

Has Government Earned Our Trust

Fourth in a series

Should Americans trust their government? That's the question isn't it? I think we would like to give our trust, but do we have sufficient cause?

Federal Building bombing in Oklahoma City:

Today we will begin by examining the evidence provided by General Benton K. Partin, retired, regarding the bombing of the Federal Building in Oklahoma City. General Partin was a *chemical engineer* whose military career centered on explosives and destruction of hardened targets. As such, his knowledge of the signatures and capabilities of explosives is that of an expert in this field.

General Partin's report sets forth the following: "The media and the Executive branch reported that the sole source of the devastation was a single truck bomb consisting of 4,800 pounds of ammonium nitrate, transported to the location in a Ryder Truck and parked in front of the building. *It is impossible that the destruction to the building could have resulted from such a bomb alone.* To cause the damage pattern that occurred to the Murrah building, there would have to have been demolition charges at several supporting column bases, at locations not accessible from the street, to supplement the truck bomb damage. Indeed, a careful examination of photographs showing the collapsed column bases reveals a failure mode produced by demolition charges and not by a blast from the truck bomb."

For those who need to hear it from the horse's mouth, I have included some of General Partin's report:

"From the potential damage contours on Tab 3, and assuming the single truck bomb, the pressure and impulse for collapsed columns B4, B5 and A7 are all in the 25 to 35 pounds per square inch region. However, the much smaller and closer columns, B4 and B5, are still standing, while the much larger column A7 is down. Column B3 is down with 42 percent less pressure and impulse than columns B4. These facts are sufficient reason to know that columns B3 and A7 had demolition charges on them. Moreover, there is not sufficient blast impulse at that range to collapse any of the three. In fact, columns B2, B4 and B5 all have the sheet rock and furring strip finish still intact on the second and third floors except where damaged by falling debris."

AND

"Columns A3, A5, A7, and B3 collapsed straight down as the apparent result of demolition charges at the column juncture with the third floor for column B3 and with the third floor level header for columns A3, A5, and A7" - Bomb Damage Analysis Of Alfred P. Murrah Federal Building, Oklahoma City, Oklahoma, - General Benton Partin

This means that someone on the *inside* had to place charges in the building, which in turn means that our government officials are not telling the whole truth. I suspect that the problem here is that if the truth be known, it is believed that considerable confidence in government could be lost. Therefore, it would be prudent policy to deny any such evidence and bet that the American people never find it out, or if they do, that they will not believe it. If this be the case then the American people enter into denial to their own detriment.

Something evidently overlooked by those responsible for the inside explosives were the seismographs in the area which recorded two separate explosions.

Weapons of Mass Destruction:

“*Weapons of mass destruction*” was the lie used to justify going into Iraq. To begin with, weapons of mass destruction are not a cause and reason to invade any country, otherwise we would be justified in invading just about everyone. Countries have a right to defend themselves and prepare for their own defense. But only in the Arab world do we have a policy of invading and killing people because they might, someday, cause us harm. Could our concern be the terrorism we have inflicted on these people for many, many years now? With this kind of logic we can be justified in killing just about everyone.

Since invading Iraq under a lie, what has been the result? As of this time the result has been about 4345 dead Americans, 31,513 American wounded and 97,000 dead Iraqi civilians.

2008 Financial Collapse:

Then we have the engineered financial collapse of 2008. Yes I know... government officials claim that it caught them completely off guard. And we are supposed to believe that they just got into the arena of finance in the past couple months. That they had no idea or experience which would allow them to see that issuing currency on the creation of public and private debt obligations might be a problem [see first article in the series]. Or that a national debt of approximately eleven-thousand-eight-hundred-twenty-three-billion-dollars (eleven-trillion-plus) owed to private creditors might be bleeding the American people of their productivity. With an individual obligation of \$33,780 for each man, woman and child, or put another way, a \$135,120 obligation for a family of four, how can the American people ever prosper? Thirty-three-thousand-dollars is more than a lot of Americans make in a year's time, yet that is their debt obligation, which will ultimately be paid for with the enslavement of the American people and the loss of their country as set up by our leadership [see first article in the series]. We are very close now!

In short, the currency you use, what you call money or Federal Reserve Notes, is issued upon the deposit of public or private debt with the Treasurer of the United States. For example the contract you sign to purchase your home. This contract authorizes the comptroller of the currency to issue circulating (Federal Reserve) Notes, in blank, duly registered and countersigned, formulated from that debt. If you borrowed \$200,000, then \$200,000 in currency [Federal Reserve Notes] is issued on this contractual debt upon which compounding interest will be owed.

That's the private debt side of it, the public debt comes from selling government bonds. And the currency that's issued on this *public debt* is added to the *National Debt* on which all Americans

are obligated to pay and to pay the interest. As more currency is issued, the currency already in circulation has less and less purchasing power. Every day you hold on to a federal reserve note, it has less purchasing power than the day previous. The difference between making \$200 a month and buying bread for \$0.25 a loaf, and making \$3,200 a month and buying a loaf of bread for \$4.00 is that now you are in a higher tax bracket and will pay more taxes, leaving you with less purchasing power than when you made \$200 a month.

And they want control of our health care.
