Partial list of what we've learned: 13) Because our leadership failed to pay the national debt, England (our creditor) took title to the land mass we know as *Washington, District of Columbia* and any other property owned by the Federal Government 14) England then incorporated *the District* along with corporation names which include "the United States of America", "the United States", "USA", "U.S.A.", and others. This *British Controlled Corporation* is now in control of America; 15) the "united States of America" could now only adjudicate civil matters and not criminal matters. England's ever changing criminal law became the law governing criminal matters; 16) Attorneys are licensed by the British Accreditation Regency to avoid copyright infringement; 17) There are still *sovereign Citizens* in the united States; 18) Virtually all law is commercial; 19) The privately owned Federal Reserve Bank came into existence in 1913; 20) In 1909 the United States was given another 20 years to pay the debt which it failed to pay, leading to the stock market crash of 1929 when the debt obligation became due and payable.

Since the united States was unable to pay its debt back in 1871, England took title to the property being held as collateral, all the property owned by the Federal Government, beginning with Washington, District of Columbia which then became the *incorporated United States*, or "the United States", or "the United States of America", or "U.S.", or "USA", or "U.S.A." The "debt obligation" then became the burden of the States by virtue of the *security instrument* which you know as the *Constitution for the United States of America*.

Our *historic train* has now arrived in the year 1929 and the economy is crashing. Sound familiar? The national debt is due and payable, but the States are unable to pay the debt. What happened? On March 9, 1933, five days after Franklin D. Roosevelt was inaugurated, the Banking Relief Act was passed. So relief was going to be granted the [private] banks, more specifically, the privately owned Federal Reserve Banks.

In short this act contained the language of the *Trading with the Enemy Act* of October 6 1917. Where the act of 1917 excluded domestic transactions because a domestic transaction is not an enemy transaction, and excluded citizens of the United States since a citizen of the United States was not considered to be an enemy of the United States, the Banking Relief Act amended this exclusionary language. The exclusionary language was amended to read "*by any person within the United States or any place subject to the jurisdiction thereof.*" There's that term "*person*" again.

Whereas the Trading with the Enemy Act gave the President authority to regulate the commercial activity of an identified enemy, the Banking Relief Act identified the people of the United States as an enemy, giving the President the authority regulate them in everything they do that is commercial. So, we have seen all our normal and regular activities converted into a commercial activity in order to regulate us in everything we do. One of the consequences of being an ENEMY of the United States.

This act also provided for the confiscation of our money, and our gold was confiscated to provide relief for the privately owned banks and bankers. Therefore, we lost our law in 1871 and now we lose our money. We lost our sovereignty.

But in taking the money, the bankster controlled government had to replace it with something. They did, Federal Reserve Notes. These notes are issued upon the deposit of DEBT with the treasurer of the United States. Here is the language from the act:

"Upon the deposit with the Treasurer of the United States; (a) any direct obligation of the United States; (b) any notes, drafts, bills of exchange or bankers acceptances acquired under the provisions of this act, that any Federal Reserve Bank making such deposits in the manner prescribed by the Secretary of the Treasury, shall be entitled to receive from the Comptroller of the Currency, circulating notes in blank, duly registered and countersigned."

(a) is public debt and (b) is private debt. Therefore, the notes are not money, they are a debt currency. They are evidence of debt. Now, does anyone think they can pay a debt with a debt? I hope not, because it is not possible to pay a debt with a debt. House Joint Resolution 192 [HJR192] takes notice of this and provides that debts may be discharged, not paid. Therefore, we Americans cannot own anything, because we do not pay for anything. And I hope you are not laughing at this because it's as serious as a heart attack. It's a real mistake to laugh.

So what is backing the currency? It's issued upon the deposit of debt, but debt cannot be the backing. During debate over this bill, one congressman asked what is backing the currency. Here it is:

"Under the new law the money [currency] is issued to the banks in return for Government obligations, bills of exchange, drafts, notes, trade acceptances, and banker's acceptances. The money will be worth 100 cents on the dollar, because it is backed by the credit of the Nation. It will represent a mortgage on all the homes and other property of all the people in the Nation." - Congressional record, March 9, 1933, House, Congressman Patman, 73rd Congress, Special Session, Volume 77, part 1, page 83

There you have it, short and to the point. Everything you think you own, you do not own. It has all been mortgaged to the privately owned Federal Reserve Bank and its owners in return for ink on paper [Federal Reserve Notes]. This is further confirmed in Senate Document 43, under *contracts payable in gold*: "The ULTIMATE OWNERSHIP OF ALL PROPERTY IS IN THE STATE, individual so-called ownership is only by virtue of Government. i.e. Law, amounting to mere user. And use must be in accordance with law and subordinate to the necessities of the State."

And so now our historic train arrives in the present. We now understand the status of our country as well as our individual status. We own nothing and cannot own anything. Our productivity is the property of international rich and predatory bankers and we are saddled with an ever increasing burden of payment (taxes). We'll discuss this and other related issues a little more in the next article.
