

Our Country

by Benson J. Lossing, LL. D.

This Version Published in 1905

Introduction

I acquired this wonderful history of these united States of America as a document included on one of several CD's that came with a computer I had purchased, now many years ago, back in the days of DOS. I have long since lost track of the original CD, but not before extracting this United States history to a hard drive. It reads like an adventure.

The original version of this history was originally published, I believe, back in the 1880's. This version was published in 1905. Obviously scanned and then using an *optical character recognition program*, converted into text. However, it was not proof-read, thus there are *conversion errors* within. For example "he" might be "be" or even "lie". Generally, the errors will be obvious, and easily corrected.

Table of Contents

Chapter I.	Page 37
The Extent and Character of Our Country - The Form of its Government - Its Discovery by Norwegians - Icelandic Navigators - Their Attempts to Found a Colony Here - Traditions Respecting other Discoveries - The North American Indians in the Sixteenth Century.	Page 37

Page 286
Chapter XXX.	Page 294
WHEN the fiery Hugh Peters and the gentler Henry Vane arrived at Boston in 1635, the colony was somewhat excited by theological disputes. The new-comers engaged in the controversy, and it soon took the form of a bitter quarrel. Peters was a rigid Puritan preacher just from a six years exile in Holland, and he was made pastor of the church vacated by Roger Williams when he was banished, whose doctrines the new preacher denounced, and whose adherents he expelled from the congregation.	Page 294
Chapter XXXI.	Page 302
King Philip - His Patriotism - Anger of His People - He Declares War - Terrible Events of that War - Death of Philip and Fate of His Son - Death of Charles II and Accession of James II - Andros Made Governor-General - Revolution in England - Andros Driven from Boston - French Jesuits in America - The French and Indians - A Congress of Delegates in New York - Canada Invaded - The English Repulsed - New Charter for	

Massachusetts.....	Page 302

Book: Our Country: Volume 1
Author: Lossing, Benson J., LL.D.
Volume: Vol. 1
Date: 1905

Chapter I

The Extent and Character of Our Country - The Form of its Government - Its Discovery by Norwegians - Icelandic Navigators - Their Attempts to Found a Colony Here - Traditions Respecting other Discoveries - The North American Indians in the Sixteenth Century.

OUR Country occupies a large space on the Map of North America. It extends, in a broad irregular belt across the Continent, from the Atlantic Ocean on the East to the Pacific Ocean on the West. Its breadth is from far down each end of the Gulf of Mexico on the South to a line even with the northern shores of Lake Superior, with a large separate territory in the far northwest, on the confines of Asia. It comprises an area (not reckoning its island possessions) of over 3 million square miles; equal to over 20 million farms of 100 acres each, if it were all land. It contains over 81 million human beings, of whom nearly fifty-six million are natives of the land. The remainder are from almost every country on the globe. The latter, mixing with the native citizens, make us a strong people.

Over all this vast domain, favored with every variety of climate, soil and productions, great lakes and rivers, and the grandest and most beautiful natural scenery, now divided into many States and several organized Territories (the germs of States), is felt the benign influence of a free and enlightened government. It is a model government which the older nations of the Earth are gradually copying as the wisest and most sturdy on the globe. It is a government by the people. How? The people, the true source of all power in government, choose a few of their number to make laws for the whole, and others are chosen to execute those laws. It is therefore a Representative Republic, or a government exercised by the whole people through their chosen representatives. Its wisdom and strength have been tested by the most severe strains and the superiority of such a government, *with an educated people as its basis*, has been demonstrated.

In contemplating the majesty of our Republic, the question naturally arises in the mind, By what processes has this great and expanding nation been planted, nurtured, and strongly rooted here, where less than four hundred years ago brooded the darkness and solitude of a wilderness over the whole continent, populated only by savage hunters or half-civilized barbarians. The answer to this question will be the marvelous story which I am about to relate.

Fully nine hundred years ago, a famous Norwegian sailor named Eric, called Eric the Red because he had red hair and florid complexion, settled in Iceland, the northern shores of which touch the Arctic Circle. Whilst he was on a voyage westward from that far north country, he discovered Greenland and made it his home. His son Lief, an ambitious young man, wished to become a discoverer, like his father. He bought a ship, one of those queer little Norwegian

vessels which were moved sometimes by sails and sometimes by oars. They were used by those old Sea-kings, as they were called, of Northern Europe, who spread terror by their piracies over the British Islands and the coasts of Western Europe from the Rhine to the Straits of Gibraltar, more than a thousand years ago.

Lief's ship was stout and tight. She had made many voyages safely. He furnished her with twenty-five strong men, and invited his father to go with him as the commander. Eric thought himself too old for such an undertaking, but was persuaded to go. Embracing his younger sons Thorwald and Thorstein, and his fiery daughter Freydisa, he bade them farewell, mounted his horse and rode toward the ship. The animal stumbled. Eric thought it was an Omen of evil. "I do not believe it is given to me to discover any more lands, and here I will abide," said the old navigator, and he returned to his house.

Lief and his companions sailed southwesterly. It was in the early summer of the year of our Lord 1002. They were soon fighting the storms and waves of the North Atlantic Ocean between Greenland and Labrador, and were sometimes chilled by slow-drifting icebergs. At length they saw land. It was flat and stony near the shore, with high snow-capped mountains a little back from the sea. They did not land, but sailing southward they soon came to another country, flat, and covered thickly with woods. It had a broad beach of white sand sloping gently to the sea. The adventurers anchored their little ship, went on shore, and fed themselves with sweet berries. A few hours later they sailed away southward.

These bold seamen soon came in sight of another land. It was hilly - gently so - and mostly covered with trees. Its northerly shores were sheltered by an island. They found there an abundance of small fruits, delicious to the taste. No traces of human beings were found excepting some burnt wood and the bones of large fishes and 110 sounds were heard from the songs of birds and the chirping of squirrels. Charmed by the soft climate, they sought a harbor, and found one at the mouth of a river where the vessel was swept by the tide into a bay. The waters were filled with the finest salmon, and wild deer abounded in the woods. The days and nights were nearly equal in length, at first. As they remained all winter, they noticed that when the days were the shortest, the sun rose at half-past seven o'clock and set at half-past four o'clock.

A young German of Lief's company, who was Eric's servant, was missing one day. They searched for him in all directions. He had wandered deep into the forest, and when they found him he was full of joy because he had discovered grapes, delicious and abundant, such as grew in his own country. So Lief named the country Vineland. He and his company built huts and wintered there, and in the spring they returned to Greenland. Eric had lately died, and Lief, his eldest son, came into the possession of his estate and patriarchal office. Eric's family were Christians, but Eric died a pagan.

Thorwald, Lief's younger brother, bought the good ship and, with thirty companions, sailed for Vineland. They passed the winter there, occupying the huts built by Lief and his companions, and subsisting as they had done, upon fish. In the spring, Thorwald and a part of his company

explored the neighboring coasts, finding many sandy islands, on which there were no traces of wild beasts and few of human beings. The summer was spent in these explorations, and the next was passed at their old quarters in Vineland. Other explorations were made the following summer, by the whole company. In the early autumn they entered a large inlet. There were high lands on each side, thickly wooded. "Here," said Thorwald, "is a goodly place; I will make my abode." There they found some natives - dusky people, of small stature, like the Esquimaux of Greenland. They were in canoes, and were timid and harmless. The Northmen caught them and cruelly put them to death, excepting one who escaped to the hills and aroused his countrymen. The angry savages went silently in their canoes and surprised Thorwald and his company. A sharp fight ensued. Arrows flew thick and fast. Thorwald was mortally wounded, but his companions escaped unhurt. The savages fled to the wooded hills, and Thorwald's companions buried the body of their chief on the promontory where he intended to settle, with a cross at its head and another at its feet. The survivors passed the winter in Vineland, in mortal fear of the enraged savages, and in the spring they returned to Greenland.

Thorstein, Eric's third son, on hearing of the death of his brother, sailed for Vineland, with twenty-five companions and his young wife, Gudrida, a beautiful blonde, to whom he had been married only a few weeks. Adverse winds drove their little vessel on a desolate shore of Greenland, far up the eastern border of Baffin's Bay. There the company suffered dreadfully, and were compelled to stay until spring. A contagious disease broke out among them, and Thorstein and a greater portion of his companions perished. Sadly the young wife carried home the body of her husband. So died two of the brave sons of the valiant Eric the Red, leaving their wayward sister, Freydisa, alone with Lief.

During the next summer, a rich citizen of Norway, young and comely, arrived in Greenland. His name was Thorfin. He saw and loved Gudrida, and demanded her in marriage of Lief her patriarchal brother-in-law. They were wedded and the Norwegian, accompanied by his bride and five other young women with their husbands and other men, sailed for Vineland, to plant a colony there. They landed near the spot where Lief had passed the winter. Upon the shore, with the little Norwegian vessel anchored near, that company of sturdy emigrants presented a picturesque group. Thorfin, stout, but not very tall, was clad, on that occasion, we may imagine, in the costume of the Norwegian nobility. If so, over his linen shirt he probably wore a dark woolen tunic that descended to the knees, with long sleeves reaching to the wrists. The borders of the skirt, the collar, and the ends of the sleeves were ornamented with various colored cloth in a variety of devices. Around his waist was a girdle or belt of dressed leather, ornamented with bosses of silver and gold and over all was a short cloak of rich stuff made of silk and wool, of a purple color, fastened to his shoulder by a brooch of gold and precious stones. His legs were covered with white hose, bandaged with crossed fillets of gay colors from the ankle to the knee and on his feet were black buskins, open in front, and secured by thongs of silk, with tasseled ends depending from the top of the shoe. His long, dark wavy hair fell upon his back and shoulders, and his flowing beard covered his bosom.

The beautiful Gudrida, tall and slender but muscular and lithe, stood by the side of Thorfin,

whilst he audibly thanked God for their deliverance from the perils of the waters and near them in the shadows of great trees were gathered the rest of the company, silently uniting in the thanksgiving. Gudrida, we may imagine, was dressed in a manner befitting the rank of her husband. She might have worn, in the costume of that day in Norway, a white linen tunic that descended to the instep. Over this a black gown of silk reaching only to the knees, with short flowing sleeves that left half the arm bare below the elbow, and clasped by a golden bracelet. A broad band of gold embroidery extended from the waist to the lower edge and around the bottom of the gown, and also around the edges of the sleeves; and over all hung gracefully a gray woolen mantle of fine and light texture, fastened at the throat with a brooch of gold and pearls. It hung in graceful folds to her waist, in front, and behind as low as the gown. Upon her head was a veil or hood of silk, loosely and tastefully arranged over the portion back of the ears, and falling in folds upon her shoulders and bosom. In front of this hood hung her beautiful auburn hair in a rich profusion of curls and ringlets. On her feet were black buskins, their open fronts laced with silken cords, showing her white hose.

Thorfin remained with the colony in Vineland about three years, when he and Gudrida, with a part of the company, sailed for Norway, with specimens of fruits and furs which they had gathered in the new country. After making several voyages Thorfin settled in Iceland, where he built a fine mansion, and lived in a style unrivaled by the richest chieftain in that country. There Thorfin died. Gudrida, who had become the mother of a son whilst she was in Vineland, then went with her boy on a pilgrimage to Rome, where she told the stories of the adventurers in the ears of Pope Benedict. After her return, she entered a convent. Her son, whose name was Snorre, became, in time, master of his father's estate, and the ancestor of a long line of descendants. Among these was Albert Thorwaldsen, the great Danish sculptor, who died in 1844.

Those of Thorfin's colony who remained in Vineland, were joined by two brothers, named Helgi and Fiombogi, with about thirty followers. They were Icelandic chieftains, who fitted out their expedition in Greenland. Freydisa, the daughter of Eric the Red, obtained a willing permission to go with them, and share in the profits of the voyage. She was an artful, intriguing, deceitful and fiery-tempered woman, and Lief and his family hoped she would remain in Vineland and be decently buried there. She was a fury and a firebrand among the colonists. Where peace had reigned she enthroned discord. Quarrels ensued which ended in a fight and the death of thirty persons. Then Freydisa, finding her own life in peril, returned to Greenland, where she died universally detested.

Such is the substance of the accounts of these adventurers, given in the chronicles of Iceland. They reveal the fact that Norwegians discovered America almost five hundred years before Columbus sailed westward from Spain, in search of India. The stony land with the snow-capped mountains was, doubtless, Labrador. The flat, wooded land, with its white beach, must have been Newfoundland; and the time given of the rising and the setting of the sun at the winter-solstice - the shortest day at about Christmas time - indicates some point on the New England coast between Boston harbor and Narragansett bay, as the spot where the German lad discovered the grapes, and Lief named the country Vineland.

Where Thorwald was buried, or where Thorfin and Gudrida landed and lived, nobody knows. The best informed students of the subject believe it to have been on Rhode Island, and that the mysterious stone tower at Newport, with its massive cylindrical walls resting on seven columns, whose foundation stones are wrought spheres, was built by these Norwegian colonists. It was there when the English settlers came, and the Indians had no knowledge of its origin. If the Northmen did not build it, who did? Perhaps Gudrida's son was born there. Who knows?

All positive traces of that colony in America, after the departure of Freydisa, are lost. Icelandic histories called Sagas, and poems called Eddas, give us glimpses of it for a few years, when it fades into utter forgetfulness. These histories and poems tell us that a navigator named Gudlief made a trading voyage from Iceland to Ireland at about the year of our Lord 1030. Whilst he was sailing along the western shores of Iceland, a strong wind blew his ship far into the Atlantic Ocean toward the southwest. After many days he and his crew saw land, anchored their ship in a safe harbor, and were made prisoners by dark-colored people who came from the woods in great numbers. Their captors took them into the forest, where they were met by a white chieftain who spoke to them in Icelandic, and procuring their release, advised them to depart immediately, for the dark people were cruel to strangers. He refused to tell them his name but inquired after Snorre and other well-known persons in Iceland. Taking a gold ring from his finger, he asked Gudlief to present it to Thurida, Snorre's sister. Gudlief bore the jewel to the daughter of Gudrida. It was believed that the white chief was Bjorn, a famous Icelandic bard, who had been a lover of Gudrida and a rival of Thorfin and who left his country in the year 998. If this story be true, Bjorn the bard and Lief the navigator, may fairly contend in the halls of Odin for the honor of having been the first of all Europeans to discover America.

It is also related that thirty years after the event just mentioned, a Saxon priest from Ireland, who had been laboring among the pagans of Iceland, went to Vineland, and was murdered there and that a bishop of Greenland undertook the same voyage, and was never heard of afterwards.

From that time, for more than four hundred years, America lay hidden from the knowledge of Europeans, a wild, uncultivated waste. There are some traditions, that seem to have facts for their substance, that tell us of other voyages to this Western world during that period. The most reasonable of these stories, is that of Prince Madoc of Wales, said to have been drawn from the chronicles of that country. It is believed by some historical students that Madoc, who was a son of Owen Gwynneth, disgusted with the domestic contentions about the rightful successor to his father, went on a voyage of discovery, with ships well manned, in the reign of King Henry the Second, of England, that he went westward from Ireland and found a most fruitful country, in the year 1170; that he returned home, and with a squadron of ten ships sailed for the same lands with a colony of men, women and children, to settle there, and that he was never heard of afterwards. It has been asserted by more than one traveler in this country, that light-colored Indians have been met by them who had many Welsh words in their language. Humboldt refers to this tradition; and Southy, the English poet, made it the theme of one of his finest productions. Until the translation of the Icelandic Chronicles revealed the story of the Norwegian voyagers, the Chronicles of Wales claimed for Madoc the honor of being the discoverer of America. There are traditions of voyages

to this country in the fourteenth century, but they are so vague and improbable that I will not weary you with a recital of them.

During the centuries whilst America again lay hidden from Europe, great changes had taken place among the nations of the Eastern hemisphere. The wild tribes of this portion of our continent had evidently been subjects of great change, too. Stronger bands of warriors and women had displaced the weaker ones; and when the Europeans again appeared on our shores, the dwarfed Esquimaux, whom the Northmen encountered, had been annihilated by a nobler race or driven toward the frozen regions of the Arctic Circle. There had evidently been great migrations from one part of the continent to the other, during which half-civilized barbarians had been expelled from fertile territories by savages, whilst once savage regions seem to have been colonized by sun-worshippers from Central and South America. They have left remains of art, in buildings and pottery, which tell of a crude civilization.

We know that in South America there existed a native empire that competed favorably with any one in the Eastern hemisphere at that time. We know that between the Rio Grande, or Grand River, which divides our country from Mexico, to the Isthmus of Darien, there was an Empire whose rulers and people displayed many of the nobler virtues and some of the arts and sciences of civilized life, and whose laws evinced as profound respect for the great principles of morality as is to be found in the most civilized nation. We know, too, that the softening influences of that empire were beginning to spread among the cruder tribes of the North, when Cortez and his followers - civilized ruffians from Spain - overturned that empire. They extinguished the light that was beginning to shine in the darker regions within the present domain of our Republic. *With professed Christian zeal they barred the way to the advance of a civilization more practically Christian than that which the Spanish conquerors displayed.*

‘Whence came these dusky inhabitants of our land?’ is an unanswered and seemingly unanswerable question. Out of isolated facts - facts like the following - bold theories have been formed. Remains of fortifications like those of ancient European nations have been discovered. An idol, composed of clay and gypsum, representing a man without arms, resembling one found in Southern Russia, was dug up near Nashville, in Tennessee. A Roman coin was found in Missouri, a Persian coin in Ohio, a bit of silver in the Genesee country, New York, with the year of our Lord engraved on it, split wood and ashes, thirty feet below the surface of the earth, at Fredonia, New York; a silver cup, finely gilded, within an ancient mound near Marietta, Ohio, and in a tomb near Montevideo, in South America, two ancient swords, a helmet and shield, with Greek inscriptions upon them, showing that they were made in the time of Alexander the Great, more than three hundred years before Christ. The mysterious mounds found in various parts of our country have made strange revelations such as weapons and utensils of copper; catacombs with mummies, ornaments of silver, brass, and copper; stones with Hebrew inscriptions, traces of iron utensils wholly reduced to dust, mirrors of isinglass and glazed pottery, and other evidences of the existence of a race here, far more civilized than the tribes found by Europeans. And nearly all of these modern Indian nations have traditions respecting their origin. Some of them told of a partial or universal deluge and some said their particular progenitor came in a bark canoe after that

terrible event.

These facts have been the texts of long argumentative discourses. One theorist tells you that they came originally from Phoenicia, another that they are Egyptians, Hindus or Chinese while others insist with great pertinacity that they are the descendants of the ten Lost Tribes of Israel, who made their way from Asia to our Continent, over the Aleutian Islands or across Behring's Straits. Others dismiss the question with the positive assertion that they are the products of this continent alone - that they originated here as did the plants and trees. "The land you sleep on is ours," said a Micmac chief, in Nova Scotia, to Colonel Cornwallis, of the British army, a century and a quarter ago. We sprung out of the Earth like the trees, the grass and the flowers." Who knows? Ethnology, history, revelation and reason are all dumb before the questioner concerning these mysteries. The pious and superstitious parson, Cotton Mather, of Boston, who wrote more than one hundred and ninety years ago, took a short method of solving the question by shrewdly guessing that the Devil [whom he called the old usurping landlord of America] decoyed these miserable salvages hither, in hopes that the Gospel of our Lord Jesus Christ would never come here to destroy or disturb his absolute empire over them." But the mounds and their contents, the relics and the theories have not solved the great question. The mounds scattered all over the continent - huge interrogation points of deep significance - and the mound-builders are yet the subjects of sharp speculation and we might show wisdom if we should follow the example of Parson Mather, who, when the delusion of witchcraft had made him ridiculous, declared that the subject was too deep for ordinary comprehension, "and referred its decision to the day of judgment." We can afford to dwell, without further inquiry for the present, in the dim light reflected by Bryant's soliloquy:

And did the dust of these fair solitudes once stir with life and burn with passion? Let the mighty mounds that overlook the rivers, or that rise in the dim forests, crowded with old oaks, answer. A race that long has passed away, built then a disciplined and populous race heaped with long toil the earth, while yet the Greek was hewing the Pentelicus to forms of symmetry, and rearing on its rock the glittering Parthenon."

Chapter II

Indian Population at the Beginning of the Sixteenth Century - Their Language, Religion, Government, Records, Literature, Domestic and Military Habits, and Their Physical and Mental Characteristics - The Iroquois Confederacy - Their Civil and Military Government - The Five Nations - The Story of Hi-a-wat-ha - Origin of the Confederacy - Geographical Distribution of the Indians.

THE number of human inhabitants of the entire continent of America, from the Frozen Ocean to Cape Horn, did not exceed five million, it is supposed, when Columbus sailed from Spain and that within the present domain of our Republic - the united States of America - there were only a little more than one million souls, or one to each three and a half square miles of territory. The people of the latter region seemed to have all come from the same original stock excepting some on the borders of the Gulf of Mexico. They had high cheek bones and broad faces, heavy dark eyes, jet black hair, lank and incapable of curling because of its peculiar structure and skins of a dull copper color. They spoke more than a hundred dialects, or peculiar forms of expressing language, all springing, evidently, from a common root. They were all taciturn or habitually silent, in society, and could endure great mental or physical suffering without visible emotion. Their plan of government was simple, and there were very few transgressors of the law. Their theology or religious system was as simple as their civil government. They believed in a great GOOD SPIRIT and a great EVIL SPIRIT, each supreme in its sphere. And they deified, or made God, the sun, moon, stars, meteors, fire, water, thunder, wind, and everything else which seemed to be superior to themselves. There were no unbelievers among them. They had no written language, excepting crude picture-writings made on rocks, barks of trees or the dried hides of beasts. Their historical records were made upon the memory from parent to child, as were their legends, and so transmitted from one generation to another. Their dwellings were crude huts made of poles leaning to a common center, and covered with bark or the skins of beasts. The men were engaged in war, hunting and fishing, whilst the women did all of the domestic drudgery. The women also bore all burdens during long journeys, put up the tents, or the wigwams, as their dwellings were called prepared the food and clothing, wove mats for beds, and planted, cultivated, and gathered the scanty crops of corn, beans, peas, potatoes, melons and tobacco, wherever these products were raised. In winter the skins of wild beasts formed the clothing of these crude people, and in summer the men wore only a wrapper around the loins. They sometimes tattooed themselves, that is, pricked the skin in lines to form shapes of objects, and making them permanent by coloring matter put in the punctures; and they were generally ornamented with the claws of bears, the pearly parts of shells, and the plumage of birds. Their money consisted of little tubes made of shells, fastened upon belts or strung on little thongs of deer hide, which was called wampum. These collections were used in traffic, in treaties, and in giving tokens of friendship. Their weapons of war were bows and arrows, tomahawks or hatchets, war-clubs, and scalping knives. Some wore shields of bark, and also corselets of hides, for protection.

The civil governor of a tribe or nation was called a Sachem whereas the military leader was called a Chief. They were naturally proud and haughty, and had great respect for personal dignity

and honor. It was offensive to a Chief or Sachem to ask him his name, because it implied that he was unknown. Red Jacket, the great leader of the Seneca nation, was once asked his name, in court, in compliance with the legal form. He was very indignant, and replied; "Look at the papers which the white people keep most carefully" -(land cession treaties) "they will tell you who I am."

Elevated as were their conceptions of the dignity of the men, they utterly degraded the women to the condition of abject slaves. They made them beasts of burden and mere objects of convenience. They were never allowed to join in the amusements of the men, but were permitted to sit, with their children, as spectators around the fires at war-dances or the horrid orgies after a victory. The husband had absolute control of the body and destiny of the wife, even to the taking of her life and so far was she removed from a position of equality with the opposite sex, that there was no society for the cultivation of those refining qualities of woman which give the chief beauty and charm to civilized communities.

The mental characteristics, or the workings of the mind of the Indian, was the same everywhere. He subjected his body to the control of his will. He was schooled in taciturnity - taught to be a silent man - because it was necessary in a society where the sharp weapon was the quick response to an unguarded or insulting word. He was trained, too, to accept physical endurance as a virtue. Apparent insensibility to fear or pain was significant of most sturdy manhood. It was regarded as an evidence of weakness or cowardice for an Indian to allow his countenance to be changed by surprise or suffering. And so his nerves and muscles were steeled against fear or pain, and made absolute slaves to his will. An Inca or King of ancient Peru, caused some of his warriors to be instantly put to death because they had shown some surprise at the appearance of Pizarro's cavalry, the horse being a novelty and wonder to that people. Coward exclaimed Pontiac, an Ottawa chief, when he saw one of his followers startled by muskets fired in the gloom of night by the English garrison at Detroit, and instantly cleaved his head with a tomahawk. Squaw cried Cornstalk, the leader of the Shawnoese in the battle of Point Pleasant, when he saw one of his warriors hiding behind a clump of bushes, and immediately ordered him to be dressed in a petticoat and to carry a papoose - an Indian baby.

The brain of the Indian seemed to be cast in a poetic mold. In his simple language - too poor to allow a profusion of words - he would express ideas in elegant and poetic forms, his figures of speech being drawn from the objects of nature around him. What he lacked in words, would be supplied by those figures. "I stand in the path," said Pontiac, haughtily, to the commander of a British force that marched into his country, signifying that he held kingly dominion over all that region, and defied the intruder's power. When Red Jacket, the Seneca chief, who became intemperate in his later years, saw all of his eleven children die one after another with consumption. he regarded the calamity as a punishment for his sin. To a lady who had known him many years before, and who, ignorant of his misfortune, enquired of his family, the old chief, with bowed head replied Red Jacket was once a great man, and in favor with the Great Spirit. He was a lofty pine among the smaller trees of the forest. But after years of glory he degraded himself by drinking the fire-water of the white man. The Great Spirit has looked upon him in anger, and his lightning has stripped the pine of its branches." At a council at Vincennes, over which Governor

Harrison presided, Tecumsa, the great Shawnoese warrior, made a speech. When it was ended, it was observed that no seat was provided for him. An officer handed him one saying, in the foolish phraseology of talk with Indians, Your father [meaning Harrison] requests you to be seated in this chair." "My father?" said the chief scornfully, whilst his eyes flashed with indignation. Wrapping his broad blanket around him, and assuming the most haughty attitude, he continued, "My father is the Sun, and the Earth is my mother." I will recline upon her bosom." And then he seated himself upon the ground.

Notwithstanding the Indians exhibited many of the nobler traits of human nature, they were, with a few notable exceptions, cruel savages, as a whole, throughout the entire country north of the parallel of Alabama, when the Europeans came and made permanent settlements here. Among these exceptions, the most conspicuous were the five nations who formed the Iroquois Confederacy within the domain of the present State of New York, and the dwellers in the softer climate around the shores of the Gulf of Mexico.

The Iroquois Confederacy was a remarkable fact in history. It was composed of five large families, each having the dignified title of a nation. These nations were named respectively, Mohawks, Oneidas, Onondagas, Cayugas, and Senecas. They were subdivided into smaller families or tribes, each having its symbol - coat-of-arms - such as the bear, the wolf, the eagle, the heron, the beaver, the deer, the turkey or the tortoise. They occupied a belt of country extending across the present State of New York from the Hudson River to Lake Erie, south of the Adirondack range of great hills, and north of the Kaatsbergs, or, as they are commonly called, the Catskill Mountains.

When Europeans became acquainted with the nations of this league and the form of their government, they were filled with admiration because of its wisdom and strength. They called these nations "The Romans of the New World," because they seemed to have many things in common with that ancient people, especially in military affairs. As in old Rome the soldiers were honored above all other citizens, so they were among the Iroquois and the warriors, under their chiefs, were all-powerful in public affairs whatever was done in the civil councils of the separate nations, or of the confederacy, was subjected to review by the soldiery, who had the right to call councils whenever they pleased, and approve or disapprove public measures. And so careful were the civil authorities to pay deference to the warriors that general answers to questions of state policy were postponed until the opinions of the soldiers might be known. Therefore, in nearly every such council, decisions were made by unanimous consent.

As each of the confederated nations was divided into several tribes, there were thirty or forty sachems in the league. These had inferior officers under them, answering to our magistrates in towns and so the civil power of the government was quite widely distributed. There was not a man who gained his office otherwise than by his own merits, and he held it only during good behavior. Any unworthy action was attended by dismissal from office and the penalty of public scorn. They, as well as the military leaders, accepted no salary, and gave away any perquisites of their offices in time of peace and their share of plunder in time of war. There was no bribery nor

corruption in office, for they had not learned these arts of civilization. They felt themselves amply rewarded by the confidence and esteem of the people. Chosen by the voice of universal suffrage, and feeling the responsibilities which that trust imposed upon them, their department was as dignified as their position.

Each canton or nation was a distinct republic, entirely independent of the others in what may be termed the domestic concerns of the state but each was bound to others of the league by ties of honor and of general interest. Each had an equal voice in the General Council or Congress of the league, and each possessed a sort of veto or prohibitory power, which was a guaranty against a central despotism. The powers and duties of the chief magistrate of the Confederacy were similar to those imposed upon the President of the United States. He had authority to "light the great Council Fire" - to assemble the General Congress - by sending a messenger to the sachem of each nation, calling him to a meeting. With his own hand he kindled a blaze around which the representatives gathered and each lighted his pipe. He had a cabinet of six councilors of state, whose powers were only advisory. In the Council, he was only the moderator or presiding officer. He had no power to control, directly, military affairs, nor interfere with the internal policy of the several states of the league. There was really no coercive or compulsory power lodged anywhere, that could act upon a state or individual, excepting that of despotic public opinion. There was a third party in the government, who exercised great influence. These were the matrons or elderly women, who had a right to sit in the councils and there exercise a negative or veto power on the subject of a declaration of war or to propose or demand a cessation of hostilities. Theirs was a highly conservative power. They were preeminently the peace-makers of the league, for their personal happiness depended upon peaceful pursuits. They modestly refrained from making speeches in the legislature, but they furnished materials for masculine orators, and so wielded a potent influence. And so it was that in that notable confederacy of barbarians, formed long before their contact with Europeans, woman was man's co-worker in legislation - a thing unheard of in civilized nations. It was a government the nearest to a pure democracy, and yet highly aristocratic - a government of the best of the people - that the world has ever seen. It had all of the essential elements of our form of government.

I have said that the soldiers of the league controlled the legislators. The military leaders, like the Sachems, derived their authority from the people, who recognized and rewarded their ability as warriors. They held the relations to the civil heads of the nations, similar to that of Roman generals to Emperors, whom they elevated to and deposed from office. The army was composed wholly of volunteers, for there was no power to conscribe men. Every able-bodied man was bound, by custom, to do military duty, and he who shirked it incurred everlasting disgrace. The ranks of the army were, therefore, always full. The war-dance and the assemblages for amusement were the recruiting stations, for there the veteran warrior painted and decorated, recounted their brave deeds in wild songs, as they danced around great fires, singly or in a ring formed by clasped hands. These stirring war songs inspired the young men with desires to emulate their example and win the honors of war. Sometimes young men - mere lads - seated among the women as spectators, inspired by these songs, would spring to their feet, and rushing out into the magic circle in a complete frenzy, would seize each other by the hand and dance and yell around

the blazing pile, to the delight of the old warriors. Such was the method of "beating up for recruits" among all the barbarian nations of North America. In the perfect freedom of this voluntary system lay the amazing strength of the league, for every servant of the state was an inspired and willing one. And so much did the people of this league reverence the inalienable rights of man, that they never made a fellow-man a serf or slave - not even their captives in war.

There is no positive proof as to the time when the Iroquois Confederacy was formed. It was probably at the beginning of the fifteenth century, or about a hundred years before Columbus crossed the Atlantic Ocean. When Europeans found it, it was powerful and aggressive. Like old Rome, the state was constantly increasing in area and population, by conquests and annexations. Had the discovery of America by Europeans been deferred a century longer, no doubt that republic would have embraced the continent; for the FIVE NATIONS, as the league was called, had already extended their conquests from the great lakes on our northern border almost to the Gulf of Mexico, and were the terror of all the other Indian tribes east and west of them. In unity was found their strength. For a time even the French in Canada, who had taught them the use of fire-arms, maintained a doubtful struggle against them. "Our wise forefathers," said one of their leading sachems to commissioners of Pennsylvania, Maryland and Virginia, in 1744, "established unity and amity among the Five Nations. This has made us formidable. This has given us great weight with our neighboring nations. We are a powerful confederacy and by observing the same methods our wise forefathers have taken, you will acquire fresh strength and power. Therefore I counsel you, whatever may befall you, not to fall out with each other."

Like every other unlettered nation whose history is unrecorded in books, and whose origin is obscure, the Iroquois have colored their traditions of the beginning of the league with the hues of the supernatural or miraculous. Their story is only another form of the old story - older than the ages of history and as widespread as the race. It has come floating down the stream of time from Central Asia - the home of the true Hindu - the Eden - the Paradise - the garden - which produced the root of the languages and the germs of the religion and laws of Europe and of the Caucasians of this continent. That teeming East is the mother of those historic myths in which figure, in divine grandeur, the founders of nations. Among these is Hi-a-wat-ha, the founder of the Iroquois Confederacy. Their traditions tell us that this personage, whom, in later years, they revered as the incarnation of wisdom, came from his serene dwelling in the skies, and took up his abode with the Onondagas, then the most favored of the Five Nations of the great Iroquois family, living within the domain of the present State of New York. The Onondagas occupied a central position, the Mohawks and Oneidas being east of them, and the Cayugas and Senecas west of them. Hi-a-wat-ha taught them the art of good living; the value and strength of mutual friendship and good-will, and the advantages of having fixed habitations and the cultivation of the earth. He was yet among them when a band of fierce warriors came down like an icy blast from the land north of the great lakes, slaying everything human in their path. He advised these related nations to call a council of their wise men for the purpose of forming a league for the common good, to oppose the destructive enemy. His advice was approved and immediately acted upon. The chief men of the Five Nations, followed by their women and children, gathered in great numbers on the banks of the Onondaga Lake. To the representatives of each nation was assigned a particular

position in that council, with an appropriate title.

That was a notable gathering of gaily-decked savages at the dividing line between the woods and the waters. There the grave and dignified Mohawk of the east, met the fierce and fiery Seneca of the west, and all waited in silence for the presence of Hi-a-wat-ha, who appeared on the lake in a mysterious canoe with a beautiful and gentle maiden, his daughter. He landed on the pebbly shore, and as he and his sweet child ascended the bank, a strange sound was heard in the air - like a wind rushing by. In the far distant sky a white speck was seen, which grew larger and larger as it approached, in rapid descent, toward the spot where the great multitude stood. It assumed the shape of a monster bird. As it was evident that it was about to fall upon the council ground, the people fled in terror, all but Hi-a-wat-ha and his daughter. "Stand still, my child," he said, "It is cowardly to fly from any danger. The decrees of the Great Spirit may not be averted by flight." He had just ceased speaking, when the bird, an enormous white heron, with extended wings, fell upon the maiden and crushed her to the earth. Its fall was so violent, that its beak and head were buried in the ground, and the bird and the maiden both perished. Hi-a-wat-ha, though so suddenly and awfully bereaved, showed no signs of emotion. Not a muscle was moved by the calamity. He calmly beckoned to the warriors, who came forward and plucked the beautiful white plumes of the dead heron, and each placing one on his head, wore it as a commemorative decoration. Thenceforth, for many generations, it was the custom of the braves of the Five Nations to wear a white heron-plume on their heads when going out on the war-path, or as a national insignia and memento of the origin of the league.

On removing the body of the bird, no traces of Hi-a-wat-ha's daughter could be found. The disconsolate father was moody for awhile, and the people waited in respectful silence until he aroused himself and proceeded to the discharge of his grave duties. He placed himself at the head of the council and guided its action. He was seated on a mossy stone, and was clad in a wolf-skin mantle and a tunic of soft furs that hung from his waist. His arms and legs were bare, and without ornaments, and on his feet were rich moccasins. On his head was a cap formed of a band of soft deer-skin covered with the small plumage of many colored birds. From this arose a stately pile of feathers of every sort, from those of the white heron and the gray eagle to the smaller ones of the golden Oriole and the flaming scarlet Taniger. Near him were seated the chief warriors and councilors of the tribes, who joined in the brief debates and listened with profound attention to the words of wisdom that fell from the lips of Hi-a-wat-ha. After listening to the discussion, he arose and addressed the people by nations, saying, as he pointed toward the heads of each:

"You (the Mohawks) who are sitting under the shadow of The Great Tree whose roots sink deep into the earth, and whose branches spread wide around, shall be the first nation, nearest the rising of the sun, because you are warlike and mighty.

"You (Oneidas) who recline your bodies against The Everlasting Stone, emblem of wisdom, that cannot be moved, shall be the second nation, because you always give wise counsel.

"You (the Onondagas) who have your habitation at the foot of The Great Hills, and are

overshadowed by their crags, shall be the third nation, because you are all greatly gifted in speech.

"You (the Cayugas) the people who live in The Open Country, and possess much wisdom, shall be the fourth nation, because you understand better the art of raising corn and beans, and making houses.

"You (the Senecas) whose dwelling is in The Dark Forest nearer the setting sun, and whose home is everywhere, shall be the fifth nation, because of your superior cunning in hunting.

Unite, you five nations and have one common interest, and no foe shall disturb or subdue you. You, the people, who are as the feeble bushes, and you who are a fishing people (addressing some who had come from the Delawares, and from the sea-shore), may place yourselves under our protection, and we will defend you. And you of the South and West may do the same - we will protect you. We earnestly desire the alliance and friendship of you all. Brothers, if we unite in this great bond, the Great Spirit will smile upon us, and we shall be free, prosperous and happy. But if we remain as we are we shall be subject to his frown. We shall be enslaved, ruined, perhaps annihilated. We may perish under the war-storm, and our names be no longer remembered by good men, nor repeated in the dance and song Brothers, these are the words of Hi-a-wat-ha. I have said it. I am done."

The confederation was formed the next day. Then Hi-a-wat-ha's mission to the Iroquois was ended. He gave them more wise advice, and then announced his intention to return to his divine habitation. Whilst the multitude stood in silence and awe, he went down to the water's edge and entered his mysterious canoe. Suddenly the air was filled with delicious music, like the warbling of innumerable birds, that charmed the senses of the wondering people. Slowly the canoe and its precious burden arose in the air, higher and higher, until it was lost in the blue depths to the vision of eager eyes gazing after it until it vanished. Hi-a-wat-ha had returned to the region of the Blessed.

Atatarho, a chief of the Onondagas, and eminent for his wisdom and valor, was chosen President or Grand Sachem of the League. A delegation of the Mohawks were sent to offer him the honor. They found him seated in grim solitude in the dark recesses of a swamp, smoking his pipe, with drinking vessels around him made of the skulls of his enemies, as were those of the old barbarian Northmen centuries before Lief came to Vineland. The delegation could not go near his person, for he was clothed with hissing serpents, emblems of wisdom. The Mohawks stood at a distance under the branches of a tamarack, whilst their leader approached nearer and announced their errand. Atatarho arose, and with dignity accepted the office. The serpents were transformed into a mantle of bear's skin; and following the delegation, the president of the league went to the council and there declared that he would do the will of the sages and warriors of the confederated nations. From that time the Iroquois Confederacy was invincible until the white man came and, by craft and power, paralyzed its strength and finally destroyed it.

When the white man came, early in the sixteenth century, to make permanent settlements in

our country, he found the dusky inhabitants, as we have observed, speaking about a hundred different dialects. But there were only eight radically distinct nations. They are known as the Algonquins, Huron-Iroquois, Cherokees, Catawbias, Uchees, Natchez, Mobilians or Floridians, and Dakotahs or Sioux. Algonquin was a name given by the French to a large collection of families north and south of the great lakes, who speaking dialects of the same language, seemed to belong to the same nation. These inhabited the territory now included in all Canada, New England, a part of New York and Pennsylvania, the States of New Jersey, Delaware, Maryland and Virginia, Eastern North Carolina above Cape Fear, a large portion of Kentucky and Tennessee, and all north and west of these States eastward of the Mississippi River. Within the folds of the Algonquin nation were the Huron-Iroquois in Canada, New York, Pennsylvania and Ohio; a few families in Southern Virginia and upper North Carolina, and the Iroquois Confederacy in the State of New York.

The Cherokees inhabited the picturesque and fertile region in the upper part of Georgia and its vicinity, where the mountain ranges that form the watershed between the Atlantic Ocean and the Mississippi River melt into the lowlands which border the Gulf of Mexico. They were called the mountaineers of the South, and were the most formidable of all the foes of the conquering Iroquois. Their neighbors on the east were the Catawbias, who dwelt upon the borders of the Yadkin and Catawba rivers on both sides of the boundary line between North and South Carolina. The Iroquois made incursions into their country, but they never brought the Catawbias under the yoke of that confederacy. The Uchees were only the remnant of a once powerful people. They were living in the beautiful land in Georgia between the sites of Augusta and Milledgeville, along the Oconee and around the head-waters of the Ogeechee and Chattahoochee. They claimed to be the descendants of a people more ancient than those around them, and they had no traditions, as all the others had, of having migrated from another country.

The Natchez, who occupied a territory east of the Mississippi stretching north-eastward from the site of the City of Natchez, along the borders of the Pearl River to the head-waters of the Chickasaw River, claimed to be an older nation than the Uchees. Like the other Indians of the Gulf region, they were fire and sun worshippers, and made sacrifices to the great luminary. The Mobilians or Floridians occupied a very large territory that bordered on the Gulf of Mexico. It stretched along the Atlantic coast from the mouth of the Cape Fear River to the extremity of the Florida peninsula, and westward to the Mississippi River. They also held jurisdiction up that stream to the mouth of the Ohio River. Their domain included the States of Florida, Alabama and Mississippi, all of Georgia not occupied by the Cherokees and Uchees, and portions of South Carolina, Tennessee and Kentucky. The nation was divided into three confederacies, known respectively as the Creek, Choctaw and Chickasaw.

Under the general title of Dakotas or Sioux, have been grouped a vast number of tribes west of the Mississippi River and the great lakes, with whom the earlier French explorers came in contact. They spoke, apparently, dialects of the same language, and were regarded as one nation. They inhabited the vast domain stretching northward from the Arkansas River to the western tributaries of Lake Winnipeg, and westward along that line to the eastern slopes of the Rocky

Mountains. These have been arranged in four classes, namely, the Winnebagoes, the Assinniboins or Sioux proper, the Minetarees and the Southern Sioux.

Such was the general geographical distribution of the Indians when European settlements were begun among them. They were not stationary residents of a fixed domain; nor, with the exception of the Iroquois Confederacy, was there the semblance of a national government amongst them. They had wandered for centuries, and some of them had evidently traversed the whole continent. Yet they were not a nomadic race, or a people seeking pasture for cattle, living in tents, and having no fixed home for a month at a time. Neither were they agriculturists, steadily cultivating the soil. The horse, cow, sheep and swine were unknown to them. They had never tamed the buffalo nor the stately elk for labor or food nor had they sheared a fleece from the great-horned Rocky Mountain sheep. Like primitive man, the Indian was a hunter and fisher, and depended for his sustenance chiefly upon the chase and the hook.

Chapter III

The Indians of the Gulf Region - Their Religious Ceremonies as Sun-Worshippers - Their Domestic Habits, Costumes, Dwellings and Productions - Their Military Defenses and War-like Operations - Their Marriage and Funeral Ceremonies - The Fate of the Indians - European Society in the Fifteenth Century - Theories Respecting the Shape of the Earth - Discoveries of the Portuguese - Popular Traditions Concerning the Atlantic Ocean - Christopher Columbus: His Theories and Aspirations - His Family Relations and Early Voyages - His Efforts to Obtain Means for Making a Voyage of Discovery - Conduct of the King of Portugal.

IN the warmer region around the Gulf of Mexico dwelt a people having the same general hue of skin, form of features and texture of hair, as those of the more northern countries. They were either the descendants of the Central or South Americans, or their habits of life had been modified by contact with the half-civilized people of those countries. They were an athletic and vigorous race. The men were well-proportioned, active and graceful in all their movements. The women were smaller, exquisitely formed, and some of them were very beautiful.

In the colder weather of the winter, the common men wore a mantle made of a sort of cloth manufactured of the soft inner bark of trees interwoven with hemp or a species of flax. This was thrown gracefully over the shoulder, leaving the right arm exposed. Around the loins was a very short tunic, extending half way down the thighs, or only a wrapper. The richer and nobler sort of men wore beautiful mantles made of feathers of every hue, exquisitely arranged, or the skins of fur-bearing animals, with dressed deer-skin tunics wrought in colors, and moccasins and buskins of the same materials. The women of the better sort, at the cooler season, wore a garment of cloth or feathers or furs wrought like the mantles of the men. It was wrapped more closely around the body at the waist, and fell gracefully almost to the knee. The rest of the form was left bare excepting in the coldest weather, when they wore short mantles that fell from the neck to the hips. Their heads were always uncovered, but the men wore a skullcap of cloth ornamented with beautiful sea-shells, the claws of beasts, or strings of pearls. It is related that a queen, on the banks of the Savannah River, took from her neck a magnificent string of pearls and twined it around that of De Soto, the early Spanish discoverer of the region. Sometimes they wore pearl pendants in their ears. In summer both sexes went without clothing, excepting a drapery of what is now known in that region as Spanish moss, gathered from the trees. This was fastened at the waist, and fell in graceful negligence to the thighs. The chiefs, and prophets, and ether principal men, and their wives, painted their breasts and the front part of their bodies, with stripes of white, yellow and red and some practiced a kind of tattooing. Sometimes the fops of this class might be seen promenading, at evening, in beautiful mantles of deer-skins and of the marten, which trailed on the ground, or were held by attendants and if they were warriors, on their heads might be seen lofty plumes of the eagle and the flamingo.

The houses of the chiefs, spacious and airy, stood upon large mounds, natural or artificial, that were ascended by steps of wood or earth. These dwellings were built of timber, sometimes in the form of a great pavilion with a broad piazza around it, furnished with benches. They were

covered with the leaves of the palmetto, or thatched with straw and sometimes they were roofed with reeds after the manner of tiles. Their winter houses were daubed inside and out with clay.

The weapons of the Floridians for hunting and war were strong bows and arrows, and javelins. Their arrows were made of fine dried cane, tipped with buck-horn and pointed with flint, hard wood, or fish bones. They were carried in a quiver made of the skin of the fawn, cased at bottom with the hide of the bear or the alligator, and slung by a thong of deer's skin so as to rest on the hip. The warriors all wore shields in battle composed of wood, split cane, or the hide of the alligator and buffalo. On the left arm they wore a small shield of bark to protect it from the rebound of the bow-string. They also had short swords made of hard wood. When a chief was about to declare war, he sent a party at night toward the town of the enemy, to stick arrows in the ground at the cross-paths or other conspicuous places near it. From these arrows waved long locks of human hair as tokens of scalping. Then he would assemble his painted warriors, and after some wild ceremonies, would turn reverentially toward the sun, with a wooden javelin in his hand, and invoking the aid of the great God of Fire, he would take a vessel of water, and sprinkle it around, saying: "Thus may you do with the blood of your enemies." Raising another vessel of water, he would pour it upon the fire which had been kindled, and as it was extinguished he would say: "Thus may you destroy your enemies and bring home their scalps." When the battle was over, the victors cruelly mutilated the bodies of their captives. Carrying their dissevered limbs and their scalps upon spear-points, into the public square, they were there placed on poles, and the people celebrated the triumph by dancing around these trophies and singing wild songs of joy. The widows of those lost in battle gathered around the chief with piteous cries, praying him to avenge the deaths of their loved ones, asking him for an allowance during their widowhood and permission to marry again as soon as the law would allow. Then they visited the burial-places of their husbands, and cutting off their long tresses, strewed them over the graves. When their hair had grown to its usual length they were ready to marry again.

Hunting, fishing and the cultivation of the rich land were the chief employments of these people. The cotton plant was unknown to them, but hemp and flax were quite abundant. The women assisted the men in the fields, in the cultivation of corn, beans, peas, squashes, and pumpkins, which yielded enormous returns for the little labor bestowed. These productions were stored in granaries made of stone and earth and covered with mats, for winter use also preserved meats. They obtained salt by evaporation, and the women were generally good cooks of the simple food. They made and used pottery for kitchen service, some of it skillfully constructed and quite beautiful. They were skillful artisans, as evinced by their arms, houses, beautiful barges and canoes, and ornaments. They had fortifications with moats or ditches and walled towns and some of their temples were grand, imposing and beautiful. Their roofs were steep and covered with mats of split cane, interwoven so compactly that they resembled the rush carpeting of the Moors. At the entrances to some of the temples, and in niches in the interior, were well-wrought wooden statues, some of them of persons who were entombed in the sacred place. Between these were shields of various sizes, made of strongly woven reeds adorned with pearls and colored tassels. Rich offerings of pearls and deer-skins, and the furs of martens and other animals were seen in these temples in great profusion, all dedicated to the Sun, the great God whom they worshiped.

The theology or religious system of these people was very simple. They regarded the Sun as the Supreme Deity, and venerated the moon and certain brilliant stars. In all their invocations of blessings upon their chiefs or upon themselves, the Sun was appealed to, as we appeal to God. May the Sun guard you May the Sun be with you were usual forms of invocation. At the beginning of March the men of a community selected the skin of the largest deer, with the heads and legs attached, which they filled with a variety of fruit and grain. It was served up, and appeared like the live creature in form. Its horns were garlanded with fruits and early spring flowers. Then the effigy was carried in a procession of all the inhabitants, to a plain, and placed at the top of a high post. There, at the moment when the sun appeared upon the eastern horizon, the people all fell upon their knees, with their faces toward the rising luminary, and implored the god of day to grant them, the ensuing season, an abundance of fruit and grain as good as those which they then offered.

The funeral ceremonies of these people, especially those on the death of a chief or prophet, were very peculiar. The body underwent a sort of embalming, when it was placed in the ground in a sitting posture by the nearest relatives of the deceased. Then food and money were placed by its side, and a conical mound of earth was piled over it, at the foot of which was made a paling of arrows stuck in the ground. Around this tomb the people gathered in great numbers, some standing, some sitting, and all howling. This ceremony continued three days and nights, after which, for a long time, chosen women visited the tomb three times a day, morning, noon and night. The chief, whilst he was alive, was held in the greatest veneration, for, like the Assyrian kings, he was both monarch and pontiff - the chief magistrate and the high priest. A cruel sacrifice was made to him of every first-born male child, a custom learned from the Central Americans. It symbolized the devotion and surrender of the entire strength of the nation to the chief. Sitting upon a bench on one side of a large circle, a block two feet in height was placed before him. The child was brought by a dancing-girl and placed upon the block, and the young mother, weeping in agony, was compelled to stand near it, to make the offering. A prophet dashed out its brains, and then a group of girls danced around the altar of sacrifice, singing songs.

When a young chief desired to marry, he would send a few of his principal men to select from the daughters of the first families one of the youngest and most beautiful of the marriageable ones. The chosen bride was then painted and decorated in the most tasteful manner, preparatory to the nuptials. Brilliant colors, and costly pearls and shells, adorned her person. She was covered from her waist almost to her knees with a beautiful tunic of rich feathers. Then she was placed in a sedan chair, the top of which was an arch of green boughs festooned and garlanded with flowers. In that state she was conveyed to the presence of her future lord on the shoulders of six noblemen who were preceded by musicians and two men bearing magnificent feather fans, and followed by dancing-girls and the immediate relatives of the bride. When arrived at the residence of the chief she was received by the lords in waiting, who conducted her to a seat by the side of her husband, on an elevated dais, where great pomp and ceremony were displayed by those in attendance. The bride and groom were constantly fanned by beautiful maidens, if the weather was warm; and they were regaled with the unfermented juice of the grape, in its season, or with a kind of sherbet made of orange juice, at other times. At near the sun-setting the chief and his young wife walked out

into an open field, followed by all the people, and at the last parting ray of the luminary, they prostrated themselves toward the west and invoked the blessings of the Sun upon themselves and their children. From that moment until the stars appeared the people indulged in music and dancing - the music of the reed and a sort of tambourine and the dancing of young men and maidens - when the chief and his bride retired to their dwelling, there, with friends, to partake of a marriage-feast by the light of lamps.

Such is an outline picture of the people with whom the Spaniards first came in contact on the continent after the discoveries of Columbus and his contemporaries. These, with the Iroquois Confederacy, are the two notable exceptions spoken of to the general character and habits of the dusky nations who then inhabited North America. We now have a tolerably correct impression of these barbarian and savage communities whose history, down to the present time, forms an important part of that of our Republic. Some of them have gone up in the social scale, and others have gone down: some of them have disappeared, and other tribes have been discovered. All are gradually fading away from the earth and the time cannot be far distant when the last of the dusky race may sit on the verge of the Pacific Ocean, with his face toward the Setting sun, and chant the death-song of his people, saying:

"We, the rightful lords of yore, Are the rightful lords no more. Like the silver mists we fail; Like the red leaves in the gale - Fail like shadows when the dawning Waves the bright Bag of the morning."

But they will leave behind them myriads of memories of their existence here, in their beautiful and significant names of our mountains and valleys, our lakes and rivers, our states, counties, villages and cities. We may say to our people,

That, mid the forests where they warr'd, There rings no hunters shout; But their name is on your waters - Ye may not wash it out."

At this point in our story, the scene shifts, as in a dissolving view, to another continent, and presently appears the grand procession of discoverers who opened the way to settlements in this new-found land.

We have remarked that from the period of the visits of the Northmen to Vineland (America) until Columbus crossed the Atlantic Ocean, great changes had taken place in Europe. The empire of the Franks, founded by Charlemagne, had been succeeded by that of the more progressive Germans, in the mastery of Europe, with Otho the Great as the initial Emperor. The Crusades had broken up the inertia or stagnation of European society. They had unbarred the gates of the East, and let in a flood of light from the sources of science and philosophy. The Northmen or Normans had taken possession of some of the fairest regions of France (Normandy), and had invaded, conquered, and refined England. The feudal system - a system in which lands are held by a few nobles who farm them out as a privilege secured by military service - had given way to an established political system in the form of monarchies or powerful republics. Commercial cities

were gathering and distributing the products of industry and flecking the seas with white sails, proving that the arts of peace are far more productive of happiness than the pursuit of war. Over all Europe - from the Carpathian mountains to the sea, and from the Mediterranean to the Baltic, there was wonderful intellectual, moral and physical activity at the middle of the fifteenth century. Trade had linked various peoples in bonds of mutual interest and sympathy, and Europe, with the birth of the printing-press at that time, was prepared to enter upon that new and bright era of scientific investigation and maritime discovery which speedily appeared. When Lief came to America, the gloom of the dark ages was most intense - it was the world's midnight. When at near the close of the fifteenth century Columbus crossed the Atlantic, the faint gleam was seen of the dawn of that glorious day in the history of civilization, whose sunrise was heralded by the bold assertion that man had an inalienable right to the free exercise of his reason in faith and practice, whether in religion, politics, or morality.

Early in the fifteenth century, commerce had stimulated maritime adventure which led to maritime discoveries. Its most wonderful activity was seen in the Mediterranean and Adriatic seas. For the control of this commerce, Genoa on the Mediterranean and Venice on the Adriatic, both in Italy, were powerful and zealous rivals. The commerce of India was very profitable, and for the monopoly of it these rivals fiercely contended through diplomacy and arms. That commerce found its chief communications with Genoa by way of the Indus, the Oxus, and the Caspian and Black Seas. It found its chief communications with Venice by way of the Persian Gulf the river Euphrates and the Red Sea to Syrian and Egyptian ports. To these and the ports of the Black Sea the Italian vessels resorted for the silks, and spices, and other rich commodities of the Orient.

In the sharp contests of these rival republics for commercial supremacy, the Venetians finally out-generated the Genoese. They acquired by diplomacy and business activity such influence over the ports of the Black Sea and the Levant that the Genoese saw ruin before them and they began to look in other directions for relief and continued prosperity. With the revival of learning which the Crusades (or the wars of Christians for the rescue of the Holy Sepulcher of Jesus, at Jerusalem, from the hands of the Turks) had been chiefly instrumental in producing, came into Europe a knowledge of the theories and demonstrations of the Arabian astronomers, concerning the globular form of the earth. Intelligent mariners and others had become satisfied that it was globular; and the idea was finally impressed as truth upon the minds of the Genoese merchants, whilst the clergy vehemently opposed it. Reason and Faith came into collision. Reason prevailed, and the Genoese merchants were willing to allow the navigators of their ships to sail westward in quest of India.

Meanwhile the merchants of Western Europe, who were wholly excluded from direct participation in the commerce of the East through the Mediterranean by the jealous Italians, were seeking other channels of communication with India. In this enterprise they had the powerful aid of Prince Henry, son of John the First, King of Portugal and the English Princess Philippa of Lancaster, sister of King Henry the Fourth of England. Whilst Prince Henry was with his father on an expedition into Africa, he received much information from the Moors concerning the coast

of Guinea and other parts that were then unknown to Europeans. He believed that important discoveries might be made by navigating along the western coast of that continent, and on his return home the idea absorbed his whole attention. He retired from court, and at a beautiful country seat near Cape St. Vincent, in full view of the ocean, he drew around him men of science and learning. Being a studious and profound mathematician himself he had become master of all the astronomy then known to the Spaniards. With these scientific men and scholars, he studied every branch of learning connected with maritime art, and they became satisfied, from ancient chronicles and fair induction, that Africa was circumnavigable - that India might be reached by going around the southern shores of that continent. This idea was contrary to the assertions of Ptolemy, the standard geographer at that time, and of many learned men but Prince Henry adhered to his belief in the face of threats of the priests and the sneers of learned professors.

Wild tales were believed of dreadful reefs and stormy headlands stretching far out at sea, and of a fiery climate at the equator which no living thing, not even whales in the depth of the ocean, could pass because of the great heat. It was believed that the waves rolled in boiling water upon the fiery sands of the coasts, and that whoever should pass beyond Cape Bajador would never return. Against every species of opposition Prince Henry persevered. His navigators scattered all these fallacies and tales to the winds by doubling Cape Bajador and penetrating the tropical regions. At length, in the year 1497, Vasquez de Gama, a Portuguese mariner who had been in Prince Henry's service in his youth, passed around the Cape of Good Hope (which he so named), with an Arabian chart directing his course, and crossing the Indian Ocean landed in India at Calcutta. Africa was circumnavigated and a new way was opened to India by the ocean pathway of Pharaoh Necho. Prince Henry had then been dead twenty-four years. He saw the promises of this achievement from afar, but he did not live to enjoy this full triumph of reason. But a greater triumph had lately been achieved than when De Gama passed the Cape of Good Hope.

Just at the evening twilight of a beautiful day in October, 1485, a man about fifty years of age (tall, well-formed, and muscular long visaged a face of fair complexion, a little freckled and usually ruddy, but now pale and careworn in expression an aquiline nose, rather high cheek bones, eyes a light-gray his hair thin and silvery, and his whole demeanor elevated and dignified) might have been seen standing at the gate of the Franciscan Convent near Palos, in Spain, asking for a little bread and water for his palefaced, motherless child, whom he was leading by the hand. It was CHRISTOPHER COLUMBUS, then in extreme poverty, making his way, with his boy Diego, on foot for the Spanish Court. While he lay sick near Belem, a mysterious voice had said to him in a dream: "God will cause thy name to be wonderfully resounded through the earth, and will give thee the keys of the gates of the ocean which are closed with strong chains." It was a prophecy of the imagination - a sequence of intense thought and weary study on the subject. To the mind of Columbus it had all the reality of a revelation from God.

Columbus was the son of a wool-comber in Genoa, where he was born about the year 1435. Like other boys with busy fancies in that maritime city, he showed a fondness for the sea at an early age, and his father, though straitened in means, sent him, for a short time, to the University of Pavia to study the sciences which might fit him to be a navigator. It was an age of rapid

intellectual development. Learning was leaving the monasteries to take up its abode with the laity. Geographical discoveries had created an intense longing for geographical knowledge, and the writings of Pliny, Strabo and others, which the newly-discovered art of printing soon multiplied, were read with avidity.

Columbus became a passionate disciple of geographical teachers. He made his first voyage when he was only fourteen years of age. As his practical knowledge deepened with experience, and wonderful tales of mariners concerning mysterious lands seen in the far-off Atlantic fell upon his ears, his soul burned with an intense desire to penetrate the unknown waste of waters. There was then a popular tradition that there was a very large island in the Atlantic called Antilla, mentioned by Aristotle, which Carthaginian mariners had visited. There was also a tradition of another island, on which St. Brandon, a Scotch priest, landed in the sixth century, and found magnificent cities. Still another spoke of the Island of Seven Cities, on which seven Spanish bishops, who fled from Spain with an immense number of followers, on the invasion of the Moors, had settled and founded seven grand cities. Even the learned geographer, Martin Behm, whom the King of Portugal employed, placed these islands on a globe which he constructed as being contiguous to the eastern coast of Asia. And with the revival of letters, came from Greece the story of Atlantis, which Plato had learned from the Egyptians and told to his countrymen - a story which gave an account of an immense island in the Atlantic, in early times, larger than Asia and Africa together, full of inhabitants, great cities and mighty kingdoms, which, by tremendous earthquakes, had been shaken from their foundations and swallowed by the sea. These traditions, the stories of the people of the Canary Islands concerning land frequently seen westward of them (a mirage?) and scores of other marvelous tales, fired the imagination of Columbus, and he conceived the grand design of attempting the discovery of unknown lands in the West.

Finding very little encouragement in his native city, and Prince Henry of Portugal being then engaged in his explorations of the western coast of Africa, Columbus went to Lisbon. He arrived there about the year 1470, when he was in the prime of his young manhood. There he was a strict attendant at religious services in the chapel of the Convent of All Saints. In that convent several ladies of rank boarded or resided. Among these was Dona Felipa, daughter of Bartolomeo de Perestrello, an Italian cavalier then lately dead, who had been one of Prince Henry's most noted navigators. He had discovered, colonized and governed the island of Porto Santo, one of the Madeiras. Columbus and Dona Felipa became acquainted. The acquaintance ripened into love and resulted in marriage.

Columbus and his bride resided with her mother in Porto Santo. Madame Perestrello placed in the hands of her son-in-law the maps, charts, journals and memoranda of her late husband. They opened new fields for the contemplation of the navigator, and inspired him with an irrepressible desire for attempting discoveries in the West. These desires were stimulated by facts that were given him by Pedro Correo, an eminent navigator, who had married a sister of the wife of Columbus. He told him of timber handsomely carved, and of immense canes such as it was said grew in India, that had been found floating on the sea, from the westward also of the bodies of two men which had been cast ashore on one of the islands of the Azores by a westerly gale,

whose faces were large and their skins a copper color. These things confirmed Columbus in a budding belief that he might reach India by sailing westward, and he formed plans accordingly. These he communicated to the eminent Toscanelli, of Florence, who wrote to him an encouraging letter, and sent him a map projected partly by Ptolemy and partly from descriptions of Marco Polo, a Venetian, who made an overland journey to China late in the thirteenth century, and was in the public employment of the Great Khan or Emperor of Tartary. With this map before him Columbus studied the narrative of Polo, and was impressed with the belief that by sailing westward he would find the rich country of Cathay described by that traveler (now known to be China) and the great island of Zipangi, supposed to be Japan. These were the subjects of his dreams, whilst cruising among the islands in American waters, many years afterward.

Columbus made voyages in the service of the Portuguese; and in 1477 he sailed to Iceland and beyond. There he doubtless heard the traditions concerning the voyages of the sons of Eric the Red, or listened to rehearsals of the sagas in which they were recorded. On his return he was filled with zeal for undertaking western discoveries. But comparative poverty was hid so he appealed to the King of portion. He was not able to fit out a ship, so appealed to the King of Portugal for assistance. That monarch was too much engrossed in a war with Spain to listen to him. He waited patiently until his successor, the young John the Second, ascended the throne. John was endowed with the spirit of his great uncle, Prince Henry, and listened to Columbus gladly. The scheme of the navigator was referred to a junta composed of two eminent cosmographers or describers of the universe, and a learned bishop. They decided that his project was extravagant and visionary.

The king was not satisfied. He called a council of learned men, who also decided against the project. Still the king was not satisfied when the bishop (who was his confessor) proposed to him a mean stratagem. It was that he should get from Columbus his plans, charts, proposed directions for sailing and all other necessary information, under the pretext that he cherished his propositions. Then he was to send a caravel (a small three-masted vessel) to the Cape de Verd islands on the pretext of carrying provisions there, with instructions to go as far westward as possible, to ascertain if there were any foundation for the navigator's theory. This was to secure advantages to the state without committing it to what might turn out to be a mere chimera. The king permitted himself to follow the advice of the bishop. The cowardly crew of the caravel did not go far, before they were frightened back by the great waves. Columbus discovered the infamous trick to defraud him of the honors of such a discovery, and with lofty pride he scorned all offers of the monarch to renew the negotiations. His wife was now dead. She had borne him a son, whom they had named Diego. The domestic ties which bound him to Portugal were broken, and turning his back upon the faithless king and priest, he took his boy and secretly departed from Lisbon late in the year 1484. Whither he went then nobody certainly knows. He first reappears in history in the south of Spain, standing, in the twilight of a beautiful October day, at the door of the Franciscan monastery near Palos, asking for a little bread and water for his famishing boy.

Chapter IV

Columbus at the Convent of De Rabida - Asks Aid of the Sovereign of Spain - The Spanish Monarchy at that Time - Columbus Kept in Suspense - The Council at Salamanca - Delays and Disappointments - Queen Isabella Resolves to Fit Out Vessels for Columbus - He is Appointed Admiral and Sails for Palos - The Voyage Westward - Discovers an Island supposed to be a Part of the East Indies - Lands, Takes Possession, and Calls the Native Inhabitants Indians.

IT is supposed by some that Columbus, after leaving Portugal, applied for aid to the Republic of Genoa. If he did, he was unsuccessful and so we find him at the gate of the convent near Palos, in Andalusia, which was dedicated to Santa Maria de Kabida. Whilst the porter was getting refreshments for his boy, the prior of the convent, Friar Juan Perez de Marchena, happening to pass by, was attracted by the dignified aspect of the stranger. He soon learned that he was on his way to the neighboring town, Huelva, to seek for his brother-in-law, probably Pedro Correo, already mentioned. He also learned, from a brief conversation, that the stranger was an extraordinary man, and he invited Columbus to remain as his guest. With increasing wonder and admiration he heard the lips of the navigator unfold his theories, his plans and his hopes that such a man should stand a beggar at his convent gate was a marvel to Father Marchena.

The friar was learned in geographical science. Able, therefore, to comprehend the grandeur of the views of Columbus, he was deeply impressed with the wisdom of the navigator, which seemed to him like inspiration. Distrusting his own judgment, he sent for Garcia Fernandez, a scientific friend in Palos, to come and converse with his guest and within the quiet cloisters of La Rabida, the project of Columbus received the most profound respect, such as powerful courts and learned philosophers in council had not deigned to bestow. There he was brought in contact with old and eminent navigators of Palos, whose stories of the sea confirmed his faith in his theory. Marchena, impressed with the same faith, and the importance to Spain of a successful result of an enterprise like that proposed by Columbus, not only offered to give him a favorable introduction to the court, but he also offered to take his son Diego into the convent, and there educate him.

It was now one of the most remarkable and brilliant periods in the history of the Spanish monarchy. Ferdinand, King of Aragon, and Isabella, Queen of Castile and Leon, had been joined in marriage. Their kingdoms were united, and formed a strong empire. So was consolidated the Christian power of the Spanish Peninsula, and gave a prophecy of a speedy conquest of the Moors who were confined to Grenada, the kingdom which they had set up on Spanish soil more than two hundred years before. To effect that conquest, the efforts of united Spain were now directed. The two monarchs were one in love, respect, interest, views and aims, and were happily united in their councils for the good of the realm, yet they ruled as separate sovereigns, each having an independent council, and sometimes holding court and exercising sovereignty at widely separate points at the same time. They were wise in council and brave in action. Sometimes they were both in the field at the head of troops in their warfare with the Moors; and the armor worn by the queen on these occasions may be seen in the royal arsenal at Madrid. The monarchs were a unit,

however, in the general administration of the consolidated kingdoms. All acts of sovereignty were executed in the names of both; public documents were signed by both; their profiles were stamped together on the national coins, and the royal seal displayed the united arms of Castile and Aragon. They were both extremely religious and were warmly attached to the Church of Rome, then at the height of its temporal power, whose head claimed to be "King of Kings."

It was an inauspicious time for Columbus to lay his projects before the monarchs. The court was moving from place to place, and was continually surrounded by the din and pageantry of war. So the navigator remained quietly at La Rabida, the guest of Father Marchena, until the spring of 1486, when the court had arrived at the ancient city of Cordova, where [he troops had assembled for a vigorous spring campaign against the common enemy. To that old city, and to the court of the young sovereigns, Columbus repaired, bearing a letter from Marchena to the friar's intimate friend, Fernando de Talevera, prior of the monastery of Prado and confessor to the Queen. He was a man high in the royal confidence, and possessed great weight in public affairs. With bright hopes Columbus presented the letter. The prior read it carefully, listened patiently to the explanations of the bearer, and coldly shaking his head in token of his doubts, bade the disappointed mariner good morning. He was not favorably impressed with the project of Columbus, and it is probable that he did not even mention it to the sovereigns.

For a long time Columbus lingered in Cordova. He went no more to the priest, but found a friend and an advocate of his theory in Quintanillo, the controller of the finances of Castile. That officer obtained for the navigator the friendly aid of Mendoza, Archbishop of Toledo and Grand Cardinal of Spain. By that important personage he found admittance to the royal court. The sovereigns listened with wonder and deep interest whilst he unfolded his theory and gave them corroborating facts. The prior of Prado was ordered to assemble a council of astronomers and cosmographers at Salamanca to confer with the navigator. There, in the Convent of St. Stephen, they listened to his theories and his arguments. These were confuted by the books of Moses, the Psalms of David, the prophecies, the Gospels and Epistles, and by the writings of the early fathers of the Christian Church. Plain reason confounded his wild notions. "If the earth is round," said the wise men of that council, "you will be compelled to sail up a kind of mountain from Spain, which you cannot do, even with the fairest wind, and you could never get back." The Grand Cardinal of Spain intimated that the theories of Columbus were irreligious and the astonished navigator was really in danger of being consigned to the Inquisition, which was about to be revived, as a heretic, instead of receiving aid and honor as a discoverer.

Columbus was again doomed to long delay. Disappointed, wearied, almost in despair, he humbled his just pride and wrote a letter to the King of Portugal, whose overtures he had rejected, again asking aid. That monarch invited him to Lisbon. It was now the early spring of 1488. Circumstances had just then revived his hopes of help from the Spanish monarchs, and Columbus did not go. He was attached to Cordova, for there Beatrix Enriquez had borne him a son whom he named Fernando, and who became the historian of his father. But another year passed away before he was again summoned to confer with scientific men at Seville. The war was then at its height. The clangor of arms disturbed every peaceful occupation, and the conference

was not held.

Another year passed away and Columbus, wearied by the suspense, pressed for a decisive answer to his petition. Another council of wise men decided that his project was vain, and beneath the dignity of sovereigns to engage in. Not so secretly thought the monarchs. They were unwilling to reject his suit altogether, and they sent him word that so soon as the war should be closed they would treat with him on the subject. So encouraged, Columbus went to the court at Seville, but saw little prospect of success there. He felt impelled to seek aid at other European courts, but he did not wish to leave Spain. Diego was at La Rabida, and Beatrix and his infant son Fernando were at Cordova. So he turned from the monarchs to the rich nobles of Spain. But he found no one among them willing to embark in his enterprise. The Duke of Medina Celi, to whom he applied, advised him to make another application to the Spanish monarchs, and gave him a letter to the queen.

The proud spirit of Columbus would not permit him to again wait upon the court in the character of a suppliant. He had received an invitation from the king of France to come to Paris, and he resolved to go. He went to the convent for Diego, to place him with Beatrix, at Cordova. The good father, Marchena, was touched with tenderest pity when he saw that great man, after years of weary waiting, again standing at his gate as poor, almost, as when he first stopped at that portal and asked food for his famishing boy. The friar's patriotism was also enkindled when he heard from the lips of the disappointed navigator that he was about to leave the country forever, for he wished Spain to be a sharer with Columbus in the brilliant honors which would be acquired by the great discoveries which Marchena believed he would soon make. He summoned his scientific friends of Palos to a council for consultation. Among them came Martin Alonzo Pinzon, the head of a wealthy family of navigators there. Pinzon approved the project of Columbus, and showed his faith in the theory by offering to engage in a voyage of discovery, with his person and his purse, and to pay the expenses of another application to the court. Columbus was willing to delay his departure for France, but he would not be a suppliant again at the feet of the Spanish monarchs. So the warm-hearted Father Marchena resolved to seek a personal interview with Queen Isabella. He had once been her confessor, and he knew that persons of his sacred order found easy access to the presence of that devout woman.

Isabella was then at the military city of Santa Fe. Thither Marchena sent a letter to the queen by an eminent navigator, who, within a fortnight, brought back a note from her majesty summoning the friar to her presence, and giving Columbus the assurance that he might confidently expect royal aid. That note was laid before the little junta of friends at the convent, and produced much joy. Before midnight Marchena had saddled his mule and departed secretly for Santa Fe, where the sovereigns were superintending the close investment of the capital of Granada. An audience of the queen was readily obtained, when the friar pleaded eloquently in behalf of Columbus and Slain. His honest zeal and earnest eloquence secured Isabella's favorable attention. Her favorite, the Marchioness of Moya, seconded Father Marchena's pleading, and the queen requested that Columbus should be sent to her again. She forwarded money to him wherewith to purchase clothes, a mule for his journey, and to bear his traveling expenses.

With renewed hope Columbus journeyed toward the camp before Granada, where he arrived in time to see the Moors surrender to the Spanish power. He was soon admitted to the presence of the sovereigns. "What do you expect?" asked the king. "To be invested with the title and privileges of an admiral and viceroy over all the countries I may discover," Columbus replied. "Also one-tenth of all the gains either by trade or conquest," he added. One of the courtiers said: "By such an arrangement you would secure the honor of a command, without any loss in case of failure." Columbus instantly replied: "I will furnish an eighth of the cost provided I may enjoy an eighth of the profits." His terms were pronounced to be inadmissible. Others were offered. He refused to compromise, and the conference seemed fruitless. Columbus, again disappointed and heartily disgusted, turned with a heavy heart from the royal pavilion, resolved to go immediately to France. He mounted his mule and started for La Rabida. Some powerful persons who were zealous converts to his theory, learning of his departure, deeply deplored the event. One of these was St. Angel, receiver of the ecclesiastical revenues of Arragon. He obtained an immediate audience of the monarchs, and ably vindicated the judgment of Columbus. The king was not convinced; the queen was. "Our treasury," said Ferdinand, "has been too much drained by the war, to warrant us in engaging in the undertaking." "I will undertake the enterprise," said Isabella, "for my own crown of Castile, and, if necessary, I will pledge my jewels for the money." St. Angel said, with emphasis, "It will not be necessary."

A courier was sent to bring Columbus back to the presence of the queen. He was two leagues away when the messenger overtook him at the bridge of Pinos. The oft disappointed mariner hesitated. The injunction, "Put not your trust in princes," was deeply impressed on his mind. When he was assured of Isabella's earnestness, he turned back. An immediate audience was granted. The queen received him graciously. She was seated in a richly-cushioned chair by the side of her husband, whilst Columbus stood before her with St. Angel at his right hand. He was then fifty-six years of age; the queen was forty. In person she was of medium height, and exquisitely formed. Her complexion was fair, her hair a rich auburn color, and her eyes a clear blue. There was a mingled gravity and sweetness in her countenance which made it very winning, and a singular modesty which graced the firmness of her purposes, her earnestness of spirit, and her courage to do right. She possessed more genius and grandeur of soul than her husband and could far better than he comprehend the theory of Columbus, and estimate the mighty results of his success should he achieve it.

The ambition of the navigator was lofty and noble. His piety was heartfelt his religious convictions were deep and controlling, and his zeal was fed by an earliest desire to serve God and benefit mankind. And when, with a tongue that seemed to be touched with the flame of inspiration, he told the queen of his faith and hope, - a belief that he was ordained of God to bear the Gospel of Jesus to the heathen of unknown lands, and a hope that he should bring back to her the glad tidings of pagans converted to the true faith - her face kindled with enthusiasm and beamed with angelic benignity. And when he spoke of giving to Spain the honors and emoluments of his anticipated discoveries, and promised to devote the profits of the enterprise to efforts for the recovery of the Holy Sepulcher at Jerusalem from the hands of the Paynim, the beautiful queen was transported with joy. She arose quickly from her chair, and stretching forth her

clasped hands, sparkling with jewels, and with her soft eyes raised toward heaven, she fervently invoked the blessing of Almighty God upon the person and deeds of Columbus. The navigator stood in awe, with bowed head, before the seeming transfigured sovereign. The colder Ferdinand's soul was warmed, and to the uttered benediction he responded "Amen."

Isabella assented to all of the demands of Columbus, and urged him to depart on his great mission as speedily as possible. Ferdinand acquiesced in the arrangements. The contract was signed by the sovereigns, at Santa Fe, on the 17th of April, 1492. On the 30th of the same month, his commission of admiral and viceroy was signed by both of them in the city of Granada. By that instrument, the dignities and prerogatives of viceroy were made hereditary in the family of Columbus, and his heirs were entitled to prefix to their names the title of Don, a token of rank and estate. Early in May the queen appointed Diego, the son of Columbus, page to her majesty's son, Prince Juan or John. Then Columbus departed for La Rabida with a light heart, and was there received by the good Father Marchena with open arms.

The Port of Palos had lately sinned against the monarchs, and the citizens had been condemned to serve the crown one year with two armed caravels - small three-masted vessels. Furnished with authority from the monarchs, Columbus went to the Church of St. George, in Palos, and in the porch of the fane, in the presence of the public offices of that seaport town and many citizens, he caused a royal order to be read commanding the authorities to had two caravels ready for sea within ten days, and they and their crews placed at the disposal of the admiral. By the Army order he was empowered to fit out a third vessel; and the people of that portion of the Andalusian coast were directed to furnish supplies for the three ships at fair prices.

When the destination of Columbus was made known, the greatest consternation spread amongst the seamen of Palos and their friends. The stories of the awful terrors of the far-western Atlantic, which everybody believed, made the stoutest hearts of the mariners quail. Many of them fled to avoid the service, and for weeks no progress was made toward the equipment of the vessels. Finally Martin Alonzo Pinzon, and his brother, Vincent Yanez, navigators of Palos, of great wealth and well-known courage and ability, having ships and seamen in their employ, came forward and not only engaged to furnish one of the vessels, but to go themselves with Columbus on the perilous voyage, each as master of a ship Martin also agreed to furnish Columbus with the money to pay his promised one-eighth of the cost. These acts of the Pinzons had a powerful effect upon the people, soothing their fears and inspiring them with confidence and very soon three vessels - all that were required - were ready for sea. Two of them were no larger than our river and coast sailing vessels - without decks, pierced for oars to be used in calms, with each a forecabin, and a cabin in the high stern for the accommodation of the ship's company. The largest, which was fitted expressly for the expedition, was decked, and was named Santa Maria (or Holy Mary). She was the flag-ship of Columbus. One of the caravels was called the Pinta, and was commanded by Martin Alonzo Pinzon, who was accompanied by his brother, Francisco Martin, as pilot. The other caravel was the Nina, with lateen sails, and was commanded by Vincent Yanez Pinzon. There were three other pilots an inspector-general of the armament; also a native of Cordova, Diego de Avana, as chief alguazil, an officer corresponding in his functions

with our constable. Roderigo de Escobar was with Columbus as royal notary, an officer always sent with the armaments of the crown, as historian of the expedition. There were also a physician and surgeon, some private adventurers, servants, and ninety mariners; in all one hundred and twenty persons. After appropriate religious ceremonies in the Church of St. George in Palos had been performed, the expedition sailed on Friday the 3rd of August, 1492. On the 9th, the little flotilla reached the Canary Islands, where they were detained more than three weeks, and early in September they passed the western-most of the group, escaped some Portuguese caravels which had been sent out to intercept them, and sailed boldly toward the unknown. Columbus carried with him charts constructed on the basis of that which Toscanelli had formerly sent to him. Expecting to find the eastern coast of Asia, he also bore a letter from the Spanish sovereigns to the Grand Khan (Emperor) of Tartary, in whose service Marco Polo had been employed two hundred years before.

With wonderful endurance the three little vessels buffeted with the waves of the Atlantic. They encountered no heavy storms such as sometimes lash that sea into fury; nor did they observe any of the expected terrors of the trackless deep. Phenomena sometimes startled the mariners, and day after day they were agitated by alternate hopes and disappointments. The volcanic blaze of the peak of Teneriffe scared the sailors as it shot up behind them. When they were two hundred leagues or more westward of that peak, Columbus observed, for the first time in his life, a variation of the needle of his compass from a true line with the north star. It inclined five or six degrees to the northwest, and this variation increased as they sailed on with no sure guide but the stars. Very soon they encountered vast masses of sea-weeds, which retarded the vessels, and seemed like a green island hundreds of miles in extent floating on the bosom of the ocean. It was doubtless the mysterious Sargasso Sea, now so well known to mariners, and which probably gave rise to the legends concerning fertile islands in the Atlantic. Then they were cheered by the sight of a flying heron and a tropical bird which were harbingers of land. The sailors, who had been mutinous at times, were quieted by these promises of nature but when they seemed to be deceptive, the crews again became stormy and almost ungovernable. They reproached their sovereigns for trusting the ambitious Italian, who would sacrifice their lives to make himself a great lord and they resolved to retrace their course and seek the shores of Spain. With kind words, tempting promises of reward, and threats against the more mutinous, Columbus quelled the rising insurrection for the time.

For eleven days after leaving the Canary Islands, the ships had sailed before the easterly trade winds now gentle breezes came from the south-west, and often diminished into dead calms. At early twilight one evening, Martin Pinzon, standing on the high stem of the Pinta, and pointing toward the southwest, shouted to the admiral, "Land! land! senor; I claim my reward " - a pension promised by the sovereigns to the first man who should discover land. Believing the report to be true, Columbus knelt and returned thanks to God; and his own crew and that of the Pinta, sailing close by, joined with the commanders in repeating the Gloria in Excelsis. Alas! the apparition was only a cloud which vanished before the dawn.

Days passed on, and the sun each evening set in the waves. Martin Pinzon believed that a

more southerly course would be wiser, and he was confirmed in his opinion by seeing a flock of parrots flying toward the southwest. He advised Columbus to follow them, but the admiral kept on his due west course. The crews again became discontented and mutinous. They had lost all hope, and in their desperation they defied Columbus. With great dignity and calmness, and with the coolness of true courage, he said: "This expedition has been sent out by your sovereigns, and come what may I am determined, by the help of God, to accomplish the object of the voyage. "We will cast you into the sea and return to Spain," said the exasperated sailors and just at sunset, on the evening of the 11th of October, they were about to carry their threat into execution, when a coast-fish was seen to glide by; dolphins played near the surface; a branch of thorn with berries on it floated near, and a staff artificially carved, came upon the waters to testify of human habitations near. Such unmistakable signs of land close by hushed the voice of rebellion, and the tigers became as meek as lambs. After the vesper hymn to the Virgin had been sung at the close of twilight, as usual, Columbus addressed his crew in words of kindness and congratulation. Recounting the many blessings which they had received from God on the voyage, he assured them that a greater blessing was about to be bestowed upon them - that probably land would be seen in the morning. He enjoined them all to watch, and promised that to whosoever should first discover land should be given a doublet of velvet, in addition to the pension offered by the sovereigns.

Not an eye was closed. Eagerly every man watched far into the night. Columbus, sitting on the high poop of the Santa Maria, more eagerly than they, gazed upon the western horizon. At about ten o'clock he thought he saw the glimmer of a distant light. He called Gutierrez, gentleman of the king's bed-chamber, who was one of the private adventurers, and inquired whether he saw a light. "I do," said Gutierrez. Columbus then called Sanchez, another adventurer, and after a few minutes they all three saw it, gleaming like a torch in a fisherman's boat, rising and falling with the waves. At length, at two o'clock in the morning, whilst the vessels were continuing on their course, a gun fired on board the Pinta announced the joyful tidings that land had been seen. It was first observed by a mariner named Rodrigo de Triana, but, as Columbus had seen the lights several hours before, the award was given to the admiral. The land was clearly seen at a distance of about six miles. The vessels were laid to, and all waited impatiently for the dawn. When it came a beautiful picture was revealed. Wooded shores were in full view. The perfumes of flowers came upon the light land breeze. Birds in gorgeous plumage hovered around the vessels caroling morning hymns, which seemed like the voices of angels to the late despairing seamen. In spite of every difficulty and danger, Columbus had accomplished his object. "The great mystery of the ocean was revealed," says Mr. Irving. "His theory, which had been the scoff of sages, was triumphantly established he had secured to himself a glory as durable as the world itself."

At sunrise, Columbus and his companions landed in small boats. Many naked men and one woman, with skins of a dark copper color, who had watched the movements of the Europeans with mingled feelings of curiosity, wonder and awe, now fled in alarm to the deep shadows of the forest. The admiral, dressed in gold-embroidered scarlet cloth and bearing the royal standard, first stepped upon the shore. He was followed by the Pinzons, each carrying the white silk banner

of the expedition. It was pennon-shaped, emblazoned with a green cross, on one side of which was the letter F and on the other side the letter Y, the initials of Ferdinand and Isabella, and each was surmounted by a golden crown. When the officers and crews were all landed, the whole company knelt, kissed the earth, and with tears of joy filling their eyes, chanted the Te Deum Laudamus. Rising from the ground, Columbus displayed the royal standard, and drawing his sword, took possession of the land in the name of the sovereigns of Spain. To the island (for such it proved to be) he gave the name of San Salvador - Holy Saviour. His followers crowded around him with the most extravagant demonstrations of delight. Those who had been most insolent and mutinous were foremost in the utterance of vows of faithfulness thereafter. Each gladly took an oath of obedience to him as admiral and viceroy, and the representative of Ferdinand and Isabella. Now the triumph of Columbus was complete.

The native inhabitants had watched the approaching ships since the dawn with fear and awe, regarding them as monsters of the deep; and when they saw the white men come from them, dressed in gay colors, with shining lace and glittering armor, they supposed them to be superior beings who had come down from the skies. Each party was a wonder to the other. The naked people with dusky skins painted with a variety of colors and devices, the men without beards and both sexes having long black hair falling from their heads over their shoulders and bosoms in great profusion, were unlike any human beings of whom Columbus and his companions had ever heard. By degrees the alarm of the timid natives subsided, and they approached the Europeans giving and receiving signs of amity and good will. As the boats of the navigators moved along the shore, in an exploration of the coast of the island, the inhabitants of villages, men, women and children, ran to the beach, throwing themselves on the ground, and assuming attitudes of worship of the supposed celestial beings. They made signs for the Spaniards to land; and when they found that the boats kept on their way, many of them went into the sea and swam after them, and others followed in canoes. Believing that he was upon an island of Farther India, Columbus called these wild inhabitants Indians, a name which all the native tribes of America have since borne.

Chapter V

Columbus Discovers Cuba and San Domingo - Leaves a Colony on San Domingo - Their Conduct there - Columbus Returns to Spain - Unrighteous Ambition of Pinzon Defeated - Columbus Invited to the Court - His Brilliant Reception at Barcelona - His Audience with the Sovereigns - Columbus at the Feast Given by Cardinal Mendoza - He Makes Other Voyages and Discovers South America - He is Falsely Accused and Sent from San Domingo to Spain in Chains - Indignation of Isabella - Ingratitude and Injustice of Ferdinand - Columbus Dies in Poverty and Neglected - His Remains - A Monument to His Memory in Genoa.

THE native name of the island whereon Columbus landed was Guanahana. To the Spaniards and others it is yet San Salvador; but the English having given it the vulgar name of Cat Island, persist in calling it so. It lies about two hundred and fifty miles E.S.E. of the southern point of the peninsula of Florida, and is one of the larger of the Bahama group. After examining it, the admiral cruised among others of the same group, naming some of them. He also touched at outlying islands as he sailed southward, and on the 28th of October he saw the northern shores of Cuba. Entering a beautiful river, which he called San Salvador, he anchored, and in honor of Prince Juan (John), the son of Isabella, he named the great island Juana. But it has retained its native name of Cuba. He sailed northwesterly along its coast as far as the eastern entrance to Laguna de Moron, which was the nearest approach to the North American continent ever vouchsafed to Columbus. There he first saw a weed, the leaves of which the natives rolled into long slim packages, called tobacco, and smoked. It was the modern cigar. The Spaniards considered the habit a nauseous indulgence, and did not adopt it. They left to an Englishman, born fifty years afterward, the fame of introducing this use of tobacco to Europeans.

Columbus persuaded several of the native inhabitants of Cuba, of both sexes, to go with him to Spain, and at the middle of November he sailed in that direction. Head winds and rough weather caused him to return to Cuba. He signaled for the Pinzons to follow him. Martin Alonzo did not heed the order, and very soon the Pinta disappeared on the eastern horizon.

Early in December, Columbus saw the eastern end of Cuba, and a few days later, as he sailed toward Europe, the charming vision of beautiful Hayti, now St. or San Domingo, burst upon his sight. The country so much resembled Spain in its natural features, that he named it Hispaniola - Little Spain. On its shores he lingered with delight many days. He received an invitation from one of the leading caciques or native rulers to anchor his vessels near his residence, and whilst sailing along the coast for the purpose of casting anchor in the harbor of the friendly chief the Santa Maria was wrecked late on Christmas eve, in consequence of bad steering. Columbus and his crew took refuge on board the caravel Nina, commanded by Vincent Pinzon, where a matin hymn to the Virgin was chanted by the admiral and his followers in the morning twilight, and utterances of thanksgiving went up to God for their deliverance from great peril on that holy festival of the church. When the cacique heard of the disaster, he sent men and canoes in abundance to unload the vessel. It was soon done with willing hands, for a truly Christian spirit animated these pagans. "So loving, and tractable, and peaceable are these people," Columbus

wrote to Ferdinand and Isabella from Hispaniola afterward, that I declare to your majesties that there is not in this world a better nation or a better land. They love their neighbors as themselves. Their discourse is ever sweet and gentle, and accompanied with a smile."

Satan had entered that paradise. Many of the followers of Columbus asked permission to remain on the island. The Nina was crowded and, delighted with the idea of planting the germ of a Christian colony there, the admiral gave his consent. Of the wreck of the vessel they built a fort, which Columbus named La Navidad - the Nativity, in commemoration of their having escaped shipwreck on Christmas day. A fort What need had they of a fort among such a people Alas it was a sign of premeditated wickedness. Thirty-nine remained. Arana, the alguazil, was placed in command of them, and they were conjured by Columbus to act honestly and live united in good-fellowship. As soon as the admiral had departed, they broke every promise. Each, bent upon private gain and incited by a desire and expectation of acquiring great wealth in a short time, broke from the social tie and acted independently. The gentle natives were compelled to yield to their avarice and lust. The golden ornaments of the women were seized, and two or three of them were made wives by each of the Spaniards. Robbery and licentiousness marked every step in the career of these Europeans. They went to different parts of the island in search of reported treasures, and soon found an incarnation of retributive justice in the person of a fierce Carib chief who ruled much of Hayti, and who slew the Spaniards and burnt their fortress to ashes. These acts of the intruders were only the beginnings of similar performances, as the Spaniards colonized the West India Islands, and especially Hayti. These savage Christians made that Pagan Eden a wilderness and a land of unutterable woes, for the real Christian kindness of the so-called savages was requited by the most barbarous cruelty. Thousands of men, women, and children perished under the hardships imposed upon them as slave-workers in the fields and in mines, and many were made abject beasts of burden for the gain of their white conquerors.

Early in January, 1493, Columbus left La Navidad, in the Nina, and sailed for Spain. He soon saw the Pinta. The avaricious Pinzon had heard of a region of gold, from one of the natives, and with a desire to secure the treasure for himself he had deserted the admiral. He had returned to Hispaniola, and there heard of the shipwreck of the Santa Maria, but he did not go to the assistance of Columbus because it might interfere with his own selfish projects. The admiral would have cruised longer among the islands, but this conduct of Pinzon, and the fact that the latter had kidnaped four men and two girls for the purpose of selling them as slaves in Spain, had destroyed his confidence in that commander, and he determined to hurry home and rid himself of so undesirable a companion. The Nina's prow was turned toward Europe, and the Pinta followed.

The caravels encountered dead calms and fierce tempests on that winter voyage, and were separated. In one of these storms, Columbus, fearing the destruction of the vessels and with them the loss of all knowledge of his discoveries, placed a written narrative of his adventures in a sealed cask, and committed it to the waves. The sailors, in affright, vowed that they would if spared, attend mass in their shirts only at the first Christian church they should come to. That vow they performed at the Azores, which they reached in February. They were all saved. At dawn on the 4th of March, about eight weeks after she had left La Navidad, the Nina appeared off the rock of

Cintra at the mouth of the Tag us, in Portugal, and soon afterwards she was anchored in the waters of that river.

Columbus immediately sent a courier with a letter to Ferdinand and Isabella, in which he announced his great discovery. He also wrote a letter to John, King of Portugal, who was then at Valparaiso. That monarch sent a cavalier to Columbus with his congratulations and an invitation for the admiral to come to his court. Columbus went and was treated with distinguished attentions. A numerous train of cavaliers escorted him back to his ship. He stopped at a monastery on the way to visit John's queen, who had expressed a strong desire to see the great discoverer; and on the 13th of March he again put to sea. Two days later, at noon, the Nina entered the harbor of Palos, where the admiral was received with the greatest demonstrations of joy. It was then seven months and twelve days since he left that harbor for the regions of the unknown, and out of those mysterious regions he had brought the wonderful tidings of a new-found world.

On the evening of the same day, the Pinta sailed into the harbor of Palos. Martin Alonzo Pinzon, her commander, after she had been driven into the Bay of Biscay by a storm, had entered the port of Bayonne, and from thence had sent a letter to Ferdinand and Isabella recounting his adventures and the discoveries, hoping to gain for himself the prepossessions of the Spanish court. He also expected to be hailed at Palos with great acclamations, and to receive royal honors from his sovereigns, for he supposed Columbus was yet fighting the waves of the Atlantic, or was engulfed in their bosom. When, therefore, he saw the flag of the Nina fluttering in the breeze at Palos, and heard the praises of him whom he chose to regard as his rival, Pinzon, jealous, and fearing the admiral as his accuser, sought seclusion until the discoverer had left the port. And when an answer to his letter was received from the monarchs filled with reproaches, and forbidding him to appear at court, his heart died within him." Killed by disappointed ambition and mortified pride, the body of Martin Alonzo Pinzon was laid in the grave a few days after the reading of the royal epistle.

Columbus hastened to Seville, where he received a letter from the monarchs expressing their delight because of his great achievements, and inviting him to repair immediately to their court at Barcelona. The letter was addressed to Don Christopher Columbus, our admiral of the ocean sea, and viceroy and governor of the islands discovered in the Indies." To their presence the honored Italian hastened, taking with him six of the Indian: whom he had brought from Cuba - four young men and two beautiful maidens. Great preparations had been made for his reception, for his discoveries and the recent conquest of the Moors were regarded by the sovereigns as special indications of the favor of God. A procession was formed on a brilliant April day (such as may be seen only in Catalonia), composed of priests, nobles, and military men. In that procession, among the hidalgos, rode the admiral, richly dressed, the cynosure of every eye, preceded by music, soldiers, and brilliantly dressed Catalonian guards, and followed by the dusky natives of the West Indies. The latter wore handsomely embroidered white tunics, with jeweled bands around their heads bearing lofty plumes of gay colors, and golden circlets around their bare arms and legs. They carried birds of strange and brilliant plumage from the tropical islands. After them came the

crews of the vessels of the expedition, carrying a crown of gold sent by the friendly cacique of Hispaniola, and many curious things, such as images of stone rudely wrought a masque with eyes of gold a living alligator; palm branches with the fruit dried on them reed arrows winged with beautiful feathers, and a hundred other strange objects from those far-off lands. Over these waved the Green Cross banner which had floated over those mysterious islands of the sea; also the modest white banner of the admiral, bearing the arms which had been granted to him, namely, those of the Spanish kingdom quartered by a group of islands surrounded by billows, and inscribed with the words, in golden letters,

POR CASTILLA Y POR LEON, NUEVO MUNDO HALLO COLON: "For Castile and for Leon, Columbus has discovered a New World."

In a vast hall open to public view and access, two thrones had been erected under a rich canopy of brocade, and near them waved thirty Moorish banners captured at Granada and Malaga, trophies of the recent conquest. Seated upon these thrones, Ferdinand and Isabella waited the arrival of the discoverer. He entered among a crowd of brilliant Spanish knights, his tall and erect figure, his flowing gray hair and beard, his lofty bearing, his benignant aspect and his great deeds making him appear, as he really was, the noblest champion of them all. The sovereigns arose to receive him, when a murmur of applause burst from the lips of the haughty grandees present. The admiral net before the monarchs, when the queen bade him rise. He then asked permission to kiss the hands of Ferdinand and Isabella, who, after God, had most favored him. The boon was granted, when the admiral took his seat among the nobles, and with a clear and steady voice he recounted the chief incidents of his voyage, exhibited gold and spices, and of the productions of the country he had discovered, and then declared that all this was but the foreshadowing of greater marvels to be revealed. His words were listened to with the most profound interest. When they had ceased, the monarchs cast themselves upon their knees, and with tears coursing down their cheeks, thanked God for so great a messenger. The whole multitude followed their devout example. As they arose to their feet, the choir of the royal chapel chanted the Te Deum. Every voice in the great hall took up the words of that glorious hymn of praise, and it seemed, says Las Casas, as if in that hour, they communicated with celestial delights." The company were dismissed with the apostolic benediction by the Grand Cardinal of Spain, and the streets of Barcelona echoed and re-echoed with shouts of joy.

That Grand Cardinal of Spain, Gonzales de Mendoza, Archbishop of Toledo, who had hinted to a council that the theory of Columbus' was irreligious, was now among the first, after the monarchs, to honor him. He invited the admiral to a feast, at which were gathered some of the highest prelates and nobles of Catalonia. To the navigator he gave the seat of honor at the table, and other marks of superior distinction. These attentions to one who was so lately a poor Italian mariner excited the envy of some of the guests. A courtier present, moved by a narrow feeling of personal and national jealousy, asked the admiral whether he thought that in ease he had not discovered the Indies (which it was believed he had found), there were not men in Spain who would have been equal to the enterprise? Columbus immediately tool: an egg that was before him, and invited the courtier to make it stand on one of its ends. He could not. All the company

tried in vain to do it. Then the admiral struck the egg upon the table so as to flatten the end by a fracture and left it standing. "Any one could do that," cried the courtier. "After I have shown the way," replied the admiral. "Gentlemen," continued Columbus, "after I have shown a new way to India, nothing is easier than to follow." The courtier was answered.

After giving an account of his voyage and discoveries in a letter to Sanchez, the treasurer of Spain (which was printed), Columbus, at the request of the monarchs, immediately fitted out another expedition to continue his researches in the western seas. The harbor of Cadiz was very soon the scene of busy preparation, and late in September, 1493, the admiral left the bay with three large ships of heavy burden, and fourteen caravels, with fifteen hundred men. We will not follow him in his subsequent voyages in detail, for they have no special bearing on the history of our country. It is sufficient to say that he made three others from Spain, and that during the last but one, he discovered the continent of America. When he left Cadiz on his second voyage in the autumn of 1493, his good fortune seemed to forsake him. His followers were largely selfish adventurers who went out in search of gold and other treasures. Quarrels and mutinies followed disappointed expectations. The chief blame was laid upon the shoulders of the admiral, and he finally became a victim to the intrigues of vicious men, who, envious of his fame and dignities, sought continually to build up their own fortunes out of the ruins of his character.

Columbus sailed on his third voyage, at the close of May, 1498, with six ships, from the port of San Lucar de Barrameda, near the mouth of the Guadalquivir. Passing the Cape de Verde Islands, he proceeded toward the equator in a southwesterly direction, and then sailed due west with the trade winds, in search of a continent. Supposing Cuba to be a great cape of Asia, he believed that under the equator he would find not only the main land, but every production of nature in greater profusion, perfection, and preciousness, than elsewhere. He was not disappointed, for on the 1st of August he saw the continent, not of Asia, but of South America, near the mouth of the Orinoco River. That was not many days after Sebastian Cabot, an English navigator, discovered North America.

Columbus coasted for awhile near the shores of South America, and then, broken in health by his labors, anxieties and exposures, he sailed for his colony on Hispaniola. There he found everything in disorder; and in his efforts to bring order out of confusion, he so interfered with the selfish projects of leading adventurers there, that they determined to ruin him. Preferring malicious and false charges against him at the court of Spain, they induced the sovereigns to send out a commissioner to inquire into the causes of the difficulties. Francisco de Bobadilla was sent. He was as ambitious and as unscrupulous as any of the adventurers, and after deposing Columbus from the vice-royalty, he sent him in chains to Spain. Valleja, who was sent with the admiral as a sort of guard, and also the master of the caravel in which Columbus was conveyed, were grieved by this cruel treatment of the man whom they revered. They would have removed his irons, but Columbus would not allow them to do so. "No," he said proudly; their majesties commanded me by letter to submit to whatever Bobadilla should order in their name; by their authority he has put upon me these chains; I will wear them until they shall order them to be taken off, and I will preserve them afterwards as relics and memorials of the reward of my services." It was done. I

saw them always hanging in his cabinet," said his son and biographer, Fernando, "and he requested that when he died they might be buried with him."

When, after the arrival of the caravel at Cadiz, Isabella heard of the cruel treatment of Columbus, she was very indignant, and sent an order for his immediate restoration to liberty. The sovereigns wrote a letter to him couched in terms of affection and gratitude, expressing their grief because of his sufferings, and inviting him to the court. The people, too, were very indignant, and were loud in their denunciations of the treatment of such a benefactor of their country. When he arrived at Granada, in December, 1498, he was cordially received by the monarchs, who, disavowing the doings of Bobadilla as contrary to their instructions, promised that he should be dismissed from office. But the Spanish nobles, jealous of Columbus because he was evidently a royal favorite, persuaded the king who was dissatisfied with the apparent unproductiveness of the admiral's discoveries, not to reinstate him in the vice-royalty. Another was appointed in the place of Bobadilla. After experiencing neglect, and alternate hope and disappointment, for almost four years, whilst others were reaping the harvest of his seed-time, the admiral was entrusted with the command of a small expedition to find a passage through "the sea" now known as the Gulf of Mexico, into the Indian Ocean. He sailed with four caravels and one hundred and fifty men, early in May, 1502, and after much suffering, returned to Cadiz in November, 1504, sick and dejected. Nineteen days after his arrival, the good Queen Isabella died. She was one of the purest spirits that ever ruled over the destinies of a nation," says Mr. Irving. With her died the hopes of the admiral, for he knew how cold and calculating was the disposition of the king. That ungrateful monarch, after torturing the discoverer with the cold politeness and evasive promises for which he was noted, rejected the legal and equitable claims of Columbus to the dignities and emoluments of vice-royalty which had been secured to him by royal contract; and this great and good man, then about seventy years of age, who had given more real honor and glory to Spain than had the whole line of her kings or the families of her nobles, was allowed to pass the remnant of his days in comparative poverty and obscurity. "I have," Columbus once wrote, "no place to repair to excepting an inn, and often with nothing to pay for my sustenance." At length, when he was utterly prostrated, and hopeless of justice, death came to his relief at Valladolid on the 20th day of May, 1506, as he was uttering the words, "Lord, into thy hands I commit my spirit." His remains were put into the convent of San Francisco, where, for seven years, no stone or inscription marked the place of his burial. Then the ashamed king, when the navigator's bones were removed to a monastery in Seville, ordered a marble tomb to be placed over them with the inscription:

A CASTILLA Y A LEON, NUEVO MUNDO DIO COLON.

"To Castile and Leon, Columbus gave a New World." He "asked for bread and he gave him a stone." More indelibly than on brass or marble, is the truth of that inscription engraved on the memory of mankind.

Columbus died with full faith that although princes might neglect him and wicked men might defraud him, God and eternal justice would vindicate his honor and his fame, and that the world would pay to him the just homage due for his services. He also died in the belief that he had

discovered Farther India, and not an unknown continent; and such was the belief of all navigators and scientific men at that time.

In the year 1536, the remains of Columbus and of his son Diego, were taken to Hispaniola, and interred in the Cathedral at San Domingo. There they remained two hundred and sixty years, when, in 1796, they were conveyed with great pomp to Havana, in Cuba, where they now repose. A few years ago, a magnificent monument to the memory of Columbus, was erected in his native city of Genoa, in the center of one of its public squares, where it is surrounded by flowers and shrubbery. It is composed of Carrara marble, and is about forty feet in height. On four panels between four pedestals are represented, in relief sculpture, four great events in his life, namely, his Conference with the Council at Salamanca; the Landing in America; Presenting the Indians to Queen Isabella; and the Admiral in Chains. Upon each pedestal is a figure personifying respectively Navigation, History, Astronomy and Wisdom. On a round shaft which rises between these figures are sculptured in high relief the prows of ancient vessels. This shaft is surmounted by a slightly colossal statue of Columbus, resting his left hand on an anchor, whilst with his right hand he presents a naked Indian maiden, sitting modestly at his feet, holding in her hand a small cross upon which she is gazing intently, her head adorned with the plumage of birds. This figure represents America, and the faith of Columbus that the New World would receive the religion of Jesus Christ is indicated by the symbol of the Atonement.

In summing up the character of Columbus, Mr. Irving wrote: "In him were singularly combined the practical and the poetical. His mind had grasped all kinds of knowledge, whether procured by study or observation, which bore upon his theories impatient of the scanty alimment of the day, his impetuous ardor, as has been well observed, threw him into the study of the fathers of the church, the Arabian Jews, and the ancient geographers; while his daring but irregular genius, bursting from the limits of imperfect science, bore him to conclusions far beyond the intellectual vision of his contemporaries. If some of his conclusions were erroneous, they were at least ingenious and splendid. And their error resulted from the clouds which still hung over his peculiar path of enterprise. His own discoveries enlightened the ignorance of the age, guided conjecture to certainty, and dispelled that very darkness with which he had been obliged to struggle. It has been said that mercenary views mingled with the ambition of Columbus, and that his stipulations with the Spanish court were selfish and avaricious. The charge is inconsiderate and unjust. He aimed at dignity and wealth in the same lofty spirit in which he sought renown they were to be part and parcel of the achievement, and palpable evidence of its success they were to arise from the territories he should discover, and be commensurate in importance. No condition could be more just."

We have now traced, in brief outline, some of the principal causes which led to the discovery of America, and the chief events in the career of the great pioneer of such discovery. He demonstrated the fact that the earth is globular, and that fertile lands might be found by sailing westward from Europe across the Atlantic Ocean. Having discovered and pointed out the way to these lands, he retired, and other navigators and discoverers appeared upon the scene. The exploits of some of them, we will now consider.

Chapter VI

Henry the Seventh of England - He commissions the Cabots to Make Discoveries - Voyage and Discoveries of Sebastian Cabot - King Henry's Ambitious Designs - Cabot in Spain - Americus Vespuccius - His Pretended First Discovery of America - How, by Fraud, Our Continent was Called by His Name - The Pope's Gift of America to the Spanish Monarch - Voyages of Cortereal to Labrador and Their Results - Young Columbus in San Domingo - Discovery of Central America - Ponce de Leon's Search for the Fountain of Youth, and Discovery of Florida - Discovery of South Carolina - Cruel Treatment of Natives and Their Revenge - Attempts to Colonize Central America - The Spaniards in Cuba - Their Introduction to the Natives of that Island.

WHEN Columbus was about to leave Portugal for Spain, he sent his brother Bartholomew to England to ask assistance of the British monarch. The ship in which he sailed was robbed by pirates, but he reached England, where he appears to have lived several years. For reasons not made clear by the chroniclers, he did not apply to the monarch until about the time when his brother was on his first voyage of discovery. Henry the Seventh was then King of England. He was the first of the Tudor dynasty, of which queen Elizabeth, in whose honor our Virginia was named, was the last. He was an energetic and enlightened prince, and responded to Bartholomew's request promptly and generously. He sent him to Spain in search of his brother, and to invite him to the English court. At Paris, whilst he was on his way, the Italian heard the joyful news of the great discoveries by his brother, and of Christopher's return in triumph to Andalusia.

When King Henry heard of the marvelous success of Columbus, he felt a disappointment because he had failed to secure for his crown and country the renown and advantages which their assistance in the great achievement would have given. But he was not thereby discouraged nor deterred from assisting in further attempts at discovery, though such assistance was, at first, only a permission. By royal charter he gave to John Cabot (a Venetian merchant at Bristol), and his sons, in 1496, permission to explore any seas with five ships and as many seamen as they might choose to employ, at their own expense, to discover and occupy isles or countries of the heathen or infidels before unknown to Christians, accounting to the king for a fifth part of the profit upon their return to the port of Bristol. It was then the favorite theory of both church and state that all lands occupied by pagan or right belonged to Christians. There is no positive evidence that the Cabots took advantage of this privilege, or that any of them engaged in a voyage of discovery before the year 1498, when John Cabot was dead.

All Europe was then ringing with the fame of Columbus, and excited by the wildest stories of the marvelous discoveries by Spanish navigators. Maritime nations and seamen everywhere were crazed with a desire to be discoverers of new lands and to gather immense riches from glittering mines. Englishmen caught the infection, and their ambitious and avaricious monarch was as eager as any to wear such laurels as then graced the brows of Ferdinand and Isabella, and to hold the key of a vast treasure house. He was seeking to secure the land of a daughter of the Spanish

sovereigns for his eldest son Arthur, whose suit the cold King of Arragon repelled on pretexts of state policy. Piqued by this circumstance the proud Henry gladly promoted the English thirst for discovery, hoping by its results not only to gain riches and honor, but to either diminish the glory of his Spanish rival or win his favor by some splendid achievement in the new field of contest. So he listened with eager attention to a proposition of Sebastian, a young son of John Cabot, concerning a voyage of discovery.

Sebastian Cabot appears to have been an ardent student of geography and the kindred sciences, from early life. When he reached young manhood he was proficient in the theory and practice of the navigator's art. To him King Henry not only gave a commission to go on a voyage of discovery, but fitted out two small vessels for him, in the year 1498. The history of that event was given by Sebastian to the Pope's legate in Spain in a few quaint sentences. "When my father died," he said, "in that time when news were brought that Don Christopher Columbus, Genoese, had discovered the coast of India; whereof was great talk in all the court of King Henry the Seventh, who then reigned, insomuch that all men with great admiration affirmed it to be a thing more divine than human, to sail by the west into the east where spices grew, by a way that was never known before by this fame and report, there increased in my heart a great flame of desire to attempt some notable thing. And understanding by reason of the sphere, that if I should sail by way of the northwest, I should, by a shorter tract, come into India, I therefore caused the king to be advertised of my desire, who immediately commanded two caravels to be furnished, with all things appertaining to the voyage."

All accounts of that voyage are very meager, and most of them are some- what contradictory. Sebastian Cabot had probably sailed as far as Cape Farewell, in Greenland, on trading voyages in his father's ships, and knew of the cold, icy sea beyond. Now he voyaged in the same direction, hoping to make a passage to India during the warm summer time. Leaving Bristol in May, 1498, with the two caravels and a full supply of men, he sailed to the northwest until the ice pack in Davis' Straits barred the way. Turning southward, he discovered land late in June or early in July, which he named Prima Vista - First View. Whether this was the northern shores of Newfoundland, or the continent on the coast of Labrador, near Cape Charles, cannot be determined. Unlike Lief the Northman, who sailed southward after seeing the land, Cabot turned northward in search of a passage to Cathay, and followed the coast of the continent almost to the sixtieth degree of north latitude, when the ice would permit him to go no further. Although it was then about mid-summer, the weather was very cold and seeing no prospect of an open sea further northward, Cabot sailed back, discovered a large island which he called New-found-land - Newfoundland - and observed the immense numbers of codfishes which have continued to fill the waters there ever since. He divulged this secret to Europe after his return, and within five or six years thereafter fishermen from England, Brittany and Normandy were off Newfoundland gathering these treasures of the sea. Leaving Newfoundland, Cabot coasted as far as the shores of Maine, and some writers think no farther; but if the reports of his conversation with Butrigarius, the Pope's legate, be true, he went as far as the Carolinas. "There," he said to that functionary, "my victuals failing, I departed from thence and returned into England, where I found great tumults among the people and preparations for wars in Scotland, by reason whereof there

was no more consideration had to this voyage. Whereupon I went into Spain, to the Catholic king."

Henry was then struggling for his throne against righteous claimants. Ferdinand refused to give his daughter in marriage to Arthur whilst these claimants existed. The unscrupulous Tudor beheaded two of them in the tower, and eagerly depressed and despoiled the old nobility who were adherents of the fallen house of York, his rival. "These things caused the tumults among the people," mentioned by Cabot. "The king's eagerness to enrich himself by despoiling that old nobility; the agreement of Ferdinand to bestow his daughter Catharine upon Arthur, and the failure of Cabot to bring back gold from America, all caused the monarch to give no more consideration to this voyage." Prince Arthur died soon after the nuptials, and Catharine became the unfortunate wife of Henry VIII.

The discovery of North America, by young Cabot, then only twenty-one years of age, had conferred more immortal honor upon the English monarch and the English nation, than all the royal affiliations and the heaping up of gold. He was a native of England, and had opened a pathway for his countrymen to a new continent. But he was neglected by his king, and he finally went into the service of the Spanish sovereign whose daughter was then the wife of the monarch of England. On the death of Ferdinand, he was so annoyed by the jealousies of the Spanish nobles, that he returned to his native country, and not long afterward we find him on another voyage in search of a northwest passage to the Indian Seas. He penetrated to Hudson's Bay, and after fighting the ice-pack there, he returned to England discomfited, and never made another voyage to the coasts of North America. The successor of Ferdinand invited him back to Spain, and made him chief pilot of the realm. After several voyages, in one of which he made researches along the southeastern coast of South America, he, in his old age, resigned his office into the hands of the Spanish monarch, and returned to his native land. There he was highly honored and liberally pensioned by the "boy-king," Edward the Sixth. Queen Mary, whose husband was a son of the Spanish monarch whose third invitation to return to Spain was rejected by Cabot, neglected the eminent navigator, and he was allowed to die in comparative poverty, in the town of his birth (Bristol) [Venice], when he was eighty years of age. His happy temperament, which made him always cheerful, was displayed the year before his death, when he danced at an assembly of young seamen with all the vivacity of youth.

The name of Americus Vespuccius or Amerigo Vespucci, as the Spaniards call him, appears prominent in history as one of the discoverers of America. He has no valid title to that distinction. Proofs accumulate as investigations proceed, which show conclusively that he was the author or abettor of a stupendous historical fraud by which Columbus was cheated out of the honor of having his name given to this continent.

Vespuccius first appears in history as a mercantile agent of the Medici family of Florence, first in Barcelona and soon afterward in Seville, in Spain. He was then about forty years of age, having been born in Florence in 1451. In Seville he was actively engaged in furnishing supplies for ships fitting out for exploring and mercantile expeditions. In that capacity he had much

personal intercourse with Columbus, whilst the admiral was preparing the large fleet for his second voyage. The narratives of the great Genoese inspired Vespuccius with a strong desire to make a mercantile venture in a voyage to the new-found world, and he had ambitious dreams of becoming a discoverer likewise. He studied geography and the kindred sciences, to fit himself for such an expedition; and when, in May, 1499, Alonzo de Ojedo sailed from Port St. Mary, opposite Cadiz, with four ships, following the southern route of Columbus to South America, Vespuccius accompanied him simply as an adventurer and self-constituted geographer. They discovered mountains in South America, when off the coast of Surinam, and then ran along the continent to the island of Trinidad, which Columbus had named the year before. Thence they cruised along the coasts and islands of Venezuela, and crossing the Caribbean Sea, touched at Hispaniola. Proceeding towards Spain, they engaged in kidnaping the natives of the Antilles, and in June, 1500, entered the port of Cadiz, the four vessels crowded with captives who were sold as slaves to the Spanish grandees.

Vespuccius, who seems to have been a shrewd, audacious, and unscrupulous man, immediately sent an account of the discoveries, in a letter, to one of the Medici family, assuming for himself the credit of that discovery and in order to establish his claim to first discoverer of the American continent, he antedated the time of the commencement of the voyage, making it in 1497, the year before Columbus and Cabot made their respective discoveries, and saying that the expedition was absent from Spain twenty-five months. To this statement, the learned and conscientious Charlevoix says: "Ojeda, when judicially interrogated, gave the lie direct." Herrera, an early Spanish historian, accuses Vespuccius of "falsifying the dates of two voyages in which he was engaged, and of confounding the one with the other, in order that he might arrogate to himself the glory of having discovered the continent."

Vespuccius in other letters, told of other voyages and great discoveries which he had made whilst in the service of the King of Portugal, but contemporary navigators and chroniclers made no mention of them. They were probably fictions of the boastful Florentine who had become expert in the construction of charts, and was familiar with the details of the numerous exploring voyages made from Spain and Portugal in his day. Finally, when Columbus was dead and no voice of accusation or denial could escape his lips, these letters of Vespuccius, giving an account of his pretended voyages and discoveries, were published at St. Diey, in Lorraine, and dedicated to the reigning duke of that country, which was then, as now, a German province. In that publication the name of America, as applied to our continent, was used. For this Vespuccius is responsible. It is possible that the letters themselves were forgeries, and that Vespuccius was not blameable for their publication; but he became an abettor in the fraud by not repudiating them. They were published in 1507, the year after the death of Columbus and four years before that of the Florentine.

That Vespuccius is responsible for the fraud involved in giving his name to the newly-discovered continent, seems clear from other circumstances. He was in communication with a learned German schoolmaster and cosmographer, named Woldseemuler, who pedantically transformed his name (Wood-lake-miller) into the Greek one of Hylacomylus. He was a

correspondent of the Academy of Cosmography which the Duke of Lorraine had established at Strasburg, and at the request or suggestion of Vespuccius he proposed to the members of that academy, under whose auspices the letters of Americus were published, the name of America for the western continent. At about the same time Hylacomylus issued at St. Diey a little work entitled "Cosmographie Rudimenta," in which it was proposed to name the continent America. He took an active part in the publication of the letters of his friend, and he may be regarded as the chief perpetrator of the fraud with Vespuccius as the accessory, at least, because he sanctioned it by his silence. "Considering the intimacy of the two parties," says the learned Viscount Santarem, "there is no doubt that the geographer was guided by the navigator in what he did." Referring to the honor so conferred on Americus Vespuccius, the late Dr. Francis Lieber wrote to the author of this history: "Ethically speaking, there has never been erected a monument so magnificent, enduring and cruelly unjust; as if the Madonna di Sisto were not called by Raphael's name but by that of the man who framed it first." It is probably too late now, after centuries of use, to correct the injustice by changing the name of America. Washington, with his usual clear conception of right, did justice to Columbus by giving to the territory in which the seat of our national government was permanently established, the name of the District of Columbia. Although Cabot probably discovered the continent a few days before Columbus touched the shores of South America, he is not entitled to the honor of giving his name to our continent. Voltaire justly declared: "The glory of having discovered the New World undoubtedly belongs to him who had the genius and courage to undertake the first voyage." Newton observed: "Those who follow are only disciples." Cabot was a noble disciple.

Many other voyages in search of new lands and great treasures, which were made from Spain at the beginning of the sixteenth century, had no immediate relation to the history of our country, and we will pass them by unnoticed. Others had a direct or indirect connection with further discoveries and final settlements in this region of the world, and these we will consider.

When the discoveries of Columbus were made known, the King of Portugal felt a strong desire to send out a similar expedition at the expense of the crown. But the Spanish monarchs had, with wise sagacity, obtained from Pope Alexander the Sixth (the pontiff who, by accident, took a fatal draught from a poisoned bowl which he had prepared for another), the gift of all lands that lay three hundred leagues westward of the Azores and the Portuguese sovereign dared not interfere with these rights of Spain. But when the news of Cabot's discovery of a continent in the northwest, reached Lisbon, King Emanuel the Great, immediately fitted out two caravels for a voyage toward that continent, and placed them under the command of Gaspar Cortereal. He was a gentleman of enterprising and determined character, who had been reared in the household of the Portuguese monarch, and ardently thirsted for glory. He first touched the northern extremity of Newfoundland, and, it is believed, discovered the Gulf of St. Lawrence. He went up the coast of Labrador almost to Hudson's Bay, discovering nothing of importance not already seen by Cabot. The natives appeared to him rugged and strong, and capital subjects for slaves so he seized fifty-nine of them, carried them on board his vessels, and with this living treasure he returned to Portugal. There he made a profitable sale of his captives. "They are extremely fitted to endure labor," wrote the Venetian ambassador at the Portuguese court, "and will probably turn out the

best slaves which have been discovered up to this time."

The profits of this voyage excited the cupidity of Cortereal and his king, and they determined to engage in an active slave-trade with Laborador (Labrador), so named because of the admirable qualities of the natives as laborers. Cortereal went on a second voyage in 1501, and was lost at sea. His brother Michael went in search of him and was never heard of afterward. The king sent a ship to search for the brothers, but no tidings of them were brought back. These disasters frustrated the cruel designs of the slave-traders, and the Portuguese monarch sought to win glory for his favorite and his crown, by claiming that Cortereal was not only the first discoverer of Newfoundland, but that he was the first to see the continent in that region. In a Portuguese map published in 1508, the coast of Labrador is called Terra Corterealis or Cortereal's Land and in support of the claim that he was the first discoverer of it, maps were actually forged. But all efforts to deprive Cabot of that honor failed.

The new-found continent at once became an object of great interest and attraction to adventurers of every kind, and a thirst for gold occasioned the fitting out of expeditions for further discoveries on the coasts of the main north and west of Hispaniola. That island, where the first Spanish settlements were made, became the center of operations in the seas around, and on the coasts of the adjacent main after its complete subjection to Castilian rule. Don Diego Columbus, the son and successor of the admiral, was appointed governor, and there, with pomp and ceremony, he and his vice-queen held a sort of court which spread a halo of romance around that West Indian empire. Diego had married a daughter of the renowned Duke of Alva, and in June, 1509, had sailed from San Lucar with his wife, his brother Don Fernando who had grown to manhood and was well educated, and his two uncles. They were accompanied by a numerous retinue of cavaliers with their wives, and young ladies of rank and family who were more distinguished for high blood than riches. The latter were adventurers also - sent out to find rich husbands among the settlers in Hispaniola. They were successful, for all of them were soon married to the wealthiest colonists, and refined the rude manners which prevailed among them.

Not long after Diego's arrival Juan Ponce, commonly known as Ponce de Leon, who had borne a conspicuous part in the subjugation of Hispaniola, as a military commander, was appointed by the king governor of Porto Rico, a large island east of Hayti. Distinguished in the wars with the Moors, and a companion of Columbus in his second voyage, Juan Ponce was regarded with reverence by many, for his locks were white with age, and he had a noble Castilian lineage. He was then an old man animated with the ambitions of youth and he was still seeking renown and wealth. The enjoyment of life had ever been an exquisite pleasure to him, and his desire to prolong his earthly existence in vigor was intense. That desire made him readily believe the marvelous tales told by some of the natives, of crystal waters flowing from living springs among the Bahama Islands, or on the coast of a beautiful country near them, in which he who bathed would be instantly endowed with immortal youth and great beauty. They told him that these fountains of youth were among magnificent trees which bore golden fruit, where the air was perpetually laden with the most exquisite perfume of flowers, and that these fruits were gathered and given to strangers by beautiful maidens. Here was the old story of the Gardens of the

Hesperides in another form, which Hesiod said lay beyond the bright ocean." Ponce dreamed of these gardens, their fountains, their golden fruit and the beautiful maidens, until he could no longer repress his desire to go in search of them. So, at the beginning of spring in 1512 - a month after Vespuccius expired at Seville - he sailed from Porto Rico for the Bahamas, with ships fitted out at his own expense. On reaching the group, he went from island to island tasting of and bathing in every stream and lake that met his vision. Finally, disappointed but not disheartened, he extended his researches in a northwesterly direction. A few days afterwards, west winds brought the delicious perfumes of flowers. The heart of the old cavalier leaped with joy and hope. Soon a long line of wooded shores were in view, and as he drew near, Ponce saw lofty trees (magnolias) whose marvelous blossoms were tinting the forest, and burdening the air with their delicate fragrance. He believed he was on the borders of the fabled paradise.

It was Easter morning when Ponce and his companions landed near the site of St. Augustine, on the southeastern borders of our Republic. After he and his followers had chanted a joyous hymn commemorative of the resurrection of Jesus, he took possession of the great island, as he supposed it to be, in the name of the sovereign of Castile. Because of its wealth of flowers, some say, or because he first saw the land on Palm Sunday (Pascua Florida), as others tell us, he gave to the country the name of Florida, now one of the States of our Union. Among its forests and savannahs he sought in vain for the miraculous Fountain of Youth and Beauty, exciting the suspicions of the natives. Then he cruised along its shores, doubled Cape Canaveral, and struggling with the Gulf Stream, sailed southward until he became entangled in a group of small islands abounding with huge turtles. This group he called the Tortugas - the Turtles - their present name. On another group he discovered only a single inhabitant - an old Indian woman - who was not a realization of his dream of beautiful maidens in the gardens of the Hesperides. He took the wrinkled hermitess with him, hoping that she might tell him where among the Bahamas he should find the Bimini, the beautiful island with the miraculous fountain. After buffeting the elements for several days, Ponce transferred the old woman to the ship of Ortubia, one of his trusted captains, who was instructed to pursue the search. Then he returned to Porto Rico, an older if not a wiser man. He had not secured for himself immortal youth, but he had won the immortal honor of being the discoverer of Florida, a part of the North American continent before unknown.

Ortubia soon arrived at Porto Rico. The old woman had guided him to Bimini, where he found beautiful groves and sparkling springs and limpid streams, but not one of the waters could restore to an old man the vernal greenness of his youth. So Ponce turned his thoughts to more practical subjects. Returning to Spain a few months later, he told the sovereigns of the beautiful land he had discovered, and received the appointment of Governor of Florida on condition that he should plant a colony there. This was not attempted until several years afterward. He had been moping in disappointment at Porto Rico, after an unsuccessful expedition against the Caribs, until he was assured that Florida was not an island, but a part of the continent. Then ambitious desires moved his sluggish heart, and the brilliant achievements of Cortez in the west, aroused the slumbering energies of the old cavalier. With nearly all of his wealth in two ships, he sailed from Porto Rico in 1521, and landed on the shores of Florida, not far from where he had first

discovered that land, to prepare for founding a colony there. He was met by a crowd of natives who had gathered near the beach with bows and arrows and long javelins, to defend their land from the intrusion of the pale faces, for they had lately been taught, by the bitter experience of their neighbors, to look upon them as children of the Evil Spirit. A sharp battle ensued. Several of the Spaniards were killed, and Ponce de Leon, badly wounded in his thigh, was carried on board his ship and conveyed to Cuba., where he died. Upon his tomb was written the following inscription, in Latin:

IN THIS SEPULCHER REST THE BONES OF A MAN WHO WAS LION BY NAME
AND STILL MORE BY NATURE.

Meanwhile, the avarice of the Spaniards in Hayti had been greatly excited by the reports of a mariner who had accidentally visited the coast near the entrance to the Savannah River, where the natives presented him with gold and pearls. He also represented the masculine natives as athletic and fine looking. A commercial company was soon formed in Hayti to visit that country to obtain gold and slaves. Luke Vasquez D'Allyon, a wealthy colonist who owned extensive mines in Hayti, was at the head of the company. His chief object in the movement was to obtain slaves to work in his mines, for cruelty had almost exterminated the native men of the island. With two ships he sailed in a northwesterly direction in the year 1520, and arrived on the coast of South Carolina through St. Helen's Sound. The natives, believing the ships were sea-monsters, crowded the shores in wonderment. When they saw clothed and bearded men come out of them, they fled to the woods in alarm. Two of them were caught and carried on board D'Allyon's ship, where they were feasted, dressed in Spanish costume, and sent back. Their appearance so pleased their sachem, that he sent fifty of his subjects to the vessels with fruits and provisions. When the Spaniards took long excursions through the forests, he sent men with them as guides and servants. In some of these excursions they were presented with gold and silver, and pearls; and they were everywhere entertained with the kindest hospitality. They were rudely feasted and were as rudely serenaded with the music of the pipe and drum. Dancing-girls afforded amusement for them, and they departed with pontifical blessings from the dwellings of chiefs and sachems.

Having fully "spied out the land" of this simple people, and being ready for departure, D'Allyon invited a large number of the native men to a feast on his ships, and to engage in traffic. Having finished the trade, they were invited below, where they were well fed, and filled with strong wine. When all were made stupid by intoxication, the hatches of the ships were closed and the deluded men were carried away captive. Many died from vexation and starvation, for they refused to take food. One of the ships was foundered at sea, and Spaniards and captives were all lost. The less fortunate captives were taken to Hayti, where D'Allyon, deaf to the voices of mercy, humanity and justice, made them slaves. The story of this perfidy and wickedness spread rapidly from lip to lip along the coast, even so far as the region of St. Augustine, and it aroused the natives to those acts of defense and revenge, which resulted in the wounding of Juan Ponce de Leon, and the expulsion of his followers from the land, the next year.

Instead of being punished for his crime against mankind, D'Allyon was rewarded as a

discoverer of new lands, when he visited the court of Spain soon afterwards. He was also appointed chief magistrate of the province of Chicora, as the native South Carolinians called their country; and he was vested with authority to plant a colony there. Under this commission he fitted out three ships at Hayti, and with the mariner Miruela, who first saw the coast near the mouth of the Savannah River, he sailed for Chicora, and passing through St. Helen's Sound reached the continent near the mouth of the Combahee. There he opened traffic with the natives, who seemed to be indifferent to his crime, and when he had finished trading he proceeded to plant his colony on an island in the waters of Port Royal Sound, near the site of the present town of Beaufort, South Carolina.

A part of D'Allyon's company had landed and prepared to lay the foundation of a town, when a deputation came from the sachem of the Combahee and invited the Spaniards to a great feast at his village at the mouth of that river. About two hundred of them went to the banquet, and were treated with the most friendly hospitalities. For three days and three nights the feast went on, and at the end of it, whilst the guests were soundly sleeping, the Indians fell upon and massacred the whole of them. They had fully matched the treachery of the pale-faces, but they were not satisfied. Hastening to the site of the projected town, they slew many there. Some of the Spaniards escaped to the ships. Among them was D'Allyon, who, badly wounded, died soon afterward. Retributive justice had overtaken him on the theater of his great crime. So perished the first germ of a settlement of Europeans that was planted in the soil of our present domain.

In the meantime, the Spaniards had been making explorations and conquests westward of Hispaniola or Hayti. In the year 1502, as we have already observed, Columbus had sailed from Cadiz with four ships, to search for a passage to the Indian Seas through the Gulf of Mexico, accompanied by his brother Bartholomew and his young son Fernando. He arrived in the Caribbean Sea in June and soon afterward he discovered the coast of Central America, which he explored from the Isthmus of Darien far up the shores of Nicaragua.

The region of Central America King Ferdinand divided into two provinces, in 1509, and prepared to plant colonies there. One of these provinces he placed under the command of the navigator Ojeda, and the other under Diego de Nicuesa. Late in the autumn Ojeda sailed from Hayti, accompanied by Pizarro, who afterward became the energetic and cruel conqueror of Peru. Hernando Cortez, who was afterward the savage conqueror of Mexico, would have sailed with Ojeda, had not a violently inflamed eye prevented. Ojeda was also accompanied by some friars whose chief business at the outset seems to have been the reading aloud to the natives, in the Latin language, a proclamation by the Spanish leader which had been prepared by learned divines in Spain. It declared that God who made them all, had given in charge of one man, named Saint Peter, who had his seat at Rome, all the nations of the earth with all the lands and seas on the globe; that his successors at Rome called Popes, were endowed in the same way by God; that one of them had given to the Spanish monarchs all the islands and continents in the Western Ocean that all natives yet found had given cheerful submission to whatever the soldiers and priests required of them, and that the natives of the land before him were expected to do the same. In the event of their willing submission, he promised them many favors. "If you do not this," he said, "or

wickedly and intentionally delay to do so, I certify to you, that, by the aid of God, I will powerfully invade and make war upon you in all parts and modes that I can, and will subdue you to the yoke and obedience of the Church and his majesty; and I will take your wives and children and make slaves of them, and sell them as such, and dispose of them as his majesty may command; and I will take your effects, and will do you all the harm and injury in my power, as vassals who will not obey or receive their sovereign, and who resist and oppose him. And I protest that the deaths and disasters which may in this manner be occasioned, will be the fault of yourselves, and not of his majesty, nor of me, nor of these cavaliers who accompany me."

This infamous proclamation which justified murder and robbery under the sanction of that religion the chief attributes of which are justice, benevolence and mercy, was adopted as the formula, and indicated the spirit of the Spanish invaders of America afterwards. Although read aloud by the friars, the pagans could not understand a word of it. The Christians did not expect them to understand it. Their offices were fulfilled when the Latin words had gone into the ears of their dusky listeners. The consequences must be borne by the wondering heathen!

Delay in making a willing submission was speedily followed by violence. The natives were attacked by the intruders and some of them were killed. Some were sent captive to the ships. Ojeda, apprehending no danger, permitted his followers who were on shore to roam in quest of booty. He was mistaken. The outraged Indians gathered stealthily and attacked the Spaniards furiously with poisoned arrows. Ojeda and a few soldiers took refuge in a small cabin, where all but himself were slain. He was a small man and found shelter from a shower of arrows under his buckler for awhile, when he sprang from his covert like a tiger and, cutting his way through the multitude uninjured, he found shelter and concealment among the matted roots of mango trees at the wooded base of a mountain. There he was found by his followers, almost dead with fatigue and hunger, and was carried to his ship.

At this juncture Nicuesa appeared with his squadron. The two governors soon agreed upon a plan of operations. Four hundred men and some horses were landed, and all started for the village of the Indians, which they desolated with fire and sword. No quarter was given to age or sex. Men, women and children were slain with weapons or perished in the burning cabins. Having gathered much spoil, the governors parted, Nicuesa for his prescribed province, and Ojeda for another part of his, for he would not attempt to plant a colony on the scene of his disaster.

The wants of his followers caused Ojeda to sail for Hayti for supplies. His crew rebelled and put him in irons, but when a great storm arose, they released him for the sake of mutual safety. The vessel stranded on the southern shores of Cuba which was then under native rule, and a place of refuge for the unhappy inhabitants of Hispaniola. The shipwrecked mariners suffered dreadfully in morasses, and more than half of them perished. They feared the natives and tried to avoid them but hunger made the survivors bold, and a part of them, led by Ojeda, followed a path into an Indian village. The pagans there treated the suffering Christians with the most tender care and unstinted hospitality. The cacique sent men with provisions to hunt up survivors in the morasses; and when Ojeda departed, he sent guides and servants to conduct the Spaniard and his

companions to a part of the island nearest Jamaica, on which his countrymen had lately settled. To that island Ojeda was taken, and thence to Hispaniola, where he died. At his own request his body was buried at the portal of the Cathedral of San Francisco. He chose that spot that every one who passed the portal might tread upon his grave." So he sought to expiate his crimes by such post-mortem or after-death humiliation.

The natural kindness of the Cubans was requited the following year (1516) in the usual way. The Spaniards of Hayti, inflamed by Ojeda's account of the wealth of Cuba, conquered it, and there established the horrid social and political system which had made Hispaniola a land of mourning for its native inhabitants. The pious Ojeda had planted a germ of the Church in Cuba, and so gave the pagans there, as he believed, an equivalent for any disabilities which they might suffer under Spanish rule. In his distress he had made a vow to the Virgin, that if she should deliver him from the great peril, he would build a chapel in the first Indian village he might find, and over its altar place a precious little Flemish painting of the Sacred Mother, which he carried with him, and leave it there. He did so. The character and attributes of the Virgin, as the mother of God who rules the universe, he explained to the simple-minded cacique and his people, who, at the outset, were taught to revere the picture as a blessing from the skies. They kept the chapel swept clean made votive offerings; composed couplets to the Virgin and sang them with accompaniments of instrumental music, as they danced in the groves around the sacred place; and in other similar ways they commended themselves to their pious conquerors as hopeful converts to Christianity. So it was that the Christian religion was introduced into Cuba nearly four centuries ago.

Chapter VII

The Spaniards on the Isthmus of Darien - Their Cruel Treatment of the Natives - Story of the Discovery of the Pacific Ocean, by Vasco Nunez de Balboa - He Takes Possession of it in the Name of the Spanish Monarchs - Tidings of Peru - Death of Nunez - Cuba Conquered - Hernando Cortez - Story of the Conquest of Mexico - Capture of its Capital - Destruction of Idols - Attempted Conquest of Florida by Narvaez - Dreadful Sufferings of that Leader and His Followers - Their Destruction.

THE Pacific Ocean, whose waters lave the western shores of our Republic along a distance, as a bird flies, of sixteen degrees of latitude, from San Diego on the south to Cape Flattery on the north, was discovered by one of the Spanish adventurers who accompanied the expedition under Nicuessa, to the coasts of Central America. That discoverer was Vasco Nunez de Balboa, an active and energetic young man of noble lineage but of small fortune, who crossed the Atlantic to the West Indies in search of wealth, in the year 1501. On Hispaniola he had acquired a moderate competence, but having fallen in debt, he escaped his creditors by being carried in a cask (supposed to contain provisions) on board a ship commanded by the Bachelor Enciso, one of Nicuessa's lieutenants. When the vessel was fairly out at sea, Nunez came from his cask. Enciso, astonished, and angry because of the deception, threatened to leave him on the first uninhabited island they should discover, but Nunez succeeded in pacifying his commander and gaining his friendship.

At Carthagina, Enciso was joined by Pizarro, who had been left by Ojeda in charge of the remnant of his colony. With that remnant, much wasted by sickness, hunger, and the arrows of the natives, he was making his way back to Hispaniola, in a brigantine. He was persuaded by Enciso to remain and return with him in the place of Pizarro's departure. They were about to weigh anchor when they heard of a province called Zenu, lying at the westward, whose mountains they were told abounded with the precious metals, and where there was an ancient cemetery in which, for centuries, the Indians had been buried with all their golden ornaments. Enciso determined to hasten to that country, dig treasures from the mountains and sack the sepulchres, for he felt no compunction at the idea of rifling the graves of pagans. The whole expedition sailed for the coast of Zenu, where they were met by two caciques and many armed followers, who opposed the invasion of the Spaniards. Then Enciso caused the formula used by Ojeda to be read and interpreted to the caciques, expounding the nature of God, the supremacy of the Pope and the light of Roman Catholic sovereigns to all the lands by virtue of a grant from the occupant of the papal chair at Rome. The caciques courteously listened to the Spaniards, and then one of them said: "No doubt there is only one God, but the Pope must have been drunk to give away what was not his own, and the King of Spain must have been crazy to ask from him what belonged to others. We are lords of these lands and want no other sovereign, and if this king should come to take possession, we would cut off his head and put it on a pole."

Enciso attacked and defeated the Indians, but in rifling the tombs of their ancestors, he did not find sufficient treasure to assuage his grief at the loss of two of his men who had perished by

poisoned arrows. He now proceeded to the seat of Ojeda's colony, where he found the fort and cabins erected there in ruins. Nunez, who had been there before, with another adventurer guided Enciso to a village on the bank of a river which the natives called Darien, and there the seat of government was established, after expelling the natives. Discontents soon arose among the Spaniards, and Nunez taking advantage of them, succeeded in having Enciso deposed and himself made chief magistrate. When Nicuessa came to assume chief command, the colonists, under the influence of Nunez, refused their allegiance to him, and the usurper became governor. He expelled Nicuessa from the country, who, with a few followers, embarked by vessel for Hispaniola, and were never heard of afterwards. Enciso, seeing no chance for the recovery of his power whilst the energetic usurper lived, returned to Spain with feelings of revenge.

Nunez was soon joined by two Spaniards who, to avoid punishment, had fled from Nicuessa's ship and found refuge and the kindest treatment with Careta, the cacique of Coyba. They requited this hospitality of the pagan chief by advising Nunez to attack Careta in his dwelling, where he would find immense booty. The governor prepared to do so. One of the Spaniards returned to Careta to assist Nunez in his betrayal, and the (the as guide to the invaders. Nunez was kindly received by the cacique and his people, and departed with presents. He halted a little way from the village, and when the Indians were all asleep, he led his men into the town at midnight and made Careta, his wives and children and many of his people captives. With them and a considerable booty, the treacherous Nunez returned to Darien, when the good cacique, distressed at his situation, said: "What have I done to thee that thou shouldst treat me thus cruelly? None of thy people ever came to my land that were not fed, and sheltered, and treated with loving-kindness. When thou camest to my dwelling did I meet thee with a javelin in my hand and welcome thee as a brother? Did I not set meat and drink before thee? Set me free, therefore, with my family and people, and we will remain thy friends. We will supply thee with provisions, and reveal to thee the riches of the land. Dost thou doubt my faith? Behold my daughter! I give her to thee as a pledge of my friendship. Take her for thy wife, and be assured of the fidelity of her family and her people."

Careta's daughter was young and beautiful. Nunez was deeply impressed by her charms. He granted the prayer of Careta, took his daughter to be his wife according to the usages of her country, and becoming very fond of her, she soon acquired great influence over him. He assisted Careta in wars against his enemies, and they became fast friends. Whilst visiting a powerful cacique, a friendly neighbor of Careta, Nunez was told by the son of that chief that beyond the mountains toward which he pointed: was a mighty sea that could be discovered from the summits of the great hills; that the sea was navigated by vessels almost as large as the Spanish brigantines and equipped like them with sails and oars; that the rivers which flowed down from the southern slopes of the mountains abounded with gold, and that there was a country further southward, bordering on that great sea, where the kings ate and drank out of golden vessels, and that gold was as plentiful there as iron was among the Spaniards.

This information seemed like a revelation from heaven beaming into the mind of Nunez. He felt a sudden impulse to abandon his wayward life, and an ambition to be ranked among the great

discoverers of his age. If he could first see that mighty ocean and the precious rivers and the country where its kings ate and drank out of golden vessels, he would surely be elevated to fame and fortune. He eagerly inquired how the summits of the mountains and the borders of that sea might be reached. "You will have to fight your way to the top and down their slopes, and through the plains beyond, with powerful caciques and brave warriors," said the young man. "You will need at least a thousand men, armed like those who follow you."

Nunez hastened back to Darien to make preparations for his journey. His thoughts were wholly occupied with plans for the discovery of the great sea beyond the mountains. He pondered the subject when awake and it gave color and shape to his night-dreams. With gold of the value of fifteen thousand crowns which he sent to Don Diego Columbus, in Hispaniola, to be forwarded to the king as the royal share of the winnings in Central America, he sent an appeal to that officer for aid in men and provisions, to enable Nunez to fight his way across the isthmus. Whilst awaiting an answer he made several expeditions from Darien, and everywhere he heard the story of the great sea beyond the mountains. Finally, one hundred and fifty armed men, with ample supplies, arrived at Darien from Hispaniola, and Nunez determined to march for the mountain summits. With one hundred and ninety men and a number of bloodhounds, he made his way to Coyba, where Careta furnished him with guides and Indian warriors and on the 6th of September, 1513, the expedition set off for the great hills which loomed up in the southern horizon. They fought their way victoriously, spreading terror among the natives by their guns, which, to the Indians, seemed like demons vomiting lightning and thunder.

At ten o'clock in the morning of the 26th of September, Nunez and his followers emerged from a thick forest high up in the mountain range. Only sixty-seven of his Spanish soldiers now remained, who were able to climb that rugged height. The bald rocky summit alone remained to be ascended. Commanding his followers to halt, and not a man to stir from his place, he climbed to that summit, when the glorious apparition of a broad sea burst upon his vision. It seemed to him that a new and unknown world, separated from the known by the lofty mountain barrier on which he stood, had been unfolded to him. It was even so. Overcome by mingled feelings of awe and joy, he fell upon his knees and fervently poured out his thanks to God for permitting him to be the first of Europeans to discover that mighty sea. He then shouted to his followers to come up; and when they had gathered around him on that breezy height, and beheld the sea stretching out interminably, he exhorted them to be faithful to him and valorous in the conquests of rich heathen lands before them, and so give glory to God and their king and win riches for themselves. They embraced their leader and made vows of fidelity to him even unto death. Then they chanted the *Te Deum Laudamus*. So it was that the Pacific Ocean was discovered by Vasco Nunez de Balboa. It was called by him the South Sea, but Magellan, who sailed into it through the straits which bear his name, a few years later, called it the Pacific Ocean, because its waters were far less turbulent than those of the Atlantic which he had just crossed.

Nunez now called all of his followers to witness the fact that he took possession of that sea, with all its coasts and islands, in the name of the sovereigns of Spain and the notary drew up a testimonial to that effect, which the leader and his sixty-seven warriors signed. Then a tree was

cut down and wrought into a cross and on the spot where Nunez first saw the ocean, it was planted with solemn religious ceremonies, whilst the Indians looked on in wonder, not comprehending the meaning of the sacred symbol nor the significance of the act. It marked the subjugation of their land by an avaricious race.

Descending the mountains on their southern sides, Nunez and his followers made their way to the sea. As the tide came flowing in upon the sandy beach, the leader took a banner on which the Virgin and Child were painted, and under them the arms of Castile and Leon. Then drawing his sword and throwing his buckler over his shoulder, he marched into the water, uncovered his knees, and waving his banner he with a loud voice again proclaimed that he took possession of that sea and its islands, in the name of the sovereigns of Spain. A testimonial to that effect was again signed by all, and the conquest was regarded as complete. After that Nunez made voyages along the coast of the Pacific, and heard tidings of the rich kingdom of Peru, where the Incas or monarchs ate and drank out of vessels of gold. That kingdom, then eminent for its civilization, was afterward conquered by Pizarro, with circumstances of great cruelty and wickedness. Vasco Nunez de Balboa, falsely accused of traitorous intentions by his jealous rival and successor, Davila, was beheaded at Acla, in Central America, by order of that officer, in 1517, when he was in the forty-second year of his age.

At about the time when Central America was first colonized, Cuba was conquered by three hundred Spaniards under Diego Velasquez: who had been sent from Hispaniola for the purpose, by Don Diego Columbus, in 1511. Hernando Cortez, destined to make a conspicuous figure in history, accompanied the expedition, and was made the chief magistrate of Santiago, the Spanish capital of the island. He was a handsome, well educated, enterprising young man, then only twenty-six years of age, and had just married one of the young ladies who came from Spain with the Vice-Queen of Hispaniola. Cortez soon amassed a considerable fortune. He was a cruel worker of the natives in his mines. "How many of the Indians died in extracting gold for him," wrote Las Casas, "God will have kept a better account than I have."

Mexico had just been discovered by Juan de Grijalva. Cortez was sent with an expedition to conquer it. He set out from Cuba late in 1518 with five hundred and fifty Spaniards, nearly three hundred Indians, a few Negroes, thirteen horses and ten brass cannon, in ten ships, and landed on the shore of Tabasco, on the 4th of March, 1519. There he had a battle with the natives, and so terrified them with his horses and great guns that they fled in dismay. They gave him as a peace-offering, a beautiful Mexican slave girl, the daughter of a cacique, whom Cortez caused to be baptized with the name of Donna Marina. She was very intelligent, and bore a conspicuous part in the fortunes of Cortez. "Without her aid," says Arthur Helps, "his conquest of Mexico would never have been accomplished."

Pushing into the interior, Cortez was met by deputies of Montezuma, a native emperor and ruler of an empire which had existed full three hundred years. The emperor hearing of the approach of the Spaniards, sent to inquire what was their errand. "Has your king any gold?" asked Cortez. The deputies answered, "Yes." The invader replied "Let him send it to me, for I

and my companions have a complaint - a disease of the heart, which only gold can cure." This was the dreadful malady which afflicted all of the Spanish discoverers and conquerors; and the records of their search for the remedy have stained the pages of history with pictures of the most horrid crimes.

Cortez took possession of the country in the usual form, and planted the seeds of a colony on the site of Vera Cruz. He destroyed his ships to prevent malcontents among his followers returning in them and, winning to his standard several native tribes who had suffered from Montezuma's tax-gatherers, and were ready to rebel, he marched toward the Mexican capital in the month of August, over the same route which was pursued by General Scott and his conquering army more than three hundred years afterward he fought his way against overwhelming numbers who were terrified by the flashing of the armor of the Spaniards and the thunders of their cannon. The simple people regarded the invaders as divine personages and made human sacrifices to placate them but the avarice and ambition of the Spaniards could not be appeased until they themselves had sacrificed thousands of human beings on the altar of their lust.

Discontented or alarmed, Mexicans continually flocked to the standard of Cortez. He fought and conquered the powerful Tlascalans and made them his allies and early in November, after murdering a large number of Cholulans that fell into his hands, he appeared before the City of Mexico - Mexico the superb, sitting on the bosom of a beautiful lake and alive with more than three hundred thousand people. With him were six thousand native warriors and four hundred and fifty Spaniards. Montezuma and his nobles received the invaders with great pomp and kindness. A beautiful palace was assigned to Cortez for his quarters. Believing that a display of power would greatly increase his strength and influence, that leader made an attack of a few Mexicans upon some of his followers, a pretext for seizing the emperor in his own palace and confining him in chains in that of his guest, whilst seventeen of the offenders were burned alive before the gate of the imperial residence. Cortez also compelled his royal prisoner to acknowledge himself a vassal of Charles the Fifth, then Emperor of Spain, and to induce his nobles and tributary caciques to do likewise. He made that vassalage a pretext for exacting tribute, and in the name of his royal master, Cortez extorted from the fallen monarch gold to the amount of two hundred thousand dollars.

This audacious robber, from the time when he left Cuba, had been rebellious towards his superiors. Another adventurer, named Narvaez, was sent with nine hundred men, eighty horses and a dozen cannon for the field, to displace the rebel and send him back to Cuba. When Cortez heard of the landing of his appointed successor, he hastened with a part of his Spanish troops and native warriors toward the coast. He had guessed the errand of Narvaez, and at once attacked him in his camp. Cortez was victorious. The defeated troops joined the standard of the victor, and all marched for the City of Mexico, where the great leader had left a small garrison under the cruel Alvarado. The inhabitants there had risen in insurrection because Alvarado, on suspicion of meditated rebellion, had caused to be murdered six hundred unarmed Mexican noblemen at the end of a solemn festival. The revolt had become formidable when Cortez returned, and in an attempt to appease his people, Montezuma had been slain. This event increased the horror and

indignation of the Mexicans. The Spaniards were driven out of the city, and their rear-guard were cut in pieces. They fled before the exasperated Mexicans, for the space of six days, dreadfully harassed by their pursuers. Finally, on the plain of Otamba, the fugitives turned upon the Mexicans, and on a hot day in July, 1520, a pitched battle was fought there. The Spaniards were victorious, and the fate of the dynasty of Montezuma was sealed.

Cortez now marched to Tlascala, where he was joined by an auxiliary native army. After subduing the neighboring provinces, he turned his forces toward the City of Mexico. The siege which ensued was one of the most remarkable recorded in history. It continued seventy-five days, when, on the 13th of August, 1521, the city was captured by the Spaniards with immense slaughter of the inhabitants. More human beings were that day offered upon the altar of ambition than had been slain in sacrifice before the Mexican gods in the space of ten years. The victory over the Mexicans was complete the conquest of Mexico in less than two years, was a fact that had passed into history.

Impelled by his own religious zeal and prompted by the priests in his train, Cortez at once proceeded to further humiliate, horrify and exasperate the subdued people, by making a clean sweep, with the besom of destruction, over the idols and temples of the empire. In the great square in Mexico, the conqueror and his followers, with their garments stained with the blood of their fellow-creatures, devoutly sang the Te Deum, and prostrating themselves before the image of the Blessed Virgin which they had set up, they reverently thanked God for permitting them to be the humble instruments in annihilating image-worship and in staying the horrid rites of human sacrifice. Such was the spirit and temper of the age in which they lived. So, was introduced Christianity into Mexico.

Pamphilio de Narvaez, who was sent to Mexico to supersede Cortez, had extraordinary adventures afterwards as a discoverer in Florida. He was a man of wealth, tall and muscular in form, commanding in appearance, with a red beard, a fine voice, and was an expert horseman. He went to Spain to complain of Cortez, where he remained several years, and finally, in June, 1527, he sailed from San Lucar, under the authority of the monarch, with six hundred men in five vessels, commissioned to conquer and govern Florida. After long detention in San Domingo and Cuba, he sailed from the latter island with four hundred men and eighty horses, accompanied by Cabeza de Vaca, as treasurer of the expedition and a sort of deputy governor. With less than four hundred men and only forty-two horses, he landed on the west side of the present Tampa Bay, on the 13th of April, 1528. The Indians fled from their wigwams or rude huts and when all of his followers, with the horses, were on the shore, Narvaez raised the standard of Spain, and with the usual formula took possession of the country in the name of his monarch. His officers then took an oath of allegiance to him as their governor; and had he known how potent kind treatment would have been in securing the friendship of the Indians, he might have ruled the province in peace and good will and with abundant prosperity. Instead of pursuing this wise course, he relied upon force and cruelty to effect the subjugation of the natives. The consequences were disastrous to him and those who came after him. His cruel mutilation of a captive chief after his first hostile encounter with the natives, by causing his nose to be cut off; and his making Cuban bloodhounds

tear in pieces the mother of the cacique, in the presence of her children, created such intense horror and hatred among the people in all that Gulf region, that vengeance followed the footsteps of the Spaniards closely and implacably, with the tenacity of their own savage dogs.

Narvaez marched with high hopes from Tampa, to explore the country, directing his ships to sail along the coasts for the same purpose. He had been told that not far off he would find Apalachee, a city and country of plenty. He crossed the Suwanee high up, and then the Ocktockonee. Every day he expected to come upon a city sparkling with wealth - filled with gold and food, like those of Mexico and Peru and palaces of caciques with magnificent courts, and a country in which they might riot in luxury won by plunder as Cortez and Pizarro had done. Alas it was an idle dream. All before him were but creations of imagination all behind him were the dark realities of disappointment. The captives whom Narvaez forced to act as guides, led the invaders into dark forests, tangled morasses, and arid sands. Men and horses suffered dreadfully from the pangs of hunger. When a horse died from starvation, these cavaliers were compelled to eat it to avoid starvation themselves. At every rood they met hostility and treachery and when they came to Apalachee, instead of a splendid city and fields and granaries burdened with food, they found a village of forty thatched huts in the midst of scattered fields of growing maize or Indian corn. There were no roads nor bridges, nor other evidences of civilization and poverty was the common aspect of nature and people. The men had fled, but soon returned for their women and children with offers of friendship. These offers were accepted, and all might have been well had not Narvaez, in imitation of Cortez in Mexico, seized the principal cacique of the Apalacheans, and held him as a hostage for the good behavior of his people. Narvaez believed this spirited act would awe the inhabitants but he had a more warlike people to deal with than the soft Aztecs of Mexico. They flew to avenge the wrong; attacked the Spaniards with great fury; burned their own houses that they might not give shelter to their enemies, and then fled to their cornfields and the forests with their families.

Narvaez was now on the Appalachian River. He learned from the captive cacique that he was in the richest region of that whole country; that forests and lakes and morasses everywhere abounded, and that he would be met at every step by expert and hostile bowmen. He told him that nine days journeying southward would bring him to the sea-coast and a better country, and assured him that gold had never been found in the region which he had penetrated. Misfortune made Narvaez listen patiently to these discouraging words, and he and his followers turned their faces toward the sea. Their sufferings on that march were dreadful. The country was broken into lakes, swamps, morasses and forests. They were compelled to wade through water sometimes waist deep and work their way through tangled vines and bristling brambles, every moment exposed to the arrows of expert bowmen who hung upon their flanks and rear. When they reached the sea - the Gulf of Mexico - at near the mouth of the Appalachian, sickness was rapidly wasting Narvaez and nearly all his men. They had devoured for food all but one of their horses, and they were in the most pitiable plight. All thoughts of gold and dominion had left their minds, and they stood upon that shore, with no signs of their fleet visible, the victims of a cruel policy of their own. They had now no thought but the question, How shall we save our lives?

There was no other way of escape from death than by the sea. Surmounting the greatest difficulties, they built some frail boats, and provisioned them with Indian corn. With this, and some water in half-tanned horse-hides, they embarked, and coasted toward the Mississippi. Their food and water soon failed, and their sufferings were horrible. One by one they died, when a storm - a "norther" - struck and dispersed the flotilla. The boat that bore Treasurer de Vaca was stranded on an island, and he and his companions were kindly treated by the Indians. Narvaez was never heard of afterward. De Vaca seems to have been the only Spaniard who survived and returned to Spain. After eight years of captivity amongst the Indians, he made his way on foot, from tribe to tribe, until he had crossed the continent, and arrived at a port occupied by his countrymen on the Gulf of California. Thence he made his way to Spain, where he appeared at the court as one risen from the dead. His narrative was soon published, and it was read with an appetite such as the most marvelous romance creates. His revelations of the heroism of Nanez made the deeds of that adventurer compare favorably with those of Cortez and Pizarro. Narvaez had not only fought hostile men with a handful of followers, but he had fought the climate and topography of Florida. Cortez had struggled in a salubrious climate seven thousand feet above the sea, and Pizarro had marched into the country of the Incas of Peru over a splendid highway built by that extraordinary people along the summits of the Andes. Narvaez was never, probably, one hundred feet above tide-water, in Florida, and much of the time he was breathing the deadly malaria of the Everglades.

Chapter VIII

De Soto Commissioned to Conquer and Govern Florida - His Experience in the Dominions of a Creek Chief - A Friendly Indian Queen on the Savannah River - De Soto's Treachery - His Kind Reception in the Coosa Country - De Soto's Perfidy - His March through Alabama - De Soto is Outgeneraled by the Emperor Tuscaloosa - Terrible Encounter with the Alabamians at Their Capital - De Soto Goes Further into the Interior - Fatal Encounters with the Barbarians - He Discovers the Mississippi River - He Crosses that Stream and Marches toward the Rocky Mountains - De Soto Returns to the Mississippi and Dies - His Followers Reach Mexico - Death of His Wife.

THE hideous story of the disastrous adventures of Narvaez and his companions in Florida seems sufficient to have deterred others undertaking further enterprises among the fierce Apalachians, either for gold or dominion. But the effect was otherwise. Spanish chivalry had been stimulated, and thirst for glory had been intensified by the valorous exploits of the discoverers and conquerors in America, and the more hazardous the performance the greater was the renown. The very difficulties in the way seemed to sharpen desire; and when Hernando de Soto, who, as one of the conquerors of Peru under Pizarro, had returned to Spain with great wealth and reputation, proposed an expedition for the conquest of Florida, hundreds of young men, the flower of the Spanish and Portuguese nobility, flocked to his standard.

De Soto longed to rival Cortez and Pizarro in the brilliancy of his deeds. He had appeared at the court of Charles the Fifth in great splendor, as one of the richest men in Spain, and had been favorably received. He had lately married Isabella de Bobadilla, a scion of one of the most renowned of the Castilian families, and his influence at court was thereby strengthened and when he offered to undertake the conquest of Florida at his own expense, the permission of his sovereign was readily given. Charles also commissioned him governor of Cuba, from which island he would sail for Florida, and made him captain-general of the provinces which he might secure by conquest on the main.

De Soto was of gentle birth; of known preeminence as a soldier; wise in council; prudent in action; brave to rashness in conflict, and his reputation was without blemish. In person, he was elegant; in deportment, courtly as a horseman, expert and in age, thirty-seven - the prime of young manhood. With these qualities and his generous offer to aid young cavaliers who needed assistance in equipping themselves in accordance with their rank and position, he soon gathered a band of six hundred brilliant adventurers. Some of the wealthier came in gorgeous suits of armor, rich dresses and trains of servants. Many of them had sold houses, lands and vineyards to enable them to embark in the enterprise, for De Soto believed there was more gold in Florida than in Mexico and Peru together, and had said so.

With this brilliant armament, and accompanied by his beautiful young wife and other noble ladies, De Soto embarked at San Lucar de Barrameda, at the mouth of the Guadalquiver, early in April, 1538, a little less than eleven years after Narvaez sailed on his unfortunate expedition from

the same port. His armament consisted of seven large and three smaller vessels; and the flag-ship was the San Christoval, of eight hundred tons burthen. Their departure was cheered by the braying of trumpets and the shouts of a great multitude; and the fleet was followed by twenty-six merchant vessels bound for Mexico.

So bountifully had De Soto furnished his ships with stores, that every man was supplied with double rations; and in their enjoyment of plenty and wastefulness, they almost adored their munificent leader. Gaiety and festivity - music, dancing and feasting - prevailed on board the San Christoval during that sunny voyage, in which richly-dressed ladies were conspicuous, with handsome young pages to do their bidding, especially on mild and brilliant moonlit evenings within the tropic of Cancer. All were joyous, for they thought they were on the way to an earthly paradise. At near the close of May the ships all entered Cuban waters. The bright sea-pageant vanished, for then the real business of the expedition was begun in earnest. There De Soto occupied a whole year in arranging affairs of government and preparing for the great enterprise in view.

Towards the middle of May, 1539, De Soto sailed from Havana with a fleet of nine vessels, large and small, and about a thousand followers with many horses, cattle, mules, and a herd of swine. He left public affairs in Cuba in the hands of his wife and the lieutenant-governor, where, for several days, he had given feasts and entertainments such as might be appropriate after a great conquest. A vessel had been sent to Florida to find a safe harbor and to kidnap some Indians to act as guides and interpreters. So prepared, De Soto bade Isabella de Bobadilla farewell on board his ship, with the full expectation of returning speedily with the rich fruits of a glorious conquest. Alas! clouds soon gathered in the firmament of his hopes, and his brilliant dream was never realized. His voyage was pleasant and when the armament anchored in Tampa Bay, near where Narvaez had landed, delicious perfumes came from the shores, for all Florida was in bloom. It was the 30th of May.

Had De Soto been wiser than the other conquerors, and conciliated the Indians by friendly acts, all might have been well. But he was no wiser than they. He sent armed men to capture natives, that he might obtain knowledge of the country, and so he imitated his predecessors. The savages had learned to be cautious from their contact with Narvaez, and they were too wily in their movements, and too expert with the bow and arrow, to be taken.

In one of their little excursions the Spaniards were startled as they were charging upon a band of Indians, by the voice of a man crying out in the Castilian tongue: "I am a Christian! I am a Christian! Slay me not!" The stout trooper stayed his lance, lifted the supplicant to his horse, and carried him to the main encampment. The Castilian in savage guise proved to be Jean Ortiz, a native of Seville, who had been a captive among the Indians for several years. He had heard of the landing of the Spaniards, and had hastened to meet them; and he was a godsend to De Soto because he was a valuable interpreter. The governor furnished Ortiz with clothed and a horse, and attached him to his personal staff.

De Soto was now ready to enter upon the conquest of Florida. His troops were clad in coats of steel to repel arrows, and bore breastplates and helmets of the same metal. They had strong shields, swords, lances, arquebuses (a kind of rude short guns), cross-bows and one cannon. The cavaliers were mounted on one hundred and thirteen horses. Savage blood-hounds from Cuba were the allies of the Spaniards, and the Castilians were plentifully supplied with iron neck-collars, handcuffs and chains for their captives. With these instruments of cruelty, a drove of swine, many cattle and mules, and accompanied by mechanics, priests, inferior clergy and monks with sacerdotal robes, holy relics, images of the Virgin and sacramental bread and wine wherewith to make Christians of the conquered pagans, De Soto began his march in June, 1539. From the outset he was met by the most vigorous opposition. In narrow defiles and other exposed places, he and his followers were assailed by clouds of arrows from the hands of a multitude of natives who had been made intensely revengeful because of the cruelties of Narvaez and his men. They had resolved to fight the invaders until not one should be left upon the soil. Cruelty was met by cruelty. When a Spaniard was captured, he was mercilessly slaughtered. The captive Indians were loaded with chains and made beasts of burden, without regard to age or sex. The antagonism of the races was fearful. When De Soto, hoping to conciliate Acuera, a powerful Muscogee or Creek chief whose territory he had entered, and invited the cacique to a friendly interview, he received this haughty reply:

"Others of your accursed race have, in years past, disturbed our peaceful shores. They have taught me what you are. What is your employment? To wander about like vagabonds from land to land; to rob the poor; to betray the confiding; to murder the defenseless in cold blood. No! with such a people I want neither peace nor friendship. War - never-ending, exterminating war - is all I ask. You boast yourselves to be valiant - and so you maybe; but my faithful warriors are not less brave and of this you shall one day have proof, for I have sworn to maintain an unsparing conflict while one white man remains in my borders; not openly in the battle-field, though even thus we fear not to meet you, but by stratagem, ambush, and midnight surprisal."

In reply to a demand that he should yield obedience to the emperor, Acuera as haughtily said: "I am king in my own land, and will never become the vassal of a mortal like myself. Vile and pusillanimous is he who submits to the yoke of another when he may be free! As for me and my people we prefer death to the loss of liberty, and the subjugation of our country!" De Soto pressed his suit for a friendly interview, but was always answered by the cacique that he had given him all the reply he had to make.

De Soto remained twenty days in the dominions of Acuera, continually suffering from the enmity of that cacique. A Spaniard could not go a hundred paces from his camp without danger of being shot, and his severed head carried in triumph on a pike to the presence of the chief. In that war fourteen Castilians perished, and many were wounded. "Keep on! robber; and traitors!" said Acuera. "In my province and in Apalachee you will be treated as you deserve. We will quarter and hang up every captive on the highest tree!" And they did so. In open fight the Spaniards were always victorious, but in ambush and skulking, the Indians were expert and fearfully dangerous.

Cutting his way through hostile tribes, De Soto reached the fertile region of Tallahassee, where he wintered. An expedition which sailed westward in his ships, to explore the coasts, returned in February with a report that the skeletons of the men and horses of Narvaez's party, who had perished at St. Marks, the place of that adventurers last embarkation, had been discovered also the sheltered bay of Pensacola. The commander of the vessels was ordered to return to Cuba immediately, and thence convey provisions and other supplies to Pensacola, whilst De Soto should march across the country to the same point. For this purpose the governor broke up his winter encampment in March, but being told that gold abounded in the north, he first went in that direction as far as Silver Bluff on the Savannah River. On the opposite side of the stream (in Barnwell District, S.C.) lived an Indian "queen," young, beautiful and a maiden, who ruled over a large extent of country. In a richly wrought canoe filled with shawls and skins, and other presents, the dusky caccia glided across the river, and with kind words welcomed the governor and offered him her services. Presents were exchanged. A magnificent string of pearls was upon her neck. This she drew over her head and hung it around the neck of De Soto as a token of her regard. Then she invited him and his followers to cross over to her village. In canoes and on log-rafts they passed the stream, and encamping in the shadows of mulberry trees, they soon received a bountiful supply of turkeys and venison. There they remained until early in May, when they departed, De Soto requiting the hospitality of the royal maiden with treachery. He carried her away a prisoner, and kept her near his person as a hostage for the good behavior of her people towards the Spaniards. She finally escaped and returned to her home, a bitter enemy of the perfidious white people.

The Spaniards marched to the headwaters of the Savannah, in Habersham county, when they turned their faces westward, and crossing northern Georgia, through the picturesque Cherokee country, went over the Oostanaula near its confluence with the Etowah, and entered the large village of Chiaha, on the site of modern Rome. There they were received with the kindest hospitality by the young chief who gave the intruders plenty of food and to their leader a string of pearls two yards in length, each pearl as large as a filbert. The streams in that region then abounded in the pearl-bearing mussel.

For thirty days the Spaniards remained at Chiaha. Then marching eastward, they entered northeastern Alabama, and were soon in the beautiful and fertile Coosa country. They were everywhere kindly received and bountifully fed by the inhabitants. Cultivated fields stretched out on every side, and granaries were filled with corn. Plum trees abounded, resembling those of Spain, and grapes hung in delicious clusters from vines that climbed the tall trees. It was now late in July, 1540. When the army came in sight of the capital of Coosa, the chief, a young man less than thirty years of age, borne upon a cushioned chair on the shoulders of four men, met him in the remote outskirts of the town, followed by a thousand warriors, tall, active and well-proportioned, with scanty garments and plumed heads. The cacique was clad in a mantle of marten skins thrown gracefully over his shoulder, and on his head was a diadem of brilliant feathers. Musicians attended him, singing songs and playing flutes; and the whole procession was almost as gorgeous as that of the Spaniards and their glittering armor. The cacique received De Soto with joy, set apart the royal house for his accommodation, and dined with the governor

every day. Finally, he besought De Soto to found a Spanish colony anywhere in his dominion. The governor, charmed with the delicious climate, would have done so but for the avaricious desire to find the great gold region which, he believed, was not far off. He decided the generous offer, with polite thanks, at the same time holding the chief as a hostage for the double purpose of securing the friendly offices of his people and extorting provisions and slaves. The natives were enraged at the indignity offered their sovereign, and fleeing to the woods prepared for war. The Spaniards pursued them, and returned with men and women in chains, many of whom they carried off as slaves when they departed in August. So, at every step, hospitality was repaid by injustice and cruelty. The Spaniards by their conduct justly earned the fate which finally overtook them.

De Soto continued his march through the beautiful regions of Alabama, taking with him the cacique of Coosa, as far as the great town of Tallase where he was dismissed. Pushing southward, the Spaniards approached the temporary residence of Tuscaloosa, the renowned chief known as the Black Warrior, who was gigantic in stature, and the head of the Mobilians Indians. They found him seated on a commanding eminence upon a cushioned seat with beautiful mats under his feet and surrounded by numerous attendants. He was forty years of age, a head taller than any of his warriors, with a handsome face of grave and severe aspect. Lord of many tribes, he was feared by his neighbors and subjects and his influence was widely spread over the region of the Alabama River to that of the Mississippi. He received De Soto with haughty courtesy and when the governor ordered one of his largest pack-horses to be brought for the use of the giant chieftain, the latter mounted with sullenness and evident reluctance. He and De Soto rode side by side, and it was soon evident to Tuscaloosa that he was a prisoner of the Spaniards after the manner of other caciques who had been held as hostages. They crossed the Alabama a short distance below Selma, and passed down the right bank of that stream in the direction of the sea. De Soto now discovered signs which made him uneasy. The deference which had been paid to him since he left the Apalachee country had assured him that the conquest of Florida would be an easy matter - Indeed, he had regarded it as already accomplished. But the demeanor of Tuscaloosa caused him to doubt. The chief was in close and continual consultation with his principal followers, and was constantly sending runners to his capital, with messages, telling the Spaniards that he was preparing for their honorable reception. De Soto did not believe him, and took precautions against treachery. Side by side he and Tuscaloosa rode into the Mobilians capital, a large palisaded and walled town on a high plain by the side of a broad river, and called Manbila. The most acute students of the Spanish narratives believe that Choctaw Bluff, in Clarke county, about twenty-five miles above the confluence of the Alabama and Tombigby rivers, was its site.

It was at about eight o'clock on a bright October morning, when De Soto and Tuscaloosa rode into Manbila together, and were received in the great square with songs, the music of flutes, and the dancing of Indian girls. They alighted, and were seated under a canopy of state, when Tuscaloosa requested not to be held as a hostage any longer. The governor hesitated. The angered cacique sprang to his feet and with a proud and haughty step walked into a house close by. Ortiz, the interpreter, followed, and invited him to breakfast with De Soto. Tuscaloosa refused to return, saying: "If your chief knows what is best for him, he will immediately take his

troops out of my country." The suspicions of the Spanish leader were confirmed, and he had scarcely recovered from his surprise when one of his spies came with information that ten thousand warriors, followers of Tuscaloosa and neighboring chiefs, were in the houses; that a vast amount of weapons and missiles, such as bows and arrows, javelins, clubs and stones, had been gathered in the town that the old women and children had been sent to the forests, and that the Indians were then debating as to the proper hour to fall upon the Spaniards. It was a startling announcement for De Soto, for a greater part of his army was then lagging behind in fancied security, many of them scattered and hunting in the woods. The governor, anxious to postpone an attack until his army should come up, by regaining the person of Tuscaloosa, approached the cacique with smiles and gracious words. The haughty chief turned scornfully away, and mingled with his warriors. At that moment a chief rushed out, and with a loud voice denounced the Spaniards as robbers, thieves and assassins who should no longer impose upon their leader by depriving him of his liberty. Balthazar Gallegos, the greatest soldier of the expedition next to De Soto, angered by this insolence, cleft the chief with his sword, from his head to his loins. That act let loose the fury of the people. Like bees from a hive the savages swarmed out of the houses by hundreds and thousands, and gradually pushed the invaders out of the ponderous gates into the plain. The Manbilans seized the Indian slaves of De Soto, together with all his baggage. The latter was stored within the walls, and the former, having their manacles knocked off, were armed and made to fight their late masters. In that first encounter, five Spaniards were killed and many were wounded, among them De Soto.

Unmindful of his wound, the governor, at the head of his cavalry, charged upon the mass of savages, and drove them back into the town with fearful slaughter. The Indians rushed to their wall-towers and loopholes, and from these sent clouds of arrows and tempests of stones which drove the Spaniards back. As they receded, the Indians dropped from the walls and rushed out of the gates with huge clubs, beating the intruders and seizing their keen swords and deadly spears. The hand-to-hand conflicts were fierce and fatal, especially to the savages. For three hours the battle lasted, victory surging from side to side like the ebbing and flowing of the tides of the sea. The lagging army hearing the noise of battle had hastened forward, and were now coming up to the aid of their comrades. The daring of De Soto, who was everywhere in the battle, had already compelled the savages to take a permanent position within the walls of Manbila; and the priest, who on their knees had uttered copious prayers for victory for the Castilian now sang the joyous Te Deum.

Having all of his forces in hand, De Soto now formed the foot soldiers in four divisions, who, armed with bucklers and battle-axes, charged upon the walls and portals. The Indians had closed and barricaded the gates and again fought from the towers and loop-holes. But the siege was not a lone one. The gates were forced, and through these and over the walls the assailants made their way into the town. A dreadful carnage ensued. The cavalry remained outside to catch and slay any who might attempt to escape whilst the butchery was going on within. The Indians fought with all the gallantry and desperation of patriots defending their country. Although the ground was covered with the dead, not one of the survivors asked for quarter. Young women, in large numbers, fought side by side with the warriors, with equal bravery and skill, and their blood

flowed as freely. At length De Soto, at the head of his cavalry, made a furious charge into the town, with a shout of "Our Lady and Santiago!" and made fearful land through the ranks of fighting men and women. As he arose to hurl his lance at a powerful Indian warrior, a heavy arrow pierced deeply into his thigh. Unable to pull it out or sit in his saddle, he continued to fight, standing in his stirrups. At length the houses were fired and the combatants were shrouded in the blinding smoke. As the sun went down, the sights and sounds of slaughter and groans of the dying were awful. When the twilight deepened into night, the contest was over. It had lasted nine hours. Manbila was a smoking ruin, and its inhabitants had perished.

That conflict was disastrous to both races. Eighty-two Europeans perished, among whom were some of the brightest flowers of Spanish chivalry. It was estimated that eleven thousand native Alabamians fell in the battle or were burned in the houses. It is believed that Tuscaloosa remained in his house and perished in the flames. Forty-five horses were slain. All the camp equipage and baggage were consumed in the place where the Indians had stored them all the clothes, medicines, books, pearls, relics and robes of the priests with their flour and wine used in the Eucharist or sacrament of the Lord's Supper instruments, and much of the armor with many other things which could not be obtained in the wilderness, were utterly destroyed. Among the ghastly ruins and piles of the dead, the Spaniards passed the night after the battle. Many of them were wounded and dying. Only one surgeon was left. Seventeen hundred severe wounds called for his care, but his instruments had perished in the flames. De Soto, though badly wounded, bestowed all his care upon his suffering companions. For eight days they remained in the town, and then went out to the Indian huts on the plain. Foraging parties were sent out who found villages abounding in provisions. They brought in beautiful captive maidens from whom they learned that Tuscaloosa had formed a plan for the destruction of the Spaniards weeks before. When the Talases complained to him that their chief had given their people to De Soto for slaves, he said Fear nothing; I shall shortly send the Spaniards back from my country to Talase in chains, led by your people, whom they have enslaved. The whole land will be rid of the robbers." De Soto also learned from these captive maidens that his squadron was in the bay of Pensacola.

The fire at Manbila deprived the Spaniards of two widely differing sources of consolation, namely, wheat flour and wine for the Eucharist, and playing-cards. Gambling was the besetting sin and most exciting pleasure of all and they often staked their money, horses, jewels and even feminine slaves, at play. The priests went through all the religious forms excepting consecration, and the unusual ceremony was called Dry Mass. Cards were made of parchment and lent from one company to another, and deep gambling was resumed.

The news of his ships that were doubtless laden with clothing and provisions gave De Soto joy; but his spirits were soon clouded by a conspiracy which had been formed among some of his followers, to abandon him and sail in the ships from Pensacola to Spain or Peru. This discovery changed his plans. He resolved to turn his back upon his ships and go deeper into the wilderness. This determination was announced on the 18th of November, 1540. The order to march northward fell upon the ears of the discontented ones like a clap of thunder. It was made potential by a threat to put to death the first man who should speak of the ships.

Northward the Spaniards marched, and on reaching the waters of the black Warrior River, they were met by a large force of Indians in battle array, who longed to avenge the destruction of their friends at Manbila. The news of that tragedy had spread over a vast region, and kindled the fiercest hatred of the Spaniards in the hearts of the natives. Hundreds of opposing warriors were swelled to thousands, and De Soto was compelled to fight his way inch by inch through the land of the Choctaws. At length, after passing over the uplands of Mississippi - a beautiful, fertile and populous region - he reached the upper tributaries of the Yazoo River in Yalobusha county, and encamped in front of the town of Chickasa, the capital of the Chickasa nation. It was now December. Ice and even snow appeared and chilled the troops, and De Soto resolved to pass the winter there in a sheltered camp. The chief of the Chickasas feigned friendship for the Spaniards. It might have been real had the latter been wise and just. But they were not. Cruelty and wrong, as before, marked their dealings with the natives. When March came and De Soto thought of marching forward, he demanded of the Chickasa chief two hundred men as burden-bearers. The cacique answered the demand by a furious attack upon the Spanish camp on a dark night, during a wild gale from the north. The assailants came in four columns, with horrid yells and the hideous sounds of wooden drums and blasts on conch-shells. Before the sleeping Spaniards were fairly roused from their slumbers, their huts, made of cane and straw, were in flames, fired by arrows bearing torches. Blinded by the smoke, they ran out of the houses half-dressed, some leaving their weapons behind them. Horses in stables perished, and many swine, in roofed pens, were burned to death. The conflict that ensued was terrible. The Spaniards fought valiantly as best they might, and finally drove their dusky assailants into the forests. But the disaster to the Europeans was greater than that which befell them at Manbila. They had lost forty of their diminished number. The only Spanish woman in the camp - the wife of a soldier - was burned to ashes. Fifty horses had perished, and most of the men saved nothing excepting what they had on their backs or in their hands.

The remainder of the inclement season was passed by the Spaniards in great wretchedness. Cold and hunger, and grievous wounds tortured them; and the Indians fell upon them night after night like fierce tigers. At length, the warm sun of April alleviated their sufferings, and De Soto moved on in a northwesterly direction, in search of the land of gold about which he had dreamed so long. The exasperated savages assailed him everywhere, and at a town called Alibamo, he had another desperate encounter with them. Then he moved on, and in May he stood upon the banks of the Mississippi River, in Tunica county, near the lower Chickasa Bluffs, above the mouth of the St. Francis River. The mighty Mississippi, then full to the brim, filled De Soto with admiration. He had not found gold, but he was the first European who found the great river upon whose bosom floats, annually, wealth a thousandfold greater than the mines of Mexico or Peru ever yielded. He was not the conqueror of a country teeming with a weak people; but he had achieved a conquest far more glorious than Cortez or Pizarro had done, and had secured immortality for his name and deeds.

Still thirsting for gold, and expecting to find the Pacific Ocean not far, De Soto crossed the Mississippi River traversed the lagoons of Arkansas climbed over the great Ozark hills, and penetrated the country westward almost to the eastern slopes of the Rocky Mountains. For a year

he wandered in those wild regions; wintered far up the Arkansas River, and in the month of May, 1542, returned to the Mississippi at a point a little north of the mouth of the Arkansas. He now gave up gold-seeking; and on the eastern bank of the great river, in Bolivar county, Mississippi, he selected a site for a colony among a tribe of savage sun-worshippers. They showed intense hostility to the Spaniards; and when De Soto, in an address to them demanding their submission to his arms, called himself a child of the Sun they ridiculed him. "If you are a child of the Sun," they haughtily replied, "return to him, dry up the Mississippi, and we will submit to you."

De Soto was now utterly discouraged, and he began the construction of two brigantines wherewith to communicate with Cuba. Exhausted in body and mind, he was soon prostrated by a malignant fever. Satisfied that he could not live, he ordered his attendants to carry him out of his hut into the balmy air under a wide-spreading live-oak, where he received the holy ministrations of the priests. Then he appointed Moscoso, his lieutenant, to be his successor in office and commander of the ragged remnant of his troops who gathered around him in silent grief. One bore a broken helmet, another a battered cuirass, a third a splintered lance, and a fourth a jagged sword. Some were dressed in skins, and some were half-naked. All, in person and equipment, were only shadows of the brilliant retinue who had gathered under his banner at San Lucar about five years before. He exhorted them to keep together, bade them farewell, and then died. To conceal the fact of his death, and to protect his body from desecration by the savages, his followers placed it in a trough made of live-oak and at midnight, when darkness was intense, they sunk it to the bottom of the river. So perished the discoverer of the Mississippi, in the beautiful month of May, 1549, at the early age of forty-two years.

But little more need be said about this wonderful expedition. Moscoso led the Spaniards into the wilderness west of the Mississippi again, hoping to find Mexico. For a year they wandered there and then returned to the Mississippi, where they built brigantines and floated in them upon its bosom toward the sea. The once splendid army of one thousand men was now reduced to three hundred and twenty. Taking with them the beautiful young women whom they had captured at Manbila, and several of the best horses that survived, they sailed out into the Gulf of Mexico, crossed it, and after enduring untold miseries, they reached Panuco, a Spanish settlement on the coast of Mexico, in September. They went to the City of Mexico, where they were entertained by the viceroy; and the elegant Castilian ladies at that petty court were enraptured by the beauty of the dusky Mobilians girls, whom they caressed, and feasted, and dressed in Spanish costume.

Maldonado, the commander of De Soto's ships, had waited long for him at Pensacola. He had made several voyages in search of him, and finally, in the spring of 1543, while he was at Vera Cruz, he had heard of De Solo's death on the Mississippi, and that only three hundred of his followers lived to reach Mexico. This sad news cast a gloom over Havana; and poor Dona Isabel, the wife of the great leader, who had so long anxiously awaited his return, died of a broken heart.

Chapter IX

Voyage of Verazzani - He Explores the Coasts from North Carolina to Newfoundland - Kidnaps an Indian Boy - Cartier Discovers the Gulf of St. Lawrence - On a Second Voyage He Discovers the River St. Lawrence and Names Both - He Explores the River to the Site of Montreal - Takes a Daughter of a Huron Chief to France - He Winters at the Site of Quebec - Cartier Kidnaps the "King of Canada" and Some of His Chiefs, and Takes Them to France - English Explorers - Their Sufferings in Newfoundland - Cartier's Third Voyage to the St. Lawrence - Hostilities of the Natives - The Lord of Roberville on the St. Lawrence.

WE will now leave the Spanish discoverers, and turn our attention to others who made voyages to the coasts of North America on similar errands.

Francis the First, one of the most energetic as well as enlightened sovereigns of France down to the sixteenth century, becoming jealous of the glory acquired by his rival of Spain, by discoveries and conquests on this continent, fitted out four ships late in the year 1523 for explorations on the North American coasts. They were placed under the command of John Verazzani, a Florentine, of whose career very little is known. He appears to have been a somewhat eminent navigator, but the narrative of his voyage to our country is so obscure in many parts that it is difficult to discover the truth. The account of that voyage on which historians have most relied, is given in a letter which, it is alleged, the navigator wrote to King Francis after his return, by which it seems he sailed for the Madeiras in December, 1523, and left them on the 27th of January, 1524, proceeding due west. Three of his ships were soon disabled by a tempest that swept over the Atlantic, and put back; and he went on with only one vessel. In that he reached the American coast in north latitude 34 degrees, or not far from Cape Fear in southern North Carolina. It was in the month of March. He speaks of the climate as salubrious of the coast as abounding with lakes and ponds the numerous bays and inlets there of the people as black-skinned, not much differing from Ethiopians, with thick black hair worn tied back upon the head in the form of a little tail and going entirely naked excepting at the loins, from which depended from a girdle of braided grass, a marten skin. These people gathered on the beach in considerable numbers, and made many friendly signs. A young sailor, more courageous than the rest, swam toward the shore with little bells, looking-glasses and other trifles as presents for them, and when he "as near the beach, he tossed them to the natives, and turned to swim back. The surf was high, and he was thrown by it upon the sands, so much exhausted that he seemed to be dead. But he was sufficiently alive to scream lustily when the natives bore him away from the water, for he expected to be killed and eaten by them. They stripped him, and viewed with astonishment his white skin. Then they made a large fire on which, his companions imagined, they were about to roast him for their dinner, but it was only an act of kindness to restore warmth to his limbs. When he had recovered sufficiently to show by signs, that he wished to return, they hugged him with great affection, withdrew to a little sand-hill, and watched him until he was safely in the boat from which he swam.

Verazzani then went further up the coast, probably as far as the vicinity of Albemarle Sound,

where he landed, with twenty men. A short distance from the sea, the land was covered with large trees, among which were noble cypresses. From these forest trees trailed luxuriant vines which were clustered with delicious grapes, the natives said, in early autumn. The people fled in fear to the woods. They were fairer than those further south, and were covered with a light drapery made of "certain plants which hung down from the branches" - Spanish moss - tied by threads of wild hemp. Their heads were uncovered. They lived in huts made of saplings and shrubbery, and navigated canoes dug out of a single log without any iron instrument whatever. In the tall reedy grass, the mariners found concealed a very old woman and a young girl eighteen or twenty years of age. The old woman carried two infants on her shoulders, and behind her neck a little boy eight years of age. The women shrieked and made signs to the men, who had fled, to come to their rescue. "We took the little boy from the old woman," says the Florentine, "to carry with us to France, and would have taken the girl, who was very beautiful and very tall, but it was impossible because of the loud shrieks she uttered as we attempted to lead her away so we determined to leave her, and take the boy only." The story of this kidnaping was soon spread over all that region, and planted the seeds of intense hatred of the white man in the bosoms of the natives. Their products were the bane of Raleigh's settlement on Roanoke Island on that coast sixty years later.

Verazzani coasted further northward, and it is evident, from his topographical description, that he entered the harbor of New York and discovered the mouth of the Hudson River. He made a very brief tarryance there. The land seemed full of people, who received the mariners kindly. They did not differ much in appearance from the inhabitants further south, and were dressed in cloaks made of the beautiful plumage of birds. Weighing anchor after a very brief intercourse with these people, he sailed eastward, as the coast lay, discovered Block Island, off the Connecticut shore, and came to a beautiful hilly country in latitude forty-one degrees and forty minutes. He was there, evidently, in Narragansett Bay, and beheld the shores of Rhode Island, where the Northmen had settled more than five hundred years before. There he found the finest looking tribe and the handsomest in their costume of any he had seen on the voyage larger in persons than the average European. "Among them," Verazzani said, "were two kings more beautiful in form and stature than can possibly be described the oldest, about forty years of age, wearing a deer's skin around his body, artificially wrought in damask figures his head without covering; his hair tied back in various knots, and around his neck he wore a large chain ornamented with many stones of different colors." "Their women," he said, "are of the same form and beauty, very graceful, of fine countenances and pleasing appearance in manners and modesty wearing no clothing except a deerskin, ornamented like those worn by the men some wear very rich lynx skins upon their arms, and various ornaments on their heads composed of braids of hair which also hang down upon their breasts on each side. Others wear different ornaments, such as the women of Egypt and Syria use."

The inhabitants were kind, but shy. The men could never be persuaded to take their wives on board the ship of the Florentine. "One of the two kings," he said, "often came with his queen and many attendants to see the vessel," but the women were kept at a distance. The country seemed to be very fertile, and abounded in their season with apples, plums, filberts and other kinds of fruit

and nuts and in the forests were great numbers of deer, lynxes and other wild animals. The dwellings of the people were generally circular in form, and built of split logs and sometimes they were large enough to accommodate a family of twenty-five or thirty persons.

From Narragansett Bay, Verazzani sailed eastward early in May, passing among the numerous islands off the coast of Massachusetts, and touching somewhere, probably, on the coast of Maine. There he found the people coarser in appearance, less friendly, and more fierce and warlike. They were clad in the skins of the bear, the lynx, the deer and the seal. No signs of cultivation appeared, and the inhabitants seemed to live almost wholly on the products of the forest and the waters. The hills were covered with vast woods; and far in the interior he saw lofty mountains. The voyagers had very little intercourse with these savages, and sailing eastward and northward, came to Newfoundland. Thence they turned their prow toward Europe and sailed to France. Verazzani had traversed the borders of the North American continent, as his ship sailed, about two thousand miles, and he named the vast country New France.

Verazzani's object was to find Cathay, in the extreme eastern limit of Asia, hoping there to discover a passage into the Indian Ocean, for which Columbus and Cabot had sought. What became of him after this marvelous voyage is not certainly known. He appears to have left the service of the French king, who was then warring desperately with Charles the Fifth of Spain and Germany. Early in 1525, Francis was defeated before Pavia, wounded, made a prisoner and carried captive to Madrid, where he was detained almost a year. His projects for foreign discoveries were, of course abandoned for a time, and it was several years before they were resumed. Meanwhile, Verazzani, it seems probable, made two other voyages to America, but not as a commander. He appears to have had some communication with Henry the Eighth of England, and possibly was in his service for an old chronicler says that he presented to that monarch a map of America, after he had made three voyages to this continent. It is certain that Henry sent out two exploring ships in 1527 - the *Samson* and the *Mary of Guilford* - and it is asserted that Verazzani sailed in the first mentioned vessel. We have a record of another expedition having been sent to America by Henry, in 1536, for discovery or settlement.

For several years voyages for discovery from Europe to America ceased. Meanwhile, the brave Admiral de Brien (Chabot, Comte de Charni), who was a favorite at the French court, had urged his king to attempt making a settlement somewhere in New France, and so secure its possession for his crown. But it was not until ten years after Verazzani's voyage, that Francis yielded to the importunities of Chabot. Then a plan for making settlements in America was arranged under the direction of Chabot, and two ships, of sixty tons each, were fitted out at St. Malo, a fortified seaport of France, for that purpose, and placed in charge of Jacques Cartier (James Carter), a native of that port and then in the service of the French monarch.

After appropriate religious ceremonies in the cathedral of St. Malo, in which Chabot participated, Cartier sailed for America. He left St. Malo on a bright afternoon (April 20, 1534), with a crew of one hundred and twenty men in each of his vessels. The voyage was prosperous, and with generally fair winds he reached the eastern coast of Newfoundland in twenty days. Then

he sailed northward, entered the Straits of Belle Isle, and touching the coast of Labrador, he formally took possession of the country in the name of his king by planting a cross and hanging upon it the arms of France. The natives, who had been fishing near, gathered around the Frenchmen in considerable numbers, with their chief, and looked with wonder as the mariners raised that symbol of the atonement made of the trunk of a tree, and thirty feet in height. The shield they hung upon it bore the lilies of France - the royal insignia - and over it they carved, in antique letters, "Vive le Roi de France Live the King of France." Then the mariners all knelt, and with hands stretched toward the skies, they thanked God for his mercies. The savage chief faintly comprehending the significance of the shield with the Gallic arms as a token of claimed sovereignty, told Cartier, by signs, that he could not allow a cross to be set up without his consent, whereupon the mariner satisfied him by the assurance that it was only as a beacon to guide other voyagers in those waters.

After spending some weeks in exploring the great gulf west and southwest of Newfoundland, discovering the Magdalen Islands, the northern coasts of Cape Breton and the bays of Chaleurs and Gaspé, now at the eastern extremity of Canada, Cartier landed and held friendly intercourse with the Indians. There he set up a huge wooden cross, as before, with a shield and the French lilies, and took possession in the name of King Francis. His kindness inspired the natives with such confidence that one of the chiefs offered to Cartier two of his sons to accompany him to France, on the condition that he should return them to their home the next year.

From Gaspé Bay Cartier sailed northeast, and doubling the east end of great Anticosti Island, he went up that branch of the St. Lawrence some distance, without suspecting that he was in the mouth of a great river whose chief sources were immense inland seas of fresh water. As the season of autumn storms was approaching, he turned back, passed through the Straits of Belle Isle, and sailed away for France, reaching St. Malo early in September. His voyage was considered successful. Chabot was delighted, and Francis was encouraged to make new efforts on a larger scale, in the same direction. Three ships were fitted out late in the following spring - La Grand Hermione, La Petite Hermione, L'Emerillon. The first was a vessel of one hundred and twenty tons burthen; the second was sixty tons, and the third was smaller. Cartier was commissioned "Captain and Pilot of the King." He gathered his companions and seamen in the cathedral at St. Malo, at the middle of May, where the whole company received absolution - pardon of their sins - from the Bishop, and also his blessing. It was Whit-Sunday - a festival when all newly baptized persons appear in the church in white garments. Beautiful and picturesque was the scene, and joyous was the occasion and impressions of the pageant remained on the memory of each mariner long after he left the holy fane that day, and embarked for his voyage.

Cartier sailed from St. Malo on his second voyage to New France, with several French noblemen, on the 19th of May, 1535: Le Grande Hermione was his flag-ship. Storms soon separated the vessels, but they met at an appointed rendezvous the Straits of Belle Isle, on the 26th of July. Going westward, they entered the gulf on which Cartier had sailed the previous year and on the day dedicated to St. Lawrence, they passed into the waters between Anticosti and the main, on the north, to which Cartier gave the name of St. Lawrence. This title was afterward

given to the gulf and to the great river at whose mouth Anticosti lies. That island, Cartier named L'Assumption. Its Indian name was Naticotec, the sound of which from the lips of the natives was, to English ears, Anticosti, and so they called it.

Voyaging on, Cartier found himself in a broad but narrowing arid freshening river; and on the first of September, he was at the mouth of the dark and mysterious Saguenay River, where the St. Lawrence is ten miles in width. Proceeding more than a hundred miles further up the great stream, with high mountains a little way from its shores on his right and gentle slopes from the waters edge on his left, Cartier came to a large island which he called The Isle of Bacchus. It is now the Island of Orleans, in sight of Quebec. He went on shore with the two young men whom he had taken to France the year before, and the next day a handsome Algonquin chief, named Donnacona, who was Lord of Canada, came to Le Grande Hermione in a beautifully wrought canoe to confer with Cartier. The conference was easy, for the two young men were interpreters. "We have been to France," they said, "and have been well-treated. The whole country is full of riches. Great castles, great armies, great ships, great cities are there, and our master is a great man in his country." Donnacona was pleased. He asked Cartier to stretch out his bare arm. The king kissed it, and laid it about his own neck in token of affection. "Go to my village of Stadacona yonder," said the dusky prince. "You will find a safe harbor there and a welcome." Then entering his canoe he glided swiftly over the waters toward a bold, rocky promontory in sight, around which came sweeping into the St. Lawrence, from the West, a gentle stream. Cartier followed. Passing a high waterfall on his right, he was soon in the safe harbor, with scenery around him whose beauty and grandeur were enchanting. He was in the harbor of Quebec. The little stream which he called the St. Croix (Holy Cross) was the present St. Charles, and the lofty cascade was the famous Falls of Montmorency. "Stadacona, the capital of the Lord of Canada," was, it is believed, on the site of the present suburb St. Roque in the city of Quebec, on the border of the St. Charles.

Cartier left his larger vessels at Quebec, and in the smaller one he ascended the St. Lawrence as far as Lake St. Peter, an expansion of the river. The two young men refused to go any further with him, because he had broken his promise to leave them at their home on Gaspe Bay. So Cartier had no interpreter on his voyage up the St. Lawrence. Obstructions in the stream near Lake St. Peter caused him to leave his ship and in a small boat, with three volunteers, make his way against the currents. They rowed up as far as the Indian town of Hochelaga, which, Cartier said, "contained fifty houses, about fifty paces long and twelve or fifteen broad, covered over with the bark of the wood as broad as any board, very finely and cunningly joined together, and having many rooms." On their tops were garrets, wherein they kept their corn. The town was circular in form, stockaded, and environed by three courses of ramparts made of timber and about thirty feet in height. There was only one gate or sally-port, which was closed with heavy timbers, stakes and bars. On the ramparts were magazines of stone for the defense of the city.

Dressed in his most brilliant attire, Cartier visited the town on the day following his arrival, where he was kindly received by the Huron king. With that monarch he climbed to the top of the lofty mountain back of the town, from which he beheld, with great admiration, a vast extent of

level wooded country and the course of the mighty river for many miles. He called the great hill, Mont Real (royal mountain); and the city which lies upon the site of the Huron capital, bears the same name - Montreal. Such, also, is the name of the island containing the city and the mountain.

After enjoying the hospitalities of the Hurons two or three days, Cartier departed, carrying with him the pretty daughter of one of the chiefs, about eight years of age, whom her father lent to him to take to France. He joined his little vessel, returned to Stadacona, and as the season was far advanced, it being near the middle of October, he resolved to winter there. His vessels were moored in the St. Croix (St. Charles), and there the Frenchmen endured the terrible cold of a Canadian winter from November until late in March. Their sufferings were grievous. The scurvy which prevailed among the natives at Quebec, extended to the Frenchmen, and of the one hundred and ten Europeans there, eight died, and nearly all of the others were sick.

The ice remained so long in the St. Lawrence that Cartier could not depart until May. On the third of that month he erected a huge cross, thirty-five feet in height, on the site of Dalhousie Bastion, the highest point of Cape Diamond, the promontory at Quebec, and upon it he hung the arms of France with a Latin inscription "Francis First, by the grace of God King of France, reigns." On the same day, Donnacona, whose unstinted kindness Cartier had enjoyed, was invited with nine of his chiefs to a feast on the French flag-ship, where they were treacherously detained, and were borne away captives three days afterward. Cartier sailed out of the St. Lawrence on the southern side of Anticosti. He reached the open sea from the gulf, between Cape Breton and Newfoundland, and reached St. Malo on the 6th of July, 1536. The Petite Hermione was found to be so unseaworthy that she was left in the St. Charles, where her remains were found in the year 1848, imbedded in the mud.

At about the time when Cartier sailed from Quebec, two English vessels, the Trinity and the Minion, sailed from Gravesend, with the good wishes of Henry the Eighth, bearing "thirty gentlemen and ninety seamen," to explore the region of the St. Lawrence, and to plant a colony in Newfoundland. The expedition was organized by "Master How, of London, a man of goodly stature, and of great courage, and given to the study of cosmography." His companions were young men of rank and fortune. The ships were two months on the voyage to Cape Breton, where they first touched and then sailed to Newfoundland. There the company came very near starving to death. The famine was so great that some of the stouter sailors killed weaker ones in the woods, and ate them. The gentlemen were about to cast lots to determine which of their number should become food for the rest, when a French fishing-vessel, amply provisioned, came into the port. The Englishmen seized her, and with that vessel and their own they turned to England. The Frenchmen laid their case before Henry, who, when he learned how great had been the necessities of his countrymen when they took possession of the vessel, did not punish them, but paid the foreigners the value of their property out of his private purse.

Cartier's report of his second voyage was not cheering. The rigors of the climate on the St. Lawrence in winter; the ice-bound condition of that stream for several months, and the barrenness of the land in precious stones and metals, were so discouraging that more than four years passed

away before another like expedition from a French port was planned. The king was then fighting Charles with more intense hatred than ever under the impression that the emperor had caused the death of the eldest son of Francis, who died from the effects of poison. For two years the father could think of nothing but revenge, when through the intervention of the Pope and the Queen of Hungary, the two monarchs whose mutual exasperation was intense, became reconciled and embraced and kissed each other as friends. But the French treasury was drained by long wars, and Francis would not listen to propositions for colonization in America, until late in 1540. Then Francis de la Roque, Lord of Robertval, in Picardy, importuned the king for permission to make further discoveries and plant a colony in New France. The monarch had, meanwhile, talked with Donnacona and learned much about Canada which Cartier could not know. He told him of the large numbers of fur-bearing animals in its woods and waters; the delicious salmon in its rivers, and the richness of its soil and value of its pine timber. Francis was willing to make another trial, and he gave his consent to the fitting out of ships according to the plan of De la Roque. He commissioned that gentleman Viceroy and Lieutenant-General of "Canada, Hochelaga, Saguenay, Newfoundland, Belle Isle, Cape Breton and Labrador;" and as the services of Cartier were indispensable, he was recommissioned Captain and Pilot of the King," and appointed chief mariner of the expedition, in which six or seven ships were to be employed. De La Roque was authorized to make conquests in the name of France and to plant a colony. To obtain men for the latter purpose - for the founders of a State - the prisons of France were ransacked, and many desperate characters were mingled with good men in making up the required number. The work of preparation went vigorously on, and the harbor of St. Malo was alive with busy men in the spring of 1541. Every thing and every body were in readiness late in May excepting De La Roque.

Cartier was not pleased with being made subservient to the Lord of Robertval, in the enterprise before him, and when five vessels were ready, he was glad to find De La Roque dilatory. He gathered the whole company that were to go in them, in the cathedral, where all received absolution and blessings, and on the 23rd of May they sailed from St. Malo for the St. Lawrence, leaving De la Roque to follow when he pleased. Storms arose when they approached the tracks of the polar icebergs as they were voyaging toward the tropics, and chilling fogs lay along their paths. It was late in August when the squadron entered the harbor of Stadacona or Quebec. The people there, led by King Agona, the successor of Donnacona, pressed eagerly to the ships to welcome their old monarch, for Cartier had assured them that he would bring him back. Alas! Donnacona was no more. He and his eight chiefs had been baptized in France, but had grieved themselves to death in slavery. All of them had died before Cartier's departure on his third voyage. The mariner dared not tell the whole truth to the people for fear of their resentment he only acknowledged that Donnacona was dead, and then told them that the other chiefs had all become great lords in France, had remained there, and would never return. In token of his good faith he showed them the pretty little daughter of the Huron chief at Hochelaga, whom he had brought back. The people had grave doubts. They were sullen and unfriendly. The kidnaping - the inexcusable treachery - had left a bitter sting of wrong in their hearts. Their sullenness grew more cloudy, and very soon signs of absolute hostility were manifested.

Cartier sailed up the river a few leagues above Quebec, where he found a better anchorage and

at the beginning of September he sent two of his vessels back to France with an account of his doings, and to communicate the fact that De la Roque had not arrived. He again visited Hochelaga to ascertain whether there were serious obstructions to navigation above that town, and to give back to her father the little Indian princess. He gave to the chief a cloak of Paris red, which cloak was set with yellow and white buttons of tin, and small bells." These acts made a favorable impression upon the Hurons, and they loaded him with favors. After visiting the rapids between Montreal and La Chine, he returned to Quebec, when the temper of the natives was so manifestly hostile that he was admonished to provide for the safety of himself and his followers. He accordingly built a fort on the island of Orleans, and made his winter quarters there, mooring his vessels in a cove. He waited patiently for the coming of the Viceroy, but he had not appeared when the St. Lawrence was bound with ice.

The winter was long, cold and gloomy. The Frenchmen were almost buried in the snow-drifts, and suffered much and when the spring opened, the natives were evidently preparing to attack them. Their provisions being almost exhausted, and no tidings of De la Roque reaching him, Cartier left the St. Lawrence toward the end of May, 1542, and sailed for France. Running into the harbor of St. John near the southeastern extremity of Newfoundland, he there found De la Roque, Lord of Robertval, with three ships and two hundred men, and about twenty French fishing-vessels. De la Roque had left Rochelle in France on the 16th of April, and reached the harbor he was in on the 8th of June. He had been there several days when Cartier arrived. They held a conference, when the Pilot told the Viceroy that he had left the St. Lawrence because he could not withstand the natives, who were becoming very hostile. The country, he said, did not seem very fertile, and there were no mines of precious stones and valuable minerals. A few "diamonds" - quartz crystals - which he had gathered, and a small quantity of gold, were all that he had to show of mineral wealth, and he advised De la Roque to go no further, for he could never make a colony on the St. Lawrence profitable to himself or his king. The Viceroy regarded this advice as selfish, believing Cartier's object to be to bear all the honor of his discoveries, and the glory of founding a new empire, himself. De la Roque therefore determined to go on, and ordered Cartier to go with him to the St. Lawrence, not doubting that their united forces might over-awe the Indians and secure peace and prosperity. But the Pilot resolved not to submit to the Viceroy. With apparent compliance with the commands of his superior, he returned to his ship. At twilight he secretly conferred with the captains of his two other vessels, and at midnight, when the heavens were cloudy and moonless and the darkness was intense, he escaped from the harbor with his little squadron and sailed for St. Malo. Cartier was then about fifty years of age, and seems to have abandoned the sea, for he afterward lived quietly at St. Malo and at a little village near, alternately. When and where he died is not known. It is believed that he lived in comparative poverty, and died soon after his return from his third voyage to Canada.

Toward the end of June, De la Roque left Newfoundland for the St. Lawrence, passing through the straits of Belle Isle. He did not stop at Quebec, for he found the natives very hostile, as Cartier had told him they were. He went further up the river, probably to the place where the Pilot's vessels were anchored when he sent the two ships back to France the previous year. There De la Roque built a fort, but there is no record of what else he did in Canada, excepting that he

and his companions suffered severely during the following winter, and early in June, 1543, made an exploring voyage to the Saguenay, where one of his vessels was lost. In the autumn of that year he returned to France. Finding his king again warring fiercely with his old enemy Charles, against whose empire he had hurled five different armies at as many points, the Viceroy abandoned all projects of foreign colonization and re-entered the military service in which he had often before distinguished himself. Six years later, when Francis was dead (having perished because of his personal excesses at the age of fifty-three years), and Henry the Second, who had married Catharine de Medici, was on the throne of France, the Lord of Robertval again sailed for the St. Lawrence, and was never heard of afterward.

Chapter X

The Protestant Reformation - The Huguenots or French Protestants - Coligny and Catherine de Medici - Permission Granted for a French Protestant Settlement in America - A Settlement Planted on the Coast of South Carolina - The Colony Neglected - Helped by the Natives - A Huguenot Colony in Florida - Friendship of the Natives - They Build a Fort on the St. John's River - Appearance there of a Spanish Fleet - The Colonists Warned Concerning it - The Spaniards Land at the Site of St. Augustine - Fruitless Expedition Against Them.

NOW was the period of those earnest theological discussions and intense theological antagonisms in Europe, known as the Era of the Reformation. There had been, a revolt in Germany, led by Luther and Melancthon, against the Italian hierarchy or rulers in the Christian Church whose head was the Bishop or Pope of Rome. A similar revolt had broken out in Switzerland, led by Zwingli. It was a movement in favor of intellectual liberty - the perfect equality of all men, in Church and State, in the exercise of the inalienable rights of private judgment in matters of religion and politics. When, at a Diet or Congress held at Spires, in 1529 (at which Luther and several princes who were in sympathy with him appeared), the Church, by a decree, was made master in both spiritual and temporal affairs, the reformers entered a solemn protest. So they acquired for their party the name of protest-ants or PROTESTANTS. They found the Church so strong that they soon afterward formed a league for mutual defense, and so first organized the Reformation as an aggressive moral power. This led to theological and political combinations which resulted, twenty-five years later, in the freedom of the Germans from the domination of the Italian Church. So popular were the doctrines of the Reformers, in Germany, that as early as 1558 not more than one-tenth of the people there were adherents of the Church of Rome.

But that Church was not disposed to yield its supremacy without a struggle, and it put forth all its energies for the maintenance of its power. By the mighty agencies of its traditions, its vantage-ground of possession, the Order of Jesuits which it had just created, and the Inquisition which it had re-established with new powers, its warfare was keen and terrible, and its victories were many. Those of its enemies were postponed. In the heat of that conflict, which has continued ever since, have been evolved the representative government, the free institutions, and the liberty, equality and fraternity which are the birth-rights of every American citizen of whatever hue or creed.

In France the Reformation met enemies in the court, the Church and a majority of the people, and its progress was slow and fitful. John Calvin was the chief reformer, and was banished. He took refuge in Switzerland, where he died in 1564. But he left devoted followers in France. Among these, Admiral Coligni, a favorite of Catharine de Medici when she was acting regent, was one of the most conspicuous orders of the Huguenots, as the French Protestants were called. All parties admired him for his valor and his virtues and his eminent deeds in the service of his country. He persuaded Catharine to attempt to reconcile, by a conference, the contending religious factions. He failed. When the peace conference ended in a quarrel, war ensued. The

Duke of Guise, a descendant of Charlemagne, and claimant of the French throne, whom Catherine feared and hated, led the Roman Catholics. The Prince of Condo led the Protestants. The latter being greatly in the minority suffered much. Grieved because of their forlorn condition, Coligni resolved to procure an asylum for them in the milder regions of North America, far removed from civilized men, where they might enjoy perfect religious and civil freedom, unmolested by foreign powers or hostile factions.

Coligni sought an audience with Catharine. It was readily granted. That proud and unprincipled daughter of Lorenzo de Medici, was then a little more than forty years of age, stout and fair, and was wielding power with a prodigal hand. Coligni found her seated on a rich divan covered with blue damask satin. On her head was a coronet sparkling with a single large diamond. Around her plump neck glittered a circlet of gold and pearls, emeralds and rubies. She wore a skirt of gold embroidered white silk, and over this a rich robe of royal purple velvet, trimmed with a narrow band of ermine at the front and bottom, and with a close-fitting bodice edged at the top with rich lace. Her full puffed sleeves were of the finest linen and lace, with brilliant gems at the wrists. A gold chain fastened at her bosom with a diamond brooch extended to her feet and terminated in a golden cross studded with seed pearls. Near her, and playing with a fawn-colored Italian greyhound, was her royal son, who had lately ascended the throne of France as Charles the Ninth. The king's hair hung in ringlets about his shoulders, for he was a boy only ten or twelve years of age, and his fair complexion was heightened by his rich suit of royal purple velvet, with slashed sleeves, revealing white linen beneath. Only a single minister of state was present, and he and a young woman, a court favorite and cousin of the King of Navarre, who sat by a vine-trailed window embroidering, were the only companions of royalty when the Admiral entered the room.

Coligni was tall, elegant in figure and deportment, grave in aspect, with flowing hair and beard slightly streaked with gray, for he was about forty-five years of age. He was dressed in the uniform of his rank, and carried in his hand a rich green velvet cap, bearing a long ostrich plume. His doublet of crimson velvet with short skirt was sprinkled with golden lilies, and encircled with a belt from which depended a straight sword. The sleeves terminated at the elbow, and the rest of the arm to the wrist was covered with embroidered linen. His trunk-hose of velvet extended to the middle of the thighs, and was slashed and elegantly embroidered with gold thread. Up to this, tight-fitting stockings wrought of fine white wool, extended, and on his feet were buskins of polished russet leather, sparkling with diamond buttons that fastened silk rosettes to the insteps. From his shoulders hung an open short Spanish cloak of blue velvet, and around his neck was a modest ruff. A massive gold chain, bearing the Order of St. Louis, was seen upon his breast. Such was the group who appeared in the audience-chamber of the Regent of France, late in the year 1561, to confer upon the subject of discoveries, and the planting of a Protestant colony in America.

That conference was short. In few words Coligni set forth the happiness which the carrying out of his scheme would confer upon his suffering countrymen; and he dwelt specially upon the fact that it might redound to the glory of France. Catharine, who was a pauper in moral and

religious convictions, and had espoused the cause of the Protestants only as a measure of state policy, was then the friend of Coligni. She readily granted all that he desired, in the name of the little king then playing with the greyhound; and the child's signature, hardly legible, was afterward placed to the charter given to the admiral, by which he was authorized to send an expedition to Florida and establish a colony there.

Coligni lost no time in making use of his privilege. He quickly fitted out two vessels of the character of Spanish caravels, chiefly for a voyage of discovery, and placed them under the command of John Ribault, an experienced mariner of Dieppe, who was an earnest Protestant. Ribault sailed from Havre de Grace on the 18th of February, 1562, with sailors and soldiers, and a few gentle men of fortune who were prompted by curiosity, the love of adventure, or the prospect of gain, to accompany him. They arrived off the coast of Anastacia Island (it is supposed) below the site of St. Augustine, at the close of April. Sailing along the sweet smelling coast northward, the two vessels entered the broad mouth of the River St. John, where the company landed and were most kindly received by the natives. The Frenchmen were delighted with everything - the soft climate the sweetest blossoms the magnificent trees festooned from root to top with grape-vines; birds of gay plumage and sweetest notes and mulberry trees, on "the boughs of which were silkworms in marvelous numbers," and with people of finest forms and kindest natures. They seemed to have entered a paradise. "It is a thing unspeakable," wrote Captain Ribault, "to consider the things that be seen there, and shall be found more and more in this incomparable land, which, never yet broken with plough irons, bringeth forth all things according to its first nature, wherewith the eternal God endowed it."

Under the shadow of a wide-spreading magnolia tree laden with blossoms at the edge of a green Savannah, with half-naked men, women and children, painted and decorated with gold and pearls - wondering sun-worshippers - standing a little way off, the Christians knelt upon the soft sward and poured forth thanksgiving to God for his mercy in giving them a safe voyage to such a delightful land. It was a bright May-day. At twilight they returned to their ships, and early the next morning the whole company went ashore again, in small boats, carrying a column of hard stone upon which was carved the arms of the French king. They set it up on a broad grassy knoll surrounded by tall cypress and spreading palmetto trees and sweet flowering shrubs and with the usual ceremonies, they took possession of the country in the name of Charles the Ninth. They were probably not far from the lowest point to which Verazzani had sailed almost forty years before.

On the 3rd of May the Huguenots went northward, visiting numerous islands and inlets, and toward the end of the month they entered the fine harbor of Port Royal on the coast of South Carolina, passing the high shore of Hilton Head on the left and the low grounds of St. Helena Island on the right. They anchored off Port Royal Island and went in small boats up the Broad River, and into the Coosaw and the Combahee. They were in the land where D'Allyon had committed his atrocities and met retributive justice about half a century before, yet they were kindly received by the natives and secured the friendship of the Indians by giving them kindness in return. Charmed with everything, Ribault, after exploring the surrounding country several days,

called his people together on Port Royal Island near the site of the present town of Beaufort. He told them that he thought they were at the best place for a colony he had yet seen. He spoke of the advantages of a settlement there, and the glory they might acquire for themselves and France by planting in that beautiful and fertile land the seed of a great empire. Who will undertake the glorious work? he asked. The result was marvelous even to that hopeful man. So many were anxious to remain, that if all of them had stayed, Ribault would not have had sufficient men to navigate the ship back to France. A colony of thirty persons was organized by the choice of Captain Albert De la Pierria as governor. At the request of the volunteers, Ribault built them a fort and provisioned it before his departure, and named it Fort Charles (Fort Carolus or Carolina) in honor of his king. It was constructed on the eastern bank of Port Royal Island, about a mile and a half from Beaufort, where its remain were yet visible when I visited the spot in the spring of 1866. Near it were magnificent live-oak; draped with the trailing Spanish moss, which were there, probably, when Ribault built the fort.

After completing the little fortress, Ribault said to the men who were to remain Be kind to each other, and prudent with your provisions. Let each love God and his neighbor. Your interests are mutual. Let no jealousies grow, nor disputes make you live apart, but cultivate brotherly love and you will prosper. Farewell!" Then he went on board of his vessel, and both ships sailed out of the harbor after exchanging salutes with the fort by firing guns. It was then near the middle of June, and Ribault attempted to explore the coasts northward, but foul weather opposed him and he sailed for France, whence he expected to return immediately with supplies for the colony.

Coligni was delighted with Ribault's report, but he was then unable to do anything for his colony. A civil war was raging in France between the theological factions - Roman Catholics and Huguenots - with unrelenting violence. The monarch, the court and Coligni were so involved in the strife that Ribault pleaded in vain for help for the colony in Florida. As soon as it subsided, the admiral renewed his efforts in its behalf. The regent and her son provided him with money and three armed ships - the Elizabeth of Honfleur, Captain John Lucas; the Petite Britain, Captain Vasseur; and the Falcon, Captain Marchant. The little squadron was placed under the general command of Rene Laudonniere, who accompanied Ribault in the preceding voyage. With him went many young men of family and fortune; mechanics and laborers; Jacob le Moyne as artist and geographer to the expedition, and two skillful pilots, the brothers Vasseur, of Dieppe. Laudonniere left Havre de Grace on the 22nd of April, 1564, and at the end of two months he saw the coast of Florida; but he did not go to the relief of the colony at Port Royal Island. Why?

The colonists at Port Royal cultivated the friendship of the Indians, and were very happy for awhile, but when the provisions began to fail and Ribault did not return, they lamented their folly in not exercising forethought. They had not cultivated a rood of land nor made any other provisions for sustenance, and they were soon compelled to look to their Indian neighbors for their daily food. That was then scanty and being informed of a rich country and a munificent king further south, a part of the company went thither in a little pinnace which they had constructed, and returned with it loaded with corn and beans. They had evidently been to the banks of the

Savannah Rivet, and there they had beheld a marvelous vision in the capital of King Ouade. His house was adorned with tapestry formed of richly-colored feathers white couches finely embroidered and fringed with scarlet handsome mats made of woven split cane and the monarch and his young queen richly adorned with golden chains and strings of great pearls. Better than these were his large granaries of food, from which their pinnace was so bountifully supplied but their treasure was destined to suddenly disappear. Soon after their return to Fort Charles, their house, in which everything was stored, was burned, and they were left desolate. Their savage neighbors did all in their power to relieve their distress, and the munificent Ouade furnished them with another pinnace full of corn and beans.

Dissension, the child of idleness, now appeared among the colonists. Governor Pierria applied the rules of discipline so harshly, that the people were exasperated, rose in mutiny and put him to death. They chose Nicolas Barry to be their leader, but their forlorn condition, produced intense discontent. Gaunt famine was before them, and a growing distrust of the French-men which appeared among the Indians menaced them with starvation. They determined to desert Port Royal and return to France. With the assistance of their neighbors they constructed a frail brigantine and sailed for home. She was scantily provisioned and calms and headwinds kept them so long upon the ocean that their food was almost exhausted. Then a furious tempest beat upon their frail barque and nearly engulfed her. A tremendous wave turned her upon her side, and so she floated. Starvation came. The sufferers tried to subsist upon their shoes and leather doublets, but one after another died and fell into the sea. The living had concluded to make the next victim their food, when another wave righted the crazy vessel, with some of the provisions uninjured. Half filled with water, she nevertheless floated. Again starvation came, and lots were about to be cast to determine who should be made food for the rest, when there was a feeble cry of Land from one of them. They were, indeed, in sight of a green shore. Very soon a small English vessel came to their relief. One of her seamen was a Frenchman who had sailed with Ribault, and recognized the famished men. He gave them food and drink, and told them of home and friends. Upon what shore they were landed, it is not known, but it is certain that a part of these French adventurers were taken into the presence of Queen Elizabeth of England, and that their account of the beauties of Florida created an intense desire on the part of the English to colonize that region.

Laudonniere and his companions resolved to make the banks of the St. John's River, in Florida, their abiding place. At a council, he said "If we should pass further north to go in search of Port Royal, this step would be neither very advantageous nor convenient, at least if we may rely on the report of those who have dwelt there a long time." He evidently had heard the report of those who had abandoned Fort Charles, before he left France. This answers the question, Why did he not go to Port Royal?

Laudonniere anchored his ships in the St. John's where Ribault had rested his, and he was received with marked kindness by the chief who dwelt near. He came to the captain with several of his noblemen gaily plumed and wearing short cloaks of marten skins or feathers, and besought him to go with them to the column which Ribault had set up. When they came to the grassy knoll they found the pillar surrounded with palm leaf, baskets of corn, and garlanded with fresh sweet

flowers. Savages then kissed the stone with much reverence, extending their arms toward the skies as they assumed their erect position. They requested the Frenchmen also to kiss the stone, which they did. The attendants of the chief then brought spring-water to their guests in ornamented earthen jars, and presented to Laudonniere two live eagles. It was a ceremonial token of friendship, which pleased the captain, and with the permission of the cacique he proceeded to erect a fort on the south bank of the river. In this work the Indians gave him great assistance, for they were very expert palmetto-leaf thatchers, and covered the barracks with excellent roofs. When the work was finished, it was called Fort Carolina, in honor of King Charles.

Very soon rumors came to the willing ears of the Frenchmen of mines of gold and silver in the interior, and such a thirst for the precious metals was created that an expedition went far up the river, in small boats, in search of them. Everywhere they had heard of gold and precious stones "further on," and they returned with such extravagant stories of their abundance somewhere far inland in the hands of dusky kings, that the colonists were made half-crazy. The fever was at its height when, in July, the ships were sent back to France for supplies. Every man seemed anxious to seek treasure on his own account, and Laudonniere was compelled to threaten severe penalties against any person who should traffic for gold or precious stones, excepting for the benefit of the whole company. The delusion soon vanished. When it was known that the stories of the savages about the abundance of precious metals and stones in the interior were sheer fictions, the gold fever instantly subsided, and was followed by indolence and disappointment, with their attendant evils. The bane of the Port Royal colony was seen in this. There were too many idle and improvident persons among them - too many "gentlemen who would not soil their hands with labor. Discontent soon created a mutinous spirit, and plots against the life of Laudonniere were planned and discovered. At length, some of the soldiers and seamen seized two small vessels, and, sailing toward Cuba, engaged in piracy in the West Indian Seas. On their return, three months afterward, the ringleaders were shot. Great excitement ensued, and the colonists were kept from open mutiny only by being engaged in explorations of the country, or in wars with the enemies of friendly chiefs around them. They neglected the rich soil, and famine threatened them. Discontent became more rampant, and the captain determined to return to France with the whole company. They were delayed for want of sufficient vessels. Meanwhile, Sir John Hawkins, of England, sailed into the St. John's with several ships. Laudonniere bought one of them, and was about to embark for Europe in her, with his whole company, when Ribault appeared with a squadron of seven ships from France, bringing a fresh company of colonists. Amongst them were several women and children. He had sailed from Dieppe late in May, with a commission as governor of all the French on that coast, and arrived at the St. John's at near the close of August, 1565.

A few days after Ribault's arrival, five ships were seen coming in from the sea. They anchored within speaking distance of the French ships at the bar, and after a long silence the commander of the intruding squadron hailed the nearest vessel. He was answered, "France. And what are you doing in the territories of King Philip?" he asked. "Begone!" The questioner was a Spaniard, and the Spanish monarch claimed all Florida by right of pre-discovery. The Spanish officer then asked "Are you Catholics or Lutherans?" and was answered, Lutherans of the new religion." The

trench officer then inquired who the Spaniard was and what was his errand, when (according to Barcia, the Spanish historian) he replied: "I am Pedro Menendez, commander of this armament, which belongs to the king of Spain, Don Philip the Second. I have come hither to hang and destroy all the Lutherans whom I shall find either on land or sea, according to my orders received from the king, which are so precise as to deprive me of the power of saving any one whatsoever; and these orders I shall execute to the letter but if I should meet with any Catholic on board your vessels, he shall receive good treatment. As for the heretics, they shall die."

Ribault was not taken altogether by surprise, for just as he was about to sail from Dieppe, he was handed a letter from Coligni, in which the admiral wrote in postscript "While closing this letter, I have received certain advice that Don Pedro Menendez is about to depart from Spain to the coast of Florida. You will take care not to suffer him to encroach upon us, any more than he would that we should encroach upon him."

The threat of Menendez and the hostile attitude of his ships caused the captains of the French vessels to cut their cables and put to sea. The Spanish vessels followed, firing the contents of heavy bow-guns after the fugitives. They chased them far, but in vain. "These enraged devils," wrote Mendoza, "the chaplain of Menendez' squadron, are such adroit sea-men, and manoeuvred so well, that we could not take one of them." The Spaniards finally turned back toward the coast, followed by the Frenchmen, who saw the smaller Spanish vessels enter a river several leagues south of the St. John's, and the larger ones, with the galleon of Menendez, anchor at its mouth. They also saw Spanish soldiers and provisions landed not far above that anchorage. With this important news the Frenchmen hastened back to the St. John's and reported to Ribault all they had seen. He immediately prepared to go in search of his enemies and attack them with his ships and his whole land force.

Whilst Ribault was holding a council in which Laudonniere opposed the measure suggested by the governor, an Indian came with tidings that the Spaniards were fortifying themselves on the bank of the river where they had landed. Ribault believed that they were preparing to march overland and attack Fort Carolina, and he hastened his preparations for seizing their ships, attacking them in their quarters, and so spoiling their scheme and possibly destroying them totally or driving them from the coast. Was he sure that he could seize their ships? The more cautious Laudonniere thought not, and still opposed the perilous expedition. The more fiery Ribault persisted in his resolution, and gathering as many soldiers on three ships (his larger one, the Trinity, being yet at sea) as they could conveniently carry, he sailed out of the river and down the straight coast, in full expectation of gaining a complete victory. He was sorely disappointed. A dead calm and a very low tide, when he first approached the enemy, prevented his attacking the Spanish ships, and whilst he was waiting for a favoring breeze and a flood tide, there arose a very sudden and violent storm which drove the French vessels far out to sea, and exposed both ships and men to a sad fate, as we shall observe hereafter.

Meanwhile, Menendez dispatched one of his small vessels to Spain, and the galleon to Cuba, the latter for the purpose of bringing to Florida a reinforcement of Spanish troops known to be at

Havana. But the galleon St. Pelayo - a large three-deck ship - did not reach its destination. There were several French prisoners on board of her whom Menendez had ordered to be sent to the Inquisition in Spain by way of St. Domingo. Soon after the great ship put to sea, these prisoners joined the sailors in a mutiny, and taking the command from the officers, they sailed for Europe and entered a port in Denmark.

Chapter XI

Menendez - His Landing on the Coast of Florida - The French on the St. John's Massacred by the Spaniards - Complaints of Outrage Unheeded by the French Monarch - The Chevalier de Gourges Avenges the Crime by Retaliation - The French Court Favors the Roman Catholics - Wickedness of Catherine de Medici - The Murder of Coligny - Queen Elizabeth Espouses Coligny's Plan for Settlement in America - Reports Concerning the Warmer Regions of America Received from Walter Raleigh - Frobisher's Voyage in Search of a Northwest Passage to India, and for Gold - His Discoveries - The Globe Circumnavigated by Drake - His Exploits Against the Spaniards.

MENENDEZ (or Melendez) seems to have been rather too harshly treated by historians, for his career in Florida was not wholly voluntary. He was a native of Avila, in Spain, and at the period under consideration, he was about forty-six years of age. He had already risen to the highest rank in the Spanish navy, and was a man of large fortune. In 1554, he commanded the vessel which bore his king to England to marry Queen Mary and in 1561, he commanded the great treasure-fleet of galleons on their voyage from Mexico to Spain. One of the vessels containing his son and several relatives and friends disappeared, and was never heard of afterward. When he had delivered the fleet in Spain, he asked permission to go back in search of the lost vessel, but was then refused. Finally, after two or three years delay, his request was granted, but on condition that he should explore and colonize Florida. He fitted out an expedition for the purpose at his own expense, but when he was about to sail, orders came to him from Philip to exterminate all Protestants he might find there, or in whatever corner of the world he should discover them, on land or sea, in forests or marshes.

Philip had heard that the Huguenots who had fled from persecution in France were hiding in the forests beyond the Atlantic, and his zeal was so kindled for the domination of his church, that he gave the order to Menendez to extirpate the heretics. The mariner had no alternative but to obey or lose the opportunity of searching for his son. He was not even allowed to choose the alternative, for disobedience would have led him to the dungeons of the Inquisition. So he obeyed. The king, regarding it as a holy enterprise, added ships and treasure Soldiers and seamen flocked to the standard of Menendez in great numbers, and he sailed with a fleet of eleven ships (one of them a galleon of nine hundred tons) with over twenty-six hundred persons, consisting, besides the soldiers and sailors, of adventurers and priests. This was the armament, the sailing of which Ribault had been apprised by Coligin. Storms and other disasters in the West Indies scattered it, and when it arrived on the coast of Florida, it was reduced to a squadron of only five vessels (one of them the great ship), bearing about a thousand persons of all descriptions.

When Menendez landed from the galleon, on the coast of Florida, he made the event an occasion for a pompous ceremonial. As he left the great ship in a boat with six oarsmen, accompanied by Mendoza, his chaplain, and followed by other boats filled with gentlemen and ecclesiastics, loud trumpets sounded, drums beat, cannon thundered, and flags were displayed on the ship and on the shore, where his soldiers had already begun the construction of a fort. As they touched the beach, the chaplain walked before, bearing a large cross and chanting a hymn.

Menendez followed with his train, carrying aloft, with his own hand, the royal standard of Spain unfurled. He and his followers reverently knelt before the priest, who was arrayed in rich sacerdotal robes, and kissed the sacred symbol of the atonement which Mendoza held in his hand. It was firmly planted in the sand by the side of the flagstaff from which fluttered the royal banner in a gentle breeze; and a shield bearing the arms of Spain was leaned against the cross. Then Menendez drew his sword and formally took possession of the whole country in the name of King Philip of Spain. On that spot, and with such consecration, were laid the foundations of the city of St. Augustine, in Florida, forty years earlier than those of any other town in America, north of Mexico.

Menendez soon marched upon Fort Carolina, on the St. Johns, to execute his dreadful mission. His journey was in incessant rain over oozy ground, but zeal gave strength to his four hundred soldiers. The feeble Huguenot fort was in command of Laudonniere, who had only a handful of soldiers (for a greater portion had gone with Ribault), and he was burdened with civilians, men, women and children. With the ferocity of tigers, the Spaniards fell upon them. They were close to the fort before their presence was suspected. No person was spared on whom the assailants could lay hands. In their beds, in prayers for mercy, in flight, they were slaughtered. A few escaped to the woods without food and with scanty clothing. Many perished for want of food, and a few made their way to two small French ships, in which they sailed for Europe. Among them was Laudonniere. According to the chaplain, Mendoza, one hundred and forty-two of the Huguenots were slain, whilst the Spaniards did not lose a man. The women and children were butchered. A few men were hanged upon trees, and over them was placed the inscription: NOT AS FRENCHMEN, BUT AS LUTHERANS.

Leaving a garrison of three hundred men in Fort Carolina, and naming it Fort Matheo, Menendez returned in triumph to St. Augustine. His chaplain has left a glowing account of his reception there, and bestows unstinted praise on that leader as one of the most zealous of Christians. He was supported, he says, in his great fatigue by a burning desire to serve our Lord and destroy this Lutheran sect, the enemy of our holy Catholic religion."

Ribault's vessels, meanwhile, had all been wrecked near Cape Canaveral, on the Florida coast. All of his people were saved from the sea, but perished at the hands of the less merciful Spaniards. They tried to make their way to Fort Carolina, ignorant of its sad fate. Ribault, with one hundred and fifty men, was betrayed by one of the sailors who had deserted Laudonniere and turned pirate, and under a promise of mercy he cast himself upon the clemency of Menendez. That leader proceeded to put to death the brave captain and his companions. "Seeing that they were Lutherans," says Mendoza, "the General condemned them all to death but as I was a priest, and had the bowels of a man, I besought him to accord to me the favor, that he would not put to death those whom we should discover to be Christians. He granted my request. I made inquiry, and found ten or twelve, whom we selected from the number. All the others were executed because they were Lutherans, enemies of our holy Catholic faith." They were led out in parcels of ten, and with their hands tied behind them and at a line drawn in the sand with a cane, by Menendez, they were butchered. So, also, says Barcia, the Spanish historian, who regarded

Menendez as the chosen instrument of the Almighty to vindicate his cause. Mendoza tells us, when writing of the massacre at Fort Carolina, that the Holy Spirit enlightened the understanding" of the commander "to enable him to gain so great a victory."

A knowledge of these horrid crimes in Florida and the avowed cause of their commission, excited the greatest indignation throughout Europe, and the unchristian spirit of revenge glowed in many a manly bosom. The French Roman Catholics were greatly moved by this outrage upon their countrymen by the hated Spaniards. The relatives of the victims appealed to the French king to vindicate the wrongs of the emigrants who had been sent out under his sanction and authority. Coligni joined in the appeal; but the king and court, ruled by Catharine, whose theological views were then in a transition state, were profoundly indifferent. No remonstrances or complaint was sent to the Spanish court. No doubt information of the expedition of Ribault had been sent from the French court to Philip and caused the issuing of his bloody commission to Menendez. The courtiers of Charles the Ninth, who feared and hated Coligni because he was a Huguenot and a patriot, rejoiced at the failure of his scheme, and he was utterly unable to do more for his colony.

At this juncture a fiery avenger appeared. It was the Chevalier Dominic de Gourges, a gentleman of Gascony, member of an eminent family and a devoted Roman Catholic. In the military service of his country he had been made a prisoner by the Spaniards, who compelled him to do slave's work in Spanish galleys. His hatred of the Spanish blood thereby engendered was undying. When he heard of the treatment of his countrymen in Florida, at their hands, he was in retirement. Filled with indignation because of the crime and the criminal indifference of his king, he determined to fit out an expedition at his own expense, to punish the offenders. That was in 1567. He sold his property, borrowed money of his friends, and fitted out three small vessels, manned by one hundred soldiers (many of them gentlemen volunteers), and eighty mariners prepared with cross-bows and picks to act as soldiers. His vessels were so flat-bottomed that they might pass over the sand-bars of rivers.

De Gourges kept his destination a secret, and sailed from Bordeaux late in August for the coast of Benin, in Africa, as he publicly pretended. After various vicissitudes and delays, his little squadron left the extreme western end of Cuba for Florida, when, for the first time, he revealed to all his followers his destination and designs. In a speech glowing with enthusiasm, he so warmed their hearts for the work that was before them, that they were impatient to reach the coast. Their eyes were gratified with a sight of Florida in the spring of 1568, when the squadron entered the mouth of a small river north of the St. John's. The Indians, supposing the new comers to be Spaniards, showed much hostility. De Gourges' trumpeter, who had been with Laudonniere, and understood a little of the Indian tongue, volunteered to go ashore. There he was delighted, not only by the discovery that the cacique was an old friend of Laudonniere, but that he was accompanied by a young Frenchman who had escaped the massacre of Fort Carolina. The cacique received the trumpeter kindly, and sent an invitation to De Gourges to come on shore and hold a conference. He did so, and his young countryman acted as interpreter. The cacique, painted and bedecked, was seated on a log in a beautiful grove, with several allied chiefs sitting in a semicircle around him. He placed De Gourges on another log, and then opened the conference

with bitter complaints against the Spaniards, because of their cruelties. They had driven the Indians from their homes, murdered their children, and desolated their fields because they had treated the Frenchmen kindly. The Chevalier was pleased with this discourse, but was cautious. He told the cacique that the Spaniards should be punished for their crimes. "Do you intend to make war upon them?" quickly asked the cacique. "I do," as quickly answered De Gourges. "We will join you!" said the cacique with vehemence as he sprang to his feet and the same words came from the lips of the other chiefs with equal vehemence as they seized their arms which they had laid upon the grass, and brandished their javelins in great excitement. An alliance against the Spaniards was made on the spot between the French and Indians, and steps were immediately taken to attack the common enemy. Other alliances were made between the French and Indians, many generations afterward, which were instruments of dire distress to the English settlers in America, as we shall observe as our story goes on.

The allies met at an appointed place not far from the St. Johns, on which the Spaniards had built two forts below Fort Carolina, on opposite banks of the river. Moving cautiously, they crossed a little stream behind a wood, arm-pit deep, the soldiers carrying their powder flasks on their helmets, an arquebuse in one hand and a sword in the other. Gathering in battle array near the little fort, the allies rushed forward with shouts and yells, and took it by surprise. The entire garrison, sixty in number, were slain, excepting a few who were reserved for another fate.

De Gourges now hastened across the river, with eighty men in boats, to attack the fort on the opposite side, followed by the Indians, who were so eager for the fray that they could not wait for the return of the little vessels. They plunged into the water, each holding a bow, javelin and quiver of arrows in one hand, and swimming with the other. Appalled by the number of pale and dusky enemies that threatened them, the garrison of sixty men fled in the direction of Fort Carolina (or Matheo), three miles above. They were overtaken by the French and Indians in the woods, and the whole company were slain, excepting a few who were held as prisoners. From these prisoners and from a spy who was discovered in the camp, the French commander learned that Fort Carolina was not very strong; that its garrison consisted of two hundred and sixty men, and that they were greatly alarmed by a report that the allies were two thousand in number. Encouraged by this information, De Gourges, after two days preparation, marched with his whole force against the doomed fortress. After some severe fighting, the fort was captured. The flower of the garrison had already been slain in a sortie or sallying out to attack the assailants, and many of the remainder had fled to the woods, where they were met by the Indians and slaughtered. There was an indiscriminate massacre as before, a few only being reserved as prisoners. Now these, with others who had been so reserved, were placed in a row under the very trees whereon the Huguenots had been hung, not as Frenchmen, but as Lutherans. De Gourges addressed them, and then suspended them all by their necks. Over them he placed the inscription, burned into wood with a hot iron: NOT AS SPANIARDS AND MARINERS, BUT AS TRAITORS, ROBBERS, AND MURDERERS.

So was concluded the savage and unchristian work of retaliating upon the innocent the crimes of the guilty. Could the blow have fallen upon King Philip of Spain, or Menendez his executioner,

or Mendoza his apologist and coadjutor, and not upon the mere machines of government - the common soldiers - retributive justice would have been more divinely vindicated. But we must judge Philip, and Menendez, Mendoza and De Gourges, leniently, in the light of the spirit of the age in which they lived. No Spanish monarch now; no military chief, no truly Christian minister in any Christian country, today, would do such horrid work for such a cause. The seminal idea of the protest at Spires has worked beneficent wonders in making men less savage and more divine, since it was projected into human society.

Too weak to brave the wrath of Menendez, who was at St. Augustine, De Gourges, with the assistance of the Indians, utterly destroyed the forts on the St. John's, and then sailed for France, where he arrived just in time to avoid vessels which Philip had sent out to intercept him. He was received with coldness at court. Philip had demanded of the weak Charles the head of De Gourges, and the Queen-mother, Catharine, had espoused the cause of the opponents of the Huguenots. In poverty De Gourges concealed himself for some years, declining an invitation of the Queen of England (Elizabeth) to enter her service. At length he died, whilst on his way to a seaport to take command of a fleet that was about to wage war on Philip.

Menendez firmly planted a colony at St. Augustine, and sent an expedition, with Jesuit missionaries, to explore the waters of Chesapeake Bay, plant a settlement there, and scatter the seeds of Christianity among the pagans. But his death in 1574, when he was High Admiral of the Spanish navy, arrested this enterprise, and no further attempts seem to have been made by the Spaniards to plant settlements within the domain of our Republic.

Coligni was deserted by his sovereign and his inhuman mother, and became a martyr. Catharine, with a strange perversion of a mother's natural instincts, after she became regent, plunged all of her children, in the flower of their youth, into a whirl of sensual pleasure, that soon weakened their minds and bodies beyond recovery, as she intended they should be. Her royal son, when he reached his majority, seemed incapable of resisting any temptation put in his way by his mother, and he was easily persuaded by her to order the destruction of the Protestants throughout France, on the eve of St. Bartholomew, in August, 1572. She had failed in a plot to bring the Duke of Guise to the scaffold, and now she had joined the league against the Huguenots, of which he was a leader. Coligni was selected as one of the first victims for sacrifice on that fatal night. Behme, a German assassin in the employ of the Duke of Guise, led a band of murderers to the room of Coligni, with concealed weapons excepting a boar-spear which he held in his hand. When he entered, the majestic presence of the Admiral and the serenity and dignity of his deportment so abashed the leader, that he was about to retire, when one of his followers whispered in his ear, "Coward!" Behme instantly recovered his self-possession and plunged the spear into the heart of Coligni, who fell dead at the feet of his murderers. His body was thrown out of the window into a court, where the Duke of Guise was waiting for the consummation of the crime. The Admiral's head was severed from his body and carried to Catharine, who had it embalmed and sent as a present to Pope Gregory the Thirteenth, at Rome. The Admiral's body was dragged through the streets of Paris amidst the execration of an infuriated mob, and then was hanged on a gibbet where Charles the Ninth and his courtiers viewed it.

We have observed that a remnant of Ribault's company who abandoned Port Royal were picked up at sea by an English vessel, and taken to the presence of Queen Elizabeth. She was the daughter of Henry the Eighth and the beautiful Anne Boleyn, and had succeeded her half-sister Mary as sovereign of Great Britain in 1558, when she was twenty-five years of age. She had not been long on the throne when these Huguenots were brought into her audience-chamber. They were treated kindly, for Elizabeth was in theological sympathy with them. She had always been a Protestant at heart, but to avoid many personal perils and even death during the reign of her half-sister, who was wife of Philip of Spain, she had so deported herself with singularly adroit hypocrisy, that she was only suspected of heresy. So completely did she deceive everybody, that only the day before she ascended the throne as queen, the Spanish ambassador at the British court wrote to his royal master: She is a true Catholic she declares that she prays to the Virgin and acknowledges the real presence [of the real body and blood of Christ] in the sacrament. That was at the middle of November. On Christmas she placed herself at the head of the Protestant world, by refusing to hear mass in the Royal Chapel; and yet, only three weeks later, when she was crowned in Westminster Abbey, the religious ceremonials were all in accordance with the liturgy of the Church of Rome, and she partook of the sacrament at the hands of a Romish Archbishop. She was simply an adroit politician, and was moved altogether by political motives. For years she endeavored to gain the favor of all her subjects, Romanists and Protestants, by favoring both and there was a ludicrous mixture of the two ceremonials in the public worship of the realm.

At the time the distressed Huguenots were brought into the presence of Elizabeth, she was on the point of affording aid to their co-religionists in France and the Netherlands. She favored Coligni's scheme for colonization in America, and she listened with delight to the accounts given by these castaways of the beauty of the country, the amenities of the climate, and the fertility of the soil of the mysterious land peopled by a mysterious people, which they had been compelled to abandon. The enlightened and sagacious queen readily perceived the glory and advantages she might win for her country, by carrying forward Coligni's plan, with her own countrymen and the French Huguenots as the materials for a powerful colony. She felt a strong desire to do so, but she was then too deeply engaged in more important state work, and her desires did not ripen into action until several years afterward, although they grew in intensity. From her subjects who went over to France in considerable numbers to fight under the Prince of Conde and Coligni, she continually heard more and more of the grandeur and richness of the warmer regions of North America. From none of them came more vivid pictures than from Walter Raleigh, a young Devonshire gentleman who came from an ancient family, was well educated, and who was one of a small body of troops sent by his queen to assist the Huguenots in France. He served five years under Coligni, and then proceeded to the Netherlands to fight the Spaniards, under the banner of the Prince of Orange. He was in that service abroad when De Gourges returned from his foray in Florida, and Raleigh heard much of that region from the lips of the Chevalier. To his friends at home and to his court, he wrote letters filled with accounts of the wonders of the West, and when he returned to England he found the minds of many of the leading men of the realm, as well as that of his queen, filled with projects for making settlements in the warmer regions of North America.

Meanwhile, English navigators had been again trying to solve the question which Cabot had failed to do more than half a century before, namely, the existence of a northwest passage to Asia from the British Isles. Among them was Martin Frobisher, a Yorkshireman, whose zeal and patience were remarkable. He spent fifteen years in fruitless endeavors to get up an expedition to accomplish that object, when he was fortunate enough to secure the patronage of Ambrose Dudley, Earl of Warwick. The queen and her government took a lively interest in the undertaking, and early in June, 1576, Frobisher sailed from Deptford, on the Thames, with two barks of only twenty-five tons each and a pinnacle of ten tons, with the avowed purpose of making the discovery or to die in the attempt. When the little flotilla passed by the palace at Greenwich, the queen, who was watching its movements from an open window, leaned out and waved her hand toward the commander in token of her good-will and a farewell.

Frobisher touched at Greenland, coasted up the shores of Labrador and entered a strait or inlet above the entrance to Hudson's Bay, which bears his name. There he landed and formally took possession of the country in the name of Elizabeth. Impenetrable pack-ice, the loss of some of his men and the growing discontent of others, caused him to return to England in the autumn, at the twilight of the polar night, taking with him some of the products of the new region which he had added to the British Empire. Among other things was a heavy dark stone, a fragment of which the wife of a man to whom Frobisher had given it threw into the fire, in a passion. Her husband snatched it out and quenched the glowing mineral in vinegar, when it glittered like burnished gold. On fusing it, a small quantity of the precious metal was found in it. The fact was soon noised abroad and produced a gold-fever. Many persons eagerly offered money to enable Frobisher to make another voyage to those high latitudes, and in May, 1577, he sailed from Harwich in a vessel of the royal navy, which the queen placed at his disposal, accompanied by two barks of thirty tons each.

Only for gold were these adventurers ordered to search. They were not to seek the mysterious passage to India. Indeed Frobisher had demonstrated the impossibility of passing the polar ice-fields. On the shores of Frobisher's Inlet, the whole company landed, freighted the ships with the black stone, and returned to England. A commission was appointed by the queen to determine the value of the discoveries made. Very little gold, if any, was procured from the cargoes of stone, but the commission, for reasons not made clear, deemed it expedient to send out another expedition. Frobisher was now placed in command of a fleet, for he had twelve ships in addition to the three with which he made his second voyage. With these he sailed from Harwich on the last day of May, 1578, instructed to make search for genuine gold-ore, or for a northwest passage. Storms and currents scattered the fleet, and not more than half of the ships reached their destination. Some turned back, and two of them went to the bottom of the North Atlantic Ocean. No effort was made to force the vessels that reached Frobisher's Inlet to penetrate the ice-pack northward. They were laden with the dark stones (out of which not a particle of gold was obtained), and returned to England.

The three expeditions under Frobisher were unsuccessful, excepting in the discovery of several bays, inlets and islands on the northern coasts of America, before unknown. The brave leader,

however, won the honors of a discoverer and the fame of having been the first European who had penetrated so far toward the Arctic Circle, for Frobisher's Inlet is under the sixty- third degree of north latitude. For these exploits and other brave deeds, especially as one of the chief captains in the British fleet that confronted the "Invincible Armada" of Spain, he received the honors of knighthood.

Whilst these expeditions were in progress, Francis Drake, another Devonshire man, was circumnavigating the globe a feat performed by the Portuguese navigator, Magellan, half a century before. Drake had suffered much in person and property from the Spaniards, and had vowed vengeance and retribution. His friends fitted out five vessels for him to go on a voyage of discovery and plunder. Promising the queen gold and conquest, he sailed under her sanction at the middle of November, 1577, from the harbor of Plymouth, making the *Pelican*, of a hundred tons burthen - the largest vessel in his squadron - his flag-ship. After touching at Brazil, and other places down the east coast of South America, he passed through the Straits of Magellan at the southern extremity of the continent, early in September, 1578. Then he ran up the western coast, plundering the Spanish settlements in Chili and Peru, capturing a royal Spanish galleon heavily loaded with treasure, and taking possession of California in the name of his sovereign. Burdened with gold and silver, and with his revenge fully satisfied, Drake determined to return home. Fearing to meet a superior Spanish force in the ocean, he resolved to seek a passage around the northern shores of America. Repelled by severe cold, he sailed across the Pacific and Indian Oceans, doubled the Cape of Good Hope, and arrived at Plymouth late in September, 1579, having discovered points on the western coasts of our country as far north as Washington Territory, above the Columbia River. The queen partook of a banquet given by Drake on board the *Pelican* in Plymouth harbor, that was spread under a rich canopy of silk and tapestry that covered the clean deck, on which lay beautiful Turkish mats. The queen was attended by several ladies and gentlemen of her court. The food was served on silver dishes, and the wine in golden goblets. All the fruit of plunder. When the banquet was ended, the queen conferred upon Drake the honor of knighthood. He was then between third and forty years of age. Richly dressed in the uniform of his rank, he knelt before his sovereign. At her command, in the presence of the goodly company, and with his own sword she smote him gently over the shoulders, three times and then bade him stand, a knight of her realm.

After that the exploits of Drake on the sea were marvelous. They were against the Spaniards, whom he hated intensely. Within the space of a single year he captured and plundered Carthagina in South America, and several other towns in that region burned Forts Antonio and St. Augustine, ravaged places in the West Indies, and running up the coasts of Florida, Georgia, and the Carolinas, he visited Roanoke Island, and bore away from it, to England, a famishing colony which Raleigh had planted there. On another occasion he "singd the beard of the King of Spain," as he said, by burning one hundred Spanish vessels in the harbor of Cadiz. He was a terror to the Spaniards everywhere and long after his death, in 1595, Spanish nurses used the name of Drake as a bugaboo to frighten children, representing him as a devouring dragon. Although he is honored for his enterprise and the glory he won for England, and is regarded as the founder of the Royal Navy, Sir Francis Drake was only a daring pirate on a large and legalized scale. Camden says:

"Nothing troubled him more than that some of the chief men at court refused to accept the gold which he offered them as gotten by piracy."

In 1594, the Spanish king threatened England, with a great show of power. Drake entered the service of his sovereign, and with Admiral Hawkins he sailed for America in 1595, with twenty-six vessels. A divided command worked mischievously. Hawkins died at Porto Rico, partly from the effects of a wound, and partly from chagrin because of reverses. Drake soon afterwards achieved great triumphs. He destroyed several Spanish towns; but a fatal fever seized him late in the year. It was aggravated by mental agitation caused by a defeat of his forces, and he died in Jan. 1596. The gallant sailor was honored with a sailor's funeral. He was buried at sea in sight of Puerto Bello.

Chapter XII

Sir Humphrey Gilbert's Patent - Character of Walter Raleigh - Illustration of His Gallantry - A Favorite of Queen Elizabeth - Gilbert at Newfoundland - Is Lost at Sea - Raleigh Receives a Charter from the Queen - Sends an Exploring Expedition to America - Its Cheering Results - The Queen Names the Region Explored Virginia - Raleigh Sends a Colony to Virginia - Bad Leaders Produce Great Disasters - A Colony of Working People Sent - First English Child Born in America - The Colony Lost - Raleigh's Deeds, and His Sufferings at the Hands of a Bad King - His Death on the Scaffold.

WHILST Drake was plundering Spanish settlements in South America and circumnavigating the globe to avoid his enemies, the minds of the British queen and many of her leading subjects were powerfully directed to the more beneficent object of founding colonies in the region of North America discovered by Cabot three-fourths of a century before. With these better desires were mingled a thirst for gold which they believed existed in abundance somewhere in those regions. There were yearnings, also, for planting settlements and searching for treasures on the borders of the beautiful lands whose marvelous imagery had been portrayed by the shipwrecked Huguenots and the letters of Raleigh from France. These desires had assumed a more tangible shape than the day-dreams which had floated in the minds of England's monarch and people. They had been stimulated into action by Raleigh, on his return from the continent; and his half-brother, Sir Humphrey Gilbert - a kindred spirit - through the intervention of the young pupil of Coligni, obtained a patent from Elizabeth, which authorized him to explore and appropriate remote and barbarous lands unoccupied by Christian powers, and to hold them as fiefs or estates of the crown of England. That was in the year 1578. Gilbert did not believe there could be profit in searching for gold in the higher latitudes. A more comprehensive view of the fisheries off Newfoundland, to which four hundred vessels from Europe repaired annually, turned his thoughts now to a project of planting a colony on that island; and in this scheme Raleigh acquiesced.

Walter Raleigh was one of the most illustrious of the English adventurers of his time. When, through his influence at court, Gilbert obtained his patent, he was only twenty-six years of age. Endowed with brilliant genius, unbounded ambition and extraordinary activity, his mind grasped the boldest projects, and his versatility, enthusiasm and credulity, led him to the immediate execution of any scheme which he might conceive. Framed in the prodigality of nature," says an English author, "he was at once the most industrious scholar and the most accomplished courtier of his age as a projector, profound, ingenious, and indefatigable as a soldier, prompt, daring, and heroic so contemplative (says an old writer), that lie might have been judged unfit for action so active, that he seemed to have no leisure for contemplation. The chief defect of his mental temperament was the absence of moderation and regulation of thought and aim. Smitten with a love of glorious achievement, he had unfortunately embraced the maxim that whatever is not extraordinary is nothing and his mind (till the last scene of his life) was not sufficiently pervaded by religion to recognize that nobility of purpose which ennobles the commonest actions, and elevates circumstances instead of borrowing dignity from them. Uncontrolled by steady principle and sober calculation, the fancy and the passions of Raleigh transported him, in some instances,

beyond the bounds of rectitude, honor and propriety; and, seconded by the malevolence of his fortune, entailed reproaches on his character and discomfiture on his undertakings. But though adversity might cloud his path, it would never depress his spirit, or quench a single ray of his genius. He subscribed to his fortune with a noble grace, and by the universal consent of mankind his errors and infirmities have been deemed within the protection of his glory."

Raleigh became a favorite of his queen by a single act of gallantry. He had lately returned from Ireland, where he had distinguished himself in putting down the rebellion of the Desmonds. Meeting the queen one day whilst she was walking with two of her maids of honor, he took from his shoulders his rich velvet mantle, and bowing gracefully, spread it over a wet spot in her path for her to walk upon. Because of this delicate gallantry, Raleigh was immediately admitted to court, where he and the accomplished Essex became powerful rivals for the queen's special favor. Their intrigues were ceaseless and often romantic, and filled a large space in the gossip of court circles. Raleigh soon tired of such a fruitless life, and leaving the business of a courtier, engaged again in the graver thoughts and duties pertaining to American colonization.

Gilbert's patent, which bound him to pay to the crown one-fifth part of all gold and silver which the countries he might discover and colonize should produce, invested him with the powers of a civil and criminal legislator over the inhabitants of any territory which he might occupy, provided the laws should be in accordance with the statutes and policy of England, and not in derogation of supreme allegiance to the crown. It also guaranteed to his followers the civil rights of Englishmen. The patent, so far as it related to the appropriation of territory, extended six years, during which time no other persons should be permitted to establish a settlement within two hundred leagues of any spot which these adventurers might occupy.

Armed with these arbitrary powers and aided by Raleigh's friendship and money, Gilbert, at the expense of much of his own fortune, fitted out a small squadron and sailed for America late in 1579. He had been distinguished for gallant military service in Ireland, and in 1570 had received the honor of knighthood. Six years afterwards, he had published a book entitled "A Discourse of a Discovery for a New Passage to Cathay," which attracted a good deal of attention toward him. His reputation was so high that the sons of many of the nobility and gentry of England embarked with him as adventurers. They were utterly unfit to be the founders of a state (and were not permitted to become so), for most of them were idlers and some were dissolute.

It is said by some that Raleigh sailed with his half-brother. Heavy storms or Spanish war vessels destroyed one of the ships, and compelled the remainder to turn back, and for the space of four years afterwards the enterprise was held in abeyance. Gilbert was too much impoverished to undertake another expedition but Raleigh and his friends, at the end of that time, fitted out another small squadron. It sailed from Plymouth in June, 1583, under the command of Gilbert, who bore as a present from the queen and as a token of her good-will, a golden anchor guided by a woman and he was accompanied by a learned Hungarian. The little flotilla reached Newfoundland in August, and entered the harbor of St. John's, wherein the Lord of Robertval and Cartier had met almost fifty years before. There, on the firm earth, Gilbert set up a column with

the arms of England carved on it; and in the presence of hundreds of fishermen from Western Europe, whom he summoned to the spot, he formally took possession of the country in the name of Queen Elizabeth.

Gilbert's vessels had suffered much from storms on the voyage; but the intrepid mariners, after making slight repairs, proceeded to explore the coasts southward. Off the shores of Cape Breton, heavy tempests beat upon his ships, and not long afterwards his larger one, in which he sailed, was dashed upon the rocks and lost with about one hundred men. The commander was saved and took refuge in the Squirrel, a little vessel of ten tons. Buffeting the waves until his flotilla was dispersed and hope failed, he turned the prow of his little vessel homeward, with another named the Hind. On a September day when a gale was rising, the two vessels were within speaking distance of each other. Gilbert was sitting abaft with a book in his hand, and in reply to a shout from the commander of the Hind that they were in great peril, he cried "We are as near Heaven on the sea as on the land." The gale increased night fell the darkness became intense, and at midnight the lights of the Squirrel went out suddenly. The little bark had plunged beneath the waves and all on board perished. The Hind was the only vessel of the squadron that escaped the tempests and returned to England with tidings of the disaster.

Misfortune seemed to stimulate Raleigh to more energetic action. He was then paying court to the queen, with whom he was a great favorite. He asked her for a charter in all respects the same as that she had given to Gilbert, but covering lands further south. It was given in April, 1584. It constituted Raleigh Lord Proprietor of all countries between Delaware Bay and the mouth of the Santee River in South Carolina. Quick in the execution of his projects, two ships were made ready for sea before June, well equipped with men and provisions. Arthur Barlow, a skillful mariner, was placed in chief command, assisted by Philip Amidas, of French descent but a native of England. They were directed to explore the coasts within the parallels named, and choose a place for settlement. Instead of following the northerly path across the Atlantic, in which so many disasters had occurred, they vent by the way of the Canary Isles, were wafted by the trade-winds to the West Indies, and approached the American coast in the latitude of Florida. Turning northward, they ran up the coast along the line of the Gulf Stream, and entering Ocracock Inlet, anchored off Wocoken Island, in July. There they landed, and were kindly received by the gentle natives who were as kindly treated in return. There Barlow set up a small column with the British arms rudely carved upon it, and waving over it the banner of England, in the presence of the wondering natives, took possession of the whole region - islands and main, inlets and sounds - in the name of the queen. They spent several weeks in explorations of Roanoke Island and Pamlico and Albemarle Sounds, and in trafficking with the natives. "The people," wrote the mariners, "were most gentle, loving and faithful, void of all guile and treason, and such as lived after the manner of the golden age."

On Roanoke Island the Englishmen were entertained, with a refined hospitality, by the mother of frying Wingina (who was absent) and wherever they went friendship was the rule. To the feelings of the strangers, everything on the islands and on the main was charming. Nature was then garnished in all her summer wealth, and to the eyes of the Englishmen her beauties there

were marvelous. Magnificent trees were draped with luxuriant vines clustered with growing grapes, and the forest swarmed with birds of sweetest songs and beautiful plumage. After gathering what information they could about the neighboring country, Barlow and Amidas departed for England, with their company, attended by Manteo and Wanchese, two dusky lords of the woods and waters.

The glowing accounts of this newly-discovered region given by the mariners, and the pictures of the simple lives and gentle manners of the inhabitants which they drew, delighted Raleigh and his sovereign; and Elizabeth, as a memorial that the splendid domain had been added to the British realm during the reign of a virgin queen, named the country VIRGINIA. So say some. Others say that the name was given because the land retained the virgin beauty, purity and fertility of its first creation. The queen declared that such acquisition was one of the most glorious events of her reign and she bestowed the honors of knighthood upon Raleigh. The parliament or congress confirmed his charter, and the queen, in order to enrich him, gave him the monopoly of the sale of sweet wines. His popularity was unbounded, and by an almost unanimous vote he was elected to represent the county of Devon in parliament.

Satisfied that his charter was a key that would unlock the coveted treasures of wealth, honor and power, Raleigh now took measures for sending out a colony to people his American domain. Friends in abundance stood ready to assist him, and on the 9th of April, 1585, he saw a fleet of seven ships sail out of Plymouth harbor, with one hundred and eighty colonists and a full complement of seamen, for the coast of Virginia. Sir Richard Grenville, one of the most gallant men of his times, was in command of the squadron, and Ralph Lane, a soldier and civilian of distinction, who had been an equerry at the royal court, was sent as the governor of the colony, with Amidas as his assistant. They were accompanied by Thomas Cavendish, who, the next year, followed the path of Drake around the world; by a competent painter to delineate men and things in America, and by Thomas Harriot, an eminent mathematician and astronomer, who went as historian and naturalist of the expedition.

The choice of Grenville as commander of the squadron was unfortunate. He was more intent upon plunder than colonization. Sailing over the southern route, he cruised among the West India Islands, capturing Spanish vessels, and so infusing the colonists with a spirit quite the reverse of that of peaceful settlers. They did not reach the American coast until late in June, when the vessels came near being wrecked upon a point of land which, from that circumstance, they named Cape Fear. Sailing up the coast they entered Ocracock Inlet and finally landed on Roanoke Island, with Manteo, who returned with them.

We learn all that we know about this colony in Virginia from Harriot's narrative. He remained there a year, making observations and obtaining drawings of everything of interest. He had been Raleigh's tutor in mathematics, and took great interest in the expedition and he labored hard to restrain the cupidity of the colonists, who were more intent upon winning gold and plunder than in tilling the soil.

The example of Grenville led to infinite mischief. He sent Manteo to the mainland to announce their arrival, and soon followed him with Lane, Cavendish, Harriot and others. For eight days they explored the country, and were hospitably entertained everywhere. How was that hospitality requited? At an Indian village a silver cup was stolen from the English and was not immediately restored on demand. Grenville ordered the whole town to be burned, and the standing corn around it destroyed. A flame of indignation, furious and destructive, was enkindled in the savage mind, which could not be quenched. Unsuspecting of the consequences of his act, the commander left the colonists and returned to England with his ships. These all became pirates on the sea; and Grenville was warmly welcomed when he entered the harbor of Plymouth with his vessels laden with plunder from Spanish galleons and other vessels.

Lane was delighted with the country, and in a letter which he sent home by Grenville, he wrote "It is the goodliest soil under the cope of Heaven the most pleasing territory of the world the continent is of a huge and unknown greatness, and very well peopled and towned, though savagely. The climate is so wholesome, that we have not one sick since we have touched the land. If Virginia had but horses and kine, and were inhabited by English, no realm in Christendom were comparable to it."

Harriot was a man of keen observation, and looked upon everything with the eye of a Christian philosopher. He perceived that the way to have the country permanently "inhabited by English," and supplied with "horses and kine," was to treat the natives kindly as friends and neighbors. He deprecated the conduct of Grenville, and tried to quench the fires of revenge which the leader's cruelty had enkindled. The Indians were curious and credulous. Many of them regarded the persons of the English with reverence and awe. Their fire-arms, burning-glasses, mathematical instruments, clocks, watches, and books seemed to the savage mind like the work of the gods. The colonists were never sick and had no women with them, and so the natives, imagined that they were not born of woman and were therefore immortal - men of ancient days who had risen to immortality. Taking advantage of this feeling, Harriot displayed the Bible everywhere, told them of its grand and precious truths, and inspired them with such a love for it that they often pressed it affectionately to their bosoms. King Wingina became very ill. He sent for Harriot, who found him in his bough-covered cabin on a couch of soft moss, with a priest making mysterious movements over the invalid, a "medicine man" offering him a decoction from a calabash, and a dancing juggler contorting his body and grimacing fearfully to drive away the Evil Spirit. Wingina dismissed all of these attendants, placed himself under the care of Harriot, and asked the prayers of the English. He recovered, and his example was followed by many of his subjects.

Had the other colonists been as wise and good as Harriot, all might have been well. But they were greedy for gold. Governor Lane had the fever, and all trusted more to their fire-arms than to friendship for the goodwill of the Indians. The natives were treated with scorn and sometimes with cruelty, which kept alive the flame of vengeance. Seeing the Englishmen's greed for gold, they told them marvelous stories of a land at the headwaters of the Roanoke which was filled with the precious metals, and where the houses were lined with pearls. They told them that the source of the Roanoke was in a rock so near the Pacific Ocean that sometimes the salt waves dashed

over into the fountain. All this was told that the English might go in search of that land, and so divided and weakened, the Indians might fall upon and destroy them. The red men guessed shrewdly, for Lane believed their stories, and with a large number of followers went up the swift stream of the Roanoke, until he was satisfied that he had been deceived by pure fictions. He turned back, and his sudden reappearance discomfited the Indians, who had planned an attack upon the divided settlers. Their wrath was only checked, but not subdued. They regarded the fire-arms of the English as demons, and that the great sickness which then prevailed as the effects of wounds given by invisible bullets that came from unseen agents in the air. Believing that more Englishmen were coming to take their lands, they so yearned to exterminate the intruders that they could not conceal their enmity.

Lane, impressed with the belief that there was a wide-spread conspiracy to destroy his colony, prepared to strike the first blow. He invited Wingina and his principal chiefs to a friendly conference. They showed their confidence in the strangers by appearing without weapons. At a preconcerted signal, Lane and his followers fell upon the Indians and murdered the king and all of his companions. Thenceforth each party stood on the defensive, and very soon the condition of the English became desperate. Their provisions were exhausted; no ships came from England with supplies, and no food could be obtained from the Indians. Only the woods and waters offered them a precarious subsistence, and they were on the verge of despair, when they saw, one day, the joyful apparition of white sails coming in from the sea. It was the fleet of Sir Francis Drake, who was returning from his raid upon Spanish towns and settlements, and looked in upon the colonists that he might report their condition to his friend Raleigh. He offered them aid and encouragement, but they were so thoroughly despondent that they begged and received permission to return to England in the baronet's ships.

Whilst they were in Virginia, Lane and his associates had acquired a taste for smoking tobacco, a habit which prevailed among the natives and they were the first persons who carried the plant into England. The Spaniards and Portuguese had introduced it on the continent. Raleigh adopted and encouraged its use in England, and very soon the habit became so widespread that the demand exceeded the supply. It became the staple product of Virginia and a bond of union between England and some of her American colonies, as well as a source of much revenue. It is said that Queen Elizabeth became Raleigh's apt pupil in the art of smoking tobacco. One day whilst she and the courtier and two or three others were indulging in the habit, Raleigh offered a wager that he would ascertain the weight of smoke that should issue from her lips in a given time. Elizabeth accepted the challenge. Raleigh weighed the tobacco that was put in her pipe, and then weighed the ashes that remained in it the difference in the weight he assigned as the weight of the smoke. The queen, laughing, acknowledged that he had won the wager, and said he was the first alchemist she had ever heard of who had succeeded in turning smoke into gold.

Drake's ships had scarcely left the coast when a vessel appeared with supplies for the fugitive colonists. Finding the post abandoned, the ship that he might report their condition to his friend Raleigh. He offered them aid and encouragement, but they were so thoroughly despondent that they begged and received permission to return to England in the baronet's ships.

Whilst they were in Virginia, Lane and his associates had acquired a taste for smoking tobacco, a habit which prevailed among the natives and they were the first persons who carried the plant into England. The Spaniards and Portuguese had introduced it on the continent. Raleigh adopted and encouraged its use in England, and very soon the habit became so wide-spread that the demand exceeded the supply. It became the staple product of Virginia and a bond of union between England and some of her American colonies, as well as a source of much revenue. It is said that Queen Elizabeth became Raleigh's apt pupil in the art of smoking tobacco. One day whilst she and the courtier and two or three others were indulging in the habit, Raleigh offered a wager that he would ascertain the weight of smoke that should issue from her lips in a given time. Elizabeth accepted the challenge. Raleigh weighed the tobacco that was put in her pipe, and then weighed the ashes that remained in it the difference in the weight he assigned as the weight of the smoke. The queen, laughing, acknowledged that he had won the wager, and said he was the first alchemist she had ever heard of who had succeeded in turning smoke into gold.

Drake's ships had scarcely left the coast when a vessel appeared with supplies for the fugitive colonists. Finding the post abandoned, the ship returned to England; and a fortnight after it left Roanoke, Sir Richard Grenville arrived with three well-furnished ships, and searched in vain for the settlers. Unwilling to give up the possession of the country, he left fifteen men there to protect the rights of England, and then he, too, returned home.

Raleigh was not dismayed by these mishaps. Lane, whose failure as a leader was conspicuous, gave a gloomy account of the country, but the report of the learned Harriot was so encouraging that Raleigh found very little difficulty in gathering another colony, and of better materials. They were not gold-seekers, but agriculturists and artisans, with their wives and children, who consented to become permanent settlers in America. John White was appointed governor of the colony, with eleven assistants, and late in April, 1587, a squadron of three ships, fitted out at Raleigh's expense, sailed for the Chesapeake Bay, where the proprietor intended to plant his farming settlement. White went first to Roanoke, and proceeded no further. He arrived there in July, when he found a little fort built by Lane broken down; the huts of the former colonists overgrown by rank weeds and inhabited by wild deer, and a heap of human bones that told the sad fate of Grenville's "protectors of the rights of England."

The new colonists wisely resolved to cultivate the friendship of the Indians, but some of the latter appeared hostile and killed one of the assistants. Manteo, who lived on Croatan Island, came with his mother and relatives, and invited them to make their abode on his domain, when White took the opportunity to have the chief receive the rite of Christian baptism, and to bestow upon him the order of a feudal baron as "Lord of Roanoke," by the command of Raleigh. This was the first and last peerage ever created on the soil of our Republic.

For a time matters went on smoothly, when an unlucky mistake of the English in attacking friendly Indians produced bad blood. At about the same time it became necessary for the ships to return to England for supplies. White was persuaded to go with them that he might hasten their return. He left behind him eighty-nine men, seventeen women and two children. Among these

was his daughter, Eleanor Dare, wife of one of his assistants, who had given birth to a daughter since her arrival, to whom they gave the name of Virginia - Virginia Dare. On his way, White touched Ireland, where he left some potato plants, the first ever seen in Europe.

When White returned home, he found his countrymen in commotion on account of a threatened invasion from Spain, and all the great naval captains, as well as Raleigh, were engaged in plans for averting the evil. But the latter, by great exertions, sent White back with supplies in two ships in April, 1588. The greed of the governor made him neglect his first duty. Instead of going directly to Virginia, he chased Spanish ships in search of plunder. Both of his vessels were so much injured that he was compelled to take them back to England, and it was not until 1590, a year after the defeat of the "Invincible Armada" of Spain in the British Channel, that White was permitted to go in search of the colony and his daughter. He sailed with two ships, and found Roanoke desolate. Had the colonists perished, or were they somewhere in the wilderness?

This question has never been answered. An inscription on the bark of a tree seemed to indicate that they had gone to Croatan. It was late in the season, and fearing the fearful storms which he knew prevailed on the coast at that period, White searched no further but hastened back to England with the sad tidings of the uncertain fate of the colonists. It was conjectured that the faithful Lord of Roanoke had saved their lives, and when they seemed to be abandoned by their countrymen, they had been incorporated with a native tribe and amalgamated with them. This conjecture finds plausibility in a tradition of the Hatteras Indians at a later period, which averred that such was the fate of the colony; and some find confirmation of the tradition in the fact that when European settlements were finally made in that region, individuals of the Hatteras family bore the mingled physical characteristics of the Indian and the Englishman. Perhaps when Jamestown was founded on the river of Powhatan, when Virginia Dare was twenty years of age, she was a beautiful young Indian queen on the banks of the Roanoke. Who knows?

Raleigh's means were now exhausted. He had spent about two hundred thousand dollars in vain attempts to colonize Virginia and in assisting other kindred enterprises; and he was compelled to abandon, in a degree, his magnificent scheme. He formed a company of merchants and adventurers under his charter, to whom he assigned a portion of his rights. Lacking his spirit and enthusiasm, they did nothing more than carry on a petty trade with Virginia for awhile, and at the time of Queen Elizabeth's death, in 1603, there was not a single Englishman settled in all America. Raleigh did not, for a long time, abandon the hope of finding the lost colonists of Roanoke and it is said that he sent persons five different times, at his own expense, to search for them, but no traces could be found. The failure of Raleigh's colonization scheme was caused chiefly by the incompetence of his agents.

Among the statesmen and adventurers of England who directed the earliest efforts of subjects of that realm for the colonization of America, the name of Raleigh will ever stand brightest. In courage, perseverance, comprehensive views, lavish expenditure and ever-buoyant hopefulness, he had no peer. He was not only a soldier and statesman, but he was a historian, poet and philosopher - a scholar in most departments of learning. When, at the age of about thirty-seven

years, he abandoned the scheme for colonizing Virginia, lie proceeded to perform other services which, alone, would have made his name immortal. He did much toward the destruction of the Spanish Armada accompanied Drake in his expedition to seat Don Antonio on the throne of Portugal brought Edmund Spenser from Ireland and introduced him to the queen discovered the large, rich and beautiful empire of Guiana, in South America assisted in the capture of Cadiz was ambassador to the Netherlands, and governor of the island of Jersey. Immoralities stained his fair fame, and when Elizabeth died in 1603, the sun of his glory went down among clouds, yet none the brighter in itself because obscured to the visions of men. When King James of Scotland came to the throne of England, he stripped Raleigh of all his preferments. The great man was then a paralytic, but his lofty spirit bore him above repining.

Raleigh was soon afterward arrested on a false charge of conspiring to place Arabella Stuart on the English throne, and on conviction without proof he was condemned to death. Reprieved, he was sent to the Tower, where he was confined many years, accompanied much of the time by his faithful wife, who had been one of Elizabeth's maids of honor. There he was in 1615, when the base and avaricious king, wanting his services to search for gold in Guiana, released him from prison, on condition that he would go there, but did not pardon him. Raleigh was then sixty-three years of age and an invalid but lie went to South America with fourteen ships, in the fitting out of which he embarked the whole of his wife's fortune and his own. The expedition was a failure, and he returned to Plymouth in the summer of 1618 a wreck in fortune, health, reputation and spirits. The king, disappointed in his expectations of wealth as the fruits of the expedition, and jealous of Raleigh even in his almost helplessness, recommitted the old man to the Tower, and soon afterward caused him to be beheaded, in execution of the unjust sentence pronounced fifteen years before. "This is a sharp medicine, but it is a cure for all diseases," said the white-haired patriot, on the scaffold, as he felt the keen edge of the axe and handed it to the executioner.

That murderous act of King James was one of the foulest of all the foul performances of the detested monarch. Upon the altar of his lust he sacrificed one of the noblest patriots, far-seeing statesmen and brilliant scholars of the British realm. Raleigh's very existence, even in the obscurity of the Tower, wherein he wrote his "History of the World," was a perpetual honor to the reign of the bad king.

Raleigh had lived to see his scheme for colonizing Virginia carried out by other Englishmen. Ten years before his death, when he was in the Tower, Jamestown was founded; and when the axe finished his earthly course, a congregation of English Puritans were contemplating that emigration to America which occurred two years later, and which resulted in the founding of the commonwealths of New England. The French navigator, Champlain, had laid the foundations of a permanent settlement on the St Lawrence River; and whilst Raleigh was in Guiana, the Dutch were laying plans for a colony in New Netherland, which Hudson had discovered a few years before. George Calvert had just received the honors of knighthood, taken a seat in the Privy Council, and gained that special friendship of King James which finally led to his elevation to the peerage as Lord Baltimore, to his attempts to colonize Newfoundland, and gain the possession of the fine domain of Maryland by his family. And after a lapse of almost two centuries, the

inhabitants of North Carolina, on the shores of whose State the great adventurer had made his attempts at settlement, showed their sense of justice by giving to their capital the name of Raleigh.

Chapter XIII

Explorations of New England Coasts by English Navigators - Grand Scheme for Colonizing Virginia Patronized by the British Monarch - Charters Granted - Attempt of the French to Plant Settlements in America - Samuel Champlain Finds Quebec and Montreal - He Discovers and Names Lake Champlain - With the Help of the Jesuits He Establishes the French Dominion in America - The Story of the Voyages and Discoveries of Henry Hudson - His Sad Fate - The Discoveries.

THE enthusiasm which Raleigh had created in England in favor of American discovery and colonization did not die out in consequence of his conspicuous failures. Some of his associates continued to believe in the rich promises which such colonization held out. Among these believers was Bartholomew Gosnold, who had made a voyage to America, and who, like Raleigh, had not lost faith. They were much together; and when the Earl of Southampton offered to fit out a bark for the purpose of attempting to plant a small settlement in America if Gosnold would command the vessel, that navigator's illustrious friend advised him to do so. They had talked much about the northern and southern tracks across the Atlantic, which were then followed by ships from England, and they believed that a more direct route might be taken a thousand leagues shorter than by way of the Canaries and the West Indies. On the 26th of April, 1602, Gosnold sailed from Falmouth in a small vessel, with twenty colonists and eight mariners on the proposed direct track, and touched the American continent at near Nahant, in Massachusetts Bay, it is supposed, just eighteen days after his departure from England. Finding no good harbor there, he sailed southward, discovered a great sandy point which he named Cape Cod, because of the profusion of codfishes seen near its shores and landed there with four of his men. Never before had the present route of ships from Europe to New England and New York been traversed never before had the soil of New England been pressed by the foot of an English-man.

Doubling the Cape, Gosnold passed around the promontory of Gayhead which he named Dover Cliff, and entered Buzzard's Bay, where he found a group of attractive islands. He named the western-most Elizabeth, in honor of his queen, and the whole group now bear that name. On Elizabeth, Gosnold and his followers landed. They were charmed with the aspects of nature there. Vegetation was luxuriant, and small fruits, such as strawberries, raspberries, and growing grapes were abundant. There the navigator resolved to plant his little colony, and on a small rocky island, in the bosom of a great pond, they built a rude stone-house and a fort.

Elizabeth Island now bears its original Indian name of Cattyhunk. Had the courage of the adventurers held out, they would there have won the honor of making the first permanent English settlement in America. But it did not hold out. They thought the Indians scowled upon them they were not sure of food in the future they could not agree upon a method for dividing profits what may the winter be was a serious question, and a wilting home-sickness came upon them. So, when Gosnold had laden his vessel with sassafras root, then much esteemed in Europe for its medical properties also with furs gathered by traffic with the natives, and sweet cedar-wood and other products, and was ready to sail for home, the colonists resolved to go with him. They

abandoned their little paradise of beauty, and in less than four months after their departure from home, they were back on the soil of England. They spoke in glowing terms of the serenity of the climate, and the beauty and fertility of the land they had visited of the shortness and safety of the voyage to it, and of the riches of the adjacent continent which might be gathered by traffic with the Indians. Raleigh strongly advised further efforts toward planting a colony in that part of America; so also did Richard Hakluyt, prebendary of Westminster - a man learned in naval and commercial science, the counsellor of many who had engaged in the expeditions to America, and who became the historian of those voyages. Under the advice of such men, Bristol merchants fitted out two ships for traffic and discovery on the coast of what was afterward called New England.

Early in April (1603, about a fortnight after the death of the queen), the Speedwell, of fifty tons, and the Discoverer, a bark of twenty-six tons, sailed from Milford Haven under the command of Martin Pring, a friend of Raleigh and Gosnold. Pring commanded the Speedwell in person, which was manned by thirty men and boys. William Browne was master of the Discoverer, and was accompanied by Robert Galterns as a supercargo or general agent of the expedition. Galterns had accompanied Gosnold to America. They were furnished with clothing, axes, and trinkets for the natives; and early in June the vessels entered Penobscot Bay. They went up the Penobscot River some distance, and then sailing along the coast, they entered the mouths of the Saco, Kennebunk, and Piscataqua rivers on the coast of Maine. Gorges says Pring made a perfect discovery of all these eastern rivers and harbors." That, however, was done three years later, when Pring was on another voyage.

Sailing southward, Pring and his companions went to the region where Gosnold and his handful of adventurers had tarried for awhile, and landed on a large island abounding with grapes, which they named Martin's Vineyard, now Martha's Vineyard. Thence they returned to England, after an absence of six months. Pring made a report confirming everything that Gosnold had told about the country. This confirmation led to other expeditions, and in 1605 the Earl of Southampton and Lord Arundel, of Wardour, fitted out a vessel, placed it under the command of George Weymouth, another friend of the now imprisoned Raleigh, and dispatched it to the eastern coasts of New England. Weymouth had already explored the coast of Labrador in an attempt to discover a northwest passage to India. He sailed from England in March, taking the shorter track, but storms delayed him on the way, and it was six weeks before he saw America, at Nantucket. Turning northward, he entered Penobscot Bay, where he opened a traffic with the natives. It was carried on for awhile in mutual confidence until signs of treachery appeared on the part of the Indians, when Weymouth determined to resent the affront. He invited some of the leading savages to a feast on board of his vessel, but only three of the cautious natives accepted the invitation. There he fed them and plied them with intoxicating drink, until they were half insensible, when he confined them in the hold of his ship. Then he went on shore with some of his men to entice others on board. They opened boxes and showed the natives trinkets, but they could not induce the savages to go to the vessel; so Weymouth and his men seized two of them. "It was as much as five or six of us could do to get them into the light horseman [the boat]," wrote Weymouth, "for they were strong, and so naked as our best hold was by their long hair on their

heads." The Englishmen took with the captives two handsome birch-bark canoes, when the anchor was taken up and the ship sailed away for England with the five dusky prisoners. The canoes, like one carried home by Pring, attracted much attention as the work of savages. Three of the captives were given to Sir Fernando Gorges, then Governor of Plymouth, (who was a fast friend of Raleigh), and remained in his family three years, during which time they acquired considerable knowledge of the English language. This kidnapping left on the shores of New England the seeds of much future trouble.

All doubts respecting the commercial value of every part of the American coast from Florida to Newfoundland had now vanished from the English mind, and the voyage of Weymouth was immediately followed by the immediate execution of a vast plan for colonizing the shores of this Western World. King James was petitioned to sanction by his authority an organization for the purpose. He not only did so willingly, but he warmly commended the enterprise. He had seen the good effects of introducing industrious artisans and traders from the lowlands among the wilder Highlanders of his native country; and as war with France had lately ceased, there was a large number of restless, unoccupied soldiers in England for whom he would gladly open a new field of enterprise. Moved by these considerations, he issued letters-patent, on the 20th of April, 1606, to Sir Thomas Gates, Sir George Somers, Richard Hakluyt and others, granting to them those territories in America lying on the sea-coast between the thirty-fourth and forty-fifth degree of north latitude, together with all the islands situated within a hundred miles of their shores that is to say, from Cape Fear to Nova Scotia. The design of this patent was declared to be "to make habitation and plantation, and to deduce a colony of sundry of our people into that part of America commonly called Virginia." The charter proclaimed that "so noble a work may, by the Providence of Almighty God, hereafter tend to the glory of his Divine Majesty, in propagating of Christian religion to such people as yet live in darkness and miserable ignorance of the true knowledge and worship of God, and may, in time, bring the infidels and savages living in those parts to human civility, and to a settled and quiet government."

The patentees were principally merchants and adventurers of London, Plymouth and Bristol, and by their charter they were required to form two companies, each under a distinct title the one consisting of London adventurers to be called the London Company," and the one composed of "knights, gentlemen and merchants" of the West of England, the Plymouth Company." The vast domain was divided into two districts, called respectively North and South Virginia, the line of separation being about on the parallel of New York City.

Now dawned the bright era when English colonies were permanently planted in America. The story of their marvelous growth will be told here after. Raleigh, poor and in prison, was not allowed to share, personally, in the glory of any of that fruitful seed-time, the result of his genius, generosity and enterprise. When Richard Hakluyt, Bartholomew Gosnold, and Sir Fernando Gorges, three of his firm friends, were permitted by the king to visit the illustrious prisoner in the Tower, and tell him of the new enterprise, the interview was a touching one. They found Raleigh seated at a little table near an open window in the massive wall, tall and narrow, writing. Around him lay huge folios. On the walls hung maps, and on the deep window-sill was a mariner's

compass. Near him sat his faithful wife, almost twenty years younger than he, who had just come to share his imprisonment. At her feet lay a sleeping spaniel belonging to the keeper of the Tower; and a picture of their son who was killed in Guiana leaned against a small cabinet at her side. When the three friends entered, Raleigh quickly arose and embraced them affectionately. When they told him of the great enterprise and the king's sanction, he sat down in his chair, and with clasped hands and eyes turned heavenward exclaimed: "God be praised for his goodness! Prison walls cannot defeat his justice. The English nation love truth and will defend the good name of her disciples. God save the king!" The final invocation was for the ears of the jailor who stood at the door. It had a double meaning on Raleigh's lips - a meaning of political loyalty, or an earnest prayer for the salvation of the monarch from the consequences of his bad life. It could not be interpreted to Raleigh's hurt.

A Protestant sovereign, the great Henry of Navarre, was now on the throne of France, the first and best of her Bourbon kings. His heart was set on promoting the prosperity and true greatness of his kingdom. He had given it peace at home by the edict of Nantes, granting toleration to his Protestant subjects, proclaimed on the thirteenth of April, 1598, and cessation from war abroad by the treaty of Verviers with Spain, signed seventeen days afterward. Agriculture, manufactures, mining, internal improvements, and settlements in New France (Canada), which had not been attempted since the disappearance of Robertval more than fifty years before, were encouraged. In these labors of statesmanship he was led and assisted by Maximilian de Bethune, the great Duke of Sully, whose name shines with splendor in the annals of France.

Among the earliest of the new French adventurers was the Marquis de la Roche, a wealthy nobleman, who gathered a company from the prisons of France wherewith to found a colony in America. He sailed with a single ship in the spring of 1598, and landed on Sable Island, in the Atlantic Ocean, ninety miles southeast of Nova Scotia, where he left forty men and returned to France for supplies. Before he was ready to go back, he sickened and died, and the poor emigrants had no tidings from home or the rest of the world for seven years. Then a vessel was sent for them, but only twelve survived. These were pardoned on their return, because of their sufferings abroad, and their immediate wants were supplied by the king.

Whilst these men were on Sable Island, another expedition was sent from France on a similar errand. M. de Chastes, Governor of Dieppe, obtained from the king a charter for founding settlements in New France. He engaged Samuel Champlain of the French navy, a man of noble lineage and a favorite of the sovereign, to act as his delegate. The king commissioned Champlain lieutenant-general of Canada, and with this authority he embarked at Honfleur on the 15th of March, 1603, with a single vessel, commanded by Pontgrave, a skillful mariner of St. Malo, whose father had been an intimate friend of Cartier. They reached the St. Lawrence in May, and anchored near the site of Quebec, when Pontgrave, with five men, went up that stream in a canoe to the rapids of Lachine, above Montreal where Cartier found an impassable barrier to his upward voyage. Then he turned back, carefully examining the shores of the river, and on reaching the ship he gave Champlain a minute account of all they had observed. Meanwhile, Champlain had held intercourse with the savages, whose memories and traditions ran back to Cartier's

kidnapping, but they were placable, and the lieutenant-general was pleased with all he saw. They returned to France in the early autumn, when Champlain published an account of the country.

When the voyagers returned, they found M. Chastes dead and the concessions transferred by the king to Pierre de Gast, the Sieur de Monts, a wealthy Huguenot, who had received the commission of viceroy, with full power for settlement and rule over six degrees of latitude in America, extending from that of Cape May to the parallel of Quebec. That region was named, in the charter, L'Acadie, a corruption of the Greek Arcadia. The charter was published in all the maritime towns of France, and soon afterward De Monts and his associates were vested with the monopoly of the fur and peltry trade of his domain, and around the Gulf of St. Lawrence. A new arrangement was made with Champlain, and early in March, 1604, De Monts, with his bosom friend Poutrincourt and Pont Greve as his lieutenants, and Champlain as the pilot, sailed from France with four vessels well manned, and a goodly company of Protestant and Roman Catholic emigrants. Among the latter were several Jesuits. They reached the St. Lawrence in April, when they found the river ice-bound and the weather so cold that the viceroy determined to plant his settlement further to the southward. They passed around Cape Breton and Nova Scotia into the Bay of Fundy, and on the northern shore of the Peninsula they anchored in a fine harbor environed by hills and meadows, early in May. Poutrincourt was so charmed by the appearance of the country, that De Monts allowed him to remain there with some of the emigrants. He gave him a grant of the region, which was confirmed by the king, and Poutrincourt named the place where he landed Port Royal. It is now Annapolis, in Nova Scotia. De Monts and the rest of the company, seventy in number, crossed over to Passamaquoddy Bay, and on an island not far from the mouth of the St. Croix River, the eastern boundary of Maine, they landed, built a fort with a chapel in it and cannon mounted on it, and there passed a severe winter. Half of them were dead in the spring, when the survivors explored the country westward as far as Cape Cod, and returned to Port Royal, where they joined Poutrincourt's colony. Early in the autumn, De Monts and Poutrincourt returned to France, leaving Champlain and Pont Greve to make further explorations of the region. They went to the southwest as far as Cape Cod, where they attempted to land and erect a cross, but were driven to their vessel by the Indians. In 1607, Champlain returned to France.

For a few years there was a struggle for existence and growth on the part of the colonists in Acadie. The Jesuit priests who accompanied Poutrincourt back to that land claimed the right to supreme rule by virtue of their holy office. He stoutly resisted their claim, and told them boldly: "It is my part to rule you on the earth, it is your part to guide me to heaven." When Poutrincourt had returned to France they made the same claim upon his son, whom he left in charge of the colony. The fiery young man threatened them with corporeal punishment, when they withdrew and settled on the island of Mount Desert, now so famous as a summer resort, and there set up a cross in token of sovereignty. They were there in 1613, when Samuel Argall, a freebooter of the seas, went, under the sanction of the governor of Virginia, to expel the French from Acadie as intruders upon the domain of the North and South Virginia Company. The Jesuits on Mount Desert, it is said, willing to use such an opportunity for revenge, piloted the Englishmen to Port Royal, which Argall plundered and laid in ashes, driving the colonists to the woods and breaking

up the settlement. Acadie was again settled by the French, who suffered many vicissitudes and became the subject of romance and song.

De Monts was not disposed to contend with the powerful English company. He obtained a new charter with ample provisions, and proceeded to plant a colony on the St. Lawrence. Two vessels were fitted out in the spring of 1608, freighted with colonists and supplies, and were navigated under the direction of Pontgrave, with Champlain as governor. They were directed to form a settlement at Tadousac on the St. Lawrence, near the mouth of the Saguenay River. They arrived at that point on the 3rd of June. Champlain perceived that it was not a good place for a colony, so he directed Pontgrave to sail further up the river. They entered the St. Charles, where Cartier had left one of his vessels, and on its banks at the foot of a rocky promontory he chose as the place for a settlement, and there he laid the foundations of the City of Quebec. That name is an Indian word, signifying "the narrows," and is pronounced kebec. That was the first permanent French settlement planted in America. It grew, for the little colony took firm root under the culture of Champlain. He opened a profitable fur trade with the Indians, and planted a small settlement at Montreal. The colonists were induced to build houses and plant seeds yet there were malcontents among them, who conspired to murder the governor. The plot was discovered; the ringleader was banged, and order and obedience were secured.

Champlain, regarding the Iroquois in northern New York as inimical to his colony because it was in the bosom of the Huron nation who were their enemies, allied himself to the Hurons and went out with them upon the warpath. In the summer of 1609, he, with a boat's crew, went with the Indian warriors up the Sorel or Richelieu River to the Falls of Chambly, where he left his boat and the crew, and with only two men pushed on in a canoe until he discovered a great lake between two distant mountain ranges - the Green Mountains and the Adirondacks. He gave his name to the sheet of water, which is a beautiful, appropriate, and eternal monument to the memory of the mariner. On its shores he and his Indian allies had a fight with their enemies, and then returned to Quebec with fifty scalps as trophies of war. In September of that year Champlain returned to France, when he published an account of Canada and of his adventures.

The following spring Champlain returned, stopping at Tadousac, where he borrowed fifty warriors from a chief, with whom he penetrated the country to Lake Champlain to fight the enemies of the Hurons. He was defeated and wounded. So bad was his hurt that when he reached Quebec he found it necessary to return to France to have medical treatment. The aspect of affairs there was changed. The dagger of the fanatic Francois Ravailac had killed his king; the fortune of De Monts was so much diminished that he could not continue the settlement at Montreal nor foster that at Quebec, and it appeared as if there were to be another ending of French settlements in America. At that moment the queen-regent, by a judicious act, saved the colony. She appointed Charles of Bourbon nominal govern of Canada, and the prince commissioned Champlain his lieutenant with large powers. So strengthened, the latter returned in 1612, and engaged vigorously in wars and explorations. Three years later he invited some Jesuit Fathers to the St. Lawrence, who accompanied him in expeditions of discovery extending up the Ottawa River and westward to Lake Huron. Turning east-ward, they traversed the wilderness to

Lake Ontario, and exploring that magnificent sheet of water its whole length, and the St. Lawrence to a point below Montreal, they returned to Quebec.

With the vision of a statesman, Champlain saw that the country with which he had made himself acquainted was fitted to become the seat of a magnificent colonial empire of Frenchmen, and he resolved to do all in his power to lay the solid foundations of such an empire. He went home, and in 1620 - the same year when the London Company planted a permanent settlement in New England - he returned to Canada vested with the authority of governor, and taking with him his family and other emigrants with their families. He had seen the amazing influence of the Jesuit fathers over the Indian mind. He had also perceived that an alliance with the red men would be essential in building up and making permanent his future empire. To make them good allies, it would be necessary to Christianize the savages so he invited more Jesuits to come. He had, very soon, as coadjutors, fifteen Jesuit priests and a considerable number of laymen. A college was established at Quebec for the instruction of the children of the Hurons in civilized modes of living, the French language, and the theology of the Roman Catholic Church. The Jesuits were peculiarly the men for the work; - sagacious, far-seeing, politic, zealous, obedient, devoted, industrious, persevering, long-suffering and self-sacrificing men of the world who could adapt themselves to every condition and plane of life, from the pitiful suppliant as a beggar to the haughty bearing of a king. They worked with untiring energy and signal success for religion and the state.

So was wisely laid, by Samuel Champlain, the foundation-stone of the French empire in America; a political structure which always displayed as its chief source of strength a firm alliance with the Indians cemented by the religious teachings of the Jesuits, which made the dusky tribes and the pale faces, to a remarkable extent, one in the Christian faith. So were secured those alliances in emergencies, between the French and Indians in America, already alluded to, which frequently gave the English colonists much and serious trouble.

Whilst the other Western nations of Europe were acquiring glory and solid territorial possessions by discoveries in America, Holland, then the greatest maritime nation on the earth, was quietly winning the gains of profitable commerce by sending her uncouth commercial marine over beaten ocean tracks, quite indifferent to the exciting day-dreams of fabulous wealth concealed in the bosom of the western continent, which so dazzled other people. But Holland, too, at this period of commercial activity, became a partner with others in making discoveries and settlements in America, in spite of her indifference. The story with its preface runs thus:

Upon the walls of the governor's room in the City Hall, New York, hangs a dingy canvas bearing the portrait of a man apparently about forty years of age, with short-cut hair and beard, and a broad ruff, such as were worn by the English gentry late in the reign of Queen Elizabeth. It is the portrait of Henry Hudson, "the bold Englishman, the expert pilot, and the famous navigator a pupil, probably of Drake, or Frobisher, or Grenville. Thoroughly imbued with the spirit of adventure then rife, he sought opportunities for winning renown in his profession therefore it was a happy day for Hudson, early in the year 1607, when in its morning he received a summons to the

parlor of Sir Thomas Gresham, a wealthy London merchant, who built the Royal Exchange. There he met a number of "certain worshipful merchants of London" who yet believed in the existence of a polar sea passage to India, and had conceived a plan for another search for it. They had sent for Hudson to join them in consultation. He found Sir Thomas and a number of friends sitting at a table covered with maps and charts, with just space enough besides for a rich silver salver holding a bottle of wine and glasses to drink it. He was received graciously. The interview was not long, and it ended in a bargain between Hudson and the merchants for the navigator to command a small expedition for the discovery of a polar sea passage, not in the usual track in the northwestern waters, but around the north of Europe.

Hudson sailed from Gravesend on the first of May, 1607, a few days after an English colony had arrived in Virginia to plant the seeds of a great commonwealth there. The vessel in which Hudson sailed was a small one manned by only ten men and a boy. He went up the eastern coast of Greenland to the eighteenth degree, where a solid ice barrier compelled him to turn back. He had discovered the island of Spitzbergen, nothing more. Baffled but not discouraged, he returned to England at the middle of September. Neither were his employers disheartened. They fitted out another vessel in which Hudson sailed late in April, 1608, with full expectation that he should make the coveted passage between Spitzbergen and Nova Zembla. Again the impenetrable ice-pack compelled him to turn back, and he again returned to England. He was not yet disheartened, but his employers were, and gave up the enterprise. Hudson went over to Holland to seek similar employment in the service of the Dutch East India Company, a wealthy corporation of merchants at Amsterdam, which had been in existence about seven years. Hudson inspired them with a belief that a much shorter passage to their possessions in the East Indies might be found around the North of Europe, and they fitted out a small vessel of ninety tons, to go in search of it. Hudson was placed in command of her, with a choice crew of English and Dutch seamen. She was a staunch new vessel named *De Halve-Maen* - the Half-Moon - and in her he left the Texel early in April, 1609, and sailed for Nova Zembla.

After manfully fighting the ice-pack on the parallel of Spitzbergen, and its allies - the polar fogs and tempests - until all hope of conquests vanished, Hudson was compelled, a third time, to turn back. He determined not to go without fruit to the Texel, so he sailed around the southern shores of Greenland into the track of searchers after a northwest passage. Again the ice-pack foiled him, and he sailed southward until, at the middle of July, he discovered the American continent off the coast of Maine. It is supposed that he passed several days in Casco Bay, repairing his storm-shattered vessel, when the natives, among whom he found French trinkets, treated him kindly. Their hospitality was requited by plundering their property and driving them from their houses. They resented this treatment so fiercely that he was compelled to put to sea.

Hudson now sailed southward as far as the Capes of Virginia, touching at Cape Cod on the way. Then he sailed up the coast, discovered Delaware Bay, and entered the harbor of New York early in September, after spending several days in visiting the beautiful shores of Raritan Bay, where he held friendly intercourse with the natives, although he was ever watchful for expected treachery. The inhabitants showed a disposition to traffic, but Hudson was so suspicious that he

repelled them in an offensive manner and kindled their enmity. One night, whilst a boat load of his crew were returning from an exploration in the neighborhood of the Narrows (between Long and Staten Islands), they were attacked by Indians, in canoes, and one of the seamen was killed. Sadly his comrades carried his body ashore the next day and buried it near the beach, while savage men, women and children looked on in wonder from a neighboring hill.

Northward from his anchorage after his vessel had entered New York Bay, Hudson saw a broad stream rising and falling with the tide, which the Indians told him came from beyond the pale blue mountain ranges in the distance. He believed it was a strait through which he might pass into the Indian Ocean so he sailed up the stream a few miles, and anchored. Natives came to him in canoes from the shores with fruits and vegetables, and friendly gestures. The men were athletic the women were graceful and the young ones often beautiful. All were half-clad in mantles made of skins or feathers depending from one shoulder and the waist, or in colored hempen tunics; and some of the women who came in the canoes, whose hair, long and black, hung loosely over their shoulders and bosoms, wore fillets ornamented with shells and the quills of the porcupine. They seemed anxious for friendly intercourse, but Hudson repelled and offended them.

The Half-Moon went leisurely up the river, anchoring here and there, whilst her commander held intercourse with the natives, sometimes friendly; sometimes hostile. When he passed the great mountains which he had seen in the distance, and found the water freshening, he was satisfied that he was not in a passage to India. It was only a beautiful river flowing down from more lofty hills three hundred miles from the sea, and called Mahicannituck by the natives. The Dutch afterwards called it the Mauritius, and the English gave it the name of Hudson's River.

Hudson went up the stream with the Half-Moon and his small boats as far as Albany, and perhaps to the mouth of the Mohawk, and looked upon the foaming falls of Cohoes. Then he sailed leisurely back, everywhere charmed with the beauty and grandeur of the scenery and apparent fertility of the soil. He had discovered one of the richest portions of America. From New York Bay he sailed for England, after formally taking possession of the whole domain which he had discovered in the name of the States-General of Holland. Landing at Dartmouth in November, he hastened to London and told the story of his discoveries. The unworthy monarch on England's throne, jealous of the advantages which the Dutch might derive from these discoveries, would not let Hudson, an English subject, leave the realm. The navigator had outwitted the sovereign. Knowing his mean character, he had sent to his Amsterdam employers, by a trusty hand, all of his log-books, maps, charts, and a full account of his voyage and discoveries. These led to the commercial ventures between the Texel and the Hudson rivers which immediately followed, and which resulted in the planting of the City of New Amsterdam (now New York) at the mouth of the latter, and of New Orange (now Albany) at near the head of its navigable waters. These were the germs of the commonwealth of New Netherland, the domain of which is now known as the State of New York.

The fate of Hudson, the last of the discoverers who revealed the Atlantic coast of the American continent to Europe, may be told in a few words. He sailed from England in the spring

of 1610 on his fourth voyage in search of a polar ocean passage, this time in the northwest. He discovered, far up North America, the Bay that bears his name, and intended to winter there, but a majority of his crew became mutinous and compelled him to sail homeward. On the way he, his son and seven of his men who had remained faithful to him were seized, pinioned, placed in an open shallop and abandoned on the icy sea, where, of course, they soon perished. Abacuck Pricket, one of Hudson's crew, who was confined to the cabin with lameness at the time, in his published account of the circumstances, after relating how he opposed the cruel proceedings, says: "Now were all the poor men in the shallop, whose names are as followeth: Henrie Hudson, John Hudson, Arnold Lodlo, Sidrack Faner, Philip Staffe, Thomas Woodhouse or Wydhouse, Adam Moore, Henrie King, Michael Bute. The carpenter got of them a Peece, and Powder, and Shot, and some Pikes, an Iron Pot, with some meale and other things. They stood out of the Ice, the Shallop being fast to the Sterne of the Ship, and so (when they were nigh out, for I cannot say they were cleane out) they cut her head fast from the Sterne of our Ship, then out with thee Top-sayles, and toward the East they stood in a cleare Sea"

Chapter XIV

England at the Beginning of the Seventeenth Century - Henry the Eighth and the Church - Dawn of the Age of Reason - Rural Population of England - Furniture, Costume, Methods of Agriculture, Learning and Fine Arts in England - London and Plymouth Companies - Settlements Attempted in New England - English Settlers on the James River - Captain John Smith - Settlement at Jamestown.

AT the beginning of the seventeenth century, when permanent English settlements were begun in America, the people of Great Britain had just passed from the reign of an age of Faith into that of an age of Reason. In the realm of the former, there was such absolute intellectual laziness, and indifference to the exercise of reason in speculative matters, that men accepted tenets in religion and politics, however absurd as truths, and bestowed no thought upon them. Theology was like a cast-iron machine, utterly inflexible. It fashioned social life in its most minute details. The people were simply passive portions of that machine obedient to its ecclesiastic movers. The monastery governed the throne and its subjects as a rigid master, and for centuries there had been very little improvement in the condition of the inhabitants. At length the glare of the moral volcano which had suddenly burst out in Germany shot across Western Europe and the English Channel and awoke the British mind from its sluggish repose. Faith gave way to Reason. A secular revolt assumed formidable proportions, and at the close of the same year, when the right of private judgment was proclaimed at Spire, the English House of Commons - the representatives of the people - presented a petition to King Henry the Eighth, which contained the germs of the English Reformation. It accused the clergy of disloyalty and immorality, and attributed the disorders which affected the realm to the malign influence of the ecclesiastics. The king presented this petition to the bishops for an answer. That answer was arrogant, and offensive to the House of Commons. The latter stood firm in the position of accuser and champion for the laity, and waged a bitter war with the clergy. Henry, stimulated by his love for Anne Boleyn and angered by the opposition of the church to his unholy scheme of divorcement from his queen, united with the Commons, and employed the resolute Thomas Cromwell to lead a movement for the disseverance of the civil government of England from the controlling spiritual power of Rome. Cromwell did so with a high hand, sanctioned and assisted by the Parliament, for already the rule of the people through representatives was recognized. That body, by law, suppressed all the monasteries in the kingdom, confiscated their property, and compelled the ecclesiastics to work for their own sustenance. "Go spin, jade go spin !" was the unfeeling remark of Cromwell to some aged nuns. By law, Henry was made the supreme head of the church in England - a pontiff of a church in rebellion - and so was established the principle that canon or ecclesiastical laws must be subservient to the civil laws. It was a new thing under the sun.

England was now partially freed from a long political bondage, and the age of Reason dawned. The English mind was thoroughly aroused to action. Wonderful social changes followed and during the reign of the adroit trimmer Queen Elizabeth, all classes had more freedom than ever before. Yet the laity were not wholly free. Henry had not specially changed the theology or the rituals of the church in England, and there appeared three powerful and antagonistic parties in the

realm. These were the English party, or Churchmen, who adhered to and enforced the doctrines and rituals of the Church of Rome, but who gave their allegiance to the English monarch, and not to the Pope; the papal party or supporters of the authority of the Roman hierarchy, and the doctrinal Protestants who were disliked by the others. When Parliament established a liturgy for the Church of England, the latter refused conformity to it, for they acknowledged no authority but the Bible in matters of religion. They were more austere in manners, more simple in their worship, and demanded greater purity of life, and so they acquired the name of Puritans. It was given in derision, but soon became an honorable title. Each class was intolerant, and for more than a century and a half there was a chronic triangular contest between the English Churchmen, the Roman Catholics, and the Puritans, which caused many of each class to seek peace in the forests of America. But Reason swayed the age with a Potent sceptre, and stamped its insignia of authority upon the movements of society. Individuals and associations found new and promising fields of action, the most attractive of which was the virgin soil of America. As we have seen, its worth was known and fairly estimated at the beginning of the seventeenth century; and then dawned the Era of Settlements within the domain of our Republic, now at the noon-tide of success, and turning the wilderness, everywhere into a blooming garden.

The condition of the rural population of England had greatly improved under the new order of things. Down to the time of Henry the Eighth, there had been very little improvement since the Romans left the island. There was not much tillage, and that little was unskillfully done. Vast forests and fens covered the land, and malaria (unwholesome exhalations) was a perpetual scourge. The population was sparse and increased very slowly. It did not exceed five million in the whole island of Great Britain, when Henry the Eighth ascended the throne. The food of the common people was not equal in its nutrition and variety, nor their clothing in comfort, to that of our Indians when Europeans first came to America. Our savages lived in better habitations than did their British contemporaries. Pestilence and famine kept the rural population sparse. The ecclesiastics rioted in coarse luxuries, and the morals of the towns were unwholesome in the extreme.

At the beginning of the seventeenth century, or a hundred years later, all this had materially changed. The methods of agriculture had been greatly improved, and its bounds immensely enlarged. Implements were better and tillage was far more productive. The farmers, generally, had an abundance of good food; lived in better houses; pewter dishes had taken the place of wooden ones; feather beds, those of straw and coarse wool, and the yeoman was fond of entertaining his neighbors. Clover had been introduced from the Netherlands, and increased the food for sheep and cattle. Gardens had begun to be cultivated. From the Netherlands had come the hop; also the cabbage, lettuce, apricot, gooseberry, musk-melon and apple. Cherries had come from France currants from Greece, and plums from Italy; and from Flanders the Flemings had brought the rose and other fragrant plants, natives of the East. Rural feasts were common among the yeomanry, and the materials for good cheer are enumerated in the following lines:

"Good bread and good drink, a good fire in the hall; Braun, pudding and sauce, and good mustard withal Beef, mutton and pork, shred pies of the best Pig, veal, goose and capon, and

turkey well drest; Cheese, apples and nuts; jolly carols to hear; All these in the country are counted good cheer."

In cities and among the nobility rapidly increasing wealth had fostered a taste for luxuries. Dwellings, furniture, and dress, felt its influence. Elegant and substantial houses were built. Furniture was elaborately carved and inlaid glass mirrors had been introduced from France early in the reign of Elizabeth, and carpets from Turkey, which English weavers soon imitated, took the place on floors of rushes and mats on which royalty had before trodden. Chairs were cushioned with velvet coverings, and costly beds and bedsteads were seen. In many houses were ornamental French clocks, and knives were seen on English dinner-tables; but forks were not used whilst Elizabeth lived.

An old chronicler tells us of a merry scene in the palace of Henry the Eighth. On the morning after the supple-kneed Archbishop Cranmer pronounced the marriage of his king with Anne Boleyn lawful, the new queen received visits of congratulation from the whole court and the archbishop and several prelates in full canonicals. Henry was delighted with the honors paid to his beautiful wife, and whilst they were pressing about her, and both ladies and gentlemen were giving her tokens of their regard, the king went to a small cabinet, unlocked it, and taking from it a French clock which he had bought in France while he was there with Anne when she was a marchioness, he brought it and put it in her hands as a public pledge of his love and constancy whilst time should endure. It was of "silver gilt, richly chased, engraved and ornamented with fleur-de-lys, little heads, etc. On the top sits a lion holding the arms of England, which are also on their sides." It was about sixteen inches in height.

The costume of this period we are considering was a little less extravagant in mode and richness of materials than it had been when Elizabeth was in her prime, for Puritan simplicity better suited good taste. Crimson and blue velvets embroidered with gold were still worn by the rich and noble; and the ruff was yet seen around the necks of both men and women, but somewhat diminished in volume. Jewelry was yet used to excess, and perfumed gloves bordered with silver were common among the rich. Headdresses were of every variety of pattern, but generally were not offensive to good taste. The pastimes of the common people were ball-playing, bowling, archery and rude theatrical exhibitions, whilst the gentry engaged in bull-baiting and horse-racing out of doors, and chess and backgammon amused them in hall and castle. Learning, until late in Elizabeth's reign, had been much neglected. Nobles and clergy were ignorant; but now a mighty impulse had been given to literature in England, for it was the age of Spenser and Shakespeare. Yet not one in ten of the gentry could write his or her name. The father of Shakespeare could only make his mark with a pen. The fine arts were very little encouraged. Henry the Eighth, who possessed good taste, caused some very fine buildings to be erected, and invited to his court painters and sculptors from abroad. Holbein the painter came from Switzerland, and Torregiano the sculptor came from Florence. But Elizabeth had no artistic taste, and we find only one eminent English painter during her reign - Nicolas Hilliard - to whom she sat for her miniature several times. She encouraged art so far it ministered to the gratification of her vanity.

Such, in brief outline, is a picture of the social condition of England when the inhabitants of that realm began to make permanent settlements in America, at the beginning of the seventeenth century. The Tudor dynasty had ended with Elizabeth, and that of the Stuarts had begun. James the Sixth of Scotland, the only son of Mary Queen of Scot, had ascended the throne as James the First of England in 1603. He was in private and public an unwashed, ill-mannered, vulgar and contemptible man fond of gross shows on which he wasted the treasures of the kingdom; and so great was his egotism that he considered himself more wise and learned than any man in his realm in church or state. He was a bigoted believer in the royal prerogative or exclusive privileges exercised by divine right and he was a fickle tyrant who gave continual uneasiness to his subjects. This was the monarch who granted charters to the London and Plymouth Companies, authorizing them to make settlements in America.

The Plymouth Company, who were to control North Virginia, were first in the field of adventure. Circumstances seemed to be favorable. England was then burdened with two classes of men who would be willing to engage in any enterprise which might promise improvement in their condition. These were restless soldiers unemployed since war with France ceased, and who might soon become dangerous to the state and impoverished spendthrifts, idle and often vicious, who had wasted their estates in riotous living. Such men stood ready to brave ocean perils and the uncertainties of life in a distant hemisphere and when the corporators asked for emigrants, there was no lack of candidates.

The charter of each company was the same. The defined boundaries of each domain was as follows: that of the London Company, between the thirty-fourth and thirty-eighth degrees of north latitude, and that of the Plymouth Company, between the forty-first and forty-fifth degrees, leaving three degrees of space between North and South Virginia, on a breadth of one hundred miles of which, in the centre, neither party should be allowed to make settlements.

The mind of the king was visible in the grant. The idea of the royal prerogative was everywhere conspicuous. He gave to the colonists nothing but the bare territory and the privilege of peopling and defending it. Absolute legislative authority was reserved to the monarch, and he had control over all appointments. Supreme jurisdiction, under the monarch, was given to a small body of men residing in England, known as "The Council of Virginia," and local administration was entrusted to a council in the colony appointed by the one at home, the term of office of the members of both councils depending upon the caprice of the king. The only political privilege accorded to the emigrants was that of perpetual English citizenship for themselves and their children. Homage and rent were the prime conditions of the charter—rent in the form of one-fifth of the net produce of the precious metals. The charter had not the slightest feature of a free government for to the emigrants not a single elective franchise, or a right to self-government, was conceded. They were subject to the ordinances of a commercial corporation of which they were not allowed to be members and even in matters of religion, they had no choice. The doctrine and rituals of the Church of England were to be the established theology and mode of worship in the American colonies, and no dissent was allowed.

The principal members of the Plymouth Company were Sir John Popham (then Lord Chief-Justice of England, who had condemned Raleigh to death), his brother George, Sir Fernando Gorges, Sir John and Raleigh Gilbert, sons of Sir Humphrey Gilbert who perished in the Squirrel, William Parker and Thomas Hanham. In 1606 they sent all agent in a small vessel to inspect the American domain. The Spaniards seized her. Popham fitted out another at his own expense, made the navigator Martin Pring her commander, and sent her to America on the same errand. Pring explored the New England coasts, and confirmed all that Gosnold and others had said about the beauty of the country and the fertility of the soil. This report stimulated Popham (who was the chief manager of the Plymouth Company to energetic efforts towards founding a settlement, and at the beginning of the summer of 1607, a hundred emigrants sailed for America in three small vessels, with George Popham as their governor. They landed on a rather sterile spot on the coast of Maine, near the mouth of the Kennebec River, late in August, where they dug a well and built a storehouse, a few log huts and a stockade fort. It was too late in the season to raise food from the soil. There was small promise of receiving any from the Indians, who, angered by the kidnapping by Weymouth, were sullen and hostile. With this prospect before them, all but forty-five of the emigrants returned home in the ships.

The ensuing winter was a fearful one. Frost closed the rivers against fishermen, and deep snows blocked the forests against hunters. The settlers had nothing to depend upon excepting the stores brought from England. At one time their huts were nearly buried in the snow-drifts. Of two of them only the chimneys were seen above the snow for a month, out of which rolled the blue smoke along the surface of the white drifts. It was difficult to get fuel to feed the hut fires and they were about to make the storehouse their general home, when, at midnight in January, it took fire and was consumed, with a part of their provisions, which they could not save. That fire produced a wild, weird scene, its red glare spreading a crimson glow far over the snow and through the dark forests. Distress followed. Confinement, hardship and scarcity gendered disease, and when the spring of 1608 opened, Governor Popham was dead.

The settlers were on the verge of despair when a ship came with supplies and brought the sad intelligence that the chief-justice and Sir John Gilbert were dead. These men were the stronger props of the enterprise. This news, with the terrible scenes of the past winter fresh in their memories, discouraged the emigrants, and they abandoned the country and returned home, taking with them a little vessel which they had built, and some furs and other products of the country. They were not fit men to found a state. They were compulsory emigrants sent hither by their personal necessities, and had left their country for their country's good. Happily for New England they were not allowed to be the founders of a commonwealth on its soil. They gave such discouraging accounts of the country that no one seemed willing to follow their example and for a number of years afterward the Plymouth Company only kept up a little traffic with the natives of their domain, and fished in the neighboring waters.

The king, with commendable vanity, had prepared a code of laws for the colonies, really more liberal in their provisions than the intentions of the patentees, who desired immediate profitable return in money rather than the ultimate blessings of colonization. These laws enjoined the

regular preaching of the gospel, kindness to the Indians and the communication of religious instruction to them, and other provisions for the well-ordering of a civil community. Under the charter and this code of laws, the London Company prepared to make a settlement in South Virginia. Sir Thomas Gates, Sir George Somers, Richard Hakluyt, and Edward Maria Wingfield were its most active members, and in December, 1606, they sent Captain Christopher Newport with three small vessels and one hundred and five emigrants, with orders to land on Roanoke Island, where Raleigh's colony had perished twenty years before. It was a company of men no better fitted for the founding of a prosperous state than were those who wintered on the coast of Maine. No family, the true nucleus of a colony, accompanied either. Of the whole number who sailed for Virginia, there were only twelve laborers and a few mechanics. The remainder were "gentlemen," a word denoting persons who were not engaged in any industrial employments - drones in society, whose numbers are, happily, small in our country at this day. Many of these were idle and dissolute, whilst a few of those who were classed with the colonists, like Bartholomew Gosnold, the projector of the scheme, Captain John Smith, George Percy brother of the Duke of Northumberland, and Edward Maria Wingfield, were men of energy and steady habits.

The silly king, with his love for concealment, trickery and surprises, had placed the names of the councillors for the Virginia government in a sealed box, with orders not to open it until the emigrants should be landed and were prepared to form a settlement. This foolish order deprived the colonists of a head whilst on the sea, and there was no competent authority to decide questions or to quell disputes, if any should arise, during the long voyage of four months, for Newport took the old southern route by way of the Canary Islands and the West Indies.

Disputes, hot and fierce, did arise on that voyage. Before reaching the Canaries there were daily quarrels, chiefly owing to the brusque and imperious manner and outspoken opinions of Captain John Smith, who possessed more energy and wisdom than any man among them. Although he was then only twenty-nine years of age, he had acquired vast renown and experience by military exploits, and his fame filled his companions with envy. He had been a wild, rollicking lad, whose friends gave him ten shillings, he said, "to get rid of him," and he went to France as a servant to an English nobleman. He was soon dismissed by his new master, and then engaged in the wars in the Low Countries. At the end of a long campaign, when he was nineteen years of age, he returned to England, built himself a hut in a dark forest, turned hermit, and devoted much of his time to the study of military history and tactics, and practicing horsemanship. The hermit became the theme of many a wild tale, when he suddenly disappeared. Rudolph, Emperor of Germany, was then waging war against the Turks, who were pressing westward through Hungary. Smith resolved to join the Christian army against them. After various vicissitudes he reached Marseilles, where he embarked for Italy in a ship filled with Roman Catholic pilgrims. A terrible storm arose. The superstitious pilgrims believed the howling tempest to be a token of God's anger because they were voyaging with a heretic, so they cast the young Englishman overboard. He swam to an island not far off, from which he was taken in a French vessel to Alexandria, and afterward on a voyage in the Levant, where they fell in with a Venetian vessel richly laden, and captured her. Soon after that, Smith joined the German army then fighting the

Turks in Transylvania, where his skill and prowess won for him great renown. On one occasion, whilst besieging a town, a famous leader of the Mussulmans challenged any Christian to single combat for the amusement of the ladies of the city. Smith was the chosen champion. The Turkish lord appeared in the arena outside the walls in a suit of glittering mail. On his shoulders were large wings made of eagle's feathers, garnished with gold and precious stones. Smith appeared in a plain suit of steel. Both were on horseback, and their weapons were the lances of the old knights. From the walls, covered with ladies and soldiers, and from the Christian camp, went up loud shouts as the combatants approached each other. The tilt was fierce. By a skillful movement, Smith thrust his spear point into the helmet of his antagonist, and pierced his brain. The Turk fell dead, when his head was cut off and sent to the Christian camp. Two other champions, who fought Smith to avenge the death of their leader, shared the same fate. The Prince of Transylvania gave him a patent of nobility and a coat-of-arms composed of a shield bearing three Turks' heads in two of the quarterings.

A little later Smith was made a prisoner and sold to a Pacha, who sent him to Constantinople as a slave for his mistress, whom that officer wished to marry. The gallant Christian, then in the bloom of young manhood, won the heart of the Turkish maiden, to whom, like the Moor, he told the story of his adventures. She tried to release him by sending him to her brother in the Crimea, but he there experienced the most grinding slavery. At length he escaped in the garb of his master whom he slew in anger, and after many stirring adventures on the continent he returned to England in 1604. Gosnold easily persuaded him to go to Virginia, where he became the real founder of that State.

After sharp quarrels on shipboard, Wingfield, who was a member of the London Company, accused Smith of a conspiracy to murder the council, whoever they might be, usurp the government, and make himself king of Virginia. This absurd charge was believed by some, and the brave soldier was imprisoned during the remainder of the voyage, which was very tedious. Whilst running up the American coast from the West Indies, they encountered a fierce storm which drove them far beyond Roanoke Island into Chesapeake Bay, the headlands of which they named in honor of the Prince of Wales and his next oldest brother, Cape Henry and Cape Charles.

A part of the voyagers landed on Cape Henry, and had a slight skirmish with the Indians; and that night the sealed box was opened, when the company were astonished to find the name of Captain Smith amongst those of the seven councillors. Yet he was not then released. They sailed across the deep waters at the mouth of the Chesapeake the next day, and landed upon a point grandly wooded and fragrant with the perfumes of flowers. Delicious was the comfort and rest of the wearied company in this paradise of beauty and repose, and with gratitude therefor they named it Point Comfort. There Fortress Monroe now stands. After resting a day or two, they entered the mouth of a broad river which the Indians called Powhatan, and sailing up that yellow stream for forty or fifty miles, they chose a place for a settlement on an island close by the northern shore of the river. There they organized government at the middle of May, by choosing Wingfield to preside over the council. In honor of their king they named the great river James, and resolved to call the island and the seat of government Jamestown. The Rev. Robert Hunt,

who was their chaplain, preached a sermon and invoked the blessings of God upon the undertaking. In that beautiful month of May, warm and sunny as in England at that season, the air laden with the perfume of wild flowers, and the children of the forest, friendly and kind, looking on in wonder, the sound of the metal axe was first heard in Virginia. The first tree was felled and the first foundation was laid for a dwelling on that charming spot where the first permanent English settlement in America was planted.

The English were told that far up the river lived Powhatan, the emperor of several confederated tribes so, whilst the carpenters were hewing the timbers for the cabins, Newport, Smith, and twenty others went up the stream in boats to discover its head and to visit the dusky monarch. They followed its winding course to the Falls, where Richmond now stands; and on a hill, a mile below, they found Powhatan at one of his imperial residences, a large structure made of saplings and boughs and covered with skins. It was surrounded by a dozen wigwams of his chief counsellors, and fields of Indian corn almost ready to burst into bloom. The emperor received them kindly, but his chiefs murmured because of the intrusion of the English. Powhatan, who was afraid, said: "They hurt you not they only take a little waste land."

Meanwhile, matters had not gone smoothly at Jamestown. The jealous and suspicious Wingfield restrained exercise with fire-arms and discouraged the building of a fort which Smith had recommended, for the latter knew that the idle and dissolute men of the company would soon make the Indians their enemies. When he returned his fears had been realized. The Indians had made a sharp attack upon the settlers, wounding several and killing a boy. Then the president consented to the building of a stockade, but daily and nightly watchings were necessary to avoid another surprise.

Newport now prepared to return to England with the ships. Smith had not been allowed to take his seat in the council, for he had not been tried nor had the charges against him been withdrawn. The jealous Wingfield, wishing to get rid of him, proposed that he should return with Newport and so avoid the disgrace of a trial. The indignant soldier rejected the proposal with scorn, and demanded an immediate trial. Smith's innocence was so plain to the comprehension of his companions, and his services were so much needed, that they demanded his release. Wingfield withdrew his charges and Smith took his seat in the council, when it was adjudged by that body that the president should pay him 203 pounds damages for false imprisonment. All of the property Wingfield had with him was seized to satisfy this award, when Smith generously "returned it to the store for the general use of the colony." From that time Captain Smith was the ruling spirit in Virginia.

At the middle of June, Newport departed for England for more emigrants and supplies, leaving a pinnacle for the use of the settlers. Already the prudent thinkers had discovered impending perils. Much of their food had been spoiled during the long voyage, and the hostile Indians withheld supplies. "Our drink," wrote one of them, was unwholesome water our lodgings, castles in the air; had we been as free from all sins as from gluttony and drunkenness, we might have been canonized for saints." Most of the emigrants were too idle or too ignorant to make efforts to till

the soil. The heat soon became intense and brought deadly malaria from the dank swamps all around them, that prostrated them with fevers and dysentery. Within a fortnight after Newport left hardly ten of them were able to stand, and before the beginning of autumn one-half of the emigrants were underground. Among the victims was the good Gosnold, a man of great worth to whose example and the precepts of Parson Hunt the settlers were indebted for the little order that prevailed among them. Despair clouded the minds of the survivors, and in the midst of their distress, they discovered that the avaricious and unscrupulous Wingfield was living on choice stores and was preparing to abandon the settlement and escape to the West Indies in the pinnace. He was deprived of his office, and Captain John Ratcliffe, a man much weaker in mind and equally wicked, was put in his place. The settlers soon perceived their mistake, and taking the reins of government out of Ratcliffe's hands, they placed them in those of Captain Smith. It was an event that saved the colony from ruin. Hopeful, cheerful, energetic, honest, full of invention and equal to any emergency, Smith's words and example diffused light amid the general gloom and revived the spirits of the most desponding. He soon brought order out of confusion inspired the Indians with awe and compelled them to bring him food. And so the settlers lived until the wild-fowl, returning from the northern waters, swarmed upon the bosom of the James in October, and at the beginning of November an abundant crop of Indian corn had been gathered by the savages, who shared it with their dependent white neighbors.

Chapter XV

Energy and Wisdom of Captain Smith - His Encounter with Indians - Saved from Death by Pocahontas - His influence at Jamestown, and His Explorations - Demands of the Company - Smith's Rule - Change in the Government - Perilous Passage of a Governor and Commissioners - Valuable Immigrants - Pocahontas Saves Jamestown - The "Starving Time" - Abandonment of and Return to Jamestown - Lord Delaware's Administration - A Better Social System - Pocahontas Kidnapped - Her Baptism and Marriage - Friendship of the Indians - The Staple of Virginia - Representative Government Established.

THE skill, prowess, and forethought of Captain Smith had secured for the settlers an abundance of food and comfortable dwellings for the winter. The sickly season was over early in November, and nothing but fear of Indian treachery made the emigrants uneasy until their improvidence had again impoverished their stores. Smith had voyaged down the James River to Point Comfort and back, making observations of the people and country, and impressing the former with a sense of the wisdom and strength of the English and he now proposed to explore the Chickahominy River, a broad stream at its mouth and flowing into the James from the northwest.

With singular ignorance of the progress of geographical discovery, and with intense greed for the wealth of India, the Company had given special instructions to the settlers to explore every considerable stream which they should find flowing from the northwest, hoping so to discover a passage to the Indian Ocean and coveted Cathay. Smith did not share the ignorance of his employers, but he gladly made their instructions his warrant for exploring the surrounding country; so, with half a dozen followers, he went up the Chickahominy in an open boat to its shallow waters among the swamps high upon the Virginia peninsula. There, with two others and two Indian guides, he penetrated the dark and tangled forests, leaving the remainder of his company in charge of the vessel with instructions not to go on shore. They disobeyed, and one of them was killed by prowling savages. Meanwhile, Smith had gone twenty miles further in a canoe, when he left his two companions and with one guide he went into the woods in search of game. The savages, under Opechancanough, the king of Pamunkey, had watched the movements of the Englishmen. They slew the two men in charge of the canoe, and then sought their leader. Smith, seeing a large number of assailants, tied his Indian guide to his own body with his long garters, and making him a buckler he fought valiantly and slew several of the savages, as he moved backward toward his canoe. Falling into a quagmire, after being slightly wounded, he was made prisoner. Death would doubtless have been his immediate fate but for his presence of mind and quickness of thought. He drew from his pocket a compass, and explained to the king its wonderful nature as well as signs could convey the forms of thought. In the same way he told them of the shape of the earth; of the nature of the sun, moon and stars, and "how the sun chased the night round about the world continually." The savages were at once impressed with the idea that he was a superior being, and they regarded him with wonder and awe.

The white captive was now conducted from village to village in great state, where the women

and children stared at him in mute astonishment. In their march the king was just behind a file of warriors, and was followed by the prisoner whose arms were held by two huge savages, having six warriors, all painted and plumed in a gorgeous manner, on each side of them. At the capital of Opechancanough, who was an elder brother of Powhatan, they held incantations for three days to discover his character, for they were in doubts whether Smith was the embodiment of a good or an evil spirit. Then they conducted him to the presence of the Emperor Powhatan, at a place now known as Shelly, on the banks of the York River, in Gloucester county, Virginia, and asked him to decide the fate of the prisoner. There Smith obtained permission to send a letter to Jamestown, in which he informed the settlers of his condition, and directed them to impress the messengers with as much fear of the English as possible. The marvelous power of that letter perplexed the Indians. It had intelligent force, and more than ever they were in doubt concerning the real character of their captive, who was now feasted in a manner which made him think he was intended as food for a banquet when he should be well fatted.

Smith was finally brought before the emperor at a great council of full two hundred warriors. Powhatan, wearing a mantle of raccoon skins and a head-dress of eagle's feathers, sat on a raised framework with a maiden on each side of him, before a fire. From this throne to the other end of the long house neatly made of boughs, the warriors stood in two rows, in their gayest attire, and back of them as many women with their necks and shoulders painted red, their heads covered with the white down of birds, and string of white beads falling over their bosoms. When the captive was brought in, they all shouted. The Queen of Appomattox brought him water that he might wash his hands, and another woman brought him a bunch of feathers wherewith he might dry them. After this he was feasted, and then a solemn council was held. By that council he was doomed to die. Two huge stones were brought before the emperor, to which the prisoner was dragged and his head laid upon them, whilst two big savages stood by with clubs ready to beat out his brains. Matoa or Pocahontas, a young daughter of the emperor, begged for the life of the Captain, but in vain, when, just as the clubs were uplifted, she darted from her father's knee, clasped the prisoner's head with her arms and laid her own head upon his.

"How could that stern old king deny
The angel pleading in her eye
How mock the sweet, imploring grace
That breathed in beauty from her face,
And to her kneeling action gave
A power to soothe and still subdue.
Until, though humbled as a slave,
To more than queenly sway she grew." - Simms.

The emperor yielded to the maid, and consented to spare the life of the captive that he might make hatchets for his majesty, and bells and rattles, beads and copper ornaments for his daughter, his favorite child. He did more; he released Captain Smith, sent him with an escort of a dozen men to Jamestown, and he and his people promised to be fast friends of the English. But for the energy and wisdom of Captain Smith and the tender compassion of an Indian maiden, the settlers at Jamestown would have all been murdered or dispersed. They had been reduced to forty persons, and when Smith returned he found the stronger ones on the point of abandoning the place and escaping in the pinnace. By his personal courage and moral force he compelled them to desist, and so, again, he saved the budding colony from ruin. These men, conscious of the purity

of Captain Smith and of their own wickedness, now hated him with an intensity of feeling that impelled them to seek his destruction.

During Smith's absence among the Indians, the church at Jamestown had been burned, and the Rev. Mr. Hunt was laboring earnestly for the good of souls under the shadow of great trees. Of that first church edifice, Captain Smith has left us an interesting account. "When I first went to Virginia," he says, "I well remember we did hang an awning (which was an old sail) to three or four trees, to shadow us from the sun our walls were rails of wood, our seats unhewed trees, till we cut planks our pulpit a bar of wood nailed to two neighboring trees; in foul weather we shifted into an old rotten tent, for we had few better, and thus came by way of adventure for new. This was our church till we built a homely thing like a barn, set upon crotchetts, covered with rafts, sedge, and earth, so was also the walls. The best of our houses were of the like curiosity, but the most part far worse workmanship, that could neither well defend wind nor rain, yet we had daily Common Prayer, morning and evening, every Sunday two sermons, and every three months the Holy Communion till our minister died."

On his return, Smith found the settlers engaged in building a house for the President of the Council. When he was installed into that office not long afterward, he ordered the church edifice to be rebuilt. "Now the building of the palace was stayed as a thing needless," he said, and the church was repaired and he assisted the minister in all ways in his power to make the people better.

When Newport returned to England he found the Council there increased in numbers and power, and he was employed to return immediately with new emigrants and supplies. He arrived at Jamestown early in 1608 with two vessels, and was received with joy. But he brought no better materials for a colony than before. Instead of needed mechanics and farmers with families, he brought chiefly idle "gentlemen," some of them vicious whose friends, Smith said, "had sent them away to escape ill destinies at home" - the prison or something worse. There were one hundred and twenty of them, and there was scarcely a really useful man among them. There were several unskilled goldsmiths, whose ignorance caused a most destructive gold-fever to prevail in Virginia. They pronounced some glittering yellow earth near Jamestown to be a deposit of the precious metal, and in spite of the earnest remonstrances of Smith, the whole population turned gold-seekers. For awhile there was "no talk, no hope, no work, but dig gold, refine gold, load gold." On the recommendation of the goldsmiths, Newport loaded his vessel with the worthless earth, and returned to England with the impression that he was an immensely rich man. He was soon undeceived by a scientific test.

Captain Smith implored the settlers to plant and sow that they might have plenty and be happy, without the aid of the Indians, who, chiefly through the exertions of Pocahontas, were sending them supplies. But they would not listen to the wise man, and at length, in the early summer of that year, he turned from Jamestown in disgust, and with a few of the more sensible men he went in an open boat to explore the Chesapeake Bay and its numerous tributaries. In the space of three months, he made two voyages. During the first he went up the Potomac River to the Falls near

Georgetown, and up the Rappahannock to the Falls near Fredericksburg, and then returned to Jamestown. During the second voyage he went up the Patapsco to the site of Baltimore and up the narrower part of Chesapeake Bay into the Susquehanna River, a short distance above Havre-de-Grace, where he heard of the powerful Iroquois Confederacy in the present State of New York. In these two voyages, Smith not only explored the shores of great water, but penetrated into the country, made friendly alliances with several chiefs, and smoothed the way for the future planting of settlements on the borders of the noble Chesapeake. He had voyaged about three thousand miles in an open boat and made a map of the region explored, remarkable for its accuracy, which is preserved in London.

When Captain Smith returned to Jamestown early in September, he found the colony in confusion again. His advent was hailed with delight by the better sort of settlers, and three days after his return he was chosen. This wise measure soon produced some good fruit. The new president organized labor, and compelled the performance of the same; and when, a little later, Newport again came with two ships bearing supplies and seventy emigrants, he hoped to find among the latter better materials for a state. There were two women (the wife of Thomas Forrest, and her maid, Anne Burrows, who soon afterward married John Laydon, a carpenter), the first of European blood who had trodden the banks of the James but the men were no better than the other emigrants. And yet the greedy corporation who had sent out such men for the founding of a state, disappointed and unreasonable, demanded impossibilities. They sent a message to the settlers by Newport, saying, in substance: "Unless you shall send us back in these ships sufficient commodities to pay the charges of the voyage [L.2,000]; unless you shall also send us a lump of gold, the product of Virginia assurances of having found a passage to the South Sea (Pacific Ocean), and also one of the lost colony sent to Roanoke by Raleigh, you shall be left in Virginia as banished men. To this threat Smith replied with spirit, showing them the absurdity of their demand, assuring them that it was as much as the settlers could do to sustain life with the assistance of the savages, and saying: I entreat you rather send but thirty carpenters, husbandmen, gardeners, fishermen, blacksmiths, masons and diggers of trees roots, well provided, than a thousand such as we have."

This threat assisted the president in enforcing rules for labor. He demanded six hours of work each day from every able-bodied man. "He who will not work shall not eat," he said. Very soon the "gentlemen" became expert in the use of the axe, and the little village showed signs of an orderly community but so little attention had been given to agriculture that at the end of two years from the first arrival, and with two hundred emigrants in the settlement, not more than forty acres were under cultivation. They were compelled to depend upon the bounty of the red men for their sustenance during the winter of 1608.

With no respect for the rights of the settlers already in Virginia; with no desire to build up an industrious and prosperous colony on the banks of the James River, but with an intense longing for the speedy accumulation of wealth by the discovery of rich mines in America and a quick passage to India, the London Company sought to grasp all power and to abolish all freedom among the settlers, so making them little better than serfs. For this purpose they obtained wealthy

and influential allies; and in the spring of 1609, the Company was composed of twenty-one peers, several bishops, ninety-eight knights, and a multitude of doctors, esquires, gentlemen, merchants and other citizens. They obtained a new charter in May under the title of "The Treasurer and Company of Adventurers of the City of London for the First Colony in Virginia," by which the boundaries of their domain were enlarged the offices of president and council in Virginia were abolished, and all laws for the settlers were to be framed by the council in England and administered by officers appointed by that council. The rule of the governor was made absolute, and the lives, liberty and property of the settlers were placed at his disposal, whilst they were compelled to contribute a certain share of their net earnings to the proprietors. They were vassals, without any recognized power to cast off the yoke. Not a valuable civil privilege was conceded to them.

Nine ships were fitted out by the new Company, and freighted with stores and more than five hundred emigrants. These were placed under the general command of Captain Newport, and sailed for Virginia early in June, 1609. Sir Thomas West, Lord De la Warr, had been appointed governor and captain-general of Virginia for life, with Sir Thomas Gates as his deputy. Sir George Somers was made admiral of Virginia, with Newport as vice-admiral; Sir Thomas Dale, high marshal, and Sir Fernando Wainman, general of cavalry. Gates, Newport and Somers were commissioned to administer the government until the arrival of Lord De la Warr, who was not then ready to go. As there had been no adjustment of precedence between these three men, and they could not settle that point, they agreed to go in the same vessel, the Sea-Venture, Newport's flag-ship. When she was near the coast of Virginia, a hurricane separated her from the rest of the fleet, and wrecked her on the shore of one of the Bermuda Islands. Another small vessel perished in the gale, but seven of the ships arrived at Jamestown, leaving a large company of emigrants composed of some of the worst classes of the population of England. These were licentious and profligate young men sent by their friends with a hope that amendment in their lives might follow, or to screen them from justice tradesmen broken in fortune and spirits, and vagabonds of every grade, from idle gentlemen to dissolute criminals. The only things brought by the fleet that were valuable accessories to the settlement were horses, swine, goats and sheep, and domestic fowls. To these were added, two years later, one hundred cows and other cattle.

Such emigrants were calculated to corrupt rather than improve the settlement, and mischief ensued. They had their leaders among the "gentlemen," who, on their arrival, proclaimed the new charter, and in the absence of the wrecked commissioners refused to obey the president. Anarchy menaced the colony, but Smith, with his usual energy, asserted his authority in the absence of legal agents of the Company, and now, as on other occasions, became the savior of the settlement from utter ruin. He devised new expeditions and new settlements that the vicious herd might be employed, and the libertines were kept in restraint until the autumn, when an accidental explosion of gunpowder so wounded Smith that he was compelled to go to England for surgical aid. He delegated his authority to George Percy, a brother of the Duke of Northumberland, a man of excellent character, but deficient in force. Smith never returned to Virginia.

It was more than six months after the departure of Captain Smith, when the three

commissioners arrived from the Bermudas. Meanwhile, the settlers, left almost without restraint, had brought awful miseries upon themselves. They had indulged in every irregularity of lie, and their ample store of provisions was soon exhausted. The new settlers, by injustice and cruelty, not only alienated the friendship of the Indians, but made them exasperated enemies. The red men, who had respect for Smith and feared his power, despised the new comers. They withheld food from the English, and killed those who came to their cabins in search of it. Finally, they devised a plan for exterminating the whole body of intruders. It was frustrated by Pocahontas, who proved to be the guardian angel of the settlers. When she heard of the plot, her soul was troubled. On a dark and stormy night she hastened to Jamestown, and revealing the conspiracy to Percy, put the English on their guard.

But death still brooded over the settlement. Famine came with its horrors and transformed civilized Englishmen into cannibals. They fed on Indians whom they slew, and sometimes upon their own companions who had perished of hunger. When the commissioners arrived in the spring of 1610, of the four hundred and ninety persons whom Smith had left in Virginia, only sixty remained alive. More than four hundred had perished within six months upon a soil out of whose generous bosom some moderate labor might have drawn ample sustenance for them all. Many a time during that winter and spring, which was ever afterward referred to as "the starving time," did those wretched men lament their folly and wickedness in not following the advice of Captain Smith, who was their true friend. His labors for their good had been disinterested. For his sacrifices he had received no reward but the approval of his conscience. Brave, honest and true, he won the imperishable honor of being the first planter of the Saxon race on the soil of the United States, and is entitled to the endearing name of Father of Virginia.

The commissioners and their fellow passengers, who had been wrecked on a fertile but uninhabited island, found sufficient food in fruits there to sustain them whilst building two small vessels in which they embarked for Virginia. They hoped to find a happy and prosperous colony at Jamestown but instead of the bright faces of contented people, they saw the horrid visages of sixty starving men in the depths of despair. They were perishing for want of food without a prospect of obtaining more. Gates, to whom the other commissioners had agreed to commit the administration of affairs in Virginia, saw no other way to save the lives of the starving men than to abandon the settlement, sail to Newfoundland, and distribute the settlers among the English fishermen there. So, embarking them in four pinnaces which were in the river, and giving them a share of his own stores, he sailed immediately for the far northeast. Some of the settlers desired Gates to set fire to the fort and dwellings at Jamestown, on their departure, but he would not consent. It was well he did not, for at the evening twilight the next day, the whole company, with others, were again at Jamestown offering thanksgiving to God for a great deliverance. At dawn that morning, the eyes of the disconsolate fugitives had been greeted by the apparition of white sails moving up the James River as Gates and his followers were approaching its mouth. They were the wings of Lord De la Warr's ships, which were filled with provisions and emigrants, accompanied by the governor, a pious, prudent, generous and humane man. Back to Jamestown they all sailed. The governor landed first. The emigrants followed, and when all were on shore, his lordship fell upon his knees and with bowed head engaged in a long silent prayer whilst the

people stood reverently by. When he arose, he and the Rev. Mr. Bucke, who had come with him to supply the place of Mr. Hunt, led the people in procession to the unfinished church, where the new pastor preached a sermon, in the evening twilight, and a large portion of the congregation joined in singing anthems. After the religious services were ended, the governor presented his credentials and addressed the people. Some Indians were seen in the woods near by, listening in wonder to the songs of praise that went up from the lips of the grateful multitude on that warm June evening.

The dignity and amiable character of Lord De la Warr commanded the respect of the settlers, and the future seemed full of bright promises. He caused the church to be rebuilt, and to be dedicated with as much pomp and ceremony as circumstances would permit. It was daily garnished with white flowers and there, every morning, a large number of the settlers were gathered to engage in common prayer, after which each man was required to work six hours during the day. The dwellings were improved and many more acres were cultivated. But the health of Lord De la Warr failed, and he returned to England in the spring of 1611, leaving the government in charge of Percy, Smith's successor. At the same time Sir Thomas Dale, a brave soldier, was out on the ocean in a ship with supplies, and on his arrival, which was hailed with delight, he assumed the reins of government and ruled by martial law both the church and state. He encouraged the Company to persevere in the dignified work which they had begun, and they sent Sir Thomas Gates with six well-furnished ships and three hundred emigrants. They arrived at the close of summer. These emigrants were a much better class than any who had yet appeared in Virginia. A greater portion of them were sober and industrious, and their influence upon the earlier settlers was salutary. Gates assumed the functions of governor, and Dale went up the river and planted settlements at the mouth of the Appomattox River (now Bermuda Hundred) and at the Falls (now Richmond). Over these the Rev. Mr. Whittaker was placed as pastor.

Another charter was now obtained for the Company, which allowed the powers of the association to be distributed in a democratic manner among all of the members, who met in mass for deliberation and legislation. The most important feature affecting the welfare of the settlement was that which allowed every man to cultivate a few acres of land for his own sole use and benefit. Before that time the land was tilled in common, and the industrious provided food for the lazy. There was no special incentive to industry in that system; but in the new arrangement there was such a stimulus to exertion that the privilege was enlarged, an ample supply of provisions for all was easily obtained, and the community system was abandoned. Although no political privileges were granted to the settlers by the new charter, they were contented.

And now a wicked act, which became a fortunate circumstance for the settlement, made a salutary change in the relations between the English and the Indians. Ever since the departure of Captain Smith, Powhatan had evinced hostility to the settlers, and the powerful Chickahomines, their nearest neighbors, sympathized with him, and allowed no food to be carried to Jamestown. Provisions there became scarce, and Captain Argall, the sort of buccaneer whom we met in Acadie, and who was then in Virginia, was sent with a vessel on a foraging expedition up the York and James Rivers. Being near the residence of Powhatan, he bribed an Indian with the gift

of a copper kettle to entice Pocahontas on board his vessel, where he detained her a prisoner, expecting to get a large quantity of corn from her father as a ransom for his daughter, and to recover some arms and implements of labor which had been stolen by the Indians. The emperor rejected the proposition of ransom with scorn, and refused to hold any intercourse with the pirate, but declaring to the authorities at Jamestown, that if his daughter should be released, he would forget the injury and be the friend of the English. They would not trust his word, and the maiden was taken to Jamestown and detained there several months, but was always treated with respectful consideration. The affair was assuming a very serious aspect, when Love, the powerful mediator, settled the difficulty. Among the young men of rank and education at Jamestown was John Rolfe, of an excellent English family, who became enamored of Pocahontas, and to him:

"She was a landscape on mild earth. Where all was harmony and calm quiet, luxuriant, budding. " - BYRON.

Pocahontas reciprocated Rolfe's passion, and they agreed to be wedded. But one thing troubled the soul of the young Englishman. He was a Christian; she was a Pagan. "Is it not my duty," he said to himself, "to lead the blind into the light?" Then came to his mind the Bible story of the visitation of the sons of Levi by God in his anger, because they sanctified strange women. But love conquered. He resolved to labor for her enlightenment and conversion. The young princess was an apt scholar, and very soon, in the little chapel at Jamestown, whose columns were rough pine trees from the forests, and its rude pews were of sweet-smelling cedar, and its rough communion-table and pulpit of black walnut, that dusky convert stood before a font "hewn hollow between like a canoe," and there received the rite of Christian baptism with the name of Rebecca, at the hands of Mr. Whittaker. She was the first Christian Indian in Virginia.

Very soon Pocahontas again stood before the chancel of the little chapel, now as a bride. It was a charming day in April, 1613. Her father's consent to her marriage had been easily obtained, and he had sent his brother Opachisco to give away his daughter according to the Christian ritual, for he would not trust himself with the English at Jamestown. Over the "fair, broad windows" hung festoons of evergreens bedecked with wild flowers, with the waxen leaves and scarlet berries of the holly. The communion table was covered with a "fair white linen cloth," and bore bread from the wheat fields around Jamestown, and wine from the luscious grapes from the adjacent woods. All the people at Jamestown were spectators of the nuptials. There were Sir Thomas Gates, and Master Sparks who had been co-ambassador with Rolfe to the court of Powhatan. Young George Percy and Henry Spilman were there and near them, an earnest watcher of the ceremony, was the elder brother of Pocahontas, with her younger brother and many youths and maidens from the forest. There, too, was Mistress John Rolfe, Mrs. Easton and child, and Mistress Horton and grand-child with her late maid-servant, Elizabeth Parsons, who, on Christmas Eve previously, had married Thomas Powell. These were all the English women then in Virginia, and all returned to Europe.

When all things were in readiness, the bride and groom entered the chapel. Pocahontas was dressed in a simple tunic of white muslin from the looms of Dacca. Her arms were bare even to

her shoulders; and hanging loosely to her feet was a robe of rich stuff presented to her by Sir Thomas Dale, and fancifully embroidered by herself and her maidens. A gaudy fillet encircled her head, and held the gay plumage of birds and a veil of gauze, while her wrists and ankles were adorned with the simple jewelry of the native workshops. Rolfe was attired in the gay clothing of an English cavalier of that period, and upon his thigh he wore the short sword of a gentleman of distinction in society. He was a noble specimen of manly beauty and dignity in form and carriage, and she of womanly modesty and lovely simplicity. Upon the chancel steps, where no railing interfered, the good Whittaker stood in sacerdotal robes, and, with impressive voice, pronounced the marriage ritual of the Anglican Church, there first planted on the American continent. The governor, sitting on his right on a richly carved chair of state, with his ever-attendant halberdiers with helmets at his back, heartily said Amen! at the conclusion of the ceremony.

So were wedded the Rose of England and the Totem or Indian symbol of nationality, giving promise of a friendly union of races in Virginia. It brought present peace, and Powhatan was ever afterward the fast friend of the English. Rolfe and his spouse "lived civilly and lovingly together" until the departure of Governor Sir Thomas Dale for England in 1616, whither they, with several others of the settlement and all the English women there, accompanied him. There the "Lady Rebecca" received great attentions from the court and all below it. The Lord Bishop of London entertained her with "festival and pomp," and at court she was treated with the ceremonious respect due to the daughter of a monarch. The silly bigot on the British throne was angry because one of his subjects had dared to marry a lady of royal blood, and Captain Smith, for fear of the royal displeasure, would not allow her to call him "father" as she desired to do. Her simple, tender heart was grieved because of his seeming want of affection for her. The king, in his absurd dreams of the royal prerogative, imagined that Rolfe or his descendants might lay claim to the crown of Virginia, in behalf of his royal wife! And it was considered in council whether he had not committed treason !

Pocahontas remained in England about a year; and when she was about to embark for America with her husband and son, and Tomocome, her father's chief councillor, she sickened and died at Gravesend in June, 1617, when she was not quite twenty-two years of age. She left a son, Thomas Rolfe, who became a distinguished man in Virginia, and whose descendants have been numbered among the honorable citizens of that commonwealth.

Prosperity was now the destiny of the settlements in Virginia, although the prime element of a permanent state - the family - was yet wanting. Because of this want, the settlers continually indulged in dreams of returning home - to England. Dale, who had ruled with wisdom as well as energy, discouraged this feeling, and by engaging them in the cultivation of the tobacco plant, somewhat allayed it. His successors encouraged its production, and in spite of the silly efforts of King James to prevent its use in England, by forbidding its cultivation in the British islands, its growth and exportation to the mother country soon became the staple and very profitable business of the planters in Virginia. Its culture became a mania. The streets of Jamestown were planted with it, and food-producing products were so neglected that while great cargoes of tobacco were preparing for England, the necessaries of life were wanting. It became the currency of the

country, the money value of a pound of tobacco being fixed at about sixty-six cents.

Dale left Argall as deputy governor, but his petty tyranny and rank dishonesty disgusted the people. The story of his bad conduct told in England checked emigration, and his office was given to the excellent George Yeardley, a wise statesman and friend of man. On the death of Lord De La Wart while he was on a voyage to resume the reins of government there, Yeardley was appointed governor with broad discretionary powers. Abolishing martial law, releasing the planters from feudal service and confirming their titles to lands in their possession, and establishing a representative government on the banks of the James, he laid the foundations of a permanent colony. He had found the settlers yearning for the freedom enjoyed by their fellow-subjects in England under the British constitution. He could not reconcile that freedom with then existing disabilities, so, with the sanction of the Company, he introduced a new political system in Virginia. The settlements were divided into eleven boroughs, each having two representatives, called burgesses, who were chosen by the people. These, with the governor and council, constituted the colonial government. The burgesses were allowed to debate all questions pertaining to the colony, but their decisions were not law until confirmed by the Company in England. Because of these liberties, the settlers expressed their gratitude; and when in June, 1619, a representative assembly met at Jamestown, they felt that they had a home in Virginia. They "fell to building houses and planting corn," says an old chronicler; and these houses were soon made happy ones by domestic virtues. Within two years after the first meeting of the House of Burgesses - the first representative assembly in America - about two hundred and fifty reputable young women were sent over from England to become wives for the planters. These were received with gladness, and cherished with fondness. The tribe of gold-seekers had disappeared. Industry was the rule and not the exception in the settlements, and the COLONY of Virginia was firmly established.

Chapter XVI

Explorations in New England - Kidnapping Indians - Religious Parties in England - Persecutions - A Theological Conference - Bad Conduct of King James - Puritans in Holland - Longings for America - Preparations for Emigration - "Pilgrims" go to America - Constitution of Government Signed - Founding of Plymouth - Sufferings of the Emigrants - First Marriage in Plymouth Colony.

WE have considered the failures of the Plymouth Company to plant settlements in America. We will now consider other attempts and failures, and the permanent establishment of a settlement in New England.

The restless Captain Smith did not long remain idle after his return from Virginia. In company with four London merchants, he fitted out two ships for the purpose of discovery and traffic in the northern regions of America. Captain Thomas Hunt commanded one of the vessels, and Smith sailed in the other. They left the Downs at the beginning of March, 1614, and first landed on the island of Mohegan, about twenty miles from the mouth of the Penobscot River, where they sought whales, but finding none Smith left the crews to engage in common fishing, while he and eight men, in a small boat, should explore the neighboring coasts and gather furs. They went up the several rivers far into the interior, and explored the whole coast from the Penobscot to Cape Cod. Smith constructed a map of the region; and after an absence of seven months, the vessels returned to England with cargoes of considerable value. He laid his map before Prince Charles, the heir apparent to the throne, and a man of considerable literary and artistic taste. The Prince procured from his father a confirmation of the title of New England, which Smith had given to the country, on his map; and so that region from twenty miles eastward of the Hudson River has ever since been called. As usual, crime dimmed the lustre of these achievements. Whilst Smith was exploring the coasts, Captain Hunt, an avaricious and profligate man, wishing, apparently, to impede settlements by inflaming the wrath of the Indians, so that he and a few others might enjoy the monopoly of traffic on that coast, kidnapped twenty-seven of the savages at Cape Cod, with Squanto their chief and taking them to Spain sold them for slaves. Some of them were taken by benevolent friars, who educated them for missionaries among the tribes, but only Squanto returned to America. The effect of this crime satisfied the apparent wishes of Hunt. The next fishing vessels that came from New England brought word that the natives were greatly exasperated.

This news did not discourage Captain Smith. On his return he had an interview with the energetic and ever-hopeful Ferdinando Gorges, and inspired him with such desires to plant a settlement in New England, that the Plymouth Company asked Smith to lead a colony thither. He believed that he could allay the anger of the natives, as he had done in Virginia, and having accepted the invitation of the Company, he sailed with two ships and some emigrants in the spring of 1615. Smith's ship was shattered by a tempest and returned to port. On the 4th of July following he sailed again, in a bark of sixty tons, and was soon captured by a French squadron. While on board one of the Gallic vessels, he wrote an account of his voyage to New England,

which was published the next year. After a brief captivity, he was released and returned home. Meanwhile, the Plymouth Company had made him admiral of New England; but, discouraged by ill luck, the association had again abandoned the project of planting a colony there. Smith now drops almost out of sight in history. He lived to see his friend, Prince Charles, seated on the throne of his father; and, not long afterwards (1631), the founder of the Virginia colony died at the age of fifty-one years.

Thus far English settlements in America had been attempted by private adventurers, or commercial associations, with no higher aim than the acquisition of wealth. That acquisition was denied, and full success was not obtained until better men, with more exalted motives, came to people the lands. These came to New England with families and were prepared to stay, not so much for the betterment of their temporal estates, as for the unmolested enjoyment of civil and religious freedom, which was denied them at home.

We have seen how three powerful religious parties - Roman Catholic, Anglican and Puritan - crystallized into distinct sects at about the beginning of Elizabeth's reign, all struggling for supremacy. The Puritans were fewer in numbers than either of their antagonists, but were stronger in the moral power which asserts and defended the rights of man. They boldly declared the right of private judgment in religious matters to be inalienable, and that every human being was endowed with the natural privilege of worshipping the Creator in accordance with the dictates of conscience. Upon the same platform of principles they asserted the rights of the people to the enjoyment of civil freedom. The Puritan pulpits became the tribunes of the common people, and sometimes the preachers were bold enough to promulgate the democratic doctrine, so dangerous to the royal prerogative, that "the sovereign was amenable to public opinion then fairly expressed."

As the Romish ritual was retained in the Anglican Church, many of the leading clergymen of the latter opposed its use. Bishop Hooper made Puritanism conspicuous by refusing to be consecrated in the ecclesiastical vestments; and Bishop Coverdale, at a later period, and other high dignitaries, refused to subscribe to the Liturgy and ceremonials, and so led the great army of Nonconformists. The fears and jealousy of the queen were aroused, and after years of effort, the Thirty-nine Articles of Religion of the Anglican Church, were declared by an act of Parliament to be the rule of faith and practice for all subjects of the realm. Canterbury, was commanded to enforce discipline. He obeyed the royal voice with alacrity, and immediately issued instructions to the bishops to forbid and prevent preaching, catechizing, and praying in any private family in the presence of persons not belonging to it, and to silence all preachers and catechists who had not received orders from Episcopal hands, or who refused or neglected to read the whole service, or to wear the prescribed clerical habits, or to subscribe to the queen's supremacy, the Thirty nine Articles and the "Book of Common Prayer." Under a provision of the Act of Supremacy, the queen now established a court of High Commission for the detection and punishment of Nonconformists with powers almost as absolute as those of the Inquisition of the Italian Church. With that tremendous engine of despotism, the Primate worked with vigor in the suppression of heresy. Ministers were silenced of some persons were put to death, and there was petty

persecution everywhere. Yet Puritanism flourished and grew more rank, especially in secret Ministers and congregations withdrew from the Anglican Church, and so acquired the name of Separatists or Independents. They numbered, at the time of the death of Elizabeth, about twenty thousand in the British realm and were the special objects for Whitgift's lash. Some of their ministers and their congregations, unable to endure the pressure, withdrew to Holland, where there was religious freedom for all.

On the accession of James, a reputed "Presbyterian king," the Puritans indulged high hopes of toleration, perhaps of supremacy. They were doomed to wretched disappointment. Soon after James ascended the throne he called a conference at Hampton Court, in which he was the chief actor, playing the parts of brute and mountebank. The Puritan divines, some of them the most eminent scholars in the land, were annoyed by coarse browbeating by the Bishop of London, and the coarser jests of the king. Whitgift, venerable with age, was present, and when the royal buffoon said to the Puritan ministers: "You want to strip Christ again away with your snivelling," and much more that was coarse and offensive, the Primate exclaimed, Your Majesty speaks by the special assistance of God's Spirit and the Bishop of London fell upon his knees and said: "I protest my heart melteth for joy that Almighty God, of his singular mercy, has given us such a king as since Christ's time has not been." A brilliant modern English writer, expressing the verdict of history, says of that king: "He was cunning, covetous, wasteful, idle, drunken, greedy, dirty, cowardly, a great swearer, and the most conceited man on earth." The discussions at the Hampton Court conference, conducted with so much ill-breeding on the part of the king and some of the High Churchmen, led to the important result of the appointment of a commission of learned men to make that translation of the Bible now in use among Protestants.

The Puritans were humiliated and discouraged by this farce at Hampton Court; and when the king told them, "I will make you conform or I will harry ye out of the land," and silenced or imprisoned three hundred of their ministers, many of the thirty thousand Nonconformists in the kingdom felt like seeking refuge in a foreign country. And many of them did join their brethren already in Holland. Among them was Richard Clifton, pastor of a rural congregation in Nottinghamshire. In that congregation was John Robinson as teacher and the most considerable private member was William Brewster, postmaster at Scrooby, and at one time a favorite of Secretary Davidson under queen Elizabeth. The pastor and the congregation after many trials, made their way to Amsterdam, in small companies, in 1608, where they were united. From that city, in the course of a few months, they went to Leyden, a city of seventy thousand inhabitants. Clifton was dead and Robinson was chosen to be their pastor, with William Brewster the chief elder. After awhile they all found employment and were happy with their families around them. The congregation became large and flourishing, for many of their persecuted brethren at home joined them.

English loyalty and patriotism asserted their power in the hearts of these exiles for conscience sake. Though driven from their native land by persecution, they had not lost their affection for it and they yearned to live "under the protection of the state of England." They had heard of beautiful Virginia, and longed for the freedom of the forest. That band of noble men and women

revealed a generous impulse when they said: "If God would be pleased to discover some place unto them, though in America, where they might live comfortably by themselves, and being freed from anti-Christian bondage, might keep their names and nature, and not only be a means to enlarge the dominions of the English state, but the Church also, if the Lord had a people among the natives, whither he would bring them; thereby they thought they might more glorify God, do more good to their country, better provide for their posterity and live to be more refreshed by their labors than ever they could do in Holland, where they were." Patriotism and Christian benevolence warmed their hearts.

"They sought not gold nor guilty ease, Upon this rock-hound shore They left such prizeless toys as these To minds that loved them more. They sought to breathe a freer air, To worship God unchain'd - They welcomed pain and danger here, When rights like these were gain'd."

The project of emigration to America caused much discussion, They looked every difficulty square in the face - the dangers of the sea and the savages; the burdens of fatigue that would be laid upon the weak and aged in so long a voyage; the cost of the enterprise, and the utter uncertainty that hovered around the whole project. These were all considered, and made dark shadings to the brighter pictures which faith and hope created. They pondered and prayed, and came to the conclusion to emigrate to America. The Dutch offered to send them to Hudson's River, free of charge, with their household goods and cattle, if they would settle there. They patriotically declined this generous proposal because "they wished to live on English land," somewhere within the bounds of the North Virginia domain, the proprietors whereof were then contemplating vast schemes of colonization under a new charter which they hoped to obtain from the king. That charter was granted late in 1620. It made the company absolute owners of a domain containing more than a million square miles. They superseded the original Plymouth Company, and assumed the corporate title of "The council of Plymouth."

Before the charter was granted, the congregation at Leyden sent two agents to England to ask leave of the Plymouth Company to settle within their domain, and to procure a guaranty from the king that they should enjoy religious freedom in their proposed new home. They obtained the permission of the Company, but the king would give them no written promise. Under the influence of Edward Sandys, he gave them an oral promise that they should not be disturbed so long as they should give no public offence. His word was considered no more stable than a rope of sand, and many were loth to unsettle themselves upon such a fickle tenure. But it was finally concluded to take the risk, and a deputation was again sent to England to make arrangements for the emigration. A joint-stock company with some London merchants and others was formed, by the terms of which the services of emigrants who could not contribute money were accepted as an equivalent for cash, the value of each share being fixed at 10 pounds. All profits were to be reserved for seven years, at the end of which time the lands, houses, and every product of their joint industry were to be valued, and an equal portion to be divided among the shareholders. Captain Smith, the founder of Virginia, offered to accompany them, but his aristocratic notions were a bar and his offer was declined.

It was agreed that only a portion of the congregation at Leyden - "the youngest and strongest" - should first go to America under the spiritual guidance of Elder Brewster, then a little more than fifty years of age, while the larger portion should remain with Mr. Robinson and follow the next year if the report of the pioneers should be favorable. Two small vessels were purchased for the voyage - the "Speedwell", of sixty tons burthen, and the "May-Flower", of one hundred and eighty tons. In the summer of 1620, a portion of the congregation at Leyden embarked in the former vessel at Delft Haven, for England, where she was joined, at Southampton, by the latter. These emigrants, like their brethren left behind, feeling that they had no home - no abiding place - but were pilgrims and strangers, assumed the name of Pilgrims, by which they are known in history - "The Pilgrim Fathers."

The embarkation at Delft Haven was a picturesque and interesting scene. A large portion of the congregation at Leyden followed the emigrants to the port, fourteen miles distant, after those who were to remain had feasted the pioneers at the house of the pastor. At the port, after another feast, they all engaged in religious exercises - prayers and psalm-singing - the voyagers on the deck of the "Speedwell" and the others on the quay. When the sails of the vessel were spread and she had left her moorings, the emigrants gave their brethren a parting salute with musketry and three small cannon.

The two ships sailed for America on the 6th of August. The "Speedwell" was soon reported to be too leaky to proceed, and both vessels went back to Dartmouth. She was repaired, and when again she was well out upon the Atlantic she was reported to be unseaworthy, and returned. It was believed that her captain and some of the company lost courage, and untruly reported her to be in a dangerous condition. She did not again sail for the Western world. The more courageous of her company joined those on the May-Flower, and on the 6th of September the latter sailed from Plymouth with forty-one men as settlers with their families, numbering in all one hundred-and-one souls. Among these were William Brewster and his numerous family, and William Bradford, of Scrooby John Carver, a deacon in the Church at Leyden young Edward Winslow and his bride, the richest couple of the flock; Miles Standish, a fiery little soldier, and his beautiful wife Rose John Alden, the youngest of the Pilgrims, being only twenty-one years of age, and a favorite of Standish; John Allerton and Dr. Edward Fuller, all of whom were distinguished in the history of the colony.

After a boisterous voyage of sixty-three days, the May-Flower arrived off Cape Cod. Her destination was some "point near Hudson's River, but within the territory of the London Company" - somewhere on the shores of New Jersey. Turning southward, the ship encountered "perilous shoals," perhaps those off Nantucket, when she was made to retrace her line, double the headland, and come to anchor in the bay inclosed by the long peninsula of Cape Cod sixty miles in length, in what is now the roadstead of Province-town. The weather was fine and the air was crisp, for it was early in November. To prevent anarchy when they should form a settlement, the following instrument was drawn up, and on a little table in the cabin of the May-Flower was signed by the entire company of forty-one adult masculine emigrants:

"In the name of God, Amen. We whose names are here underwritten, the loyal subjects of our dread sovereign lord, King James, by the grace of God, of Great Britain, France and Ireland, King, Defender of the Faith, etc., having undertaken for the glory of God, and advancement of the Christian Faith, and honor of our king and country, a voyage to plant the first colony in the northern parts of Virginia, do, by these presents, solemnly and mutually, in the presence of God and of one another, covenant and combine ourselves together into a civil body politic, for our better ordering and preservation, and furtherance of the ends aforesaid and by virtue hereof to enact, constitute, and frame such just and equal laws, ordinances, acts, constitutions, and offices, from time to time, as shall be thought most meet and convenient for the general good of the colony unto which we promise all due submission and obedience. In witness whereof we have hereunto subscribed our names at Cape Cod, the 11th of November, in the year of the reign of our sovereign lord, King James, of England, France and Ireland, the eighteenth, and of Scotland the fifty-fourth, Anno Domini, 1620."

This was the first constitution of government ever signed by a whole people. More than a month passed after this act before the Pilgrims landed. Explorations of the coasts of the great Bay were made in search of a good place for a settlement. In a shallop and on foot the explorers wandered, often suffering much from the biting cold of winter, which came early with binding frost, and blinding, hindering snow. They saw few natives, and these were shy or hostile. They found some graves some remains of human habitations many deserted wigwam some heaps of maize or Indian corn, and some tokens of civilized visitors here and there, when they touched the shores. They were assailed by a few savages who knew the English as kidnappers, for it was only a few years before that Hunt had carried away more than a score of their people. At length the explorers came to a snug harbor, and landed upon a rock on the site of Plymouth, almost due west across the water from where the May-Flower lay. It seemed a goodly place for a settlement, and they chose it as such. That landing took place on the 22nd of December, 1620. It was an important event in the history of New England, and since the year 1767 its anniversary has been celebrated; and fragments of the rock - "Plymouth Rock," which has been called the Blarney Stone of New England - are preserved on the spot with care.

The May-Flower was now immediately brought across and anchored in the harbor, when her precious cargo of human beings, men, women, and children - the seed of a nation - were landed. There had been an addition made to the number of the emigrants since the explorers departed, for the wife of William White had given birth to a boy, who was named Peregrine. The good ship that brought them safely across the stormy Atlantic was safely moored; and in grateful recollection of the hospitalities they had received at the port from which they had sailed from England, they named the spot Plymouth.

The first care of the Pilgrims was to build houses, after they had planted their five cannon on a platform and erected a storehouse for their food. But with the labor began sickness. Exposure and poor food made dreadful ravages upon their vitality that could not be stayed. There were no delicacies, and very little wholesome food. The sailors unkindly refused to let them have a variety, by sharing with the suffering their abundance of coarse food on the ship, until sickness

invaded their circle, and the kindness of the Pilgrims taught them to be ashamed. Crowded in the cabin of the May-Flower, or exposed in half-finished huts, sometimes nearly buried with snowdrifts, the sufferers had little chance for recovery and when, early in March, there came warm days and abundance of sunshine, forty-four of the passengers of the May-Flower were in their graves, doomed by quick consumption and lung fever. Governor Carver's son died soon after the landing. Six were buried in December, eight in January, seventeen in February, and thirteen in March. At one time there were only seven persons who had strength enough to wait upon the sick and bury the dead. Early in April the governor died, and his heart-broken wife soon followed him to the grave. Yet with all the discouragements of that dreadful winter, the fidelity, faith, and fortitude of the Pilgrims never faltered; and when, in March, the sun shone warmly, and the birds came and sang pleasantly, and the sickness was stayed, the living chanted songs of thanksgiving to God for his manifold mercies.

There had been, earlier than this, a cheering voice from the savages whom the settlers so much dreaded. One day in February, when the sickness was at its height, an Indian passed through the hamlet and with plain Saxon words cried, "Welcome, Englishmen! welcome, Englishmen!" It was Samoset, a chief who had come from the island of Mohegan, where Captain Smith first landed, off the coast of Maine, and where he had learned a few English words from the sailors. He told them why they had seen so few Indians. It was because three or four years before a pestilence had almost depopulated the coast from Cape Cod to the Kennebec, as if clearing the way for Christians to plant the germs of civilization, unmolested. He came several days in succession, bringing with him other Indians, among them, at last, Squanto, whom Hunt had carried away and sold in Spain, but who had been sent back. That time Samoset came with a message from Massasoit, a neighboring king of the Wampanoags, of whom Squanto was a vassal, desiring an interview with the chief of the new comers.

Governor Carver gladly consented to hold a conference with the Indian monarch. Massasoit appeared on a neighboring hill, with sixty followers all painted and plumed. Winslow was sent with Squanto to meet him, bearing presents from the governor, whilst Captain Standish, who had been chosen military commander of the settlement, remained a little way off with several musketeers. Massasoit advanced slowly with twenty armed followers, leaving Winslow behind as a hostage or pledge, and met Standish at a dividing brook. Then the dusky men were conducted by the soldier to a building, where a rug and cushions were spread for the king and his courtiers. Sitting there in state, Massasoit received the governor, who came with the braying of a trumpet and the beating of a drum, followed by a few musketeers. After salutations and feasting, they entered into a treaty of peace and amity (Squanto acting as interpreter) and the sachem agreed to send messengers to neighboring tribes to invite them to come and make similar treaties, that they might all dwell lovingly with the pale-faces. Rising from the rug, the old chief stretching forth his hand with dignity and pointing to the surrounding country, said, "in substance Englishmen, take possession of the land, for there is no one left to occupy it. The Great Spirit came in his anger and swept the people from the face of the earth." That treaty was kept inviolate for forty-five years.

When the Indians had departed, the Pilgrims reelected Carver governor of the colony, made some salutary laws, and sent the May-Flower home. She was scarcely out of sight, when the governor died suddenly from the effects of a "sun-stroke," and William Bradford was chosen to fill his place. As the season advanced hope grew stronger. Game was found to be plentiful in the forest, and fish in the streams. The survivors cultivated the land industriously, and reaped abundantly. In a short time the other emigrants joined them. The whole community was free as air; and the settlement, begun with so much suffering, bereavement and discouragement, was made permanent. Within a few months after the arrival of the May-Flower, the Christian men and women who survived that winter of terrible experience, planted strong and deep, on the principles of justice and the rights of man, the foundations of the colony and the commonwealth of Massachusetts.

Chapter XVII

Hudson's Voyages and Discoveries - Block's Explorations - Charter for New Netherland Granted - Dutch Traders on the Hudson - Troubles with the English - Dutch West India Company Chartered - Preparations for Settlement - An English Intruder - Arrival of Walloons at Manhattan - Settlement on the Delaware - Political Organization of New Netherland - New Amsterdam Founded - Freedom There.

We have already considered the incidents attending the discovery of the Hudson River and the country on its borders between its mouth and the site of Albany, in 1609. Let us now view the more prominent events connected with the establishment of a permanent settlement there.

In the year 1602, Dutch merchants in the India trade formed an association, with a capital of more than a million dollars, under the corporate title of "The Dutch East India Company." The government of Holland gave them the exclusive privilege of trading in the Eastern Seas between the Cape of Good Hope and the Straits of Magellan - that is to say, over all the Indian and South Pacific Oceans between Africa and America. The enterprise was so profitable that an application was made to the government, in 1607, for the incorporation of the Dutch West India Company to trade along the coast of Africa from the tropics to the Cape of Good Hope, and from Newfoundland to Cape Horn along the continent of America. But political considerations in connection with Spain deferred the issuing of a charter for such a company for several years. Meanwhile, the East India Company employed Hudson to make the voyage, which resulted in the discovery of a region in America far more valuable than any to which a northwestern pad sage to India would have led.

The report that the newly-discovered region abounded with bears, beavers, otters, and other fur-bearing animals, excited the keenest cupidity of the Dutch, for they had recently tasted the pleasures of a profitable fur trade which they had opened with Northern Russia. The "Half-Moon", Hudson's discovery ship, had returned in the autumn of 1609. In the following spring she was fitted out with cheap trinkets and other articles suitable for traffic with the natives, and, with a part of her old crew, sailed from the Texel in the early summer for the "River of the Mountains." She was sent by private adventurers, some of them directors of the Dutch East India Company, to trade with the savages for peltries and furs. The island of Manhattan, at the mouth of the river, was so well adapted for commercial purposes that it was made the central point, where the treasures of the forests and the streams, gathered in the interior from the Delaware to the Housatonic and northward to the Mohawk, were collected for shipment to Holland.

Among the bold navigators who came from Holland to Manhattan was Adrien Block. His vessel was the *Tigress*. Late in the autumn of 1613, when she was laden with bear skins and was about to depart for Amsterdam she accidentally took fire and was burned to a useless wreck. The Indians kindly offered the shelter of wigwams to the Dutchmen, but they, regarding them too frail to keep out the winds and snows, built for themselves rude log huts where the warehouses of Beaver street now stand, and went cheerily at work to construct a new vessel. Before spring, the

oaks that sheltered black bears on the wooded slopes where the bulls of Wall street now contend with bruins in financial warfare, wee converted into a trim-built and staunch yacht of sixteen tons. They named her Onrust - "Restless " - a title that seems prophetic of that unresting activity which now marks the island of Manhattan. The little hamlet then built, and the vessel there constructed, were the fruitful seeds of the great commonwealth of New York.

Early in the spring of 1614, Block sailed from Manhattan in the Onrust through the narrow, turbulent and dangerous strait of Hell Gate into Long Island Sound. He discovered and explored the rivers now known as the Housatonic, Connecticut, and Thames; anchored in the bay at New Haven; touched at Montauk Point on the eastern end of Long Island, and landed upon a small island further eastward which Verazzani had discovered almost a century before, but which has ever since borne the name of Block, given to it by his countrymen. He then visited the shores of the main and the islands from Narragansett Bay around to Nahant beyond Boston Harbor. There he found the inhabitants numerous; for the plague, already mentioned, that swept along the coast three or four years later, had not yet appeared. They were "extremely well-looking, but timid and shy of Christians." There the Onrust fell in with the Fortune, commanded by Block's friend, Hendrick Christiansen, who was about to sail for Holland. Block left his own vessel in charge of another navigator and sailed for Amsterdam with his friend, to report to his employers.

Block's report further stimulated the commercial enterprise of Dutch merchants, and they hastened to avail themselves of an ordinance which the States-General or government of Holland had recently passed. It provided that whoever shall, from this time forward, discover any new passage, haven, lands, or places, shall have the exclusive right of navigating to the same for four voyages. The merchants concerned in Block's discoveries hastened to form an association, and took immediate steps to profit by the privileges offered by that ordinance. They employed an expert draughtsman, probably under the direction of Block, to construct a map of the newly-discovered regions, and appointed a deputation to go to the Hague, the seat of government, to obtain the special license to trade in these regions without interference.

At the Hague, the finest city of the Netherlands, and the residence of the Counts of Holland for four hundred years, may be seen a pile of buildings upon an artificial island irregular and quaint in appearance. They were erected at different periods, and inclose a vast quadrangle paved with small yellow bricks. There was the palace of those Counts. Its great hall, wherein hung trophies of Dutch valor and conquest, is now used as a repository of the archives of Holland. In a superbly-decorated room in the Binnenhof or inner court, the States-General held their meetings. To that sumptuous apartment went the deputies of the Amsterdam Company and gave, in a brief narrative of Block's discoveries, their reasons for asking for the special privilege. They were received by twelve "high and mighty lords" of the great council, who were sitting around an oval table. Among them was the incorruptible patriot John Van Olden Barneveldt, the grand-pensionary or chief magistrate of Holland, who, five years later, was beheaded in that court as a traitor, the victim of his jealous, malicious and unscrupulous prince. Block was probably one of the deputies. The map spoken of was spread upon tile table the countries were described, and their value as parts of the territories of the Dutch were fully set forth. The States-General gladly

complied with the wishes of the Company, and on the 11th of October, 1614, a charter was given them, duly signed and sealed, by which the petitioners were granted the usual privileges of the ordinance. The territory included in the charter, and which was defined as lying between Virginia and New France - between the parallels of 40 degrees and 45 degrees was called NEW NETHERLAND.

At the expiration of the charter at the beginning of 1618, the Amsterdam Company applied for its renewal. The privilege was denied, because the State-General contemplated the issuing of a more comprehensive and lasting patent to a West India Company. Meanwhile, the Onrust, which Block had left in charge of Cornelius Hendricksen, had entered and explored Delaware Bay and River, probably as far up as the Falls, near Trenton and on the site of Philadelphia her commander had ransomed three Dutch traders, who had fallen into the hands of the Indians. Efforts were made to obtain a four years trading charter for that region also, but the States-General, considering the domain as a part of the province of Virginia, would not grant one. The directors of New Netherland then prosecuted their trading enterprise upon the borders of the Hudson with increased vigor. They had already built a fort on an island just below the site of Albany. They now enlarged their storehouse at Manhattan, and made the little hamlet a social village. The traders went over the pine-barrens into the Mohawk Valley and became acquainted with the powerful Iroquois league of Five Confederated Nations. They built a new fort on the main at the mouth of the Tawasentha, now Norman's Kill, a little below Albany, where a treaty of friendship was made with the Five Nations, and which was kept inviolate until New Netherland passed into the possession of the English, and long afterwards. It was a wise measure, for that confederacy was strong enough to have swept from the face of the earth all European intruders. Their power was felt, as we have observed, from the St. Lawrence to the Gulf of Mexico.

"The fierce Adirondac had fled from their wrath, The Hurons been swept from their merciless path, Around, the Ottawas, like leaves had been strown, And the Lake of the Eries struck silent and lone.

"The Lenapes, once lords of the valley and hill, Made women bend low at their conqueror's will; By the far Mississippi the Illini shrank, When the trail of the Tortoise was seen on the bank.

"On the hills of New England the Pequod turned pale, When the howl of the Wolf swelled at night on the gale; And the Cherokee shook, in his green smiling bowers, When the foot of the Bear stamp'd his carpet of flowers." Street's "Frontenac"

These Hollanders were so remote from the Jamestown settlement, and all New England being a wilderness untrodden by any European resident, that they were not disturbed. The Plymouth Company complained that they were intruders on their domain; and King James growled; and a word of warning was given by Captain Dermer of an English ship which, one fine morning in June, 1619, while on its way to Virginia, sailed through Long Island Sound, and lost an anchor in its encounter with the eddies of Hell Gate. That commander thought he was the first discoverer of that "most dangerous cataract and the flowery islands between which he sailed, but when he

was fairly out upon the Bay of New York, he saw the smoke of cottages on Manhattan, and was saluted by Hollanders. He did not stop then to talk to the intruders, but on his return he felt it to be his duty to go in and warn the traffickers to leave his majesty's domain as quickly as possible. "We found no Englishmen here, and hope we have not offended," replied the good-natured Dutchmen, and went on smoking their pipes, planting their gardens, and catching beavers and otters, as if they had never heard the voice of Captain Dermer, the "loving subject" of the king of England. The sounds of royal bluster that came occasionally from Great Britain did not deter the States-General from helping their "loyal subjects" in New Netherland, and they proceeded to charter the "Dutch West India Company," making it a great commercial monopoly by giving it almost regal powers to colonize, govern, and defend, not only that little domain on the Hudson, but the whole unoccupied coasts of America from Newfoundland to Cape Horn, and the western coasts of Africa from the Cape of Good Hope far northward.

That charter contained all the guarantees of freedom in social, political, and religious life necessary to the founding of a free state. Republicanism was recognized as the true system of government, and home, in its broadest and purest sense, as the prime element of political strength. No stranger was to be questioned concerning his nativity or his creed as matters which concerned the state. "Do you wish to build, to plant, and to become a citizen?" was the sum of their catechism when a new comer appeared. If the answer should be satisfactory, he was to be welcomed. That charter was granted on the 3rd of June, 1621, at the time when the stricken Pilgrims at Plymouth, on the coast of Massachusetts, were cultivating their first fruitgardens and cornfields.

The government of the West India Company was vested in five separate chambers of managers, composed of members in different parts of Holland. General executive powers were entrusted to a board of nineteen delegates, of whom about one-half were to reside in Amsterdam, and one was to represent the States-General. The government agreed to furnish the Company, in case of war, with sixteen armed ships, of three hundred tons burden each, to assist in maintaining their rights, - these, with an equal number of the Company's ships-of-war to be under the command of an admiral appointed by the States-General. Whilst the Company might make conquests of territories and treaties with native chiefs at their own risk, they were required to submit the instructions to their governors to the approval of the home government and their officers were all required to take the oath of allegiance to the States-General.

It was two years after obtaining this charter before the Company was organized. It was an armed commercial monopoly, the chief object of which was traffic and the humbling of Spain and Portugal, and not colonization. Meanwhile, the Plymouth Company had obtained the coveted new charter already mentioned. By it their king conferred upon them almost regal powers. Without the consent of the Plymouth Company, no ships might enter any harbor on the American coast between Newfoundland and the latitude of Philadelphia; not a fish might be caught within three miles of the American coast not a skin trafficked for in the forests, nor an emigrant live upon the soil. That extraordinary charter had been signed by the king a week before the arrival of the May-Flower off Cape Cod, with the Pilgrims and that little colony who had braved the terrors of

the Atlantic for the sake of freedom, were subjected, prospectively, to an almost irresponsible despotism. The House of Commons, alarmed because of this delegation of despotic power to a grasping company of traders, presented the patent as the first of the public grievances of the kingdom. "The French ambassador in London protested against it because Canada was included within the limits of the Plymouth Company's charter; and a little later the captain of a French vessel, anchored in the mouth of the Hudson River, attempted to set up the arms of France there, and take possession of the country in the name of his king. The Dutch, too, were concerned in the matter, for if the powers granted to the Plymouth Company might be exercised without hindrance, New Netherland would be useless to them.

In defiance of the House of Commons, King James upheld the monopoly. He scolded the representatives of the people, paid no attention to the Frenchman's protest, and reminded the States-General of Holland that Dutchmen were unlawfully seated upon the domain of a chartered English Company. The Hollanders at the Hague were as little moved by the covert threats of the British monarch as were those at Manhattan by Captain Dermer's warning. The complaint, however, had a useful result. It induced the West India Company, before its final organization, to take measures for securing the rights of eminent domain in New Netherland, in accordance with the principles of English policy which declared that first occupation gave those rights. So it was that the attention of that powerful Company was called from traffic to the founding of a permanent agricultural colony in America.

At that time there were thousands of refugees from persecution in the Netherlands. Among these were many of French extraction, who spoke the French language, called Walloons. They had inhabited the southern Belgic provinces of Hainault, Namur, Luxemburg, Limburg, and a part of the bishopric of Liege. When the northern provinces of the Netherlands formed their union more than forty years before, these southern provinces, whose inhabitants were mostly Roman Catholics, declined to join the confederation. There were many Protestants in those provinces, and they were made to feel, in all its rigor, the lash of persecution in the hands of the Spaniards. Thousands of them fled to Holland, where strangers of every race and creed were welcomed. There were the Walloons, a hardy, industrious, and skillful race of men and women, who introduced many useful arts into their adopted country. There they established their peculiar mode of public worship, and were soon ranked among the most thrifty, honest, and religious inhabitants. They were numerous in Amsterdam and Leyden, and were on friendly terms with the Puritan refugees from England. Like those Puritans they heard, from time to time, the enticing stories about the beauty and fertility of Virginia, and some of them desired to emigrate to America. They applied to the British ambassador at the Hague for permission and encouragement. He referred them to his king, and James submitted the matter to the London Company. The latter were not liberal enough in their proffered conditions to induce the Walloons to go. The States-General hearing of the movement commended them and their project to the West India Company. The latter perceived the great advantage which such emigrants would be to them in founding a permanent industrial colony in New Netherland, and took measures immediately to secure them. An agreement was made with several families, and in the spring of 1623, the emigrants were ready for departure for their new home.

The Company, anxious to commence their settlement with a sufficient number of willing hands, fitted out the *New Netherland*, a ship of two hundred and sixty tons burden, in which thirty families, consisting of one hundred and ten men, women and children, embarked. They were provided with agricultural implements, cows, horses, sheep and swine, and a sufficient quantity of household furniture to make them comfortable. The command of the ship was given to Cornelius Jacobsen May, of Hoorn, who was to remain in New Netherland as first director or governor. His lieutenant was Adrien Joris. The vessel sailed from the Texel early in March, and taking the long and tedious southern route by way of the Canaries and the West Indies, to avoid the storms of the northern Atlantic, they did not reach their destined haven until the beginning of May, where they found the French vessel above mentioned lying at anchor. The yacht *Mackerel* had just come down the Hudson. With two pieces of cannon taken from the fort at Manhattan, she compelled the Frenchman to desist, and convoyed his vessel out to sea. He went round to the Delaware on the same errand, and received similar treatment from the Dutch traders who were seated on its banks, when he sailed for France. With this ridiculous feat ended attempts of the French to assert jurisdiction below the fortieth parallel.

On a beautiful morning in May the Walloons landed from the *New Netherland*, in small boats, upon the rocky shore where Castle Garden now is. They made a picturesque appearance as they ascended the bank in their quaint costume, every man carrying some article of domestic use, and many women each carrying a babe or small child in her arms. They were cordially welcomed by the resident traders and friendly Indians, and were feasted under a tent made of sails stretched between several trees. Under that tent a Christian teacher, who accompanied the settlers, offered up fervent thanksgivings to Almighty God for his preserving care during the long voyage, and implored His blessing upon the great undertaking before them. May then read his commission, which made him first director of New Netherland, and formally assumed the governorship of the colony and country.

Traditions have told us that these emigrants were immediately scattered to different points to form settlements, and so to secure a wide domain for the West India Company. Some, it is said, settled on Long Island and founded the City of Brooklyn others went up the Connecticut River to a point near the site of Hartford, and built Fort Good Hope others planted themselves in the present Ulster County in New York, and others founded Albany, where the Dutch had erected a military work and named it Fort Orange. Others, it is said, went to the Delaware and began a settlement at the mouth of Timber Creek, on the east side of the river, a few miles below the site of Philadelphia, and built a small fortification which they named Fort Nassau. The settlers engaged in this enterprise, it is said, were four young couples who were married on ship-board, and eight seamen who managed a little yacht that conveyed them to the South River, as the Delaware was called. This was to distinguish it from the North River, as the Hudson was then called, and which yet retain that name.

When May's lieutenant, Joris, returned to Amsterdam with a ship laden with furs worth over ten thousand dollars, and reported that the settlers were "getting bravely along," the Company were delighted, and sent out ships with cattle, horses, sheep, swine, farming implements and seeds

for their use, and more emigrants. Political affairs in Europe were now favorable to the enterprise. King James of England, angered because of the failure of his son Charles to win the hand of a Spanish princess, had leagued with the Dutch against Spain. At his death, his son became King Charles the First, and he renewed the league with the States-General in a still stronger bond. This alliance with the British sovereign promising noninterference, on his part, in the growth of a permanent colony in New Netherland, the West India Company proceeded to lay the political foundations of a state. They commissioned Peter Minuit director-general or governor of the colony, with a council of seven men, a secretary of state, who was also keeper of the Company's accounts, and a schout or sheriff, who was also public prosecutor or manager of the revenue. The council was invested with all local legislative, judicial and executive powers, subject to the jurisdiction of the Amsterdam College or Chamber of Nineteen. The Council were empowered to administer justice in all criminal cases to the extent of imprisonment, but each capital offender "must be sent, with his sentence, to Holland."

Governor Minuit arrived at Manhattan in the ship Sea-Mew, at the beginning of May, 1626. So soon as he was installed in office, he opened negotiations with the Indians for the purchase of the island, so as to procure a more valid title to its possession than that of discovery and occupation. It was estimated that it contained about twenty-two thousand acres of land, and it was purchased for the West India Company for the sum of about twenty-four dollars. A fort was immediately staked out by the engineer Frederick, at the lower point of the island, where the Battery and its stately trees now are, the plan of which called for a work faced with stone and having four angles, by which the bay in front, and the East and Hudson Rivers on its flanks, might be commanded by cannon. Before the work was finished, it was named Fort Amsterdam, and afterward the city that grew up there was called New Amsterdam. It retained that name until the province was surrendered to the English, when it received the title of New York. The State-General constituted the province a county of Holland with an armorial distinction of a count. Its great seal bore the device of a shield, with an escutcheon enclosed in a chain, emblematic of union, and bearing the figure of a beaver. The crest was the coronet of a count.

While Fort Amsterdam was a-building an event occurred, the sad effects of which were felt long afterwards. Two adult Indians and a small boy, of a tribe in Westchester county, went from their homes to the Dutch settlement with beaver-skins to barter with the Hollanders at the fort. They followed the beaten trail along the East River to Kip's Bay (foot of Thirty-fourth street), where it diverged westward to the pond and marsh formerly known as The Collect, on the borders of which, on Centre street, New York, the Halls of Justice or the "Tombs" now stand. Near that pond, three farm-servants in the employ of Governor Minuit, robbed the Indians of their property and then murdered the men. The boy escaped. He vowed vengeance and in after years, when he was a stalwart brave, he fearfully executed his vow. The murder was unknown to the Dutch authorities for a long time, and the guilty men probably escaped punishment.

When the stock of the Dutch West India Company was secured, and the several boards of direction were chosen, the College of XIX gave to the Amsterdam Chamber the exclusive management of the affairs of the province of New Netherland. Brodhead enumerates among the

prominent members of that Chamber, Jonas Witsen, Hendrick Hamel, Samuel Godyn, John de Laet, the historian Killian Van Rensselaer, Michael Pauw, and Peter Evertsen Hulft. The names of these men were identified with the first European possession of the States of New York, New Jersey, Delaware, Pennsylvania, and Connecticut. The Company took measures immediately to secure their title to the domain by more extended actual occupation. They had taken possession of the country before their final organization, by virtue of their charter, because they knew how jealous were the English and to give a show of actual occupation, they had sent trading vessels which bore instructions to the officers at Manhattan and on the North River, and, as we have seen, proceeded to build fortifications.

Within seventeen years after the discoveries of Hudson, the foundations of the great commonwealth of New York were laid by families, most of whom were voluntary exiles from their native land for the sake of freedom of thought and action. These were the first seeds of the state. To these were added, at the season of germination, noble plants from Holland, of genuine Hollanders, who brought with them those principles of toleration which lie at the foundations of a truly Christian state and give it sustenance. The community of their capital was very soon as cosmopolitan as their mother city of Amsterdam, of which Andrew Marvell quaintly wrote:

"Hence Amsterdam, Turk, Christian, Pagan, Jew, Staple of sects and mint of schism grew That bank of conscience where not one so strange Opinion, but finds credit and exchange; In vain for Catholics ourselves we bear - The Universal Church is only there."

New Amsterdam gave to the state and nation a race in whose veins courses the blood of Teuton, Saxon, Celt and Gaul. The colonists from Holland exhibited, from the beginning, a more enlarged vision of the rights of conscience and respect for the dignity of personal freedom, than and other of the early American settlers. Their passion for far-reaching commerce and adventurous enterprise has ever hovered over Manhattan Island like a tutelary deity, during all its social and political vicissitudes, and has made New York City the commercial emporium of the Western Continent.

Chapter XVIII

The Plymouth Company in Parliament - First Debate in Parliament on American Affairs - Grants of Territory East of Massachusetts - Sir William Alexander's Domain - Emigration Plan of Gorges and Mason - Settlers in New Hampshire - Dissolution of the Plymouth Company - Gorges Governor-General of New England - Founding of the Colony of New Hampshire - George Calvert (Lord Baltimore) Seeks a Charter for Maryland - His Son Receives It - Its Character - Voyage of Emigrants to Maryland - First Settlement in Maryland, and Founding of its Capital.

WHILST French and English colonists from free Holland were planting settlements on the Delaware and Hudson Rivers and the borders of Cape Cod Bay, a seed-time had again begun on that portion of the soil of New England now covered by the States of New Hampshire and Maine. Sir Ferdinando Gorges was the chief promoter of this cultivation. He had been the controlling spirit in the Plymouth Company, from the beginning, and the chief instrument in procuring the despotic charter for the Plymouth Council. For its existence and powers he contended fearlessly before the hostile Parliament, standing firmly upon the king's prerogative. In that contest he had a powerful coadjutor in Sir George Calvert, a representative of Yorkshire, and who afterward became the founder of Maryland. Educated at Oxford taught wisdom by travels; fostered in public life by Sir Robert Cecil, and through him advanced to the honors of knighthood; employed as one of the Secretaries of State when the Pilgrims were preparing to depart for America, and being possessed of a handsome person, winning manners and fluency of speech, he was very popular among all classes, and had been elected to a seat in the House of Commons by an immense majority. He had sought refuge from controversy (privately at first) in the bosom of the Roman Catholic Church. As that Church paid all due deference to the king as sovereign, it was not regarded with disfavor by James, and Sir George was an ever-welcome guest at the palace, for he was a thorough courtier.

It was a notable scene in the House of Commons, then convened for the first time in seven years, when Gorges appeared before that body to show cause why the charter should not be annulled or its despotic powers abridged. The king was present to defend his prerogative if it should be assailed. Gorges and Calvert were opposed by Sir Edwin Sandys, the wise statesman and friend of Virginia, and by the then venerable Sir Edward Coke, who had been Lord Chief-Justice of England. Coke was a member of Parliament and of the Privy Council, and he then began his famous contest with the king, which resulted in a curious exhibition of wrath and despotism on the part of James. Coke had procured the opposition of Parliament to the proposed marriage of the Prince of Wales to a Spanish princess, as dangerous to Protestantism in England. The angered king denounced the address which the House of Commons presented to him on the subject as an unlawful interference with his prerogative mentioned the name of Coke, the author of it, as a culprit and in a letter to the Speaker declared his intention to "punish any man's misdemeanor in Parliament as well during the sitting as after." This threat was aimed at Coke, who immediately moved a protestation for the privilege of the House, setting forth the right of every member to "freedom of speech, and like freedom from all impeachment, imprisonment or molestation," on account of anything said or done in Parliament. It was carried and entered in the

journals. On hearing of this act, the king immediately prorogued or dissolved Parliament, sent for the journals of the House, and with his own hand tore out the offensive record. Then he caused the arrest of Coke and others, in execution of his threat, and confined him in the Tower several months, when he was released on the petition of Prince Charles.

In the matter of the charter, Sandys pleaded for the freedom in fishing and of general commerce, which was then becoming the staple of wealth for England. "The fishermen hinder the plantations," replied Calvert, "they choke the harbors with their ballast, and waste the forests by improvident use. America is not annexed to the realm nor within the jurisdiction of Parliament you have therefore no right to interfere." We make laws for Virginia, said another member; "a bill passed by the Commons and the Lords, if it receives the king's assent, will control the patent." Sir Edward Coke argued with numerous references to the statutes of the realm, that as the charter was granted without regard to preexisting rights, it was necessarily void. This attack upon his prerogative aroused the angry monarch, who was sitting near the Speaker's chair, and he blurted out some silly words about the "divine right of kings," when the Commons, in defiance of his wrath, passed a bill giving freedom to commerce in spite of the charter. That bill had not gone through all the forms of legislation when the king broke up the Parliament for reasons just mentioned.

James, in the exercise of his prerogative, issued a proclamation forbidding any vessel to approach the shores of North Virginia without the special consent of the Plymouth Company. The Company commissioned Francis West admiral of New England, and sent him to protect their chartered rights. His police force was too feeble for so wide a domain, and the fishermen, in their fast-sailing shallops, eluded his grasp. The next Parliament proceeded to perfect what the former one had begun. The House was led by Coke, lately released from the Tower. "Your patent, he said to Gorges from the Speaker's chair, contains many particulars contrary to the laws and privileges of the subject it is a monopoly, and the ends of private gain are concealed under color of planting a colony." In debate, he said, Shall none visit the sea-coast for fishing? This is to make a monopoly upon the seas, which want to be free. If you, alone, are to pack and dry fish, you attempt a monopoly of the wind and sun." The bill passed, but never received the signature of the king. The monopolists, discouraged by the opposition of the Commons, lowered their pretensions, and many of the patentees withdrew their interests in the Company. Those who remained, like Gorges, now did little more than issue grants of domain in the northeastern parts of America.

This was the first debate on American affairs in the British Parliament; and it is a singular fact that in the course of it the supreme authority of the National Legislature over the American colonies was plainly asserted, the attempted exercise of which, in the matter of taxation, led to the old war for independence, one hundred and fifty years afterward, and the dismemberment of the British empire.

Before this disaster to the hopes of the Plymouth Company, grants of domain had been made. The first was to its secretary, Captain John Mason, who had been governor of Newfoundland. It

embraced the country in Massachusetts between Salem and Newburyport, inland to the sources of the Merrimac River, and all the islands on its sea-front within three miles of the coasts. To forestall French settlements in the East, and to secure the country to Protestants, Gorges procured a grant to Sir William Alexander of the whole main eastward of the St. Croix River, excepting a small portion of Acadie. Sir William was Secretary of State from Scotland, and author of a hundred sonnets and some dull tragedies. The domain was named New Scotland. The charter being in Latin, it was written Nova Scotia, and has ever since retained that name. The baronet was invested with the regal privileges of a count-palatine, in 1630, and was created Earl of Stirling and Viscount of Canada. The domain was created a fief or dependence of the Scottish crown, and an attempt was made to establish a Scotch settlement there. It failed. Alexander lacked the energy necessary for such an undertaking.

When the suit of Charles for the hand of the Spanish princess was ended, he sought and obtained that of Henriette-Marie, sister of the King of France. Their marriage, in 1625, promised friendly relations between the two countries, notwithstanding she was a Roman Catholic; but the folly and baseness of the Duke of Buckingham, the court favorite, who had negotiated the union, soon plunged the two nations into war, the effects of which were seen in America. Sir David Kirke was sent with ships and soldiers to conquer Canada and then occurred the surrender of Quebec to the English, mentioned in a previous chapter. It was a barren victory, for at almost the same time, Canada, Cape Breton, and undefined Acadie were restored to the French by treaty.

Meanwhile, Gorges and Mason had projected plans for a very extensive colonization. They obtained a patent for the country along the coast of New England between the Merrimac and Kennebec Rivers, and back to the St. Lawrence, under the title of the "Province of Laconic." It was represented to be a terrestrial paradise in beauty and fertility. Settlements at various points were projected and attempted, but none seem to have become permanent until about the year 1630. Mason and Gorges had agreed to divide their territory at the Piscataqua River, and in 1629 the former obtained a patent for the country between that river and the Merrimac, and gave it the name of New Hampshire. He built a house at the mouth of the Piscataqua, in 1631, and named the spot Portsmouth. He had been governor of Portsmouth, in Hampshire county, England, and these names he transferred to his new territory and first permanent settlement. Four years afterwards he died. His widow tried in vain to manage his large landed estate profitably. It passed into the possession of his retainers in payment for their services. These settlers were now left to themselves to fashion an independent state, but it was of slow growth. There was then only one agricultural settlement in all New England, excepting in Massachusetts, and scarcely the germ of a state had appeared. The colonists were mostly squatters, and moved frequently from place to place. They were chiefly hunters and fishermen, and cultivated the soil only for the production of a few vegetables and a little maize or Indian corn. Their huts were scattered along the harbors and when some families came to Maine to establish a farming community, they were laughed at by the older residents as visionaries, and they went to the Plymouth colony. The whole enterprise was unprofitable to the proprietors. From the beginning the expenses had been greater than the receipts, and now the jealousy of different parties threatened the Company with utter ruin, whilst the French, resolved to maintain their hold upon New France, were building huts at the mouth of

the Penobscot, and threatening to seize the territory between that river and the Kennebec. The Indians, too, were showing restlessness.

In this unpromising state of the affairs of the Plymouth Company, Gorges was again summoned before the House of Commons to show cause why the charter should not be revoked. The merchants were restive under the restrictions of the monopoly; the Commons regarded it as a royal instrument; churchmen looked upon it as a foe to prelacy, because Puritans were sheltered on its domain; and the new king, Charles (whose father had died in 1625), suspected the New England colonists were enjoying liberties inconsistent with the royal prerogative. Charles was as bigoted a believer in the divine right of kings as his father, and that belief manifested in practice proved his ruin.

Gorges defended the Company against the various charges with vigor, but he and his associates perceived that further contention for its existence would be useless. Therefore they prepared for its dissolution by dividing North Virginia into twelve royal provinces, assigning each to persons named and at their last meeting in April, 1635, they caused to be entered upon their minutes the following record We have been bereaved of friends; oppressed by losses, expenses and troubles assailed before the Privy Council again and again with groundless charges; and weakened by the French and other foes without and within the realm, and what remains is only a breathless carcass. We, therefore, now resign the patent to the king, first reserving all grants by us made and all vested rights - a patent we have holden about fifteen years."

The king appointed eleven of his Privy Council a "Board of Lords Commissioners of all the American Plantations," and committed to them the general direction of colonial affairs. Gorges, then sixty years of age, and robust in mind and body, was appointed Governor-General over New England. A ship-of-war was in preparation to bring him to America, but was broken in the launching, and the baronet never crossed the Atlantic Ocean. His nephew, William Gorges, was sent over as his lieutenant, to administer the government. He made his headquarters at Saco, where he found about one hundred and fifty inhabitants governed by a voluntary social compact. There he established a regular government on the 28th of March, 1636, the first within the State of Maine. Soon afterward a royal charter made the elder Gorges lord proprietor of a large territory in that region, called the "Province or County of Maine." Gratified by this mark of royal favor, he began energetically in his old age to devise laws for his palatinate, such as a soldier and royalist would be likely to conceive, but they were little heeded in America. Gorges lived eight years in the enjoyment of his vice-regal honors, and soon after his death his province passed under the jurisdiction of Massachusetts.

Feeble and scattered settlements grew in New Hampshire, and in 1641 these formed a union with the flourishing Massachusetts colony, and remained a part of that province until 1680, when the king ordered their separation, and the more feeble partner became a royal province. Its first governor (John Cutts) was appointed by the Crown, who was assisted by a council also made by royal appointment; and there was a house of representatives elected by the people. Then was laid the foundation of the Commonwealth of New Hampshire.

Sir George Calvert has been alluded to as the founder of Maryland. He was a thorough courtier, and one of the most brilliant and able of the supporters of the royal prerogative. King James knighted him in 1617, and in 1619 he was commissioned one of the principal Secretaries of State. He was then thirty-seven years of age. For a few years afterward he was one of the most active of James's courtiers.

Calvert had taken great interest from early youth in the discovery and settlement of foreign countries. He was a member of the East India Company, and also of the London Company, by whom Virginia was colonized. The same year when the May-Flower came to America, he purchased a part of Newfoundland, and named his domain Avalon. He at once took vigorous measures for planting an English colony there, but failed. At about the same time his son Cecil married the beautiful Anne, daughter of the Earl of Arundel, who was a member of the Roman Catholic Church. This union brought him into more intimate relations with distinguished persons of that sect. Among them was Gondamar, the Spanish ambassador in London, and Tillieres, the French ambassador at the same court. The influence of these men soon wrought a change in Calvert's religious thoughts. He became an advocate for the Spanish match, on the floor of the House of Commons; and he inflamed the resentment of King James against that body by giving him a highly-colored account of their proceedings in the matter. Finally, in the summer of 1624, his adherence to the Church of Rome became so palpable, that he was compelled to abandon the Secretary-ship. Early the following March, James gave him an Irish peerage by creating him "Baron of Baltimore in the County of Longford." Sixteen days afterward the monarch died. When his successor came to White Hall and the oath of allegiance and supremacy was offered to Lord Baltimore as one of the Privy Council, he declined to take it, and retired to Ireland bearing a cordial letter of introduction and good-will from his king to the Lord Deputy of that country.

The Roman Catholics of England were suffering much persecution at that time from the Puritans on one side, who were daily increasing in strength, and from the Churchmen on the other; and Lord Baltimore desired to provide an asylum for them in America. In the summer of 1627 he visited Avalon to inspect it in person, with a view of planting a Roman Catholic colony there. He went in a ship armed with twenty cannon, as a protection against the French. A few friends and some priests accompanied him. After remaining a few months he returned to England, and the next spring he sailed again for Newfoundland with his second wife and all his children, excepting the married ones.

The following winter was a very severe one. In the spring he sent his children home; and at the beginning of autumn, with his wife and retainers, he sailed for Virginia, arriving at Jamestown in October. When he appeared before Governor Harvey and his council, and was asked what his purpose was, he answered: "To plant and dwell." "Will you take the oath which we all have taken?" asked the governor. "I cannot with a good conscience," his lordship answered. "Then you must leave with the first ship hence to England," said Harvey. He did so, leaving his wife and retainers to winter in Virginia. He returned for them in 1630, and brought with him a patent from King Charles for a territory south of the James River, for the rigors of the climate and the barrenness of the soil of Avalon, and the menaces of the French, had determined him to abandon

his domain on Newfoundland. The Virginia Company made so much opposition to his new charter that he was induced to surrender it and accept one for territory north and east of the Potomac River, and embracing the Chesapeake Bay, which he had explored.

Lord Baltimore desired to call that chartered domain *Crescentia*; but in deference to the king, when the charter was drawn up, the space for the name was left blank that his Majesty might fill it as he pleased. When Baltimore appeared before Charles to receive his signature to the document, the monarch asked: "What will you call the country?" His lordship referred the matter to his Majesty. "Then let us name it after the queen," said Charles. "What do you think of Mariana?," the expert courtier dissented, because that was the name of the Spanish historian who taught the heresy that "the will of the people is higher than the law of tyrants." The king, still disposed to compliment his queen, said: "Let it be *Terra Maria*" - Mary Land. So it was that in the charter the province was named Maryland, in honor of Queen Henrietta Marie. Before the great seal of England was affixed to the patent, Lord Baltimore died in London. His son Cecil, the successor to his estates and titles, received the charter a few months afterward, dated June 20, 1632. The territory defined in the patent extended along each side of Chesapeake Bay from the fortieth degree to the mouth of the Potomac, and westward along the line of that river.

The Maryland charter, it is said, was drawn up by the hand of the first Lord Baltimore. It was evidently copied, substantially, from the one granted by Charles to his Attorney-General, Sir Robert Heath, for Carolina, "a territory south of the Roanoke River." It gave greater democratic privileges to the settlers under it than any yet issued by monopolist or monarch. It declared that the territory was out of the plenitude of royal power; the people were exempted from taxation by the crown except by their own consent and other important political privileges were secured to them. It silently allowed religious toleration. While it directed the dedication and consecration of churches, chapels, and places of worship in accordance with the prescriptions of the ecclesiastical laws of England, the matter of a state theology was left entirely untouched, and within the legislative power of the colonists themselves. This toleration was a wise provision. It promoted the growth of the colony when it was established, for those who were persecuted by the Puritans of New England and the Churchmen of Virginia, went thither and found a refuge and peace. The charter also provided that the proprietary should have "free, full, and absolute power to enact all laws necessary for the common good, not, however, without the advice, consent, and approbation of the freemen of the province or their representatives convoked in general assembly." This was the first instance of any provision having been made in an American patent for securing to the citizen a share in legislation.

Armed with this charter, young Lord Baltimore set about the business of colonizing his domain, not for an asylum for his persecuted co-religionists, but chiefly for pecuniary gain. He appointed his half-brother, Leonard Calvert, governor, and on the 22nd of November, 1633, that kinsman and his brother, "with very near twenty other gentlemen of very good fashion, and three hundred laboring men" (so Lord Baltimore wrote to Wentworth, afterward Earl of Stafford), sailed from Cowes, in the Isle of Wight, in two ships, the *Ark* and *Dove*. The Calverts and the other "gentlemen and some of the laborers were Roman Catholics, but a greater portion of the

latter were Protestants, who took the oath of supremacy before leaving England. The emigrants were accompanied by two Jesuit priests, Fathers Andrew White and John Altham. They performed religious ceremonies at the point of departure, while a gentle east wind was blowing, "committing the principal parts of the ship to the protection of God especially, and of His most Holy Mother, and St. Ignatius, and all the guardian angels of Maryland."

The colonists took the tedious southern route by way of the Canaries and the West Indies. They had just escaped the perils of The Needles on the coast of the Isle of Wight, when the fear of the Turkish cruisers, then the terror of all Christian seamen, took possession of them. This fear was soon allayed by the appearance of a large English merchantman called The Dragon, well armed and bound for Angola, which would convoy them beyond the line of danger. When only two days out, they were overtaken by a furious gale. The Dragon turned back; the emigrant vessels went forward. The tempest increased when the night came on. The people of the Dove, the smaller vessel, notified the officers of the staunch Ark that in case of danger they would hang out a lighted lantern at the masthead. That signal of distress appeared at midnight for a few minutes, and then suddenly vanished. "All are lost!" thought the tenants of the Ark, and they grieved sorely. They had no doubt the Dove, with her precious freight of Christians, had gone to the bottom of the sea.

For three days the tempest swept the ocean, when suddenly the clouds gathered in fearful tumult, rain fell in torrents, and for a few minutes a dreadful hurricane threatened instant destruction to all in its path. It seemed as if all the malicious spirits of the storm, and all the evil genii of Maryland had come forth to battle "against the good ship." Her mainsail was split from top to bottom her rudder was unshipped, and she was left at the mercy of the winds and waves. In mortal terror the emigrants fell on their knees and prayed; and the Roman Catholics uttered vows in honor of "the Blessed Virgin Mary and her Immaculate Conception; of St. Ignatius, the patron saint of Maryland St. Michael, and all the guardian angels of the same country." I had betaken myself to prayer," says Father White, from whose narrative I have quoted, "when the sea was raging its worst, and (may this be to the glory of God) I had scarcely finished, when they observed that the storm was abating." After that the voyagers had delightful weather for three months, on the sea and on the land.

The Ark steered for Bonavista, one of the Cape de Verd Islands, but altered her course and entered a harbor of the island of Barbados, on the eastern verge of the Antilles, where her people, all regarded as Roman Catholics, were coldly received, and charged extravagant prices for the provisions which they were compelled to purchase. The voyagers there learned that they had escaped a Spanish fleet lying at Bonavista, and also another peril in the port at which they had arrived. The slaves on the island had conspired to murder their masters, seize the first ship that should appear, and put to sea. The conspiracy had just been discovered, and its cruel purposes arrested. Their eyes were now greeted by the arrival there of the pinnace Dove, after a separation of six weeks. In the terrible gale she had put back while her lantern was at the masthead, and took refuge in the Scilly Isles, whence she sailed with a fair wind in search of her consort. After perilous wanderings over the waters, the Dove returned to the Ark.

The emigrants left Barbados after a short sojourn there, passed several islands of the Antilles, near one of which they encountered canoes full of naked and painted cannibals, and late in February they sailed in between the Capes of Virginia. They touched at Point Comfort and then went up to Jamestown, where royal letters borne by Calvert secured for them a friendly reception from Governor Harvey. Nine days they tarried pleasantly there, and then sailed for the Chesapeake and entered the broad mouth of the Potomac River. They were delighted with the great stream and the scenery on its banks, and gave to it the name of St. Gregory, in honor of the canonized Pope of that name. "Never have I beheld a larger or more beautiful river," wrote Father White, "The Thames seems a mere rivulet in comparison with it is not disfigured by any swamps, but has firm land on each side. Fine groves of trees appear, not choked with briers or bushes or undergrowth, but growing at intervals as if planted by the hand of man, so that you can drive a four- horse carriage, wherever you choose, through the midst of the trees. Just at the mouth of the river we saw the natives in arms. That night fires blazed throughout the whole country, and since they had never seen so large a ship, messengers were sent in all directions, who reported that a canoe, like an island, had come with as many men as there were trees in the woods."

The colonists sailed up the Potomac to the Heron Islands, and on Blackstone (which they named St. Clements) they landed at a little past the middle of March. The air was balmy, and sweet with opening spring flowers, and birds were filling the groves with rich melody. The shy natives came to them one after another, and were disarmed of all hostility by the kindness of the Britons. There, on the feast of the Annunciation (March 25th), the priests, in full canonicals, performed religious services, and administered the Lord's Supper for the first time in all that savage region. Then the whole company followed Governor Calvert and the priests in procession, bearing a huge cross which they had fashioned from a tree, and planted the symbol of Christianity and civilization at a chosen spot. The Roman Catholics, on bended knees, recited the "Litanies of the Sacred Cross" according to the Italian ritual. On the verge of the forest shadows, as wondering spectators of the strange scene, stood groups of savage men, women and children, clad in scanty and picturesque garments, with their emperor and his queen. He was at the head of a tribe called the Piscataways, and ruled over several small principalities, as did Powhatan, in Virginia.

Calvert proceeded at once to pay a visit of ceremony to the emperor to make a treaty of friendship and secure his influence over the surrounding tribes in favor of the colonists. In the Dove and another pinnace which they had procured at Jamestown; the governor, with Father Altham and a part of the emigrants, sailed up the river, leaving the Ark at anchor. Indians appeared here and there along the shores for a few minutes, and then disappeared in the woods, fleeing in alarm. They finally reached the village of Potomac, near Mount Vernon, whose king was a youth, and the people were ruled by his uncle as regent. Their fears were soon overcome, and Father Altham, through an interpreter from Jamestown, explained that their object in coming was to teach the Indians to lead better lives, and to live with them as brothers. The old sachem welcomed them, saying: "We will use one table - my people shall hunt for my pale-faced brother, and all things shall be in common between us."

The colonists, pleased with this peaceful conquest, went on to Piscataway, where they found five hundred warriors ready to dispute their landing. A parley ensued which ended in the emperor venturing on board the Dove, where he was soon satisfied that his visitors were peaceful and powerful. He readily gave them permission to settle anywhere within his empire, near him or more distant. Calvert thought it better to settle nearer the mouth of the Potomac, and returned to St. Clements. There he found the natives very friendly and familiar, and watching with marvelling eyes the building of a brigantine, of timber brought over from England. They supposed the floating vessels had been each hollowed out of a single tree, as were their own canoes, and concluded England must be a mighty country where such big trees grew. They were awed by the flash and roar of the cannon, supposing them to be lightning and thunder under the control of the visitors.

The governor now explored the Wicomico River emptying into another (which they called St. George) twelve miles upward, and anchored at an Indian village of the same name, where he and his company were hospitably entertained that night, after holding a friendly conference with the reigning sachem, who gave up his own mat to Calvert to sleep on. The interpreter explained the object of the visit. The sachem said but little, but told them to examine the country. The governor did so the next day. Pleased with the situation, the soil and the forest growth, he determined to plant his first settlement there, and make Wicomico the capital. He possessed delegated power to take possession of the country without leave or reward, in accordance with the custom of the strong mailed hand of Europeans at that time, whose creed ran - "We believe that Might makes Right," but he believed it to be more noble and wise to be just. He believed, too, that there was more worldly profit in honor than in dishonor - that "honesty" was "the best policy," and found it so. He entered into a treaty with the sachem for the purchase of a large portion of his domain. It was concluded and Calvert gave the Indians some English cloth, axes, hoes, rakes, knives, and some trinkets for the women of little real value, for about thirty miles of territory, including the village; and he named the domain "Augusta Carolina." The Indians gave up to the colonists, for their immediate use, one-half of their village. Their houses were of an oblong, oval shape, "with a window in the roof which admitted light and also permitted the smoke to escape from the fire built in the centre of the room." They also agreed to give to the settlers one-half of their corn-grounds, which they were then planting, reserving the residue for their own use until the harvest should be gathered, when the whole of the purchased domain was to be given up to the Britons. They mutually agreed that if an injury should be done by one party, full satisfaction should be given by the other; and there was a tacit understanding that they should be allies in war. The king regarded this as essential; indeed it was the most cogent argument in favor of his making a treaty, for he wished a powerful ally, his territory having been desolated and his subjects driven from their homes, by the powerful "Susquehanocs" of the North.

On the 27th of March, 1634, Calvert took formal possession of the territory. The vessels came from St. Clements with the remainder of the emigrants, and when they landed, a cannon was fired to commemorate their arrival at the end of their weary wanderings. They built a storehouse and a small battery and planted a portion of the soil. Then the governor, on a warm day in April, proceeded with a part of the company to a chosen spot fragrant with wild-flowers, about a mile

from the river, where he laid out a capital city that was dedicated, with imposing religious ceremonies, to the "Blessed Virgin Mary," and was named St. Mary's. There the settlers immediately began to build, and were aided by the really gentle Indians. While they were so engaged, they were visited by Governor Harvey, of Virginia who came in a pinnace with some of his councillors. Governor Calvert received him on board the Ark with great ceremony, and gave a banquet there to which several of the neighboring chiefs were invited. To the king of Patuxent, reigning eastward of St. Mary's, special attention was paid, for he was a conspicuous friend of the white people. He was seated at table between the two governors, when one of his followers seeing him there, and suspecting there was some evil design against his sovereign, would have leaped overboard, swam ashore, sped to his people and aroused them to arms with possible disastrous consequences, had he not been restrained by those near him, and assured by the king that all was right. When the warrior's suspicions were allayed and he was pacified, the monarch of the Patuxent addressed the other chiefs present, saying: "I love the English so well, that if they should go about to kill me, and I had so much breath as to speak, I would command the people not to avenge my death; for I know they do no such thing, except it were through mine own fault."

These settlers seem to have been exempted from the distresses which had befallen the earlier emigrants to other colonies. The surrounding native inhabitants were friendly they had a genial climate general good health prevailed they had abundance of food, and the soil yielded to moderate tillage abundant fruit. They were vested with peculiar civil privileges were not hampered by ecclesiastical restrictions and a year after they had established their capital at St. Mary's, a legislative assembly, composed of the whole people - a purely democratic legislature - convened there. As their numbers increased by emigration, this method of legislation was found to be inconvenient, and in 1639 a representative government was established, the people being allowed to send as many delegates as they pleased. Then was founded the republican commonwealth of Maryland It had been founded in justice, and by the exercise of kindness toward the native inhabitants and, but for the wickedness of ambitious men, the hite people and the Indians might have lived together in perfect harmony, for the savages were easily and powerfully impressed with a sense of gratitude for good treatment. This trait was exhibited by the king of the Piscataways, the most powerful tribe in Maryland. He was taken sick and forty conjurers tried to cure him by conjurations. He grew worse, when Father White asked and obtained permission to treat him. The priest gave him some medicine and bled him, when the king soon recovered his health. Grateful for the blessing, he begged the priest to baptize him, his queen, and their daughter, to prepare them to enter the Christian Church. In a chapel built of bark for the occasion, they and some chiefs were baptized; and in the afternoon the king and his queen were married according to Christian rites. Their daughter, as I have observed elsewhere, was sent to St. Mary's, to be educated.

Chapter XIX

Claims of the Dutch in New England - A Dutch Embassy to the Pilgrims - The Capital of the Pilgrims - The Dutch and the English in the Valley of the Connecticut - First English Settlement There - The Dutch Exasperate the Indians - Emigration of Puritans to the Connecticut Valley - Conflicting Claims to the Territory - Hooker's Emigration - The Pequods Jealous - War with the Pequods - Their Destruction.

WE have observed that the Dutch who founded New Netherland and the city of New Amsterdam (now New York) extended their explorations and traffic east, west, north, and south. They even went as far as Narraganset and Cape Cod bays in search of the beaver and otter. As Captain Block had discovered the Connecticut River and named it the Fresh-Water, and had looked into Narraganset Bay, the Dutch felt that they had a legal claim upon those regions according to the English doctrine concerning the right of discovery. So early as 1623, the agent of the Dutch West India Company seems to have taken possession of the Connecticut River and the lands drained by its tributaries, in the name of the Company and of the States-General of Holland.

A peaceful and profitable trade might have been carried on with the natives of the Connecticut Valley, by the Dutch, had not the latter exasperated the Indians by the seizure of one of their chiefs and demanding a heavy ransom for his release. The savages threatened the intruders with violence, and the Dutch began to build a stockade fort for their own protection, at what is yet known as Dutch Point, near the City of Hartford. Wrath prevailed a long time. At length the Indians were pacified, and at their request the Dutch abandoned the fort.

A friendly intercourse was now opened between the Dutch on Manhattan and the English at New Plymouth. In the spring of 1627, Isaac de Rasieres, secretary of the colony of New Netherland, by order of Governor Minuit, wrote a letter to Governor Bradford, of Plymouth, officially informing him of the founding of a settlement and province on the Mauritius or Hudson's River, and assuring him that the Hollanders wished to cultivate friendly and commercial relations with the Pilgrims. Bradford reciprocated these friendly professions, but in his reply he warned the Dutch not to occupy or to trade in the country north of the fortieth degree of latitude, as that region was claimed by the Council of New England. He wished to maintain friendly relations with New Netherland, and proposed not to molest the Dutch provided they would refrain from trading with the natives on the waters at the very doors of the English. Minuit replied courteously, but firmly, that the Dutch had a right to traffic with the Narragansets as they had done for years. "As the English claim authority under the king of England," said Minuit, "we derive ours from the States-General in Holland." Bradford was not disposed to contend, for obvious reasons. For strength of men and fortification," he wrote to the Council for New England, "they [the Dutch] far excel us and all in this land."

Bradford made no reply to Minuit's letter. The latter finally sent a messenger to New Plymouth to invite the governor to send a deputy to Manhattan to confer orally with the authorities there. The messenger took with him a "rundlet of sugar and two Holland cheeses" as a

present for Bradford, who entertained him generously in return. It was agreed that a commission should be sent to New Plymouth from Manhattan to confer upon all matters of intercourse. With De Rasieres at their head, such commissioners sailed in a bark laden with wampum and other things for traffic, and when they landed near one of the outposts of the Plymouth colony, the echoes of the forest and the attention of the Pilgrims were awakened by the braying of trumpets at the lips of sturdy Dutchmen. With the same noise the commissioners entered New Plymouth. They were hospitably entertained for several days at the table of the governor, whereat probably sat Elder Brewster, Miles Standish, Edward Winslow, Dr. Fuller and other passengers of the May-Flower. There the commissioners attended public worship on the Sabbath, of which De Rasieres gave a vivid account in a letter. "They assemble," he said, "by beat of drum, each with his musket or fire-lock in front of the captain's door. They have their cloaks on, and place themselves in order, three abreast, and are led by a sergeant without beat of drum. Behind comes the governor in a long robe. Beside him, on the right hand, comes the preacher, with his cloak on the left hand the captain, with his side-arms and his cloak on, and with a small cane in his hand. And so they march in good order, and each sets his arms down near him. Thus they are constantly on their guard, night and day," for they had excited the anger of the Indians.

The secretary also graphically described New Plymouth. "It lies on a slope," he said. "The houses are constructed of hewn planks, with gardens also inclosed behind and at the sides with hewn timber; so that their houses and court-yards are arranged in very good order, with a stockade against a sudden attack. At the ends of the streets are three wooden gates. In the centre, on the cross street, stands the governor's house, before which is a square inclosure, upon which four swivels are mounted, so as to flank along the streets. Upon the hill they have a large square house with a flat roof, made of thick sawn plank, stayed with oak beams; upon the tops of which they have six cannon, which shoot iron balls of four and five pounds weight, and command the surrounding country. The lower part they use for their church, where they preach on Sundays and the usual holidays." Such was the capital of the English colony six years after they had landed from the May-Flower, and at the time of the embassy of Secretary Rasieres. That mission opened a profitable trade between the two settlements, and led to the speedy planting of an English colony in the Valley of the Connecticut.

With a keen eye to self-interest, the Dutch advised the Pilgrims to leave their more sterile soil and make their home in the beautiful and fertile country on the banks of the Fresh-Water River, under the jurisdiction of New Netherland. The fertility of that region was set forth in glowing terms and the stories of the Dutch were confirmed by native chiefs. One of these, of the Mohegan tribe, whose council fire was on the eastern bank of the Hudson, visited Governor Winthrop, of Massachusetts, in 1631, and with self-interest as strong as that of the Dutch, but rather more artfully concealed, he urged them to settle in the Connecticut Valley. He offered to give them lands, and an annual tribute of corn and beaver skins, if they would do so. The Mohegan chief's prime object was to so plant a barrier between his people and the powerful and warlike Pequods, whose seat was on the hills that stretch between New London and Stonington. The Puritans saw the selfish policy of both parties under the thin disguise of friendship, and declined to move in a body. They would not consent to become subjects of the Dutch nor to be made shields for the

savages.

The stories of the "pleasant meadows" along the Connecticut River excited the attention of the English, and in 1632 Edward Winslow visited that region. He was delighted with the country, and confirmed all that Dutch ambassadors and traders and savage chieftains had said about it. The fame of it had already reached Old England, and two years before Winslow's visit, the Council for New England had granted the soil of that region to the Earl of Warwick. That nobleman conveyed his chartered rights to the domain to other parties (Lords Say and Seal, Lord Brook, Mr. Saltonstall and others) in 1632. In that conveyance the territory was defined as extending, "in a certain width throughout the main lands there, from the Western [Atlantic] Ocean to the South Sea" or the Pacific Ocean. These parties did not take immediate steps for colonizing the Connecticut Valley, and the ever-vigilant Dutch got there before them. The Dutch purchased the territory of the Indians, the rightful owners, and Commissioner Van Curler completed the redoubt already begun on Dutch Point, named it Fort Good Hope, and armed it with cannon.

Governor Bradford and Edward Winslow visited Governor Winthrop at Boston, and proposed an alliance for the purpose of taking immediate possession of the valley. Winthrop refused to join them in such an enterprise, but thought it necessary, in some formal way, to assert, promptly and firmly, the jurisdiction of the English over that now coveted region. He sent his bark the Blessing of the Bay on a trading voyage along Long Island Sound, her captain bearing a message to Manhattan, declaring that "the King of England had granted the river and country of Connecticut to his own subjects," and that the Dutch must "forbear to build there." The messenger and his companions were kindly treated by Governor Van Twiller, Minuit's successor, who, in a courteous letter to Winthrop, requested him to defer the pretense or claim to the Connecticut until their respective governments should agree upon the limit of the colonies. At the same time Van Twiller informed Winthrop that the Dutch had already "purchased the soil and set up a house with intent to plant."

These Dutchmen and initial "Yankees" were now playing a sharp game in diplomacy, with soft words. The Yankees outwitted the Dutchmen, and the Plymouth people out-generated those at Boston at first. At Plymouth was a company of "banished Indians" - families driven from the Connecticut Valley, with their chief, by the Pequods. From these the Plymouth settlers purchased a tract of land above Fort Good Hope. They prepared a house of wood, which they stowed in pieces on board of a bark commanded by Captain William Holmes. In this bark sailed the fugitive savages and some Englishmen, and went up the Connecticut River. When they approached Fort Good Hope, the commander of the fort hailed the little craft and demanded of Captain Holmes whither he was going, and for what purpose. "Up the river to trade!" answered the skipper. This little fib did not satisfy the suspicious Dutchmen, who rightly supposed that the intruders had orders to settle rather than to trade. "Heave to" shouted the commander of the garrison standing by the side of a heavy gun, "or I'll shoot." "I must obey my commands," said the intrepid Holmes, and sailed by. The Dutchmen blustered, but did not shoot. The English landed above; hastily erected the house they had brought with them, and took possession of the country. They sent the bark back, palisaded their house, and prepared to maintain their position. This house was built on

the site of Windsor, in Connecticut. So was begun the first English settlement in that region in the autumn of 1633.

When Van Twiller heard of this impertinent intrusion, he sent to Van Curler, at Good Hope, a protest to be delivered to Holmes, and a peremptory order for the latter "to depart forthwith with all his people and houses" - from that Dutch domain. "I am here," replied Holmes, "in the name of the King of England, whose servant I am, and here I will remain." Van Twiller stormed at this defiance, but prudently referred the matter to his superiors at Amsterdam. Before an answer could arrive, the subject became mixed with another of a serious nature. A Captain Stone had been on a trading voyage from Massachusetts to Virginia, and on his return ran into and up the Connecticut River to traffic with the Dutch garrison at Good Hope. He and his companions were treacherously seized and murdered by Pequods on the banks of the stream. This crime was soon followed by the massacre of some Indians friendly to the Dutch. Then Van Curler seized a guilty old sachem and some of his followers, and hanged them. This exasperated the Pequods. They flew to arms and declared war against the Dutch. They sought the friendship of the English, and for this purpose they sent four or five ambassadors to Boston to negotiate a treaty. These ambassadors appeared before the governor in all the barbaric splendor of paint and rich skins, gorgeous feathers and rude ornaments. A treaty was made which provided that the Pequods, in consideration of the passive friendship of the English, were to surrender to the latter the Connecticut Valley and the remaining two murderers of Captain Stone's party, and pay a large tribute of wampum and beaver-skins. So Winthrop gained a great advantage over Bradford in the accession of territory, and both parties won powerful allies, as they supposed, in the work of expelling the Dutch from the Connecticut Valley. At the same time, the position and security of the settlers at Windsor were strengthened.

At about this time, Van Twiller received instructions from Amsterdam, to maintain possession of the Connecticut at all hazards. He sent seventy men with arquebuses, swords, trumpets, and banners to dislodge the settlers at Windsor. The latter made a bold stand. After much blustering and a great deal of noise, there was a parley, when the Dutch withdrew and friendly relations were established. The region was opened for an influx of immigrants from Massachusetts Bay. Permission for such immigration was given by the authorities there, without any territorial restraints. The question to whom does the Valley of the Connecticut belong - to the Dutch, the Pilgrims at Plymouth, the Puritans at Boston, or to the savages? - was not considered; and in the autumn of 1635, sixty men, women, and children from the Puritan settlements journeyed westward through the forests to join the colony planted by Holmes at Windsor. During the previous summer, a few pioneers had explored the country. They went from Dorchester and Watertown to the beautiful valley, and their report stimulated emigration.

The exodus from Massachusetts Bay began late in October, when frost and snow-flurries were prophesying of an early coming of winter. With oxen for tillage and beasts of burden, and cows for the production of food, these emigrants made their way on foot through the pathless woods a hundred miles or more, sometimes wading miry swamps, sometimes climbing rugged hills or fording swift streams, the men carrying the smaller children, and the larger ones with their

mothers trudging after. At the end of a wearisome journey of a month's duration, they descended into the Connecticut Valley, then white with snow, and found the river so hard frozen that a vessel which had been sent with supplies could not ascend it. It never tried to navigate that stream, for it was wrecked on the rocks near Point Judith in a gale.

At Wethersfield, and on the site of Hartford, these immigrants built log huts in the snow, and there they passed a dreary, bitter winter in great privation, for a vessel in which had been sent clothing and household furniture was kept back by the ice. Snow fell to a great depth. Many cattle suffered and perished from want of food, and the settlers were threatened with the horrors of famine. In the face of this impending peril many of them made their way to the mouth of the river in the vain expectation of finding their food-bearing vessel, which, alas had been beaten into pieces on the rocks. When almost despairing, another vessel appeared, in which they sailed to Boston. The settlers whom they left behind subsisted much of the time upon acorns, Indian corn and malt, until the spring opened and supplies were sent to them from Massachusetts, then rapidly filling with emigrants. Twenty vessels had brought three thousand colonists to its shores during the year 1635.

Governor Winthrop's son John, then twenty-nine years of age, arrived at Boston from England in October. He bore a commission as governor of the Connecticut territory, from the proprietors of the soil. With him came Hugh Peters, his senior by six years, and Henry Vane, only twenty-four years of age, who were joint commissioners with him, instructed to build a fort and plant a colony at the mouth of the Connecticut River. They were directed to gather the scattered settlers near the fort but these were left where they had planted themselves. Other measures were taken to secure the possession of the territory and peace of the colony. Governor Bradford had denounced as "an unrighteous and injurious intrusion," the settling of Massachusetts people upon the lands on the Connecticut which the Plymouth people had purchased from the Indians, not considering that the "Plymothians," as the Dutch called them, were equally intruders upon the territory of New Netherland, according to English doctrine. And the Connecticut commissioners perfected their usurpation of the territorial authority of the Netherlands by driving away, by force of arms, a Dutch vessel which came into the river to protect the rights of the West India Company.

"Might makes right," was the stern rule among the nations then and the cannon at the mouth of the river gave a warrant for the more important emigration of the English to the Connecticut Valley, which occurred in the summer of 1636. The dispute with the Plymouth people was amicably settled.

Arrangements having been made for the accommodation of new settlers on the site of Hartford, the Rev. Thomas Hooker, a zealous non-conformist minister, who came to Boston from his refuge in Holland, in 1633, led a company of one hundred men, women, and children thither in the summer of 1676. He was accompanied by the Rev. Mr. Stone. Their followers consisted of their families and congregations. The emigrants drove before them one hundred and sixty head of cattle. The cows of the herd, pasturing in grassy savannas which they found on the way, gave

them an ample supply of fresh milk. They had no pathway, and were guided only by a compass. Through thickets and morasses, and over streams they made their way, clearing away here with axes, making causeways and bridges there with felled trees, and resting in shady groves. The women and children were conveyed in wagons drawn by oxen, and Mrs. Hooker, who was an invalid, was carried on a horse litter.

The company had ample provisions and were regaled on the way by delicious strawberries growing in abundance in open places. The songs of birds and the fragrance of flowers afforded them exquisite delight in the midst of the weariness of travel. They made easy stages, consuming a fortnight in the journey of a hundred miles. It was ended when, on the fourth of July, they stood on the beautiful banks of the Connecticut, under the shadows of great trees and trailing vines, and sang hymns of praise to the Good Father. On the following Sabbath, Mr. Hooker preached and administered the Lord's Supper in the little chapel on the site of Hartford, which the first colonists there had erected. Some of the new comers settled at Wethersfield, and others went further up the river and founded Springfield. There were now five feeble settlements in the Connecticut Valley. One of these was near the fort at the mouth of the river, and in honor of two of the proprietors of the territory, Lords Say and Brook, it was called Say-Brook.

In the very morning of this colonial era of Connecticut, dark clouds gathered black and threatening, and for awhile a storm impended which seemed ready to sweep the little settlements from the face of the earth in a moment. The fiery Pequods had become jealous of the English because the latter appeared to be on friendly terms with the Mohegans on the west and the Narragansets on the east, the bitter enemies of this warlike tribe. Over the Pequods, a famous sachem and chief named Sassacus was ruler. He was cool, calculating, treacherous, haughty, fierce and malignant, and he was the terror of the neighboring tribes. He ruled over twenty-six sagamores or inferior princes, and his domain extended from Narraganset Bay to the Hudson River, and over Long Island. His bravery won the unbounded admiration of his warriors, of whom almost two thousand were always ready to follow him wheresoever he might lead. Seeing the power of the few English in garrison at Saybrook, and dreading the strength and influence of more who would undoubtedly join them, he resolved to exterminate the intruders. By every art of persuasion and menace, he tried to induce the Mohegans and Narragansets to become his allies. The united tribes could put four thousand men on the war-path at one time, while among all the English in the Connecticut Valley, there were not more than two hundred and fifty men capable of bearing arms. How easily might those fierce pagans have annihilated the pale-faced Christians!

The Pequods moved cautiously. At first they were sullen. Then they kidnapped children; and finally they murdered Englishmen found alone in the forests or on the waters, and destroyed or made captive families on the borders of the settlements. It was evident that they intended to exterminate the white people in detail, and terror prevailed throughout the valley. This was heightened by the capture of a Massachusetts trading vessel by the allies of the Pequods on Block Island, killing the commander and plundering the vessel.

The authorities at Boston determined to punish the Pequods and awe them into quietude. For

this purpose they sent a small military force, in three vessels, into Long Island Sound. This force killed some Indians on Block Island, burnt their wigwams, broke their canoes in pieces, and cut down their growing corn. Then they went over to the Pequod country on the main, where they made demands which they could not enforce, burnt some wigwams, destroyed crops, and killed a few people. The expedition, weak in numbers and injudiciously conducted, was looked upon with contempt by the savages, and intensified their hatred of the white intruders. They sent ambassadors to the monarch of the Narragansets urging him to join them at once in a war of extermination, declaring, as a powerful plea, that the two races could not live together in the same land, and that the Indians, who would soon be the weaker party, would be scattered and destroyed like leaves in autumn.

At this critical juncture, a deliverer appeared in the person of Roger Williams, a Puritan minister, who had been driven out of Massachusetts by persecution and had taken refuge in the land of the Narragansets, who soon learned to love and respect him. He heard of the proposed alliance and perceived the danger. Unmindful of the cruel wrongs he had suffered at the hands of his Puritan brethren, he hastened in an open boat on a stormy day, across Narraganset Bay, to the dwelling of Miantonomoh near the site of Newport, on Rhode Island. He was the acting chief sachem of the Narragansets (for his uncle, Canonicus, the chief, was very old), and was revered by them all. There Williams found fierce ambassadors from Sassacus, urging their suit, and at the peril of his life he opposed them with arguments. "Three days and nights," Williams wrote to Major Mason, "my business forced me to lodge and mix with the bloody Pequod ambassadors, whose hands and arms, methought, reeked with the blood of my countrymen, murdered and massacred by them on Connecticut River, and from whom I could not but nightly took for their bloody knives at my own throat, also." Williams prevailed. He not only prevented the alliance, but induced Narraganset chiefs to go to Boston, where they concluded a treaty of peace and alliance with the colonists. So the Pequods were not only compelled to carry on their proposed war alone, but to fight the Narragansets.

This failure did not dishearten the Pequods. They kept the settlements on the Connecticut in a state of constant fear, all the autumn and winter. They plundered and murdered whenever opportunities offered. Barns were fired and cattle were killed by them and the murders were sometimes accompanied by the most horrid atrocities. Finally, a band of a hundred Pequods attacked Wethersfield, killed seven men, a woman and a child, and carried away two girls. They had now slain more than thirty of the English, and the settlers were compelled to choose between flight and destruction, or war and possible salvation. They resolved to fight, having promise of aid from the eastern colonies.

At this time there were in the colonies two brave soldiers who had served in the Netherlands. These were Captains John Mason and John Underhill. The former had taken an active part in military and civil affairs in Massachusetts, and was now in Connecticut. The latter was an eccentric character, and might have been mistaken at one time for a friar and at another for a buffoon. He had been brought to Massachusetts by Governor Winthrop to teach the young colonists military tactics, which it was evident they would need. Under him the authorities of that

colony and Plymouth placed two hundred men to aid the Connecticut people in their war.

It was not safe for the settlers in the valley to wait for their allies on the sea-coast. They placed ninety men under Mason, who rendezvoused at Hartford. With twenty of them, the captain hastened to reinforce the garrison at Saybrook. There he found Underhill, who had just arrived with an equal number of men. Mason hurried back, assembled his whole force, and with these and seventy warriors of the Mohegans under Uncas, he marched down to the tort. Uncas was of the royal blood of the Pequods, and had been a petty chief under Sassacus, but was now in open rebellion against his prince, and a fugitive. He gladly joined the English against his enemy, and Captain Mason as gladly accepted his services. As the war was begun by the Connecticut people, Captain Mason was regarded and obeyed as the commander-in-chief of the expedition.

It was determined in council to go into the Narraganset country and march upon the rear of the Pequods, where they would least expect an attack. In three pinnaces the expedition sailed eastward. As they passed the Pequod country, those savages concluded that the English had abandoned the Connecticut Valley in despair. It was a fatal mistake and the relaxation which that belief caused ruined them. They had no spies out beyond the Mystic River; and when the expedition landed near Narraganset Bay, Sassacus was rejoicing in a sense of absolute security from harm. So he continued to rejoice while the white people, joined by two hundred Narragansets and as many Niantics - more than five hundred warriors in all, pale and dusky - were marching swiftly and stealthily toward the citadel of his power.

That chief stronghold of Sassacus was on a hill a few miles northward from both New London and Stonington, near the waters of the Mystic River. It was a fort built of palisades, the trunks of trees set firmly in the ground close together, and rising above it ten or twelve feet, with sharpened points. Within this inclosure, which was of circular form, were seventy wigwams covered with matting and thatch and at two points were sallyports or gates of weaker construction, through which Mason and Underhill were destined to force an entrance. When the invaders reached the foot of the hill on which this fort stood, quite undiscovered, and arranged their camp, the sentinels could hear the sounds of noisy revelry among the savages in the fortress, which ceased not before midnight. Then all was still, and the invaders slumbered soundly. At two hours before the dawn on a warm June morning, they were aroused from sleep and arranged in marching order so as to break into the fort at opposite points and take it by surprise. The Indian allies had grown weak in heart, all but the followers of Uncas. They regarded Sassacus as a sort of god, and supposed he was in the fort. So they lagged behind, but formed a cordon in the woods around the fortress to arrest any fugitives who might escape.

In the bright moonlight the little army crept stealthily up the wooded slope, and were on the point of rushing to the attack when the barking of a dog aroused a sentinel and he gave the alarm to the sound sleepers within. Before they were fairly awake, Mason and Underhill burst in the sallyports. The terrified Pequods rushed out of the wigwams, but were driven back by swords and musket-balls, when the tinder-like coverings of the huts were set on fire. Within an hour about seven hundred men, women and children perished in the flames, and by the weapons of the

English. The strong, the beautiful, and the innocent were doomed to a common fate with the blood-thirsty and cruel. The door of mercy was shut. Not a dusky human being among the Pequods was allowed to live. When all was over, the pious Captain Mason, who had narrowly escaped death by the arrow of a young warrior, exultingly exclaimed God is over us He laughs his enemies to scorn, making them as a fiery oven. Thus does the Lord judge among the heathen, filling the place with dead bodies. And the equally if not more pious Dr. Mather afterward wrote: "It was supposed that no less than 500 or 600 Pequod souls were brought down to hell that day." Happily a better Christian spirit now prevails.

Sassacus was not in the doomed fort, but was at another near Groton, on the Thames, to which point Mason had ordered his vessels to come. As the English were making their wearisome way to the river, three hundred warriors came from the presence of Sassacus to attack them. The savages were soon dispersed. Most of the victors then sailed for the Connecticut, making the air vocal with sacred song. The remainder, with friendly Indians, marched through the wilderness to Hartford to protect the settlements in that vicinity. There warriors and clergymen, Christians and pagans, women and children, gathered in a happy reunion after great peril.

Sassacus sate sullenly and stately in his embowered dwelling, when the remnant of his warriors, who escaped from the citadel, came to tell him of the great disaster. They charged the whole of the misfortunes of the day to his haughtiness and misconduct. Tearing their hair, stamping violently, and with fierce gestures, they threatened to destroy him, and doubtless they would have executed the menace had not the blast of a trumpet startled them. From the head-waters of the Mystic came almost two hundred armed settlers from Massachusetts and Plymouth to seal the doom of the Pequods. The question, Shall we fight or flee? was soon answered at the court of Sassacus, for there was little time for deliberation. After a strong and hot debate, it was determined to flee. They set fire to their wigwams and the fort, and with their women and children hurried across the Thames and fled swiftly westward, with the intention of seeking refuge with the Mohawks beyond the Hudson.

The English hotly pursued the Pequods, with despairing Sassacus at their head. As the chase was kept up across the beautiful country bordering on Long Island Sound, a track of desolation was left behind, for wigwams and corn-fields were destroyed, and helpless men, women and children were put to the sword. At last the fugitives took refuge in Sasco Swamp, near Fairfield, where they all surrendered to the English excepting the sachem and a few followers, who escaped to the Mohawks. A blow had been struck which gave peace to New England forty years. A nation had been destroyed in a day. But few of the once-powerful Pequods survived the national disaster. The last representative of the pure blood of that race was, probably, Eunice Mauwee, who died at Kent, in Connecticut, about the year 860, at the age of one hundred years. The proud Sassacus, haughty and insolent in his exile, fell by the hands of an assassin among the people who had opened their arms to receive him; and his scalp was sent to the English, whom he hated and despised. He was the last of his royal line in power excepting Uncas, who now returned to the land of his fathers and became a powerful sachem, renowned in war and peace. He remained a firm friend of the English, and was buried among the graves of his kindred near the falls of the

Yantic, in the City of Norwich, where a granite monument, erected by the descendants of his white friends, marks the place of his sepulchre.

Chapter XX

A Settlement Begun at New Haven - A Peculiar Government Established There - The Dutch and English at Variance in the Connecticut Valley - A Government Formed at Hartford - Roger Williams in Massachusetts - His Banishment - Williams and Others Found Providence - Rhode Island Settled - Form of Government There - Anne Hutchinson and Others Driven from Massachusetts - Williams Obtains a Charter for Rhode Island - Intolerance in Massachusetts - Reception of Williams on His Return from England.

WHEN peace and security were established in the Connecticut region after the destruction of the Pequods in the summer of 1637, a desire for emigrating thither was revived. At about that time several gentlemen destined to occupy conspicuous places in history as founders of a state arrived at Boston. These were Rev John Davenport, a popular Puritan preacher of London, who had been persecuted by Arch-bishop Laud and taken refuge in Rotterdam. Another was Theophilus Eaton, an opulent London merchant and member of Mr. Davenport's congregation and a third was Edward Hopkins, another rich London merchant and member of the same society. They were much attached to Mr. Davenport, and gladly came to share his voluntary exile from his native land.

At the time of the arrival of these gentlemen, society in Massachusetts was violently agitated by bitter theological discussions, which will be noticed hereafter. Mr. Davenport and his friends belonged to a school who sought to carry out in practice the idea of finding in the Scriptures a special rule for everything in church and state. For the purpose of trying an experiment in government on the basis of that idea, they desired an unoccupied field. From some of those who pursued the fugitive Pequods along the country bordering on Long Island Sound, they heard of the beauty and fertility of that region, and early in the autumn Mr. Eaton and a small party visited the country. He was charmed with a harbor on the north side of the Sound and on the banks of a stream, which the Indians called Quinnipiack, he erected a hut, where some of the party passed the winter to try the climate. That was on the site of New Haven, Connecticut. The place had been called by the Dutch navigator, Block, who had anchored in the harbor, "Roodenberg" or Red Hills, in allusion to the red cliffs a little inland.

In the spring of 1638, Mr. Davenport and his friends sailed for Quinnipiack, where they arrived at the middle of April. They were accompanied by a number of followers, mostly persons from London who had been engaged in trade; and in proportion to their number, they formed the richest colony in America. They spent their first Sabbath there - a warm April day - mostly under the shadow of a great oak, where Mr. Davenport preached a sermon on the subject of Jesus being led into the wilderness. They purchased the land of the Indians and proceeded to plant the seeds of a new state by framing articles of association, which they called a "Plantation Covenant," according to their peculiar ideas. In it they resolved that, as in matters that concern the gathering and ordering of a church, so likewise in all public offices which concern civil order, as choice of magistrates and officers, making and repealing of laws, dividing allotments of inheritance, and all things of like nature, "they would be ordered by the rules which the Scriptures held forth." So

they began their settlement without any reference to any government or community on the face of the earth. The place where the first hut was built was on the present corner of Church and George Streets, New Haven, and the spot whereon stood the oak tree - their first temple for worship - was at the intersection of George and College Streets.

For about a year this little community endeavored to learn by experience, from reflection, and light from Heaven through the medium of prayer, what would be the best kind of social and political organization for the government of the colony. They talked together much, and early in the summer of 1639 they were nearly or quite all of one mind. Then they assembled in a barn - all the free planters "to compare views and settle upon a plan of civil government according to the word of God." Mr. Davenport prayed earnestly, and preached from the text "Wisdom hath builded her house she hath hewn out her seven pillars." In his discourse, he showed the fitness of choosing seven competent men to construct the government and he then proposed for their adoption four fundamental articles; (1) That the Scriptures contain a perfect rule for the government of men in the family, in the church, and in the commonwealth; (2) That they would be ordered by the rules which the Scriptures held forth; (3) That their purpose was to be admitted into church-fellowship, according to Christ, as soon as God should fit them thereunto; and (4) That they held themselves bound to establish such civil order, according to God, as would be likely to secure the greatest good to themselves and their posterity.

These articles were unanimously adopted, when Mr. Davenport presented two other articles designed to put into practical operation the theories of the other four. These were (1) That church membership only should be freeburgesses or freemen endowed with political franchises, and that they only should choose magistrates, and transact civil public business of every kind (2) That twelve or more men should be chosen from the company and tried for their fitness, and these twelve should choose seven of their number as the seven pillars of the church. These articles were subscribed by sixty-three persons present, and soon afterward by fifty others.

The twelve men were chosen, and after due deliberation they selected the "seven pillars." After another pause, these pillars proceeded to organize a church. Their assistants, nine in number, were regarded as freemen or "free burgesses," and the sixteen elected Theophilus Eaton as magistrate for one year. Four other persons were chosen to be deputies, and these constituted the executive and legislative departments of the new-born state of Quinnipiack. To these Mr. Davenport gave a "charge," grounded upon Deuteronomy i. 16, 17. A secretary and sheriff were appointed. The "Freeman's Charge," which was a substitute for an oath, gave no pledge of allegiance to king or Parliament, nor any other authority on the face of the earth, excepting that of the civil government here established. It was a state independent of all others. It was resolved that there should be annual General Court or meeting of the whole body, in the month of October, and that "the word of God [the Bible] should be the only rule to be attended unto in ordering the affairs of government." Then orders were issued for building a meeting-house for the distribution of house-lots and pasturage for regulating the prices of labor and commodities, and for taking measures to resist the attacks of savages. They resolved, also, to choose their own company, and it was ordained that "none should come to dwell as planters without their consent and allowance,

whether they came in by purchase or otherwise." In 1640 they named the settlement New Haven.

In the meantime, the planters in the Connecticut Valley had been perfecting a system of government, and preparing to possess the land westward as far as the Hudson River. People from Quinnipiack and the valley planted themselves at Fairfield, Norwalk, Guilford, and Stratford and Milford on the Housatonic. Captain Patrick, the commander of a part of the forces sent from Massachusetts against the Pequods, and who had married a Dutch wife, settled as far westward as Greenwich, with a son-in-law of the elder Governor Winthrop. At that time there were no Dutch settlers east of the Harlem River excepting Bronck and his lessees or tenants. The Dutch, however, continued in possession of their lands at Fort Good Hope, and a small garrison was kept up there under Commissary Guysbert of Dyck. But the English, when they became strong in numbers, paid little respect to the rights of the Netherlanders. They ploughed up their lands, excusing themselves for the intrusion with the plea that the soil was lying idle and ought to be cultivated by somebody. When the Commissary attempted to resist these encroachments, his soldiers were cudgelled by the planters, who said they (the English) were Israelites, while the Dutch in New Netherland and the English in Virginia were Egyptians.

The troubles with their neighbors, pale and dusky, and the necessity which called for fundamental laws, induced the planters of the valley to meet in convention at Hartford at the middle of January, 1639, to form a constitution of government. Like that of the New Haven colony, it was framed without the slightest reference to any other government. It provided that all persons in the commonwealth should be freemen, and should take an oath of allegiance to the general government; that the governor, to be elected at each spring meeting of the freemen, should be a member of some church that there should be as many magistrates (not less than six) and other officers as should be found necessary; that there should be a house of deputies, composed of four from each of the then existing towns, and as many as the General Court or legislature should determine from towns that might be created; and that the governor, four magistrates, and a majority of the deputies, should be competent to make all laws and deal generally for the good of the commonwealth. In the absence of special laws, the rule of the word of God was to be followed.

This instrument which has been spoken of as the "first example in history of a written constitution - a distinct organic law, constituting a government and defining its powers," and which recognized no authority outside of its own inherent potency, continued in force as the fundamental law of Connecticut one hundred and eighty years. It secured for that commonwealth a degree of social order and general prosperity rarely equalled in the life of nations. The political organization under it was called the Connecticut Colony, and the domain acquired the title of "the land of steady habits." Notwithstanding the two colonies were not united until twenty-six years afterward, now, in the year 1639, was laid the foundations of the commonwealth of Connecticut.

While the framework of the colony of Connecticut was in process of construction, that of its little neighbor on the east, Rhode Island, was likewise in a formative state. Persecution by brethren had driven into the forests on the borders of Narraganset Bay, good men who became

the founders of a state. That bay had been discovered and thoroughly explored by Block, the Dutch navigator, as early as 1614, when he gave the name of Roode Eylandt or Red Island to the insular domain on its eastern side, now known as Rhode Island. Eight or ten years afterward the Dutch on Manhattan carried on a profitable fur trade with the natives there, and a few years later they had the monopoly of that trade as far east as Buzzard's Bay. The Pilgrims at Plymouth were annoyed by this commercial intrusion, as we have seen, and especially when the New Netherlanders claimed territorial jurisdiction as far east as Narraganset Bay, and westward from a line of longitude from that bay to Canada. That claim was made at about the time when Roger Williams, the founder of the commonwealth of Rhode Island, sought refuge from persecution in the forests on the borders of the Narraganset. The claim was not relinquished until many years afterwards, but was never pressed with injurious vehemence.

Mr. Williams was a Welsh Puritan educated in England by Sir Edward Coke, who found him in London, a mere youth, reporting sermons and Star-chamber speeches in shorthand. At the age of thirty-two years he fled from persecution to New England, where he arrived in 1631 with his beautiful bride Mary, a charming young English woman. He was soon appointed assistant minister in the church at Salem, where his broad and enlightened views respecting the freedom of conscience and the injurious character of a wedded church and state offended the dignitaries in both, at Boston, and he withdrew to Plymouth. There he was an assistant minister, acceptable to the people, for about two years, when he returned to Salem and became pastor of the congregation to whom he had ministered as assistant.

Bolder than ever, his convictions having become more firmly rooted by opposition and controversy, Mr. Williams now put forth his views in sometimes intemperate language, for in support of toleration he became intolerant. He boldly questioned the authority of magistrates in respect to the right of the king to appropriate and grant the lands of the Indians without purchase, and the right of the civil power to impose faith and worship. This denial of the right of magistrates to intermeddle, even to restrain a church from heresy or apostasy, was regarded as so monstrous and dangerous an error and innovation that the banishment of Williams from the colony was decreed unless he should recant, or take back what he had said. He would not recant. He maintained with vehemence his opinion that there was an absolute and eternal distinction between the spheres of the civil government and the Christian church. He also appealed in writing to the charter against the decision of magistrates and he wrote a long letter to his own congregation in favor of the rigid separation of church and state. These writings were among his enumerated offenses, and were called letters of defamation in the preface of his sentence of banishment which was now put in force, and which ran thus:

"It is therefore ordered that the said Mr. Williams shall depart out of this jurisdiction within six weeks now next ensuing, which, if he neglect to perform, it shall be lawful for the governor and two of the magistrates to send him to some place out of this jurisdiction, not to return any more without license from the court."

This sentence was pronounced late in 1635. The friends of Williams were indignant. The

enlightened Edward Winslow, who was then governor of Plymouth, sympathized with him; and twenty leading men in the two colonies determined to go with him to the wilderness and share his privations of exile. Salem was in an uproar, and the magistrates began to suspect that they had made a mistake in passing the sentence. A rumor spread that he intended to found a colony among the Narragansets, with whom he had become familiar while he was at Plymouth and gained the friendship of their sachems and learned their language.

A colony founded upon the liberal principles advocated by Williams was not a pleasant subject for the contemplation of Massachusetts magistrates and clergymen at that period, and the time for his departure was extended until spring. Williams regarded this as a concession. No doubt he had formed a plan for founding a new colony, and was now glad of an excuse to leave Massachusetts; so he taught his doctrines with more fervor, and boldly proclaimed himself to be an Anabaptist - one who denies the validity of infant baptism - a Baptist of our day. This was too much for his people and the authorities in church and state, and it was resolved by Governor Haynes to send the "troublers" back to England. He had refused to obey a summons to appear before the magistrates at Boston, and they sent a pinnace to Salem, with a warrant to Captain Underhill to arrest him, take him on board the little vessel, and convey him to a ship then ready to sail for England.

Williams had been informed of this order. Ex-Governor Winthrop had kindly but secretly advised him to steer his canoe to the Narraganset Bay and Indians; and when Underhill and his men went to his house to arrest him, they found only his sorrowing wife and two babes. Williams had been gone three days. On a cold winter's night, the moon on the wane, he had kissed his wife and children and departed in the gloom to seek a refuge with the dusky pagans, who were more tolerant than his pale-faced Christian brethren. He went forth alone with a long staff and a scrip thrown over his shoulders. The snow was deep. Wild beasts were in his path. Behind him were the treasures of wife and children before him, as radiant and enticing as the star in the east, glowed the brilliant luminary of Christian ethics, which was his pole-star and guide. He made his way to the house of Massasoit, the venerable sachem of the Wampanoags, where he was warmly welcomed. The sachem gave him a tract of land on the Seekonk River, eastward of the site of Providence, at which place he and some friends who joined him seated themselves in the spring of 1636. Some distance above them, on the Seekonk or Pawtucket River, was a solitary settler named William Blackstone. He was a non-conformist minister, who disliked the "lords brethren" of Massachusetts as much as the "lords bishops" of England. He had withdrawn to the wilderness, and there lived the life of a hermit at a place which he named Rehoboth-room. He was the first settler but not the founder of Rhode Island, for he refused to join Williams and his friends.

Just as the new colony had begun to build and plant near the present Manton's cove, a friendly letter came from Governor Winslow saying they were within the jurisdiction of the Plymouth Colony, and as he did not wish to offend "the Bay," and desired the undisturbed repose of the exiles, he advised Williams and his little party to pass to the other side of the Seekonk, where he would have a large country before him beyond the jurisdiction of both colonies on the coast.

The settlers heeded this kind and wise advice. The six exiles left the Seekonk in a large canoe, with all the worldly goods which they had brought into the wilderness, and rounding the headlands known as Fox and India Points, they went up to the mouth of the Mooshansic River and landed. It was a warm day late in June. Near by, upon a grassy slope shaded by sycamore trees, they saw a gushing spring. It was a joyful sight to the thirsty pilgrims. Around it they gathered, and after partaking of its clear waters, they fell on their knees and offered fervid supplications and thanksgiving to God for his goodness. At that spring, now surrounded by a populous city and yet shaded by sycamores, these devout men resolved there to lay the foundations of a free state. In commemoration of "God's merciful providence to him in his distress," Williams named the spot Providence, and dedicated it as "a shelter for persons distressed for conscience."

The freedom enjoyed at Providence was spoken of at Boston, and persecuted men flocked to the new settlement with their families. Williams had purchased the land from the aged Canonicus and the younger Miantonomoh, who had learned to love him. These men, naturally shy and suspicious, had perfect confidence in Williams, and willingly took him and his friends into their bosoms. "It was not thousands nor tens of thousands of money," Williams wrote, "that could have bought of them an English entrance into the bay." It was the personal influence of the men who there established a pure democracy, under the following simple article of agreement:

"We, whose names are hereunder written, being desirous to inhabit in the town of Providence, do promise to submit ourselves, in active or passive obedience, to all such orders or agreements as shall be made for public good by the body in an orderly way, by the major consent of the inhabitants, masters of families, incorporated together into a township, and such others as they shall admit into the same, only in civil things."

Every man was required to sign this compact, which left him "free in all but civil things." The conscience was left absolutely free. The founder reserved no political power to himself and the leader and follower had equal dignity and privileges. Under the sunny skies of such freedom, the settlers fell to work cheerfully. The summer was too far advanced to allow them to procure much food from the soil and when Governor Winslow visited Providence in the autumn, the planters were much pinched. This fact is made evident by the touching manner in which the founder gratefully alludes to the kindness of the governor. "He put a piece of gold into the hands of my wife for our supply," he wrote - "that sweet, loving wife who shared with her husband the privations as well as the comforts and honors which were his lot."

Now came the war with the Pequods. Persecution and slander had not embittered the feelings of Williams toward the authorities of Massachusetts. Seeing the danger, he warned them of it early. He sent to Governor Winthrop a rude map of the country along the coast from the Narraganset to the Connecticut, which he had drawn from descriptions by the Indians, with a plan for a campaign, and periled his life for the good of his enemies. He saved his persecutors from destruction, yet the rulers in church and state in Massachusetts had not the Christian manliness to show gratitude by expunging from their records his sentence of banishment and receiving him to

their bosoms as a brother. They proclaimed a solemn thanksgiving at the close of the war, and received the leaders of their troops in triumph with feasting and rejoicing; but they passed no vote of thanks to one who had achieved more for the life of that commonwealth than any soldier or statesman. Winthrop tried to procure a vote of thanks and Williams's recall from banishment, but bigotry prevailed. The following couplet, written by Governor Dudley, expresses the prevailing sentiment of magistrates and clergy then in Boston: "Let men of God, in court and churches, watch over such as do a toleration hatch."

The theological disputes already referred to as agitating the people of Massachusetts divided them and sent many into exile. A brilliant woman named Anne Hutchinson, of powerful intellect and beautiful person, came to Boston. She was a sister of Rev. John Wheelwright, a popular preacher there. She agreed, generally, in theological views, with Roger Williams, and very soon boldly proclaimed the doctrine that conscience, the indwelling Holy Spirit in every believer, and the conscientious judgment of the mind, are of paramount authority. She denounced the prevailing spiritual despotism, and startled and charmed the best thinkers with the loftiness of her ideas concerning the spiritual freedom of the individual. She soon drew many leading men after her. Among these was the young Henry Vane, then governor of the commonwealth, and a few of the clergy, but only her brother among the ministers ventured to openly advocate her doctrines. He was censured by the civil authorities, when he threatened to appeal to the king. This threat a synod of clergy and lay delegates, called to act upon the subject, construed into a menace of rebellion, and gave them a pretext for recommending the civil authorities to disarm the Hutchinsonians.

The war of words was waged more fiercely. The civil authorities arraigned Mrs. Hutchinson, her brother, and another leader in the movement, on a charge of heresy. The result was a decree for the banishment of these three persons, and the disarming of sixty citizens of Boston. They were forbidden, upon the penalty of a fine, to buy or borrow any other arms or ammunition, until permitted by the General Court or legislature. Unwilling to endure this indignity, a large portion of them under the leadership of John Clarke and William Coddington, left Boston with their families, accompanied by Mrs. Hutchinson and her brother, with the intention of settling on the Delaware Bay. They were so "lovingly entertained" by Roger Williams at Providence, and so kindly invited to settle in the land of the Narragansets, that they paused. Through the influence of Williams they were enabled to purchase from the Indians the beautiful island of Aquetneck, now Rhode Island; and at the close of March, 1638, they began a settlement at Portsmouth, near its northern extremity. The colonists were charmed with the salubrity of the climate, and thankfully exchanged their home on Shawmut (the Boston peninsula) for one on Rhode Island. They all immediately adopted and all signed a written agreement similar to that of the Providence colony, in these words:

"We, whose names are underwritten, do swear solemnly, in the presence of Jehovah, to incorporate ourselves into a body politic, and, as He shall help us, will submit our persons, lives, and estates, unto our Lord Jesus Christ, the King of kings and Lord of Hosts, and to all those most perfect and absolute laws of His, given us in his Holy Word of Truth, to be guided and

judged thereby."

In imitation of the Jewish form of government, under the judges, Mr. Coddington was chosen judge or chief ruler of the Rhode Island colony. Both settlements flourished. They were separate governments, but one in aims and sentiment. The persecuted came to them and population rapidly increased. Liberty of conscience was there absolute; and upon the seal which the Rhode Island colony adopted was the motto: *Amour Vincit Omnia* - "Love is all-powerful." The jealousy of the Massachusetts authorities was frequently conspicuous, and stood in the way of a friendly intercourse and a profitable trade between the two colonies. Because a refugee from Boston, writing from Providence, spoke harshly of Massachusetts magistrates, the latter passed an ordinance forbidding citizens of Providence, of like views, coming into that colony.

Unwilling to yield allegiance to either of the other colonies, the Rhode Island and Providence settlements sought an independent charter which should unite them in one commonwealth. At about that time, a confederacy of the New England colonies, for mutual defence, was formed, but the stern bigotry which banished Mr. Williams and Mrs. Hutchinson, excluded these settlements on the Narraganset from the Union. That isolation, in case of trouble with the savages, would be both perilous and inconvenient, and Williams was sent to England to obtain a royal charter. He sailed from New Amsterdam in the summer of 1643, and arrived in Great Britain at the time when the civil war was raging violently. Circumstances favored his mission. The king was powerless; the Parliament was supreme. That body had entrusted the management of colonial affairs to a commission of which the Earl of Warwick, the original grantee of Connecticut, was the head as "Governor-General and Lord High Admiral of the colonies in America." He was assisted by a council composed of five peers and ten commons. Henry Vane, who had returned to England and had been created a baronet, was one of that Council. He received Mr. Williams cordially, and introduced him to his associates. That body listened to Mr. Williams's statements with great attention, and granted his prayer. On the 14th of March, 1644, they issued a charter in the name of the king, which connected the towns of Providence, Portsmouth, and Newport under the title of "the Incorporation of Providence Plantations in the Narragansett Bay in New England."

Mr. Williams left England for his home in the summer of 1644, bearing the charter. He also bore a letter signed by several members of Parliament, addressed to the authorities of Massachusetts, in favor of the exile, and with this he landed in Boston. The letter did not weaken the aspirates of the magistrates toward him, excepting sufficient to allow him to pass to Providence unmolested. That heretical colony, now that it had received a charter and been applauded by high authority in England, was more than ever an object of distrust and suspicion on the part of the Massachusetts authorities. But Mr. Williams bore himself meekly under their frowns. As he approached Providence he was cheered by a gratifying spectacle. The people had heard of his coming, and all turned out to meet him and welcome him home. The Seekonk was covered with well-filled canoes gaily decked with flowers and evergreens, and the shore was alive with men, women and children in holiday attire, who greeted him with loud huzzahs, the waving of handkerchiefs, and the singing of psalms. The charter which he bore to the people on the banks of the Narraganset was the corner-stone of a state. Then was founded the commonwealth of

Rhode Island.

Chapter XXI

Social Condition of Holland in the Seventeenth Century - Inducements to Settle in New Netherland - The Patroons, Their Privileges and Dependants - A Settlement in Delaware and Its Fate - The Swedes on the Delaware - The Dutch and Swedes at Variance - The Swedes Maintain Their Position - New Jersey Granted to Royal Favorites - Inducements to Settle There - Governor Carteret and Settlers at Elizabethtown - Trouble with the Settlers - A Republican Prophet.

WHEN industry was made honorable in Holland, the feudal system began to decay. It was a system embracing large landowners, whose tenants were military men who controlled all labor and bore allegiance to the lordly proprietor. In the new era which had gradually dawned in Holland, the owner of the soil was no longer the head of a band of armed depredators who were his dependants, but the careful proprietor of broad acres, and devoted to industry and thrift. The nobles who composed the landlord class gradually came down from the stilts of exclusiveness, and in habits and even costume imitated the working people. The latter became elevated in the social scale. Their rights were respected, and their value in the state was duly estimated. Ceaseless toil in Holland was necessary to preserve the hollow land from the invasion of the sea, and the common needs assimilated all classes in a country where all must work or drown.

It was this state of society in Holland which stimulated agricultural interests in New Netherland, and changed trading into farming communities. This impulse was much accelerated by a charter of Privileges and Exemptions given by the Dutch west India Company in 1629, for the purpose of encouraging agricultural settlements on their American domain. They reserved the lands on and around the island of Manhattan, which they called the commercial emporium of the province, and required that all products for exportation should first be brought there. To persons who were disposed to settle in any other part of the province, the Company offered as much land as each emigrant might be able to improve, with "free liberty of hunting and fowling," under the direction of the provincial governor. They also offered to every person who should "discover any shores, bays, or other fit places for erecting fisheries, or the making of salt-ponds," an absolute property in such discovery.

The rural tenantry of Holland were not rich enough to avail themselves of this privilege, so the Company offered inducements for wealthy citizens to promote emigration, by transplanting into America the modified feudal system of the Netherlands. They offered to grant lands and manorial privileges and exemptions to any member of the Company who should, within four years, plant a colony of fifty adults in any part of New Netherland outside of Manhattan Island such proprietor being constituted feudal chief of the domain which he might thus colonize. The lands of each colony were limited to sixteen miles along one shore of a navigable stream, or to eight miles if they occupied both shores, but they might extend into the interior indefinitely. It was also provided that if any proportionably greater number of emigrants should be settled by a proprietor, the area of his domain should be extended in the same ratio. He was to be absolutely lord of the manor, political and otherwise. He might hold inferior courts for the adjudication of petty civil cases; and if cities should grow up on his domain he was to have power appoint the magistrates

and other officers of such municipalities, and have a deputy to confer with the governor.

The settlers under the patroons, as these manorial proprietors were called, were to be exempted from all taxation and tribute for the support of the provincial government for ten years; and for the same period every man, woman and child was bound not to leave the service of the patroon without his written consent. The colonists were forbidden to manufacture cloth of any kind, on pain of banishment; and the Company agreed to furnish them with as many African slaves "as they conveniently could" also to protect them against foes. Each colony was bound to support a minister of the Gospel and a schoolmaster, and so provide a comforter for the sick and a teacher of the illiterate. It was also provided that every colonist, whether patroon or an independent settler, should first make a satisfactory arrangement with the Indians for the lands they should occupy.

Such is a brief outline of the charter of Privileges and Exemptions under which several large manorial estates were acquired in New Netherland, one of which (the Van Rensselaer Manor on the Hudson) existed, with some of its privileges, until late in the present century. It recognized the right of the Indians to the soil invited independent farmers to whom a homestead should be secured; promised protection to all in case of war, and encouraged religion and learning. Yet this system of colonization was not so favorable to the development and growth of popular liberty as was that in New England.

While this charter was under consideration in the meetings of the Company at Amsterdam, two of the directors (Samuel Godyn and Samuel Bloemmaert) purchased of the Indians a tract of land on Delaware Bay, extending from Cape Henlopen (the southern boundary of New Netherland) northward, full thirty miles, and two miles in the interior. This purchase was ratified by the Company when the charter was issued. Very soon afterward Killian Van Rensselaer purchased a large tract of the natives on the upper navigable waters of the Hudson River; and Michael Pauw, another director, secured by the same means a large tract in New Jersey at the mouth of the river, opposite Manhattan, and all of Staten Island. This adroit management of wide-awake directors, in securing the best lands in the province, as to situation - who helped themselves by the cunning trick of merchants - provoked jealousy and ill-will among their fellow-directors, which was finally allayed by admitting others into partnership with them.

Immediate steps were taken for colonizing these manors. Under the direction of Captain de Vries, an eminent navigator and friend of Godyn, who had made him a partner in the purchase, two ships sailed with colonists, cattle, seeds and agricultural implements, for Delaware Bay. They left the Texel under the command of Peter Heyes on the 12th of December, 1630, and took the long southern route by way of the Canaries and the West Indies. One of the vessels was captured the other, carrying eighteen cannon, did not reach the Delaware until April following. Near the site of the village of Lewiston, thirty emigrants, with their cattle and implements, seated themselves. There Heyes set up a wooden column, and on it placed a piece of tin emblazoned with the arms of Holland in token of taking possession of the country in the name of the States-General. The place was named Swaanendael. They built a house and stockaded it; and

then Captain Heyes went over to the New Jersey shore and purchased from the Indians, in the name of Godyn, a tract of land along the coast from Cape May, twelve miles. In the autumn, Heyes returned to Holland, leaving the colony in charge of Gillis Hossett.

In the spring of 1632, De Vries went with two vessels to the Delaware. There a sad sight greeted him. The house which the settlers had built was in ruins; the palisades had been burned; and the bones of the settlers strewed the ground. They had all been murdered by the Indians. One of the savages told De Vries all about it. A chief thoughtlessly took down the piece of tin which bore the arms of Holland, to make a tobacco-pipe of it. Hossett made such ado about it that the Indians, to allay the feeling, slew the offending chief and sent his scalp to the Dutch commander. When the bearer presented it, Hossett told him the Indians had done wrong; that had the offender been brought to him he would only have cautioned him not to repeat the offence. The friends of the victim burned with vengeful desires, and determined to destroy the white people as a retribution. A party of warriors visited the settlement under the guise of friendship and massacred the whole of them in their houses and in the fields. This crime was forgiven, and the Indians and Hollanders remained friends.

A competition with the English and Dutch for American possessions now appeared in the North. The enlightened Gustavus Adolphus, King of Sweden, had looked with longing eyes westward as he heard from time to time of the rich countries beyond the British isles. At length he was excited to action by William Usselincx, the projector of the Dutch West India Company, who, dissatisfied with his associates in that corporation, visited Sweden, and laid before its monarch well-arranged plans for colonization on the Delaware. The king was delighted. He entered warmly into the projects of Usselincx, and was preparing for the execution of a scheme for planting a colony in America that should be an open asylum for all Christians, when the danger which threatened Protestantism in Germany called him to the field to contend for the principles of the Reformation. While leading victorious armies against the Imperial hosts marshalled under the banner of the Pope on the fields of Germany, he did not forget the scheme for American colonization. At Nuremburg he drew up a paper for his great chancellor, the Count Oxenstierna, in which he recommended the enterprise as the "jewel of his kingdom." A few days afterwards he was face to face with his enemy at Lutzen, in battle array. On their knees he and the brave Swedes sang Luther's glorious hymn, *Eine feste Burg ist unser Gott* - "A tower of strength is our God." Then they sang a hymn composed by the king himself and springing to their feet, they made a furious charge upon the Imperialists, Gustavus leading the right wing. He fell covered with mortal wounds.

But the words of Gustavus did not die. Oxenstierna, at the head of a regency, administered the government for the heir to the throne, Christina, who was then only six years of age. "A colony in America would, indeed, be a precious jewel in the crown of Sweden," said the wise Chancellor. He had favored the project from the beginning; and in 1634, he issued a charter for a Swedish West India Company.

Governor Minit, who had been recalled from New Netherland because he had favored the

grasping patroons too much, it was thought, hastened to Stockholm and offered the fruits of his experience in America and his personal services to the new company. They were gladly accepted and at near the close of 1637, he sailed from Gottenburg with fifty emigrants in two vessels, bearing a commission to plant a colony on the west side of Delaware Bay, within the manor of Godyn and Blommaert, where he knew no settlement then existed. He landed at the site of Newcastle in April, 1638, and purchased from the Indians the whole territory from Cape Henlopen to the falls of the Delaware River at Trenton without the slightest regard to the claims of the Dutch. Then he sailed into the mouth of the river, and anchored in a creek at the site of Wilmington. They built a fort and then a church, and named the place Christina, in honor of their young queen. The territory they had purchased they called New Sweden.

When the Dutch at Fort Nassau, fifteen miles further up the river, heard of this intrusion, they went down to inquire what it meant. Minuit gave them evasive answers at first, but finally told them that he intended to plant a settlement in the country, and build a fort there. "The Queen of Sweden," he said, "has as good a right to build a fort here as the Dutch West India Company. A messenger to tell the news was at once sent to Manhattan. Kieft, the newly arrived governor, sent an officer to Minuit at Christina to protest against the movement. The warning was unheeded. Then Kieft issued a proclamation saying that he was persuaded that the Queen of Sweden had not authorized the building of forts within the domain of New Netherland, and that while he would not be responsible "for any mishap, bloodshed, trouble and disaster" which Minuit and his people might suffer thereafter, he was resolved to defend the rights of the West India Company as he should deem proper.

Minuit paid no attention to this proclamation, but built Fort Christina on the site of Wilmington, and erected posts with the royal initials and the crown of Sweden carved on them. Well acquainted with the Indian traffic, from long experience at Manhattan, he soon drew to Christina a profitable fur-trade and at midsummer he sent the vessels back to Sweden with cargoes of peltry and other products of the land. The fort was well garrisoned and provisioned, and the settlers there planted and reaped. So was established the first permanent settlement on that soil, and there and then was planted the fruitful seed of the commonwealth of Delaware.

Eastward of the Delaware Bay and River (so called in honor of Lord De la Warr, Governor of Virginia), lies New Jersey. Its domain was included in the New Netherland charter. So early as 1622, transient trading settlements were made on its soil at Bergen and on the banks of the Delaware. The following year, as we have observed, Director May, moved by the attempt of a French sea-captain to set up the arms of France on the Delaware, built a redoubt called Fort Nassau at the mouth of Timmer Kill or Timber Creek, a few miles below Camden, and settled some young Walloons near it. The most southern headland of New Jersey and now popular summer resort, Cape May, received its name from the first director-general of New Netherland, who gave it, also, to several other places.

The Walloons - young couples who had been married on shipboard - settled on the site of Gloucester. This was the first settlement on the soil of New Jersey that lived long; but it, too,

withered away in time. It was seven years later when Michael Pauw made his purchase of the Indians extending from Hoboken to the Raritan River, and latinizing his name, called it Pavonia. In this purchase was included the settlement of some Dutch at Bergen. Other settlements were attempted, but none became permanent until about forty years afterward. Cape May, which Captain Heyes bought of the Indian - a territory sixteen miles square - remained an uncultivated wilderness all that time yielding the products of its salt meadow to the browsing deer.

We must now run ahead of our story, as we leave, a little, at other times, in coming to the period when the foundations of a colony were actually laid, and glance at an important event in the political history of New Netherland Charles the Second, King of England, granted a greater portion of the claimed territory of New Netherland to his brother, the Duke of York, then Lord High Admiral of the realm. The duke sent a fleet and army to take possession of his domain. This armament, stronger than any in New Netherland, found the task an easy one, and early in the autumn of 1664, the province passed into the hands of the English. Soon after that armament sailed, and while it was yet on the bosom of the Atlantic, the duke conveyed to two of his favorites all the territory between the Hudson and Delaware rivers from Cape May north to the latitude of forty degrees and forty minutes. These favorites were Lord Berkeley, brother of the governor of Virginia and the duke's own governor in his youth, and Sir George Carteret, then the treasurer of the Admiralty, who had been governor of the island of Jersey, which he had gallantly defended against the forces of Cromwell. In the charter this province was named "Nova Caesarea or New Jersey," in commemoration of Carteret's loyalty and gallant deeds while he was governor of the island of Jersey. Colonel Richard Nicolls, the commander of the expedition to seize New Netherland, and deputy-governor of the province, changed the name to New York; and, ignorant of the charter given to Berkeley and Carteret, he called the territory west of the Hudson Albania, so honoring his employer, who bore the title of Duke of York and Albany.

Berkeley and Carteret hastened to make use of their patent. They framed a constitution of government for the new domain under the title of "The Concessions and Agreement of the Lords Proprietors of the Province of Nova Caesarea or New Jersey, to and with all and every of the new adventurers and all such as shall Settle and Plant there." It was a fair and liberal constitution. It provided for a governor and council appointed by the proprietors, and deputies or representatives chosen by the people, who should meet annually, and with the governor and his council form a General Assembly for the government of the colony. It provided for the choice of a president by the representatives when in session, in case of the absence of the governor and deputy governor. All legislative power was vested in the Assembly of Deputies, who were to make all laws for the province - these to be consistent with the laws and customs of Great Britain, and not repugnant to the interests of the proprietors. Provision was also made for the encouragement of emigration to New Jersey. To every freeman who should go to that province with the first governor, furnished with a good musket and plenty of ammunition, with provisions for six months, was offered a free gift of one hundred and fifty acres of land and for every able manservant that such emigrant should take with him so armed and provisioned, a like quantity of land. Any person sending such servants should be likewise rewarded; and for every weaker servant or slave, of either sex, over fourteen years of age, which any person might take or send, at that time, should be given seventy-

five acres of land each, Christian servants being entitled, at the expiration of the term of service, to the land so granted for their own use and benefit. To all who should settle in the province before the beginning of 1665, other than those who should go with the governor, were offered one hundred and twenty acres of land, on like conditions.

These offers were certainly attractive, and the proprietors expected to see their country rapidly peopled with industrious settlers. They appointed Philip Carteret, la cousin of Sir George, governor, and with about thirty emigrants, several of whom were Frenchmen skilled in the art of salt-making, he sailed for New York, where he arrived in July, 1665. The vessel had been driven into Chesapeake Bay in June and anchored at the mouth of the James River, whence the governor sent despatches to New York. Among them was a copy of the duke's grant of New Jersey. Governor Nicolls was astounded by the folly of the duke in parting with so much of his valuable domain, for he regarded Albania as the most improvable" part of the territory. He was mortified by this dismemberment of a state over which he had been ruling for many months with pride and satisfaction. But he kept his thoughts between his lips until the arrival of Carteret, whom Colonel Nicolls received at Fort James, late Fort Amsterdam, with all the honors due to his rank and station. That meeting in the governor's quarters in the fort was a notable one. Nicolls was tall, athletic, and about forty-five years of age a soldier, haughty and sometimes very irritable, and brusque in speech when excited. Carteret was shorter and fat, good-natured and affable, with polished manners which he had learned by being much at court. He entered the governor's room with Bollen, the commissary of the fort, when the former arose, beckoned his secretary to withdraw, and received his distinguished visitor cordially. But when Carteret presented the outspread parchment, bearing the original of the duke's grant with his grace's seal and signature, Nicolls could not restrain his feelings. His temper flamed out in words of fierce anger at first. He stormed, and uttered denunciations in language as respectful as possible. He paced the floor backwards and forwards rapidly, his hands clenched behind his back, and finally calmed down and begged his visitor's pardon for his uncontrollable outburst of passion.

Nicolls yielded gracefully but sorrowfully to circumstances, and contented himself with addressing a manly remonstrance to the duke, in which he urged an arrangement for the grantees to give up their domain in exchange for a hundred thousand acres all along the sea-coast. It was too late. In pursuance of the duke's orders, Nicolls formally surrendered Albania into the quiet possession of Carteret, and thenceforth that region appeared as New Jersey on the maps. Its governor crossed over to his domain early in August, and landed, at the head of a few followers, with a hoe on his shoulder in token of his intention to become a planter among them. He chose for his seat of government a beautifully shaded spot not far from the strait between Staten Island and the main, called The Kills, where he found four English families living in as many neatly-built log cabins, with gardens around them. In compliment to the wife of Sir George Carteret, the governor gave to the place the name of Elizabethtown, which it yet retains. There he built a house for himself near the bank of the little creek, and there he organized a civil government. So was laid the foundations of the colony and commonwealth of New Jersey.

The land on which Governor Carteret found the four families had been bought of some Indians

on Long Island, who claimed it as their own. They gave a deed of it to John Bailey, Daniel Denton, and Luke Watson of Jamaica, Long Island, and Governor Nicolls granted a patent for it to seventy-four associates, whose descendants are numerous in East Jersey. This patent was given before Nicolls had heard of the extraordinary grant of the Duke of York and when the governor's grantees were informed of that transaction, they resolved to assert their rights, as against the claims of the duke's friends. Some of the company went to Elizabethtown to confer with Carteret on the subject. At the head of the embassy was John Ogden, of Long Island, who had left England on the accession of Charles the Second to the throne, for he was republican. The governor received them under the shadow of a great tulip tree on the borders of the creek, and there the conference was held. Ogden showed the Indian deed and the Nicolls grant. Carteret showed the duke's grant with his seal and signature attached. Ogden declared that Indian titles were more valid than royal titles, because the grantors were the original owners of the soil. This point was conceded, when the governor pointed to the lion in the British arms impressed upon the seal, as an emblem of competent power, intimating that might makes right. By this intimation the spirit of Ogden was powerfully stirred. Pointing to the sun as the visible presence of the Great Spirit whom all the Indians worshipped, he said: "As far above petty kings and their powers as is the sun in the heaven, now making the earth teem with abundance and beauty, above all below, so far is justice, the prime attribute of God, above might - the mere brute force that gives kingship to the lion and the eagle among beasts and birds. The Dutch acquired possession of this soil by the divine right of a just purchase from the Indians; King Charles had no right to this domain but that of a strong-armed robber. The British lion on that seal is, in this case, only an emblem of oppression and wrong, whose only warrant for injustice is his strength to conquer. In this land monarchs will yet be taught that they have no divine rights not the common property of their subjects, and that there is more strength in justice than in the sword."

John Ogden was a prophet. Under that tree on the soil of New Jersey, that sturdy republican caught luminous visions of the struggles of a people with royalty for the rights of man, which, more than a hundred years afterwards, led to the dismemberment of the British empire and the founding of our free Republic. Carteret admired his spirit, but his words sounded too much like the voices of the followers of Cromwell, and he refused to hold further conference with him. "Very well," said Ogden. "We shall maintain our rights as best we may;" and he and his friends were about to depart, when the courteous governor invited them into his house to partake of refreshments. He then accompanied them to their boat at the Kills, and gave them a cordial invitation to come again as friends, but not as ambassadors.

The Long Islanders liked the good-natured governor personally, and to show their kind feeling toward him and his family, they gave the name of Elizabethtown Associates "to their company, and to their territory the Elizabethtown Grant." They adhered to their determination to defend their rights; and during the seven years that Philip Carteret governed New Jersey there were frequent and severe conflicts between the "Associates" and the grantees of the Duke of York.

Chapter XXII

The "Friends" or "Quakers" - William Penn Obtains a Charter for Pennsylvania - Emigration to Pennsylvania - Penn Visits America - The Swedes on the Delaware - Treaty with the Indians - Penn Visits New York - Meets the First Pennsylvanian Assembly - Visits Lord Baltimore - Finds Philadelphia - Settlers in North Carolina - The Carolinas Granted to Royal Favorites - Settlements on the Cape Fear - Charleston Founded - Government for the Carolinas Framed.

LATER in the seventeenth century than the period of settlement in Delaware and New Jersey was the domain called Pennsylvania colonized, chiefly by a sect called Quakers in derision. That sect appeared in England at about the time when Roger Williams was there to procure a charter for Rhode Island. Their founder and preachers were among the boldest and yet the meekest of the non-conformists. Their morality was so strict that the world called them ascetics - persons who devote their lives to religion only. They carried this strictness into all departments of life and personal habits. Fashionable dress, extravagance in expenditure, dancing, attendance at theatres, games of chance and other amusements were forbidden and music was discouraged as a seductive vanity. Taking part in war, slavery, lawsuits, intemperance and profanity of speech, was a sufficient reason, if persisted in, for the expulsion of a member from the Society; and the whole body was bound to keep a watch upon the actions of each other. Their practices so generally agreed with their principles that society was compelled to admit that the profession of a Quaker or "Friend," as they styled themselves, was a guaranty of a morality above the level of the world.

George Fox, a shoemaker of Leicestershire, England, was the founder of this sect. At the age of nineteen years, conceiving himself to be called by God to preach the gospel of Jesus, he went from place to place exhorting his hearers to repentance and newness of life. He complained of the coldness and spiritual deadness of all the modes and forms of religious worship around him, and thereby he soon excited a persecuting spirit by which his ministerial life of about forty years was marked as a pilgrimage from one prison to another. When, in 1650, he was called before Justice Bennet, of Derby, he admonished that magistrate to repent, and "tremble and shake before the word of the Lord," at the same time his own body was violently agitated by emotion. Then and there the sect received the name of Quakers.

Among the multitude of converts to the moral and religious doctrines of George Fox was young William Penn, a son of the distinguished admiral of that name. He embraced the doctrines and adopted the mode of life of George Fox and his followers, while he was yet in college. Then he had a long and severe struggle with his father, a worldly and ambitious man, for the privilege of following the directions of his conscience. He was beaten and turned out of doors by the angry admiral; he was sent to France to be lured with gaiety; and he was dazzled with promises of wealth and distinction. He suffered with his sect. On one occasion he was tried, with another, on a charge of preaching in the streets. The jury, after being kept without fire, food or water two days and nights, brought in a verdict of "not guilty," when they were each heavily fined by the court and committed to Newgate and Penn and his companion were also fined and imprisoned for contempt of court in wearing their hats in the presence of that body. The young Quaker was then

only about twenty-four years of age.

Many "Friends" had emigrated to America, and two had become proprietors of New Jersey. Penn acted as umpire between them, in a dispute that arose, and so his particular attention was drawn toward his country. He looked with longing eyes across the Atlantic for a home for himself and his sectarian friends, out of the reach of persecution. From the crown he obtained a charter for a vast territory beyond the Delaware, in payment of a debt of eighty thousand dollars due to his father from the government, with perpetual proprietaryship given to him and his heirs, in the fealty of an annual payment of two beaver skins. Penn proposed to call the domain "New Wales," in honor of the land of his ancestors, but the Welsh secretary of state objected. Then he suggested "Sylvania" as appropriate for such a woody country. The secretary who drew up the charter prefixed the name of Penn to Sylvania, in the document. The proprietor offered him a hundred dollars if he would leave it off. On his refusal to do so, Penn complained to the king - the "merry King Charlie" - who insisted that the province should be called "Pennsylvania," in honor of his dead friend the admiral. And so it was. The domain extended north from New Castle in Delaware three degrees of latitude, and five degrees of longitude west from the Delaware River. To Penn was given power to ordain all laws with the consent of the freemen, subject to the approval of the king. No taxes were to be raised except by the Provincial Assembly; and clergymen of the Anglican Church were to be allowed to reside in the province without molestation.

Penn's charter was granted on the 14th of March, 1681. In May he sent his kinsman, William Markham, to take possession of his province and to act as deputy governor. A large company of emigrants went with him. They were employed by the "Company of Free Traders," who had purchased lands in Pennsylvania of the proprietor. They seated themselves near the Delaware and "buildd and planted." With the help of Algernon Sidney, the sturdy republican martyr who perished on the scaffold soon afterward, Penn drew up a code of wise, liberal and benevolent regulations for the government of the colony, and sent them to the settlers the next year for their approval. It was not a formal constitution, but a body of wholesome laws for the benefit of all concerned.

Penn found that the want of a seaboard for his province would be a serious bar to its future prosperity. He coveted Delaware for that purpose, and resolved to have it if possible. It was claimed by Lord Baltimore as a part of Maryland, and had been a matter of dispute between him and the Duke of York. The latter, for the sake of peace, offered to buy the territory of Baltimore. The baron could not sell. Penn then assured the duke that Lord Baltimore's claim was against law, civil or common. The duke gladly assented to the opinion, and the worldly-wise Quaker obtained from his grace a quit-claim deed for the territory comprising the whole State of Delaware, then, as now, divided into the counties of Newcastle, Kent, and Sussex; also for all of his interest in the soil of Pennsylvania.

When Penn had gained these coveted possessions, he made immediate preparations for going to America and within a week after the bargain was officially settled, he set sail in the ship

Welcome with about one hundred emigrants, many of whom died of small-pox on the voyage. That was at the close of August, 1682. On his arrival at New Castle early in November, he found almost a thousand new emigrants there. These, with the three thousand old settlers - Swedes, Dutch, Huguenots, Germans and English composed materials for the solid foundation of a state. There, in the presence of the people, he received from the agents of the Duke of York a formal surrender into his hands of that fine domain. The Dutch had, long before, conquered and absorbed the Swedes on the Delaware; and by virtue of his charter, giving him a title to all New Netherland, the duke claimed this territory as his own. By this transfer, Penn inherited for himself and descendants a dispute with the proprietors of Maryland. In honor of the duke, the courteous Quaker called Cape Henlopen Cape James, but the two capes of the Delaware - Henlopen and May - have preserved their original name given to them by the Dutch.

Having secured his domain, Penn went many miles up the Delaware River, to the present Kensington district of Philadelphia, and there, under a wide- spreading elm, just shedding its foliage, he concluded a treaty with Indian chiefs, not for the purchase of lands, but to confirm what Markham had promised them for him, and to make an everlasting covenant of peace and friendship with them. "We meet," Penn said, "in the broad pathway of good faith and good will; no advantage shall be taken on either side, but all shall be openness and love. I will not call you children; for parents sometimes chide their children too severely; nor brothers, only; for brothers differ. The friendship between me and you, I will not compare to a chain; for that the rains might rust, or a falling tree might break. We are the same as if one man's body was to be divided into two parts; we are all one flesh and blood." Then he gave them presents and they in turn handed him a belt of wampum as a pledge of their fidelity. They were delighted with his divine words, and believed in his noble promises. "We will live in love with William Penn and his children," they said, "as long as the sun and moon shall endure." And they did. Not a drop of the blood of a Quaker was ever shed by an Indian.

William Penn had achieved a marvelous victory over the savage arm and the savage spirit. While in other colonies the might of the sword and musket, of the arrow and the hatchet, were making fearfully red records of crime while the savages were in fierce array, secretly and openly, against the pale-faced intruders, Penn had conquered and subdued those of Pennsylvania by love. There were not even contentions between the races there.

"We have done better," said the Friends, in their Plantation Speech, in 1684, "than if, with the proud Spaniards, we had gained the mines of Potosi. We may make the ambitious heroes whom the world admires, blush for their shameful victories. To the poor, dark souls round about us, we teach their rights as MEN." Significant is the question of the historian "Was there not progress from Melendez to Roger Williams? from Cortez and Pizarro to William Penn?"

There is no written record of that treaty made in the open air on the banks of the Delaware. We have accounts of the personal character of the council. Penn was then a graceful man, strong built and of fair complexion, and thirty-eight years of age. Most of his companions were younger than himself, and all were dressed in the garb of the Quakers - the fashion of the more simple

Puritans during the Protectorate of Cromwell. The Indians were clad in the skins of beasts, for it was on the verge of winter - their harvest time was over. Frost and expanding buds were stripping the trees of their foliage, and every aspect of the scene was becoming dreary excepting the bright council-fire under the great elm around which the high contracting parties were gathered. Penn was accompanied by the deputy governor and a few others; and the Indian sachems brought their wives and children, who sat upon the ground modestly back.

From that treaty place, Penn journeyed through New Jersey to New York and Long Island, visiting Friends and preaching with fervor. Then he returned to the Delaware, and on the seventh of November he went to Uplands (now Chester), where he met the first Provincial Assembly of his province. There he made known his benevolent designs toward all men, civilized and savage, and excited the love and reverence of his hearers. The Assembly tendered their grateful acknowledgments to him, and the Swedes authorized one of their number to say to him in their name that they would live, serve and obey him with all they had, "declaring that it was the best day they ever saw." He informed the Assembly of the union of the territories (as Delaware was called) with his province, and received their congratulations. Then was laid the foundations of the commonwealth of Pennsylvania.

From Chester, Penn went to Maryland to confer with the third Lord Baltimore concerning their boundary lines, but did not make a satisfactory arrangement. On his return, he went up the Delaware in an open boat to Wicaco, to attend the founding of a city, to which allusion had been made in his "Concessions," in 1681. Before his arrival in this country he had determined to give to the future city the name of Philadelphia - a Greek word signifying brotherly love - as a token of tended to govern his province. Near a block-house which the Swedes had built, and which they had changed into a church, he purchased lands extending from the high banks of the Delaware fringed with pines to those of the Schuylkill. There his surveyors laid out the city of Philadelphia upon a plan which would embrace twelve square miles.

Although the efforts of Raleigh and Coligny to make settlements in the warmer portions of North America had utterly failed, and the country south of the James River was untrodden by the foot of the white man unless by the few survivors of the lost colony of Roanoke Island or around the Spanish fort at St. Augustine, the desire to plant colonies there remained strong, and finally led to the wished-for result. From time to time restless, discontented, adventurous or greedy persons went there to find homes for themselves and their children, or to acquire fortunes, but no permanent settlement was planted until past the middle of the seventeenth century.

So early as 1609, some colonists under the direction of Captain John Smith left Jamestown and seated themselves on the Nansemond River, near the Dismal Swamp. In 1622, the ambitious Porey, Secretary of the Virginia colony, penetrated the country southward to the tide-waters of the Chowan River. He told, in earnest words, of the beauty and richness of the country, but did not induce settlers to go there. Eight years later, as we have observed, Sir Robert Heath, the Attorney General of Charles the First, obtained from his king a charter for a domain south of Virginia, six degrees of latitude in width, and extending westward to the Pacific Ocean. This

included the region between Albemarle Sound and the St. John's River in Florida. That patent was declared void in 1663, because neither the proprietor nor his assigns had fulfilled their agreements.

Sufferers from the oppression of the State Church in Virginia looked to the wilderness for freedom, as the Huguenots and the Pilgrims had done. In 1653, a few Presbyterians from Jamestown settled on the Chowan River near the present village of Edenton. Other non-conformists followed, and the settlement flourished. Already the New England colonies had begun to swarm. The Massachusetts hive had become too small; and in 1661, some adventurous New Englanders appeared in a small vessel, in the Cape Fear River, in search of a home in a more genial climate. They purchased lands of the Indians, and were making the experiment of establishing a colony of farmers and herdsmen there, when news came that the whole region had been given by Charles the Second to some of his favorites. The New Englanders had partners in their enterprise, in London. These pleaded, in behalf of the claims of the colonists, their prior purchase of the soil, and also their right to self-government. A compromise was offered by the patentees, yielding to every claim of the settlers excepting the ownership of the soil and that they offered at a yearly rent of a half-penny an acre. The soil was not inviting enough for those who might choose a dwelling-place from almost an entire continent. Most of the New Englanders returned home and "spread a reproach on the harbor and the soil" at Cape Fear.

The grant alluded to was made to several of the rapacious courtiers of Charles the Second, the most of them men past middle-life in age, and possessed of the easy virtue which distinguished the reign of that monarch. They begged the domain of the king under the pretense of a pious zeal for the propagation of the gospel among the heathen. Their real object was to rob the heathen of their lands, and to accumulate riches and honor for themselves. These grantees were the covetous and time-serving Earl of Clarendon, the historian and the Prime Minister; Monk, who, for his conspicuous and treacherous services in the restoration of Charles to the throne of his father, had been created Duke of Albemarle; Lord Craven, who is supposed to have been the husband of the Queen of Bohemia; Sir Anthony Ashley Cooper, afterward Earl of Shaftesbury; Sir John Colleton, a corrupt loyalist who had played false to Cromwell; Lord John Berkeley and his younger brother, Sir William, who was then governor of Virginia and the "passionate, ignorant and not too honest" Sir George Carteret, proprietor of New Jersey. It is said that when these petitioners appeared before Charles in the garden at Hampton Court and presented their memorial so full of pious pretensions, the monarch, after looking each in the face for a moment, with a merry twinkle of his eye, burst into loud laughter, in which his audience joined involuntarily. Then taking up a little shaggy spaniel, with large, meek eyes, and holding it at arms length before them, he said "Good friends, here is a model of piety and sincerity which might be wholesome for you to copy." Then tossing the little pet to Clarendon, he said "There, Hyde, is a worthy prelate; make him archbishop of the domain which I shall give you." He granted the prayer of the petitioners, and in March, 1663, he gave them a charter for the territory which had been given to Sir Robert Heath. By the terms of that charter, the proprietors were made absolute sovereigns of the domain, returning to their king only a bare allegiance. Charles, with grim satire, introduced into the preamble of the charter the statement that the petitioners, excited with a laudable and pious zeal for the

propagation of the Gospel, have "begged a certain country in the parts of America not yet cultivated and planted, and only inhabited by some barbarous people who have no knowledge of God." The title of "Carolina," in honor of the king, was given to this vast domain.

We have observed that some non-conformists from Virginia were settled on the banks of the Chowan ten years before the charter was granted. How extensive was the settlement at the latter period, we do not know. The plantations were mostly on the northern bank of the Chowan, and had become so conspicuous that in the autumn of 1663 the new proprietors authorized Governor Berkeley, of Virginia, to extend his jurisdiction over them. He organized a separate government instead, under the title of the Albemarle County Colony, so named in honor of Monk. He appointed William Drummond, a Presbyterian emigrant from Scotland to Virginia, and a republican at heart, governor, and gave to the colonists every freedom which they could reasonably desire. Here was presented the anomaly of a colony founded under the direction and control of rigid churchmen and royalists who were filling the prisons of England with men like John Bunyan, composed of non-conformists as rigid as these, and republicans as staunch as Sidney. And they were left to grow into an independent state with very little hindrance.

Two years later some English emigrants came from Barbados, purchased from the Indians a tract of land on the Cape Fear River, thirty-two miles square, including the domain abandoned by the New Englanders, and near the site of Wilmington founded a settlement. They treated the few New Englanders who had remained very kindly, and harmony prevailed. This settlement was soon organized into a political community under the title of the Clarendon County Colony, in honor of the historian. Sir John Yeamans, an impoverished baronet who had settled in Barbados to improve his fortune, was appointed governor of the new colony, with a jurisdiction extending from Cape Fear to the St. John's River. The poverty of the soil prevented a rapid growth of the settlement, yet the industry of the inhabitants made them prosperous. Finding themselves in the bosom of a vast pine forest, the settlers turned their labor into the manufacture of boards, shingles and staves, and the gathering of turpentine, for all of which they found a ready and profitable sale in the West Indies. The settlement became permanent and so, with the organization of the two colonies, the foundation of the commonwealth of North Carolina was laid.

The avaricious courtiers now sought the acquisition of more territory, and in June, 1665, they readily obtained from the king another charter which confirmed the former one, and gave renewed assurance and commendation of the "pious and noble purpose under which these men thought it decent to cloak their ambition and rapacity. It granted to them the territory from the now southern boundary of Virginia to the peninsula of Florida, and westward to the Pacific Ocean, comprising all of our States excepting the lower part of Florida south of the thirty-sixth degree, and a part of Mexico, the whole under the name of Carolina. The terms of the charter give evidence that the founding of a great empire was contemplated. Provision was made for the appointment of legislators and magistrates; for levying troops and erecting fortifications; waging war by sea and land; erecting cities establishing manors and baronies, and creating titles; levying impost duties; and other features coincident with those of the existing British government. Every favor was extended to the proprietors," says an eminent historian; "nothing was neglected but the

interests of the English sovereign and the rights of the colonists." It was the duty of Clarendon, as Prime Minister of the realm, to affix the great seal of the kingdom to this charter that conferred such extraordinary privileges upon himself and his seven associates.

In the year 1670, the proprietors sent three ships with emigrants to settle the more southern portions of Carolina. These were under the directions of William Sayle and Joseph West. Sayle had already explored the coasts; and twenty years before, he had endeavored to plant in the Bahama Isles a Puritan colony from Virginia, and to establish an "Eleutheria" - a place dedicated to liberty - among the islands near the coast of Florida. The three ships entered Port Royal harbor, and the emigrants landed at Beaufort Island, near the place where the Huguenots built Fort Carolina a hundred years before. There Sayle died early in the following year, and was buried under a broad live-oak tree draped with Spanish moss. The emigrants abandoned Beaufort soon afterward, and sailing northward entered Charleston harbor. On the banks of a stream a few miles above the site of Charleston, they landed, built houses and cultivated the soil. There they planted the first seeds of the colony of South Carolina at a spot known as Old Town.

The settlers found the Indians unfriendly, for tradition had taught them to believe that the white man was a cruel robber. The planters were compelled to labor in the fields and on the waters, well-armed, yet they prospered; and they soon conquered the savages by kindness. West exercised the authority of magistrate until the arrival of Sir John Yeamans from Barbados with the commission of governor late in 1671. He brought with him fifty families and many negro slaves. This was the introduction of slave-labor into South Carolina, which has always been preeminently a planting state.

The settlement at Old Town was organized under the title of the Carteret County Colony, and representative government was established there in 1672. So was founded the commonwealth of South Carolina. It was known as a place where freedom was enjoyed, and emigrants flocked to it from England, Holland, and New York. They spread over the peninsula between the Ashley and another stream which they called the Cooper River, both so named in honor of Ashley Cooper, one of the proprietors. At Oyster Point, at the junction of three streams, on the verge of a fine harbor and in sight of the sea, they laid the foundations of a capital city for the province eight or ten years later, and named it Charles Town (Charleston) in compliment to the king. Old Town was abandoned, and the new village flourished. Very soon thriving settlements were seen along the Santee and Edisto Rivers; and the region between the Ashley and Cooper - the Ke-awah and E-ti-wan of the Indians - became quite populous with industrious inhabitants.

We have observed that it was designed to establish a great empire in the region of the Carolinas. It was deemed proper to devise a scheme of government commensurate with that grand idea. To Sir Ashley Cooper, and the philosopher John Locke, was entrusted the task of framing a constitution. Cooper was then about forty-seven years of age, and in the full maturity of his genius and power. He was of an old and wealthy family, and was connected with some of the most distinguished members of the English aristocracy. He was now a royalist of the strictest pattern. A few years later (1672), he was elevated to the peerage as Earl of Shaftesbury, and

made Lord High Chancellor of England. Locke was much younger - only thirty-four - but was a more profound thinker than Cooper, and was already famous as a philosopher. He was a tutor of Cooper's son. His views of government were consonant with those of his friend, the statesman and courtier. Neither of these men was fitted for the task of framing an acceptable constitution for the government of a free people, and the magnificent scheme which they prepared, with the title of "Fundamental Constitutions," was entirely inconsistent with the condition and circumstances of the American colonists. It was the production chiefly of the brain and hand of Locke, it is believed, and was perfected in 1669.

For purposes of settlement, the proposed constitution provided for dividing the vast domain into counties, each to contain four hundred and eighty thousand acres. These lands were to be distributed in five equal parts, one-fifth to remain the inalienable property of the proprietors; another fifth the inalienable property of two orders of nobility, namely, landgraves or earls, and caciques or barons, one of the former and two of the latter belonging to each county; and the remaining three-fifths to belong to "the peoples," that is to say, "farmers and lords of manors, the latter having no prescriptive legislative powers, but exercising judicial functions on their respective domains, in baronial courts. The number of the nobility was not to be increased nor diminished, the places of those who should not leave heirs, to be supplied by election. It gave to every freeman of Carolina absolute power over his negro slaves; and tenants, cultivating small quantities of land, were not only to be denied political franchises of any kind, but were serfs of the soil, and under the jurisdiction of their lord, without appeal and all their children were to endure the same social degradation to all generations."

When that elaborate constitution, which provided for titles, and classes, and aristocratic distinctions in America, was submitted to the people of the Carolinas, they rejected it as absurd in its details. They had made judicious laws for their own government, were satisfied with their workings, and resolved to have nothing to do with the scheme of the proprietors. Under their own laws they built up flourishing colonies, inseparable in interests and aims, and so they remained over sixty years, when they were dismembered and formed the separate colonies of North and South Carolina.

Chapter XXIII

The English and Spaniards - Slaves in South Carolina - Prisoners for Debt in England - Revelations of the Prisons - Measures for the Relief of the Prisoners - Charter for Georgia Granted - General Oglethorpe Accompanies Emigrants to the Savannah River - Joy of the Carolinians - Friendship of the Indians - To-mo-chi-chi - A Treaty - Indians Accompany Oglethorpe to England - Their Reception There - Oglethorpe Returns to Georgia with the Wesleys - An Unwise Code for Georgia.

SELFISHNESS and philanthropy went hand in hand in promoting English settlements in the country south of the Savannah River. There seemed to be an unconquerable antagonism between the Spaniards and the English, in both hemispheres. The Spaniards viewed with jealousy the rapid increase of English settlements in America, especially in the region bordering on Florida, which the Castilians held by right of undoubted first discovery. They saw the English rapidly gaining the monopoly of the trade with the Indians and exercising a wide influence over the native inhabitants in the Gulf region, who had been taught by past sad experience to look upon the Spaniards as their abiding enemies. Therefore the Castilians in Florida were disposed to cast obstacles in the way of an extension of the English colonies southward.

Early in the eighteenth century, South Carolina was well stocked with slaves from Africa, especially in the rice-planting districts, where Negro's performed nearly all of the manual labor. They had become essential to the prosperity of the colony. The Spaniards believed that the most effectual way to discourage the English planters add to prevent their making settlements below the Savannah River, would be to entice away their slaves by promises of the freedom and the privileges of the Spanish subjects. This measure was successfully employed. A complete regiment was formed at St. Augustine of runaway slaves from South Carolina; and they were taught to hate the English as their enemies. This was an alarming state of things for the South Carolinians, and they anxiously sought a remedy for the evil.

Between the Savannah and Alatomaha rivers, there was a region wholly unoccupied by white inhabitants at the end of the first quarter of the eighteenth century. The South Carolinians proposed to erect a barrier between themselves and the Spaniards in Florida, by the planting of an English colony in that region. They asked the British government to do so. There were great obstacles in the way. Voluntary emigrants preferred a settled country away from immediate danger from foes; and a penal colony for British convicts was not desirable.

At that juncture, the subject of the condition of prisoners for debt in Great Britain was attracting general attention. These men, unconvicted of any crime, were crowding the jails of the kingdom, and enduring sufferings more horrible than those inflicted upon negro slaves in the West Indies. Disease and moral degradation were making sad havoc among them. The hearts of the benevolent yearned to relieve them. A humane and wealthy citizen of London bequeathed his fortune to the government to be employed in liberating the most deserving insolvent debtors from the jails, where they were doomed to hopeless indigence and misery by the cruel laws oftentimes

more cruelly administered.

This act caused the appointment of a committee by Parliament to inquire into the condition of prisoners for debt. It was done at the suggestion of Colonel James Edward Oglethorpe, a graduate of Oxford, a brave soldier, and then a member of Parliament. That was in the year 1728. Colonel Oglethorpe was made chairman of the committee, and they entered upon their duties with vigor. The revelations of the prisons were horrible and sickening. The writings of the afterwards illustrious Howard give us vivid pen-pictures of the scenes. The pencil of Hogarth has left us actual delineations of them. The English merchant, unfortunate in his business, was often suddenly plunged from a sphere of affluence and usefulness, to the dreadful dens called prisons, there to herd with the ignorant and vile in hopeless poverty and degradation.

Oglethorpe stood before one of these men who had been a distinguished alderman, in London, when he was a boy, and had been highly esteemed for his many virtues and practical benevolence. He had also been a "merchant prince," but had been ruined by great losses. His creditors sent him to prison. In an instant he was compelled to exchange a happy home and delightful society for a loathsome prison cell and the company of the debased. One by one his friends, who could aid him in keeping famine from his wretched abode, disappeared, and he was forgotten by the outside world. Twenty-three years he had been in jail. Gray-headed, haggard, ragged and perishing with hunger, he lay upon a heap of filthy straw in a dark, damp, unventilated room. His devoted wife, who had shared his misery eighteen years, had just starved to death, and lay in rags by his side, silent and cold. An hour before he had begged his jailor, with outstretched arms of supplication, to remove her body to the prison burying-ground. The inhuman wretch, who knew his history, refused with an oath, saying, with horrid irony: "Send for your alderman's coach to take her to the Abbey!"

The man expired when he had finished his sad story. There and then, inspired by God, Oglethorpe conceived a scheme of providing an asylum for such as these beyond the sea, where they might enjoy comfort and happiness. He also resolved to bring such jailers to punishment. The records of some of the English state trials show how earnestly he pursued these felons.

Oglethorpe proposed to plant the colony of unfortunates in the unoccupied country below the Savannah. His colleagues readily assented, and in his report to the House of Commons he laid a scheme for the colony before that body. It promised the advantages of securing that domain to the British Crown, relieving the South Carolinians from danger, and doing good to a large class of worthy British subjects. The king and Parliament approved the project. An appropriation of money for the object was made, and on the 9th of June, 1732, the king granted a charter for founding a colony with the title of Georgia. That name was given in compliment to King George the Second, then the ruling monarch of England.

The management of the new settlement was entrusted to twenty-one "noblemen and gentlemen," who were constituted Trustees for Settling and Establishing the "Colony of Georgia." Colonel Oglethorpe was one of them. They were vested with legislative powers for the

government of the colony for the space of twenty-one years, at the expiration of which time a permanent government was to be established by the king or his successors in accordance with British law and usage.

Oglethorpe generously offered to accompany the emigrants and assist them in making their first settlement. Every feature of the project commended itself to the hearts of the British people. Donations from all ranks and classes were freely given to assist the emigrants in planting comfortable homes in the wilderness. The Bank of England made a generous gift; and the House of Commons, from time to time, voted money, amounting in the aggregate, in the course of two years, to one hundred and sixty thousand dollars. Lord Viscount Percival was chosen president of the trustees, and a code of regulations for the colony, with agreements and stipulations, was speedily prepared.

All things being in readiness, thirty-five families - one hundred and twenty emigrants, men, women, and children - sailed from Gravesend for Georgia in the ship *Anne*, of two hundred tons burden, on the 6th of November, 1732. They were accompanied by Colonel Oglethorpe as governor, the Rev. Mr. Shubert, of the Church of England, as a spiritual guide, and a few Piedmontese silk-workers; for one of the projects of the trustees was the growing of silk in Georgia.

The *Anne* arrived at Charleston harbor at the middle of January, 1733, where the emigrants were received with joy by the inhabitants. The Assembly of South Carolina voted them a large supply of cattle and other provisions, for they were regarded as valuable auxiliaries. Their mutual aid was foreshadowed by the following lines which appeared in the *Gentleman's Magazine*:

"To Carolina be a Georgia joined! Then shall both colonies sure progress make, Endeared to either for the other's sake; Georgia shall Carolina's protection move, And Carolina bloom by Georgia's love."

The *Anne* was piloted from Charleston into Port Royal Sound, near Beaufort Island, whence the emigrants were to be conveyed to the Savannah River in small boats. From that point, Oglethorpe, accompanied by a guide furnished by the council of South Carolina, went forward to select a suitable place for a settlement. He chose Yamacraw Bluff, on the Savannah River, about ten miles from the sea, where Governor Moore, of South Carolina, had planted a small tribe of Creek Indians thirty years before, as owners of the soil. It was a high plain, its river front forty feet above the stream, and gently sloping to the swamps in the rear. There he laid out a town and returned to Beaufort, where the emigrants had landed, to conduct them to their final destination. They all arrived there on the first of February, and slept in tents that night.

The South Carolinians had sent boats with the additional provisions, and a body of rangers for the protection of the colonists while the latter should build cabins and a fort for their defence. The town projected by the governor was named Savannah, and there the emigrants soon had comfortable dwellings and a formidable military work armed with cannons. Concerning this spot,

Oglethorpe wrote to the trustees:

"Upon the river side, at the centre of this plain, I have laid out a town, opposite to which is an island [Hutchinson's Island] of very rich pasturage, which I think should be kept for the trustees' cattle. The river is pretty wide, the water fresh, and from the key of the town you see its whole course to the sea, with the island of Tybee, which forms the mouth of the river. For about six miles up into the country the landscape is very agreeable, the stream being wide and bordered with high woods on both sides."

Before their departure from England, the colonists had received some military training from the sergeants of the guards, in London. Oglethorpe now formed them into a company of militia with officers; and he frequently exercised them that the Indians might be impressed with their military skill. The fort was soon completed and cannon mounted upon it. Then the governor turned his earliest attention to the important business of establishing friendly relations with the Indians. He was within territory claimed by the powerful Creek Confederacy, and not far from the seat of a tribe composed partly of Yamacraws and partly of Yamasees or Savannahs, over whom presided To-mo-chi-chi, a venerable chief. He had suffered banishment at the hands of his people, the Lower Creeks, but for what cause is unknown. He was then ninety-one years of age, of commanding person and grave demeanor. His power over his immediate followers was supreme, and his name had great weight throughout the Confederacy as a renowned warrior and wise sachem. Oglethorpe therefore sought an early interview with To-mo-chi-chi. It was held under the tall pines and wide-spreading live-oaks that covered Yamacraw Bluff, with Mary Musgrove, the half-breed Creek wife of a South Carolina trader, then at Savannah, as interpreter.

That interview was very satisfactory. To-mo-chi-chi pledged his unwavering friendship for the English, and assisted Oglethorpe in making arrangements for a general convention of the heads of the Confederacy. That convention assembled in one of the large houses at Savannah, late in May, 1733, and was attended by fifty chiefs representing eight tribes of the Creek Nation.

Oglethorpe addressed the assembled chiefs. He told them of the great power, wealth and wisdom of the English people, and of the advantages the Indians might derive by the cultivation of friendly relations between the two races. He expressed a hope that as the Indians had a superabundance of land, they would freely resign a portion of it to those who had come over the sea for their instruction and benefit. When the governor ceased speaking, the venerable To-mo-chi-chi arose and, in behalf of the Creek warriors present, he gave their cordial assent to Oglethorpe's proposition. "I was a banished man," he said. "I came here, poor and helpless, to look for good lands near the tombs of my ancestors, and the trustees sent people here. I feared you would drive us away, for we were weak and wanted corn but you confirmed our land to us, gave us food and instructed our children." After further declaring the goodness of the English and expressing thanks, To-mo-chi-chi said, as he gave a buffalo-skin to the governor, on the inside of which were delineated the head and feathers of an eagle "Here is a little present. I give you the skin of a buffalo adorned with the head and feathers of an eagle, which I desire you to accept, because the eagle is an emblem of speed and the buffalo of strength. The English are as swift as

the bird and as strong as the beast since like the former, they flew over vast seas to the uttermost parts of the earth and like the latter, they are so strong that nothing can withstand them. The feathers of the eagle are soft, and signify love; the buffalo's skin is warm, and signifies protection; therefore I hope the English will love and protect our little families."

A satisfactory treaty was made by which all unoccupied lands within defined boundaries were assigned to the English. This treaty was ratified by the trustees on the 18th of October, 1733, when the English obtained sovereignty over the domain between the Savannah and Alatomaha rivers, westward from the Atlantic to the extent of tide-water, and all the islands but three from Tybee to St. Simons. Unfortunately the Indians were allowed to reserve for their use in hunting, bathing and fishing the islands of Ossabaw, Sapela and St. Catharines, which were within the limits of the English domain. This reservation was a source of trouble afterwards.

At the conclusion of the treaty, To-mo-chi-chi invited the members of the convention to his own town near by, where they spent the night in feasting and dancing. The treaty was signed on the 21st, when the governor distributed the following presents among the Indians A laced coat and a laced hat and shirt to each of the chiefs to each of the warriors, a gun and a mantle of duffils (a coarse woolen cloth with nap and fringe), and to all their attendants coarse cloth for clothing; a barrel of gunpowder; four kegs of bullets a piece of broadcloth a piece of Irish linen a cask of tobacco pipes eight belts and cutlasses with gilt handles tape, and of all colors; eight kegs of rum to be carried home to their towns one pound of powder, one pound of bullets, and as much provision for each one as they pleased to take for their journey home. Rum appears to have been freely used at first in Georgia. In the minutes of the trustees, under date of August 11, 1733, is the following record Read a letter from Mr. Oglethorpe with an account of the death of several persons in Georgia, which he imputed to the drinking of rum. "Resolved, That the drinking of rum in Georgia be absolutely prohibited, and that all which be brought there be staved." This was a short but pretty effectual prohibitory law.

In the spring of 1734, Oglethorpe went to England, leaving the colony in the care of others. Believing that a sight of England, its inhabitants and evidences of its power, by some of the Indians, would increase the reverence of the savages for Englishmen and add strength and permanence to the colony, he invited To-mo-chi-chi and some of his friends to go with him. The invitation was accepted, and the old Creek monarch with his queen, See-naw-ki; their adopted son and nephew, Too-na-ho-wi and five chiefs, went on the voyage. The vessel reached England in June, when Oglethorpe sent a letter to his friend, Sir John Phillips, in which he spoke of To-mo-chi-chi as an aged chief, the mico or king of Yamacraw, a man of an excellent understanding, so desirous of hearing the young people taught the English language and religion, that, notwithstanding his advanced age, he has come over with me to obtain means and assistant teachers. He has brought with him a young man whom he calls his nephew and next heir, and who has already learned the Lord's prayer in the English and the Indian language. The reception of the governor and his dusky friends was cordial. The Indians were objects of great curiosity, none having been seen in England since Schuyler took some Mohawk kings to the court of Queen Anne. To-mo-chi-chi was made the subject of an ode of eleven stanzas of ten lines each, the first

of which was as follows:

"What stranger this? and from what region far? This wondrous form, majestic to behold? Uncloath'd but arm'd offensive for the war, In hoary age and wise experience old? His limbs inured to hardiness and toil, His strong large limbs what mighty sinews brace! Whilst truth sincere and artless virtue smile In the expressive features of his face, His hold, free aspect speaks the inward mind, Arm'd by no slavish fear, from no vile passion blind."

On the first of August the Indians were conveyed in three of the royal coaches, each drawn by six horses, to Kensington palace, to have an interview with the king. They had been dressed at the office of the trustees in English costume. To-mo-chi-chi and his queen in scarlet and gold. The chiefs, less gorgeously attired, had their faces painted according to their home-custom. They were received at the door of the palace by the royal body-guard and conducted to the presence of the king and queen, who were seated on thrones. Then To-mo-chi-chi presented some eagle's feathers to the monarch, and said:

"This day I see the majesty of your face, the greatness of your house, and the number of your people. I am come for the good of the whole nation called the Creeks, to renew the peace which was long ago had with the English. I am come over in my old days, although I cannot live to see any advantage to myself. I am come for the good of the children of all the nations of the Upper and Lower Creeks, that they may be instructed in the knowledge of the English.

"These are the feathers of the eagle which is the swiftest of birds, and who flieth all around our nations. These feathers are a sign of peace in our land, and have been carried from town to town there; and we have brought them over to leave with you, O great king! as a sign of everlasting peace. O great king! whatsoever words you shall say to me, I will tell them faithfully to all the kings of the Creek nations."

The sovereign gave a gracious answer to this speech, assuring the old chief that he and his people might rely upon the friendship of the English. Then they withdrew. A cloud was upon their spirits. One of the chiefs, a brother of queen See-naw-ki, was very sick with the small-pox. He soon died, and was buried with the custom of his country as nearly as possible. Then Oglethorpe took the whole party to his estate, where they bewailed their loss for several days. After remaining four months in England, and becoming deeply impressed with the greatness of the English people, To-mo-chi-chi and his company returned to Georgia, in the company of a considerable number of new emigrants. The Indians were conveyed to the ship at Gravesend, in the royal coaches, bearing with them presents valued at two thousand dollars. The Prince of Wales had given to To-mo-chi-chi's heir a gold watch, with an injunction to call upon Jesus Christ every morning, when he looked on it. They reached Savannah late in December, 1734. Among the emigrants was an English baronet (Francis Parkhurst) and his family, and fifty-six Saltzburghers newly arrived from Rotterdam.

Oglethorpe did not return to Georgia until the beginning of 1736, when he was received with

joy by the colonists and the Indians. He took with him several cannon and about one hundred and fifty Scotch Highlanders, well skilled in the military art, who constituted the first army in Georgia during its early struggles. With him also came the Rev. John Wesley, the founder of the Methodist Church, and his brother Charles, who came to preach the gospel to the heathen. To Mr. Wesley, To-mo-chi-chi remarked: "I am glad you are come. When I was in England, I desired that some one would speak the great word to me. I will go up and speak to the wise men of my nation, and hope they will hear. But we would not be made Christians as the Spaniards make Christians; we would be taught before we are baptized."

With a population of more than five hundred souls with a military force, and with means for religious instruction, the foundations of the colony of Georgia, were now firmly laid. And had the wisdom of the trustees been equal to their benevolence, immediate and great prosperity would have been visible. But they bound the colonists by such unwise rules and regulations that their energies were cramped, and it seemed, at one time, as if the grand object of the trustees, and the hopes of Englishmen, would be frustrated.

We have now considered the more prominent events in the history of the planting of settlements in America, and the development of many of them into permanent colonies. The ingredients of the story are highly picturesque. The simple outline picture, when drawn from nature with fidelity, possesses marvelous interest to the student of human nature. The imagination may not conceive incidents more romantic than those which sober truth reveals in the career of men and women who came from Europe to explore and make homes in the wilds of America. Nearly all of them were impelled to the undertaking by those powerful motives of human action, - avarice, ambition or the love of liberty. In all of the earlier adventurers and settlers, we see these passions dominating all others. The discoverers stand out on the page of history as grand heroes, worthy of a representation on the shield of Achilles. In the delineation of their deeds and of those of their followers who occupied what they discovered, faith, hope, courage, hardihood, fortitude, indomitable perseverance and untiring energy, are prominent features in the picture. These were the necessary elements of success in the wide and wild fields of adventure, and were ever present in great abundance when required in laying the foundations of our Republic.

We will now consider the processes by which small settlements grew into great commonwealths in the form of British-American colonies.

Book: Our Country: Volume 2

Volume: Vol. 2
Date: 1905

Overview of Our Country: Volume 2

A history of the United States from the discovery of America to the present time (1905). Volume 2 of 8 covers the Virginia Colonists and the first public Thanksgiving in New England through the capture of Detroit and the fate of Pontiac.

Chapter XXIV

The Virginia Colonists - Introduction of Slaves from Africa - Young Women Sent to Virginia - Families and Schools Established There - Constitution of Virginia - Better Prospects - Massacre by Indians - Retaliation - Pestilence - The New British Monarch - An Unpopular Government Deposed - Sir William Berkeley - Another Massacre by the Indians - Death of the Indian Emperor - End of the Confederacy - Berkeley and Royalty - The "Old Dominion."

WE have observed that in Virginia was first established a permanent English colony in our country, when, in 1619, Governor Yeardley organized representative government there, and so laid the foundations of a commonwealth. The tribe of gold-seekers had disappeared forever; but the unwholesome influences of a tribe of felons from the prisons of England, which the king had ordered to be sent to Virginia - a hundred in number - was yet felt in the scandal it had brought upon the colony, and in their demoralizing example. Captain Smith declared that they gave Virginia such a bad reputation, "that some did choose to be hanged ere they would go thither, and were."

Another element was introduced into Virginia society in 1619, which had a powerful influence over the destinies, not only of that colony, but of the nation of which it afterward formed a part. Just at sunset, on a hot evening in August, a Dutch trading vessel arrived from the coast of Guinea with a strange cargo of living creatures for sale. They were black men and women who had been stolen from their homes on that coast and destined for slaves. The planters had heard of the capacity of Africans for enduring labor in warm regions, and they purchased twenty of them - fourteen men and six women. They found them to be good workers and very docile. Others were imported; and so was begun the system of negro slavery in our country - a stain which was washed out with blood almost two centuries and a half afterwards, when the servile race numbered about four million.

At about the same time another element was introduced into Virginia society, which exerted a most healthful and beneficent influence over the colony. The wise Sir Edwin Sandys, who had lately been appointed treasurer of the London Company, had, for the purpose of effecting a

reform, entered upon a thorough and fearless investigation of the abuses which had attended the colonization of Virginia, and retarded its progress. It was then twelve years since the first emigrants landed at Jamestown. A large amount of money had been spent in sending persons to people the region, and yet there were only about six hundred Europeans there when Sandys entered upon his duties. He pursued his purpose with zeal, and very soon he purged Virginia of its bad name. His reputation for candor and other virtues were so well known, that within the space of one year he persuaded more than twelve hundred emigrants to go to the James River. He had patriotic colleagues in the Board, and they effected a wonderful change in the fortunes of the colony.

The English settlers, more delicate in their tastes and habits than the French and Portuguese, would not marry the Indian women, and very few English women had ventured to cross the Atlantic. Therefore the planters of Virginia had not the comforts and sacred connections of married life. Few of them expected to remain in the colony. Most of them looked for a return to England when they should acquire a competency. They were unsettled, and unfitted for patient industry. The sagacious Sandys clearly perceived their needs and the remedy. He proposed to send over to Virginia one hundred virtuous and attractive young English women from the middle class in society, to become wives for the planters, the cost of the transportation of each to be paid by the husband who should choose her.

The scheme involved a half-social, half-commercial speculation. It was tried and succeeded. Ninety young women of the class named were induced to go to Virginia early in 1620. When they arrived at Jamestown, they were landed from the ship in small boats. The shore was covered by young planters who came to see the disembarkation of the novel and precious cargo. Led by the rector of the parish, these maidens walked in procession to the church, where thanksgivings were offered to their Maker for their preservation from the perils of the sea. The church was crowded and within the space of a few days, every maiden was wooed and won by the young planters. Love at first sight was the rule. Several nuptials occurred in the church at the same time. According to contemporary witnesses, the seeming indelicacy of the transaction was qualified by the true affection which prevailed among the married couples, most of them being happily mated. The young matrons sent word home for other maidens to come, and sixty more, "young and handsome," arrived at Jamestown the next year. Others followed.

The price of a wife was at first fixed at one hundred and twenty pounds of tobacco, then the currency of the colony. The money value was about ninety dollars. It finally arose to one hundred and fifty dollars. A debt incurred for a wife was regarded as a confidential one. It took precedence of all others. To encourage wedding, the Company gave preference to married men in conferring employments. The salutary effects of the scheme and of this policy were soon visible in the colony. Homes - fire-sides - family altars - the purest and strongest elements in the foundations of a virtuous and prosperous state, were established. Domestic ties so created, promoted personal virtue and habits of thrift. Men no longer talked of returning to England, but called Virginia their home. Emigration rapidly swelled the population, and before the close of 1621, fifty patents had been granted for land, and there were three thousand five hundred

inhabitants of European blood in Virginia. Settlements had been already made so remote from the capital as the Falls of the James River, where Richmond now stands. Below there, at what is known as Dutch Gap (so called because Germans were employed to cut a new channel for the river across a narrow isthmus there), a town had been founded which was named Henricopolis, and there a church had been built and a grammar-school established for the education of Indian children. When the school was endowed with money and thousands of acres of land, the dignified title of The University of Henrico was given to it. The church, the college and the town have long ago crumbled into ruins, which no longer attract the eye of the curious or the scrutiny of the antiquary.

The blessings of marriage created the necessity for making provision for the education of children. English Bishops and other philanthropists collected money for the purpose. The colonists bore a share of the burden. Other schools beside that of Henrico were established in which Indian children were also taught. Finally, in the reign of William and Mary, more than seventy years after the emigration of the maidens, a college was established at Williamsburg, the new capital of Virginia, which still flourishes, and yet bears the names of those sovereigns.

In the year 1621, the London Company granted a written constitution to the Virginia colonists, modeled after that of England, but exceedingly simple the Pilgrims in the May-Flower, more democratic, gave to themselves a written constitution at about the same time, fashioned to meet the circumstances of their case, and still more simple. A century and a half afterward, as we shall discover, the inhabitants of these two colonies, then founded, were leaders in the great struggle for that political independence which these early constitutions foreshadowed. The Virginia constitution provided for a governor and council to be appointed by the Company, and a popular legislative body to be chosen by the people, and called the House of Burgesses. Each settlement was allowed two burgesses, and these, with the governor and council, composed the General Assembly. That Assembly exercised full legislative power, but none of its acts were valid until they received the sanction of the Company in London. With unexampled justice, it was also provided that no orders from the Company should be binding on the colonists, unless they should be, in like manner, ratified by the General Assembly. This was the work of the Earl of Southampton (the bosom friend of Shakespeare), Sir Edwin Sandys and the patriotic party in England, who were careful to imbue public life in Virginia with the principles of popular freedom. It was at the dawn of that eventful day of political disputes in England which resulted in the beheading of her king and the abolition of monarchy for a season.

When Sir Francis Wyatt came to Virginia, bringing with him the new constitution, he was pleased with the aspect of everything around him and the colonists rejoiced in the prospect of long years of peace and prosperity before them. The atmosphere of their daily life appeared perfectly serene. There was no cloud in the firmament. But at that moment a fearful tempest was brooding, in restraint, in the forests around them. Powhatan, the friend of the English, was dead, and his younger brother, the subtle, treacherous and truly savage Opechancanough (the captor of Smith in the forest), was then wielding the sceptre of his empire. He could command fifteen hundred warriors to do his bidding. He hated the English intensely, and inspired his followers with the

same passion yet lie feigned the warmest friendship for them, and deceived them with Satanic smiles. He believed that the English intended to seize the lands of his empire and exterminate his race, and his patriotism impelled him to strike a blow for his country and countrymen.

Opechancanough used various arts to inflame the anger of the Indians against the English. He had a rival in the admiration of his people, who had shown himself to be a bitter enemy of the colonists. For the double purpose of ridding himself of this rival and exciting the anger of his nation against the English, the emperor sent word to Governor Wyatt that he gave him liberty to cut that man's throat. Such an act would surely have aroused the savages into furious war. It was not done but, unfortunately, in an affray with a settler, the man was shot. The wily emperor pretended to bewail his loss, and so he fired the resentment of the Indians against the English. Then he went secretly to the governor, half-clad in skins, his head plumed with eagle's feathers, and bearing in his belt a finely-wrought hatchet. After making warm professions of friendship, he demanded in a haughty tone, some concessions to his incensed people. His demand was refused, and forgetting himself for a moment, he snatched the hatchet from his belt and struck its keen blade into a log of the cabin, uttering a curse upon the English. His words fell like a fearful revelation upon the mind of the governor. Instantly recovering himself the savage smiled, and said blandly: "Pardon me, governor; I was thinking of that wicked Englishman [Argall] who stole my niece [Pocahontas], and struck me with his sword. I love the English who are the friends of the family of Powhatan. Sooner will the skies fall than my bond of friendship with the English shall be dissolved."

Sir Francis warned his people that there was treachery abroad. They were slow to believe it. There had never been a war with the Indians. Their settlements were scattered - some of them in solitary places - and yet no one had ever been disturbed by the savages since the happy marriage of Pocahontas. So secure had they felt, that they had broken a law which forbade the teaching of the use of fire-arms to the Indians, and had employed them to hunt with the musket. In the midst of this calm of confidence, the tempest suddenly burst upon the colony. At midday, on the 1st of April [the 22nd of March, old style], 1622, the Indians rushed from the forests upon all of the remote settlements at a pre-concerted time, and in the space of an hour three hundred and fifty men, women and children were slain. Even the devoted missionary at Henrico, who had instructed the children of the savages and tenderly nursed the young and old in sickness, was not spared. Among the victims were six members of the council and several of the wealthier inhabitants. On the very morning of the massacre, the treacherous savages were in the houses and at the tables of those whom they intended to murder at noon.

The people at Jamestown were saved by Chanco, a Christian Indian, who heard of the conspiracy in the evening before the massacre. He hastened to Jamestown to warn a friend of impending danger. The alarm spread, but it was too late to reach the more remote settlements. The people at Jamestown were prepared to meet the assassins, and so averted the blow which might have extinguished the colony. Those at a distance, who survived the carnage, beat back the savages and then fled to Jamestown. In the course of a few days, eighty inhabited plantations were reduced to eight. But a large part of the colony was saved.

The people thus gathered at Jamestown by a terrible necessity prepared for vengeance. A vindictive and exterminating war was immediately waged. Every man capable of bearing arms appeared in the field, and fearful retaliating blows were given. The English spread death and desolation over the peninsula between the York and James rivers. The Indians were slaughtered by scores, or driven far back into the wilderness. Opechancanough fled for his life to the land of the Pamunkeys, and lost much of his influence by a show of cowardice. His power was broken, and the strength of his people had departed. Before the war, there were about six thousand Indians within sixty miles of Jamestown, occupying a domain eight thousand square miles in extent at the close of the war, there were probably not a thousand within that territory.

The blight of war, pestilence and famine fell upon the colony. Sickness prevailed among the people, who were gathered into a narrow space for mutual protection. Large areas of land were left uncultivated and many of the settlers, discouraged and terrified, returned to England. The colony of almost four thousand souls was soon reduced to twenty-five hundred; and these never retired at night with all assurance that they would not hear the savage war-whoop before the dawn.

The sufferings of the colonists excited the liveliest sympathy in England. Ships were sent with supplies. The mean king made it the occasion for a false show of generosity. He sent to the colonists a number of guns from the Tower of London, which had been cast aside as useless in Europe.

"They may serve the people," said the king, "against ignorant and naked heathen salvages." The generous Captain Smith, deeply interested in the fate of the colony he had helped to found, offered his services to the Company to lead an expedition to overawe the Indians and to protect the people. Some of the Company, moved by inordinate greed more than by compassion for the colonists, offered to give Smith permission to lead an expedition at his own expense, provided he would give the Company one-half the plunder.

The meddlesome King James, finding a majority of the London Company surely drifting toward republicanism, and disliking the freedom of debate in the General Assembly of Virginia, resolved to control the Company and the colony. "The Virginia House of Burgesses," said Gondamar, "the Spanish envoy at the English court, is but a seminary to a seditious Parliament." The king believed it and at the election of officers for the Company in 1622, he tried to control the choice of candidates. He failed. Then he determined to deprive the Company of their charter, and, by taking control of the affairs of the corporation, regain what he had lost by granting them the liberal third charter. He sent a commission to Virginia, composed of his pliable instruments, to inquire into the affairs of the colony. They tried to coax and frighten the House of Burgesses into a relinquishment of the rights guaranteed to them by the terms of the charter. Finding these representatives of the people firm in support of their liberties, the commissioners recommended a dissolution of the charter. A pliant judiciary assisted the king in the measure, and in July, 1624, the patent was canceled and Virginia became a royal province again. No material change was made in the domestic affairs of the colony. The monarch appointed Sir Francis Wyatt governor,

with twelve councillors of state, but wisely refrained from interfering with the House of Burgesses. He boasted that he would make the colony more prosperous than ever, but he died soon afterward, and was succeeded by his son, Charles the First, on the 6th of April, 1625.

King Charles was a thorough disciple of his father in the science of what James was pleased to call kingcraft, the prime elements of which, as he exhibited it, were lying and deception. He was also as bigoted as his father in his belief in the doctrine of the divine right of kings to govern the people absolutely, and the sacredness of the royal prerogative or the enjoyment of special privileges not accorded to the people. He was only twenty-five years of age when he ascended the throne; and he was a pliant tool in the hands of the Duke of Buckingham, his father's base court favorite, who assisted in bringing to England as the queen of the young king, a Roman Catholic French princess, sister of the monarch of France. Three months after he became king, Charles received the princess at Dover and married her at Canterbury; but they did not enter London for some time because of the ravages of an epidemic there, by which over thirty-five thousand persons perished.

The queen brought with her a retinue of priests and other Roman Catholic attendants. The Protestant sentiment of a majority of the English people was alarmed. This fact, combined with the character of the king, which was uniformly marked by insincerity, deception, falsehood and treachery - the fruits of the favorite's training - made him feared, hated and despised by the honest portion of his friends, as well as his foes, and brought swift trouble upon himself and his country. There were causes which nourished opposition to monarchy, and cherished discontents. These soon led to a civil war, the beheading of the king, and the abolition of monarchy in England for a season. Such was the sovereign with whom the American colonists had to deal for many years, while England was in a state of transition from absolutism or the unbridled rule of the monarch, to constitutional liberty or the enjoyment of rights guaranteed to the people by a constitution respected by the sovereign because his subjects have the power to enforce it. It was a state which Charles would not comprehend; and his stupid obstinacy plunged his country into war with itself, and also with France and Spain.

Charles did not materially change the political situation of the Virginians. His appointment of Sir George Yeardly, the magistrate who had established representative government in Virginia, was a guaranty that no such change would take place. But the king, who was selfish as well as weak, sought to enlarge his private fortune out of the profits of the industry of the Virginia planters of tobacco. He gave them the monopoly of production for the market of England, saying: "It may be well said that the plantation is built wholly on smoke which will easily turn into air, if either English tobacco be permitted to be planted or Spanish be imported." At the same time, he forbade the tobacco-growers selling their products to any persons excepting such as the king had appointed his agents. Among these agents was Sir John Harvey, who had been one of the governor's council, and who has been represented as a rapacious, unscrupulous, avaricious and cruel royalist.

These arrangements did not disturb the Virginians, and the colony prospered until Harvey was

made governor in 1629, two years after the death of Yearly. In 1628, not less than a thousand English people emigrated to Virginia. But the advent of Harvey in 1630 was the beginning of confusion. He was represented by his political foes as an enemy of the people, and he made himself unpopular because he advocated and promoted a system of land grants which would tend to place the soil of the province into the possession of a few landed aristocracy - and so be injurious to the prosperity of the colony. In various ways he offended the Republicans. Violent disputes arose, and after a war of words for several years, the House of Burgesses deposed Harvey and sent commissioners to England with an impeachment. The governor went with the commissioners. The king refused to hear any complaints against his agent, and sent him back clothed with power to rule the state independently of the people.

Harvey was succeeded in 1639 by Sir Francis Wyatt, whose administration was an uneventful one. It ended in February, 1642, when Sir William Berkeley, brother of Lord Berkeley (one of the earliest English proprietors of New Jersey), arrived at Jamestown with the commission of chief magistrate of Virginia. He was a fine specimen of a young English courtier, only thirty-two years of age. Handsome in person, educated at Oxford, polished by extensive travel on the continent and possessing exquisite taste in dress, he was one of the most elegant of the cavaliers of his time. Some salutary measures which he adopted at the beginning of his administration for the benefit of the people made him popular in Virginia; and his natural suavity of manners, and the generous hospitality dispensed at his mansion at Green Spring, not far from Jamestown, sustained that popularity for many years. He was a staunch loyalist, but not a bigoted one and so prudent was the method of his adhesion to the cause of the king during the civil war from 1641 to 1649, that a greater part of the Virginians were in sympathy with him. There was a party for the Parliament, in Virginia, but it was not sufficiently strong to show any serious opposition to royal rule. The colonists were warmly attached to the Church of England, yet there were many Puritans there, for toleration had been the rule - Puritans had even been invited to come, with their ministers, when the peculiar character of the revolution, then going on in England, brought religious sects into political prominence. The Puritans in England were identified with the Republicans in their struggle with royalty. Governor Berkeley was of the cavalier class, and despised the non-conformists. He perceived that a great majority of the inhabitants of Virginia were warmly attached to the Church of England, and he conceived that to tolerate Puritanism in Virginia was to nurture a Republican party there. So he decreed that no Puritan minister should preach or teach publicly, except in accordance with the constitution of the Church of England. This was soon followed by the banishment of nonconformists from the colony. It was a calamity but a heavier one soon fell upon the Virginians.

Ever since the massacre by the Indians in 1622, there had remained a deadly hostility between the two races. In 1643, the Virginia Assembly decreed that no terms of peace should be entertained with the Indians. Opechancanough was yet living and past ninety years of age. He had been on the Pamunkey, nursing his wrath for twenty years. Prudence only had restrained his nature, and now he was too old and feeble to make war, on his feet. But his malice was as keen and his will as strong as they had ever been in the days of his prime.

When, at length, Thomas Holfe, the son of Pocahontas, and then nearly thirty years of age, came from England by consent of the Virginia Assembly to visit his uncle, the aged emperor, and Cleopatra the sister of his mother, Opechancanough heard from his lips about the war between the English factions. The old emperor concluded that the time for him to strike a vengeful blow had arrived. He sent runners throughout his empire, and very soon a confederacy was formed over an area many hundred square miles in extent for the extermination of the Europeans. A day was fixed for the execution of the scheme. The confederates were to begin at the frontiers and, sweep the country to the sea. Opechancanough was carried at the head of his warriors, on a litter, when early in April, 1644, the savages began their horrid work. In the space of two days they slew more than three hundred of the settlers, sparing none who fell in their way. So they almost depopulated the region of the Pamunkey and York rivers. Governor Berkeley met the murderers with an armed force, and drove them back with great slaughter. Their old monarch was taken prisoner, and carried in triumph to Jamestown. He was so much exhausted that he could not raise his eyelids, and in that forlorn condition he was mortally wounded by a bullet from the gun of an English soldier who guarded him, and who was impelled by the remembrance of the bereavements he had suffered at the hands of the Indians, and of the agency of the old chief in the matter. The people out of curiosity gathered around the dying emperor. Just before he expired, hearing the hum of a multitude, he asked one of his attendants to raise his eyelids. When he observed the crowd, he raised himself from the ground, and in a haughty tone commanded an officer near him to summon the governor before him. When the magistrate came, the old monarch said, as fiery indignation gave strength to his voice "Had it been my fortune to have taken Sir William Berkeley prisoner, I would not meanly have exposed him as a show to my people." He then stretched himself upon the earth and died.

With Opechancanough expired the Powhatan confederacy. After ceding large tracts of land to the Virginians, the chiefs acknowledged allegiance to the authorities of the province, and so passed away the political life of that once powerful empire. The colonists then had peace and prosperity. In 1648, there were twenty thousand Europeans in Virginia. "The cottages were filled with children, as the ports with ships and emigrants." The people were loyal to Charles because he left them in the enjoyment of liberty. They felt none of the oppressions, nor were they distracted by the disputes which afflicted their kindred at home. They exercised the freedom of an independent government; and when the king was beheaded, they opened wide their hospitable arms to the cavaliers who fled in horror from England. Many of these fugitives were of the gentry, nobility and clergy They were valuable additions to the refined society of Virginia, and strengthened the royal cause in that province. When the king was slain, the Virginians acknowledged his exiled son as their sovereign; and Sir William Berkeley conducted the affairs of the colony as governor, under a commission sent to him by that prince, from Breda, in Flanders. Virginia was the last country belonging to England that submitted to the government of the rulers of the commonwealth which succeeded the monarchy.

The Republican Parliament was offended by this persistent attachment to royalty, and in the early spring of 1652, sent Sir George Ayscue with a powerful fleet to reduce the Virginians to submission. It bore commissioners of the Parliament, who were clothed with power to exercise

conciliatory or harsh measures - to compromise, or to proclaim freedom to the slaves and to put arms in their hands to make slaves of their masters. Berkeley met the commissioners with firmness. They were astonished at the boldness of the Virginians, and deemed it more prudent to compromise than to coerce. They made satisfactory arrangements, by which the political freedom of the colonists was guaranteed. Berkeley disdained to make any stipulation for himself with those whom he regarded as usurpers, and he withdrew to his plantation at Green Spring, where he lived in retirement as a private person. The Virginians then elected Richard Bennet, governor. When news of the preparation of an armament for the subjugation of the colony reached Virginia, Berkeley and the cavalier party resolved not to submit, and they sent a messenger to Breda to invite Prince Charles to come over and be their king. He was preparing to come, with his mother and some others of his family, when affairs took a turn in England which foreshadowed a speedy restoration of the monarchy there. That event occurred in 1660, when the prince ascended the throne of his father, as Charles the Second, at the age of thirty years. The monarch did not forget the loyalty of the Virginians. He caused the arms of that province to be quartered with those of England, Scotland and Ireland, as an independent member of his empire. From this circumstance the title of the Old Dominion was given to Virginia. Coins, with these quarterings, were struck as late as 1773.

Chapter XXV

Berkeley an Oppressor - Republicanism in Virginia - Royal Favorites Enriched - Condition of the Virginians - War with the Indians - Berkeley's Bad Conduct - Bacon's Rebellion - Berkeley's Cruelties - A Breach of Privilege - A Profligate Governor - Virginians Impoverished and Degraded by Misrule - Political Troubles in England - White Slaves in Virginia - Growth of Republicanism There - The Revolution of 1688.

THE Virginians soon felt the deep significance of the injunction "Put not your trust in princes." When Matthews died (1660), whom Cromwell had appointed Governor of Virginia, the people elected Berkeley. He refused to serve, excepting under royal appointment and he went to England to congratulate Charles on his accession to the throne, where he was graciously received by the sovereign. The king spoke very kindly of the Virginians, because of their loyalty, and praised them as "the best of his distant children." These manifestations of love were the velvet coverings of the iron hand which soon afterwards signed those decrees of a pliant Parliament which deeply oppressed the Virginians by restrictions upon their commerce, their political franchises and their religious liberty.

Charles gave Berkeley a new commission, and he returned to Virginia prepared to execute his master's will in full. At an election of members for a new House of Burgesses, the candidates of the cavaliers and land-owners were chosen, and Berkeley had as pliant an assembly of royalists as his king possessed in the Parliament. Navigation laws, oppressive to the commerce of the colony, were passed, and Berkeley executed them. Marriage laws, the freedom of elections and almost every other franchise possessed by the people were modified, abridged or abolished. The Church of England was made supreme, and persecution with its fiery broom attempted to sweep, Baptists, Friends and other Puritans out of Virginia. When Owen, the bold Quaker preacher, stood with his head covered with his hat before the court at whose bar he had been summoned, and said meekly but firmly, "Tender consciences obey the laws of God however they suffer," the angry reply of the court, in the spirit of the age, was "There is no toleration for wicked consciences." Berkeley enforced the laws and Friends and Puritans sought peace and a refuge in the wilds of upper North Carolina, where they formed settlements.

Less tolerant and just than when he was younger and weaker, Berkeley, in the later years of his administration, drifted, in thought and action, with the cavaliers, who hated everything that marked the character of the Puritans. They despised the popular education and consequent elevation of the "common people of New England" and Berkeley wrote, some years after the restoration of monarchy, I thank God there are no free schools nor printing in Virginia, and I hope we shall not have them these hundred years. For learning has brought heresy and disobedience and sects into the world, and printing has divulged them, and libels against the best government; God keep us from both!

Stimulated by oppression, republicanism grew vigorously in Virginia. The men of toil, and righteous ones of the aristocracy, soon formed a powerful republican party. Their strength was

increased by the rank injustice of the king, who seems not to have had a clear perception of right and wrong. He gave to profligate favorites large tracts of land in Virginia, some of them under cultivation and in 1673, he actually gave to Lord Culpepper, a cunning and covetous member of the Commission for Trade and Plantations, and the Earl of Arlington, a heartless spendthrift, all the dominion of land and water, called "Virginia," for the term of thirty-one years.

This act excited the alarm of the more thoughtful men of the aristocratic assembly, and a committee was appointed to carry a remonstrance to the king. Its mission was unfruitful. The republicans were inflamed with just indignation, and rebellious murmurs were heard everywhere. The toiling people were made to regard the aristocracy as their natural enemies. The latter had the power to promote the welfare of the people at large, but omitted to do so. Everything of a public character was neglected. There were no roads or bridges in Virginia. In boats and along bridle-paths the people were compelled to travel, and to ford or swim the streams. There were no schools. Every planter was compelled to be his own mechanic. Most of the houses of the toilers were mean log huts with unglazed windows, Villages nowhere existed, for the inhabitants were scattered over a wide domain. Even the capital of the colony consisted only of a church, state house and eighteen dwellings at the time we are considering, and the Assembly had, until lately, met in the hall of an alehouse.

Meanwhile, the large land-owners were living in luxury in fine mansions in sight of some beautiful rivers. They were surrounded by slaves or indentured servants, and were engaged in a sort of patriarchal life. At the same time Governor Berkeley was clamoring for an increase of salary, while in his stables and his fields he had seventy horses; and large flocks of sheep whitened the broad acres of the Green Spring plantation. The "common people" saw clearly that the tendency of circumstances in Virginia was toward a rich landed aristocracy and an impoverished peasantry, and they longed for a pretext and an opportunity to assert their natural rights. That pretext and opportunity soon appeared.

In the summer of 1675, the Indians, in despair, invaded Virginia from the north. When they were sweeping through Maryland, John Washington, the great-grandfather of our Beloved Patriot, met them with a force of Virginians. A fierce border war ensued. Governor Berkeley, who hid the monopoly of the beaver trade with the Indians, and was willing to be just, treated them leniently. When he heard that six of their chiefs who came to treat for peace had been treacherously murdered by Englishmen, he exclaimed with warmth "Had they killed all of my nearest relations, yet if they had come to treat of peace they ought to have gone in peace."

Fired by this treachery, the savages swept over the country between the Rappahannock and the James rivers, strewing their pathway with death and desolation. They ceased not to kill until their wrath was appeased by the slaughter of at least ten Englishmen for each of their chiefs slain. Insecurity was everywhere felt, and dread filled every cabin. The apparent supineness of the governor in the presence of the great peril, aroused the people to vigorous action. Led by the young and wealthy Nathaniel Bacon, a planter and lawyer on the James, who was fluent in speech and bold in action, and who was very popular, they petitioned the governor for leave to arm and

protect themselves. The governor had reason to suspect Bacon of ambitious rather than patriotic motives, for he had been concerned in a partial insurrection the previous year, suffered imprisonment and had been generously pardoned by the executive. So Berkeley refused their petition.

The impetuous Bacon took fire at this refusal. He knew the hidden cause. He at once proclaimed that he was ready to lead the people against the dusky invaders, without permission, if another white person should be murdered. Very soon the news came that some on his own plantation, near Richmond, had been slain. The people gathered under the shadows of a great tulip tree to consult. Bacon was among them. He mounted a stump and with impassioned eloquence stirred their hearts as if with electric fire. He denounced the governor as neglectful or imbecile, and advised his hearers to take up arms in their own defense.

The excited colonists followed Bacon's advice. The multitude were soon embodied in military form, and chose Bacon to be their general. He asked the governor to give him a commission in confirmation of the expressed will of the people. Berkeley refused, and Bacon marched against the Indians. He had not yet crossed the York River, when the governor, yielding to the bad advice of an aristocratic faction in the Assembly, proclaimed him to be a rebel and ordered his followers to disperse. A few weak-kneed Peters obeyed, but a large portion clung to Bacon's standard. He led the expedition forward. At the same time the lower settlements arose in insurrection, and demanded the immediate dissolution of the aristocratic Assembly.

Bacon drove the Indians back toward the Rappahannock. A new Assembly was chosen, and he was elected to a seat in the House of Burgesses, from Henrico county.

The new Assembly represented popular opinion in Virginia, and in their legislation they proceeded upon the principles of freedom, justice and humanity, and the governor and his fellow cavaliers were compelled to yield at all points. The Assembly voted to give the required commission to Bacon, but Berkeley refused to sign it. Some of the members were disposed to support him in the refusal. Bacon, fearing treachery, retired to the Middle Plantation (now Williamsburg), where he was soon surrounded by about five hundred followers who proclaimed him commander-in-chief of the Virginia forces. With these he marched to Jamestown and demanded his commission. The governor, regarding the movement as rebellious, again refused to sign it. In an angry moment the old cavalier went out and confronted the insurgents. Baring his bosom to their weapons, he cried out "Shoot, shoot it is a fair mark!" Bacon said respectfully: "Not a hair of your head shall be hurt we have come for our commissions to save our lives from the Indians."

The passion of the governor soon yielded to his judgment or his fears, and he not only signed the commission but joined his council in commending Bacon to the king as a zealous, loyal, and patriotic citizen. That was done on the 4th of July, 1676, just one hundred years to a day before the representatives of English-American colonies signed the famous document written by a Virginia rebel, "which declared these colonies to be free and independent States."

On receiving his commission; Bacon marched against the savages beyond the York River. Berkeley appears to have learned lessons of faithlessness from his immoral king, in his old age, for as soon as Bacon had departed, the governor went over the York into Gloucester county, called a convention of the inhabitants, and proposed to proclaim Bacon a traitor. The convention, though loyal, spurned the proposition, when the proud and obstinate baron issued such a proclamation in spite of their remonstrances. When the news of this perfidy reached Bacon, in his camp on the Pamunkey River, he said: "It vexes me to the heart, that while I am hunting the wolves and tigers that destroy our lands, I should, myself, be pursued as a savage. Shall persons wholly devoted to their king and country-men hazarding their lives against the public enemy deserve the appellation of rebels and traitors? The whole country is witness to our peaceable behavior. But those in authority, how have they obtained their estates? Have they not devoured the common treasury? What arts, what sciences, what learning have they promoted? I appeal to the king and Parliament, where the cause of the people will be heard impartially."

Bacon felt compelled, by the action of the governor, to lead in a revolution. He invited the Virginians to meet in convention at the Middle Plantation, to devise means for saving the colony from the grasp of tyranny. The best men in the colony hastened to the gathering. From noon until midnight on a warm August day, that convention debated and deliberated, Bacon's eloquence and logic led them to vigorous action, and the whole assemblage took an oath to support their leader in subduing the Indians and preventing civil war.

In the strength of these popular pledges, Bacon proceeded against the savages. The governor, alarmed by the demonstration at the Middle Plantation, fled, with some of his council, to the eastern shore of the Chesapeake, where, by promises of booty, he tried to raise an army among the inhabitants and the seamen of English ships in the ports. This movement demanded prompt action on the part of Bacon. With this leader was the brave William Drummond, who had been the first governor of North Carolina. He was accompanied by his wife Sarah, who was as brave as he. She did much to inspire the Virginians - civilians and soldiers - with courage to go on in revolution; and she was denounced as a "notorious and wicked rebel." When her husband proposed to declare Berkeley's flight from Jamestown to be an abdication of government, and the appointment of another in his place, and it was suggested that a power would then come from England that would ruin the republicans of the colony, Sarah Drummond, who knew that the realm was then distracted by factions, snatched tip a small stick from the ground, and exclaimed: "I fear the power of England no more than a broken straw." "The child that is unborn," she said, "shall have cause to rejoice for the good that will come by the rising of the county."

Drummond's proposition was agreed to. Government in the colony was declared to be abdicated by Berkeley, and that he was fomenting civil war; and Bacon and four of his colleagues issued writs for a representative convention of the people. Meanwhile Berkeley had gathered a motley host of followers on the eastern shore, many of them allured by hopes of plunder. He had proclaimed freedom to the slaves of rebels who should join his standard. The English vessels on that coast were placed at his service, and some Indians joined him. With this army under the command of Major Beverly, in five ships and ten sloops, the governor sailed for Jamestown, and

landed there early in September. After offering thanksgiving for his safe arrival, he again proclaimed Nathaniel Bacon a traitor.

The republican leader was taken by surprise. He had but a few followers in arms; but the news spread swiftly through the forests and over the plantations, and very soon Bacon was at the head of brave Virginians marching toward their capital. On their way, they seized as hostages or pledges of honor on the part of their husbands the wives of royalists who were with Berkeley.

On a moonlit evening the republicans appeared before Jamestown, and cast up an entrenchment. In vain the governor urged his troops to go out and attack them. His men were not made of stuff for soldiers. Only the seamen showed pluck, and they were too few to do much. At length the royalists stole away in their ships by night and compelled the indignant governor to follow them. Then Bacon entered Jamestown - the only village in all Virginia - and assumed the reins of civil power. He was startled by a rumor that the royalists of the upper counties were coming down upon him. In a council of war it was resolved to burn the capital, that no shelter might remain for an enemy. At twilight the torch was applied, and the blaze of the conflagration was seen by the royalists on the ships, far down the James River. Drummond set fire to his own house - one of the best in the village - as a sacrifice to freedom. So perished the first town founded in America by Englishmen. It was never rebuilt. No vestige of it remains but the ruins of the church tower and a few monuments in the graveyard near it.

Bacon now hastened to meet the royalists from the north. These were not disposed to fight, and in a body they deserted their leader and joined the patriots. The royalists of Gloucester yielded their allegiance to Bacon, and he resolved to cross the Chesapeake and drive the cavaliers and their adherents out of Virginia. But a deadlier foe than these now attacked the republican leader. The malaria from the marshes around Jamestown poisoned his blood, and he died of a malignant fever on the 11th of October, 1676. There was no man to receive his mantle of authority and influence, and his departure paralyzed the cause he had espoused. His followers made but a feeble resistance thereafter, and before the first of November Governor Berkeley returned to the Middle Plantation and resumed the functions of government. Nathaniel Bacon failed, and he is embalmed in history as a rebel. Had he succeeded, he would have been immortalized as a patriot.

The vexations and fatigues which Berkeley had endured in his contest with the republicans soured his haughty temper and made him very miserable. He signalized his return to power by acts of wanton cruelty. His king had proclaimed Bacon to be a traitor, and sent an armament under Sir John Berry to assist in crushing the rebellion in Virginia. These were the first royal troops sent to America to suppress the aspirations of the people for freedom. The incident was repeated a hundred years later when Howe, Clinton, Cornwallis and Burgoyne were here, like Sir John Berry, leading British troops to suppress a more formidable and successful uprising of Americans in favor of the rights of man.

Feeling strong, Berkeley, with strange stony-heartedness, pursued the accomplices of Bacon

with malignant severity, until twenty-two of them were hanged. Even King Charles was disgusted with his cruelty, and said "The old fool has taken more lives in that naked country than I have taken for the murder of my father." The first martyr was Thomas Hansford, a gallant young native of Virginia. When he was brought before Berkeley, he boldly avowed his attachment to the republican cause and when he was sentenced to be hanged, he said: "I ask no favor but that I may be shot like a soldier and not hanged like a dog." The governor replied: "You die, not as a soldier, but as a rebel." When he came to the gallows, he said "Take notice, I die a loyal subject and a lover of my country."

When Edmund Cheesman was arraigned before the governor, and he was asked why he engaged in Bacon's wicked scheme, before he could answer, his young wife stepped forward and said: "My provocations made my husband join in the cause for which Bacon contended but for me, he had never done what he has done. Since what is done," she said, as she fell upon her knees in an attitude of supplication, with her head bowed and covered with her hands, "was done by my means, I am most guilty let me bear the punishment; let me be hanged, but let my husband be pardoned." The governor angrily cried out: "Away with you!" and added a brutal insinuation against her virtue. The poor young wife fainted, and her husband was led to the gallows.

So fearful, at first, was the cruel old baron that some of his intended victims might escape through a verdict of acquittal by a jury that men were taken from the tribunal of a court-martial directly to the gallows without the forms of civil law. When the brave Drummond, who had been captured, was brought before him, the governor with wicked satire made a low bow and exultingly cried: "You are very welcome; I am more glad to see you than any man in Virginia; you shall be hanged in half an hour." "I expect no mercy from you," Drummond replied. "I have followed the lead of my conscience, and done what I might to free my countrymen from oppression." He was condemned at one o'clock, and was hanged at four o'clock. By a decree, his brave wife Sarah was denounced as a traitor and banished, with her children, to the wilderness, there to subsist by the charity of sympathizing friends. And after these judicial murders had been publicly condemned by the king as contrary to his commands and offensive to his clemency, Berkeley continued to fine, imprison and confiscate the property of all those who, in any way, were accomplices of Bacon, until he was recalled in the spring of 1677, and went to England with the returning fleet of Sir John Berry. So glad were the colonists at the departure of the governor that they fired great guns and lighted bonfires. In England his cruelties were severely censured and Sir William Berkeley died of grief and mortified pride before he was permitted to stand before his king. Circumstances had transformed a wise, prudent and benevolent magistrate in the days of his young manhood, into an unwise and cruel oppressor in his old age.

With the troops under Sir John Berry came Colonel Jeffreys, appointed to recall Berkeley and succeed him as governor. With him were associated Sir John and Colonel Moryson as commissioners to inquire into and report the causes of "Bacon's Rebellion." They found the Virginia Assembly pretty thoroughly winnowed of its aristocratic elements, and in sympathy with the people. The Burgesses would yield nothing repugnant to liberty because of the presence of troops quartered in Virginia and when Jeffreys and his associates demanded that all the books and

journals of the Assembly should be submitted to their inspection, they hesitated. Those papers were seized and when the Assembly demanded reparation for the insult, and Jeffreys appealed to the Great Seal of England in defence of the act, the Burgesses firmly replied to him that such a breach of privilege could not be commanded under the Great Seal, because they could not find that any king of England had ever done so in former times. When the king was informed of this reply, with foolish arrogance worthy of his grandfather, he commanded the governor to signify his majesty's indignation at language so seditious, and to give the leaders marks of the royal displeasure. The Burgesses were quite indifferent to the royal frowns or to the royal favors.

Soon after Berkeley's departure from Virginia, the king appointed Lord Culpepper, one of his favorites to whom he had leased the province for the term of a generation, governor of the domain for life, with a salary double in amount that received by the late magistrate, because he was a peer. It now became a proprietary colony. Culpepper went there reluctantly, in 1680, with instructions to bury all animosities growing out of Bacon's rebellion. But the profligate governor began his administration by did franchising all of the willing followers of Bacon. He despoiled the colonists of privilege after privilege, and exercised measures which impoverished them. By a proclamation forbidding, under severest penalties, all disrespectful words concerning the governor and his administration, he closed the royal ear against all complaints of his tyranny and having accumulated, by a system of pillage, a considerable sum of money, he returned to England to spend it in dissipation.

Culpepper returned to Virginia in 1682. His profligacy and rapacity so disgusted the people and fostered discontents, that, unable to endure him longer, they broke out into insurrection. His false reports of the matter induced the king to issue an order for the hanging of several of the most influential leaders but at length the true state of the case was laid before Charles, and he recalled the grant made to Culpepper and Arlington, and constituted Virginia a royal province again. Lord Howard of Effingham was sent over as governor in Culpepper's place. His greed was excessive, and was not controlled by moral principles. He was instructed by the king not to allow a printing-press to be set up in Virginia, and he was left free to sway the judiciary for his own benefit. With him was sent a frigate to cruise on the coast and enforce the navigation laws. His rapacity was so shameless in the methods of its gratification, that the colonists were on the point of rising in a general insurrection, when news came of the death of King Charles and the accession to the throne of his brother James, Duke of York. The Virginians rejoiced, for they felt that any change must better their condition - it could not well be made worse.

Virginia was so impoverished and really degraded by misrule, that voluntary emigration to its shores had almost ceased at the time of the accession of James, in 1685. Another and strong tide of emigration now began to flow thitherward.

Charles the Second had a son born out of wedlock, whom he had created Duke of Monmouth. He had participated in a movement for making himself the successor of his father instead of the Duke of York, and had fled to Holland. On the accession of James, this young man engaged with others to carry out the project. He sailed from Holland with eighty men, and landed on the west

of England, where he was joined by about six thousand partisans, many of them men of good families and education. Monmouth was defeated, captured and beheaded, and his partisans were most severely treated. Sir George Jeffreys was then Lord Chief Justice of England. He was sent into the insurgent district, where he held what are known in history as the Bloody Assizes. The partisans of Monmouth were brought before him by scores. He seemed to delight in convicting and punishing them. The king wrote: "Lord Chief Justice is making his campaign in the west. He has already condemned several hundreds - some of whom are already executed, more are to be, and the others sent to the plantations." He caused three hundred and twenty to be hanged or beheaded, and more than eight hundred to be sold as slaves in the West Indies or Virginia. Many of them were given to court favorites that they might sell them on speculation or extort money for the pardon of those who had any to give.

In this nefarious business Effingham engaged. So, also, were some of his friends; and many men of culture, as well as good mechanics, were sent to Virginia to be sold as slaves, and so added good social materials to the population. "Take all care," wrote the malignant monarch to Effingham, by the hand of Sunderland, "that they continue to serve for ten years at least, and that they be not permitted in any manner to redeem themselves by money or otherwise, until that term be fully expired. Prepare a bill for the Assembly of our colony, with such clauses as shall be requisite for this purpose." This malice was not countenanced by the Assembly. The Burgesses showed, on all occasions, a manly spirit of resistance to wrong; and when a new government in England pardoned these exiles in December, 1689, the Virginians received them with open arms as brethren and citizens.

A new Assembly convened in 1688. "It was more turbulent," the governor and council said, "than any which had preceded." They paid very little attention to the unlawful requirements of the chief magistrates, and boldly discussed the rights of citizens. To check this stimulant to republicanism, the governor and council determined to dissolve the Assembly. The people resented the attempt to interfere with the privileges of their representatives, and flew to arms. They were on the verge of open insurrection, when the news came over the sea that King James had been driven from the throne, and it was occupied by his daughter Mary and her husband William of Orange.

The revolution in England which placed William and Mary on the throne had such an important bearing upon the colonial history of our country, that a brief outline of its principal events is necessary for a clear understanding of that bearing. That revolution had been gathering head ever since soon after James's accession to the throne, it became evident that he contemplated the overthrow of the constitutional system of England, and the restoration of the Roman Catholic religion and polity there as they existed at the accession of Henry the Eighth. By a series of crimes and blunders, the king, in less than three years, had arrayed all of his subjects against him excepting the Roman Catholics and a few pliant dissenters. The foreign policy of the government was made subservient to France, then ruled by Louis the Fourteenth, a kinsman of James.

In the summer of 1688, a crisis occurred. The king had ordered a declaration of indulgence to

be read in all the churches. The order shocked the Protestant sentiment of England, and met with strenuous opposition. The Archbishop of Canterbury and six bishops were sent to the Tower on a charge of libel, because they ventured to petition the king against the order. This outrage shook English society to its foundations, with the most intense excitement. The prelates were acquitted, yet the excitement continued and in obedience to what was undoubtedly the common wish of Protestant England, some of the leading peers and prelates of the realm invited Prince William of Orange to invade England and dethrone the Stuart. William was the husband of Princess Mary, the eldest daughter of King James, and both were Protestants.

William accepted the invitation, and on the 5th of November, 1688, he landed at Torbay, with fifteen thousand troops. The friends of James all deserted him, even his daughter Anne, the wife of Prince George of Denmark. James fled to France, and William called a convention of the notables of England to settle the momentous questions of the future monarchy. In February, 1689, William and Mary were proclaimed joint monarchs of England, and their effigies, or profiles of their faces, were placed together on the coins of England. To this the couplet refers in speaking of lovers cooing and billing, Like William and Mary on a shilling."

The detested and detestable Stuart dynasty now disappeared forever. Higher political principles were diffused through English society. A declaration of the rights and liberties of the subject was made by the British Parliament at the accession of the new sovereigns and from that time the people of the realm had a more direct and controlling participation in the administration of the public affairs of the realm, than even in the time of the Commonwealth and Cromwell. The salutary influence of that great change in the English government and policy upon the destinies of the English-American colonies was remarkable. From the period of that revolution, to the beginning of the French and Indian War at the middle of the eighteenth century, the history of Virginia is the story of the steady, quiet progress of an industrious people, who were ready in the fullness of time to join with other colonies in the establishment of a great republic.

Chapter XXVI

Executive Government of New Netherland - Troubles with Indians - Dutch India Companies - Admiral Heyn and His Mother - A New Scheme of Colonization - Governor Van Twiller - Intercourse with Virginia - De Vries in Virginia and at New Amsterdam - Van Twiller's Folly - Plain Talk by a Parson and Sheriff - Governor Kieft and His Administration - Covetousness of the Patroons - Monopoly Rebuked - Farmers in New Netherland - New England Intruders - Troubles with the Indians - First Popular Assembly - Massacre of Indians at Hobolten - Retaliation.

WHILE the English were laying the foundations of a flourishing commonwealth in Virginia on the broad basis of republicanism, the Dutch were busy fashioning a state upon the still broader foundations of justice, liberty, equality and fraternity, with its capital on the site of the city of New York.

We have seen how' refugees from persecution in France, and native Hollanders, first made settlements on Manhattan Island and elsewhere, and so established the colony of New Netherland, and founded a city which they called New Amsterdam, with Peter Minuit as director-general or governor. Minuit was an energetic man from Wesel, in Rhenish Prussia, where he had been a deacon in the Walloon or French Refugee Church, and had good family connections. He was assisted, we have observed in Chapter XVII of the present volume, by a council appointed by the Dutch West India Company. Also by a secretary who was the bookkeeper of the Company, and a sheriff who was also the manager of the revenues of the province. These several officers composed the executive government of New Netherland its laws derived their life from Holland, and were subservient to the supposed interests of the Company. The first commissary or chief secretary was Isaac de Rasieres, already mentioned as a correspondent with the Pilgrim and Puritan authorities in New England.

The intercourse between the Dutch and Indians was friendly for some time. The Hollanders had extended their traffic as far north as the upper waters of the Hudson, and built a military work on the site of Albany which they called Fort Orange. Eight families had settled there and begun to cultivate the land, when the Mohawk Indians on one side of the river and the Mohegans on the other, both friendly with the Dutch, quarreled and went to war. The commander of the fort foolishly joined the Mohegans in an expedition against the Mohawks in violation of the treaty made at Tawasentha. They were met by the fierce Iroquois, and in a battle with them, the Dutch commander and three of his men were slain, with many of the Mohegans. The settlers at Fort Orange were terrified, and were about to flee to Manhattan in their boats, when Barentsten, a very popular trader, arrived, and received a deputation of Mohawks, who came to justify their deed. "We have done nothing against the white people," they said; "why did they meddle with us? Had it been otherwise, this would not have happened from us." The position was considered unsafe, and the eight families, with every woman in the garrison, were removed to New Amsterdam. That was in the year 1626.

Now followed the correspondence and personal intercourse between the Dutch on Manhattan

and the Puritans in New England mentioned in Chapter XIX of the present volume. During that time, and until 1628, wars between the Indians on the upper Hudson caused Fort Orange to remain only a military and trading post, for settlers would not venture much beyond the bounds of Manhattan Island. But while the extension of settlements in New Netherland was thus checked by the hostilities of two savage nations, and the general prosperity of the colony was somewhat depressed, the Dutch West India Company were reaping a rich harvest of wealth and honors from the circumstances of war between Christian nations - Holland, Spain and Portugal. Its battle-ships depredated fiercely and successfully upon the floating commerce of those kingdoms of the Peninsula. The fleets of the two India companies were then the right arm of Dutch power and controlled the state.

Peter Petersen Heyn, who had risen from the position of a peasant boy to that of a distinguished naval commander, captured for the Company, in 1629, the Spanish Silver Fleet while on its way from Yucatan with the spoils of the mines of Mexico and Peru. He put about five million dollars of treasure into their coffers. The joy of the people of Holland was unbounded when the news reached Amsterdam. The reception of the victor there was princely in its display. He was conducted into the Assembly Chamber of the States-General at the Hague, and there received the thanks of the nation publicly. He asked for no share of the booty he had won; and when the commission of Admiral was offered him, he refused it, saying: "It is too great a dignity for one of so mean birth and unpolished manners to possess." It was forced upon him, and he went forth to win other victories. The next year, while fighting two Dunkirk pirates, with his ship between them, he was killed on the deck of his vessel. His body was conveyed in regal pomp to the old church at Delft, wherein the Pilgrim fathers had worshipped on the shores of Holland; and he was buried by the side of Prince William of Orange. His grateful government erected over his remains under the great aisle a superb marble monument. When the States-General sent a letter of condolence to his peasant mother by the hand of a high officer, she said: "Aye, I thought that would be the end of him. He was always a vagabond but I did my best to correct him. He has got no more than he deserved."

Compared with other sources of wealth, the profits derived from New Netherland now seemed insignificant to the Company, and they devised new schemes for increasing the value of the province. Nothing seemed wiser than an increase in the population so they adopted the plan of making separate and independent colonies on the Hudson and Delaware rivers, in the form of manorial estates not more than sixteen miles in length if lying on one side of a river, or eight miles if on both sides, as we have observed on page 267. They were to be fashioned after then existing manors in Holland and England. In order to enlist private capital in this undertaking, the College of XIX proposed to give a charter which should confer those patroon privileges and exemptions mentioned on the page above referred to. This proposition was approved by the States-General in 1630; and so the feudal system displayed by the manorial estates in Holland and England was transferred to America.

Governor Minuit returned to Amsterdam in 1632, leaving the province in a state of increasing prosperity. The fur trade was enlarging. Comfortable homes and commodious warehouses were

seen clustered around Fort Amsterdam, and gardens were blooming around many dwellings. He was succeeded the following year by Walter Van Twiller, a narrow-minded and inexperienced clerk in the Company's warehouse at Amsterdam, who had married the niece of the rich pearl-merchant Killian Van Rensselaer, one of the directors. Van Twiller seems to have had very little fitness for the position of governor of the colony, excepting the alacrity with which he would be likely to serve the interests of his wife's rich kinsman, who had become a patroon and whose estate lay on each side of the upper Hudson, at the site of Albany and its surroundings. He had been employed by the patroon in shipping cattle to his colony, and was pretty well versed in the mysteries of traffic. But he was entirely ignorant of public affairs, and had not a single quality of a statesman. He was one of those sleek, rotund, bullet-headed Dutchmen who had ease of mind and body; dull of intellect, yet shrewd and cunning; courageous when there was no danger; always undecided and wavering, and was a capital butt for the jokes of the wiser men of New Amsterdam. Irving has left us a spirited caricature of his person, as a model of majesty and lordly grandeur. The chronicler says:

"He was exactly five feet six inches in height, and six feet five inches in circumference. His head was a perfect sphere, and of such stupendous dimensions that dame Nature, with all her sex's ingenuity, would have been puzzled to construct a neck capable of supporting it wherefore she wisely declined the attempt, and settled it firmly on the top of his backbone just between his shoulders. His legs were very short, but sturdy in proportion to the weight they had to sustain so that, when erect, he had not a little the appearance of a beer-barrel on skids. His face, that infallible index of the mind, presented a vast expanse unfurrowed by any of those lines and angles which disfigure the human countenance with what is termed expression. Two small grey eyes twinkled feebly in the midst, like two stars of lesser magnitude in a hazy firmament and his full-fed cheeks, which seemed to have taken toll of everything that went into his mouth, were curiously mottled and streaked with dusky red, like a Spitzenberg apple. His habits were as regular as his person. He daily took his four stated meals, appropriating exactly an hour to each he smoked and doubted eight hours, and he slept the remaining twelve of the four-and-twenty."

Van Twiller's administration lasted about four years, and the colony flourished in spite of him. Just before his advent, a pleasant intercourse was opened with Virginia by Captain de Vries, one of the patroons, who had an estate on the South or Delaware River, where he and others attempted to establish a whale fishery. It did not succeed but De Vries made valuable explorations up the river and formed salutary relations with the natives. He finally sailed for Virginia for supplies, rightfully supposing that he would find corn more abundant there than at New Amsterdam. He was anxious, too, to be the first Hollander from New Netherland to enter the James River. As his vessel neared the shore at Jamestown, and displayed the flag of Holland, Sir John Harvey, then Governor of Virginia, came down to the beach with some halberdiers, and in a friendly tone demanded where he was from. "From the South Bay in New Netherlands," said Captain De Vries. The governor invited him to his house, presented him with a glass of Venice sack, and then taking an English chart, pointed out South Bay as named Delaware in honor of Lord De La Warr (a former governor of Virginia), who, some years before, had been driven into that bay. Finding it full of shoals and supposing it to be unnavigable, the English, Harvey said,

had not looked after it since. "Yet it is our king's land," he continued, "and not New Netherland."

De Vries then gave the governor a glowing account of the beauty of the Delaware Bay and river, only a hundred miles north from Jamestown, and a history of what the Dutch had been doing there. Harvey was astonished. He had heard that the Dutch had built a fort upon Hudson's River, as the English call it but, being uncertain whether there was a Delaware Bay or river, had sent a small vessel, with several seamen, the previous autumn to search for them. These men had not returned, and he supposed they had - gone to the bottom of the sea in a storm. De Vries told him that he had seen Indians with English jackets on, and had no doubt his seamen had been murdered by them.

No dispute arose about the territory. "There are lands enough," said the knight we shall be friends and good neighbors with each other. "You will have no trouble from us Englishmen, if only those of New England do not approach too near you, and dwell at a distance from you." So began a pleasant intercourse between New Netherland and Virginia. Sir John's half-formed warning was prophetic, for from New England came encroachments and annoyances to the Dutch.

De Vries sailed for the Delaware with an ample supply of provisions and some goats as a present from Sir John to the governor of New Netherland. He found his affairs on the Delaware far from prosperous so he abandoned the country to the Indians and sailed into the harbor of New Amsterdam, where lay the ship which had just brought over Governor Van Twiller. It was well for the Company that a man of pluck like De Vries was at New Amsterdam at that time, for a former commissary at Fort Orange, Jacob Elkens, came a few days after De Vries's arrival, in the English ship William, with the intention of going up the Hudson to trade with the Indians. Elkens knew Van Twiller at Amsterdam, and counted on his impotence. When the governor demanded his papers, he refused, saying: "The country belongs to England, for it was discovered by an Englishman. I command an English ship and will go where I please." Van Twiller ordered the Orange flag to be run up over Fort Amsterdam, and a salute of three guns to be fired in honor of Prince Maurice. Elkens displayed the British flag on the William, and fired a salute of three guns in honor of King Charles. "I will go up the river if it costs me my life," said Elkens, and weighing anchor he boldly sailed up the Hudson.

This audacious act aroused the wrath of Van Twiller. He opened a cask of wine at the gate of the fort, assembled the people there, drank a full glass himself and called upon those who loved him and their prince to follow his example and assist in protecting him from the violence which the Englishman had committed. The people drank his wine but laughed in his face, for the William was out of sight. De Vries dined with the governor the same day, and told him plainly that he had played the fool. He advised Van Twiller to send an expedition after the intruder, which the stupid governor did, and very soon Elkens was sent to sea with an injunction not to attempt any further interference with the Dutch on the Hudson.

The province yet lacked a prime element of permanent prosperity. There were no independent

farmers in New Netherland cultivating their own land. The wealthy monopolists owned the land the tiller might own the house he lived in - no more. A great incentive to industry was wanting. Large tracts of land, accessible and fertile, were left uncultivated. There were continued disputes between the grasping patroons and the agents of the Company concerning the monopoly of the fur-trade, which each was seeking to secure. The governor had lost the respect of all parties, and was simply a clog to progress. Parson Bogardus, who came over with him from Holland, called him a child of the devil to his face and he also told him, on one occasion, that if he did not behave himself he would give him such a "shake from the pulpit the next Sabbath as would make him tremble like a bowl of jelly. Lubbertus Van Dincklagen, his sheriff, and one of the most learned men in the colony, spoke contemptuously of him to his face, when the governor, unfortunately for himself, summoned courage sufficient to resent it, and sent the offender to Holland in disgrace, without paying him three years' salary which was due him. Dincklagen was expert with his tongue and pen, and he made such representations of the character of Van Twiller in a memorial to the States-General of Holland, that he was finally recalled. It was a sad interruption of Van Twiller's sweet dream of peace. He had bought Nutten and other islands near Manhattan, with the expectation of vegetating in riches and dying there. He has left no memorial of his name upon anything. There is a simple reminder of him in the present Nutten Island, lying nearest the Battery in New York Bay, which is known as Governor's Island.

In 1637, Van Twiller was succeeded by William Kieft, whose portrait had been hanged on a gallows at Rochelle at one time. De Vries recorded him among the great rogues. Spiteful, rapacious, energetic; fond of quarrels and never happy excepting when in trouble with some one; unscrupulous in the use of means to promote his own interest, and a petty tyrant, he was, nevertheless, a better man for the Company than Van Twiller. He was an agitator, and agitation is healthier than stagnation. Kieft's administration was stormy, and therefore a delightful one for him. He had regarded Minuit as a model governor, and Minuit, for a long time, was the bane of Kieft's official peace and quiet. The next governor had hardly become seated in the executive chair, when tidings reached him that Minuit had led a colony of Swedes to the Delaware. Then news came that the impertinent Swedes, having built a house between two trees, claimed the whole country west of the Delaware from its falls at Trenton to Cape Henlopen and as far inland as they pleased. Kieft stormed at first, and then issued a proclamation, as we have observed, protesting against this invasion of the territory of New Netherland.

Kieft began his administration by concentrating all executive power in his own hands; and he and his council had such dignity, in their own estimation, that it became a high crime to appeal from their decision. While shaking his official fist at the Swedes and threatening war, he was not unmindful of the wants of the growing capital of the colony. He found public affairs in a wretched condition, and needing the strong hand of an autocrat to bring order out of confusion. Abuses everywhere abounded, and he set about reforming them with a vigor that very soon almost stripped the citizen of privileges. He caused Fort Amsterdam to be repaired, and new warehouses to be erected. By example and command he made fruit-trees to bud and blossom in gardens where brambles had flourished. Police ordinances were framed and thoroughly enforced. Religion arid morality were fostered for a time, and ordained ministers conducted public worship.

A spacious stone church was built within the fort and it was a gala day in New Amsterdam when the Connecticut architect hung the Spanish bells captured at Porto Rico in the little tower, and the governor gave a supper to the builders and the city magistrates. It was a proud day for Parson Bogardus when he ascended the new pulpit and preached in the presence of Englishmen from Puritan New England and Cavalier Virginia. When, after long absence, De Vries returned to Manhattan, he saw much to praise in the management of the new governor. These are some of the brighter tints in the picture of Kieft's career.

A change for the better was wrought by the States-General in 1638. The Company had pursued the unwise policy of peopling the province with its own dependents. The States-General and some of the wise directors saw that this was a capital error. A proposition was made to the Company to place the control of New Netherland in the care of the States-General, making it a colony of Holland instead of the possession of a commercial monopoly. It would have been a salutary measure for the colony, but the Company were not disposed to surrender their control. Meanwhile the grasping patroons had asked the States-General to enlarge their privileges and exemptions, by allowing them to monopolize more territory; have a longer time to settle colonists enjoy free trade throughout and around New Netherland be invested with greater feudal powers so as to be independent of the Company in their control of the government of their respective manors; have a vote in the council of the governor and to be supplied with convicts from Holland as servile laborers, and with negro slaves. They actually asked that all "private persons" and poor emigrants should be forbidden to purchase lands from the Indians, and should be required to settle themselves within the manors and under the jurisdiction of the great manorial lords.

This scheme for monopolizing all the lands of the province by a few wealthy men, and making the "common people" mere serfs on the manorial estates, was so offensive to the States-General that they were disposed to abridge the privileges enjoyed by the patroons. They compelled the Company to throw open the internal trade of the province to free competition for all inhabitants of Holland, under restrictions and the governor of New Netherland was instructed to accommodate every emigrant with as much land as he and his family might properly cultivate, such grantee paying a quit-rent to the Company of one-tenth of all produce.

This more liberal policy stimulated emigration from Holland and gave a powerful impulse to the prosperity of the colony. Private enterprise and industry were left free for development and expansion. Emigrants pressed into Amsterdam to seek opportunities to go to New Netherland. The Company, enamored of the new policy, wisely offered a free passage and other inducements to respectable farmers. A good class of citizens soon sought homes in New Netherland - men of culture and fortune. Among them came De Vries, with emigrants, and planted a colony on Staten Island. Strangers came from New England and Virginia, for there was freedom of conscience in the Dutch dominions. The only obligation required from strangers was an oath of fidelity and allegiance to their High Mightinesses the States-General of Holland.

In view of the increasing demand for homesteads, Governor Kieft purchased from the Indians nearly the whole of the present queens county on Long Island, and the lower part of Westchester

county. Meanwhile the New Englanders had become as troublesome in their territorial encroachments, as the Swedes on the Delaware. Like busy ants they were spreading over the fertile country westward of the Housatonic River. At the mouth of that stream they had planted the flourishing village of Stratford, and they had made settlements at Norwalk and Greenwich. It being evident that the New Englanders intended to push their settlements to the Hudson River, Kieft, in 1640, purchased of the Indians all the islands near Norwalk and the domain westward, which comprised nearly the whole of Westchester county, and raised thereon, at Cow Bay, the arms of the States-General. For awhile the New Englanders disregarded Indian title-deeds and Dutch proclamations and filibusters from Connecticut cut down the arms of Holland and mocked the officials at New Amsterdam. But they soon learned that Kieft was a more energetic man than Van Twiller, who had excited their contempt. The new governor soon put a stop to these encroachments, and compelled the settlers on the newly-purchased domain to take an oath of allegiance to the States-General.

Had Kieft's policy and conduct been as wise and just as it was firm and energetic, his administration might have been marked by peace and great prosperity. But he pursued a policy toward the Indians which inflamed whole tribes with resentment against the Dutch. His partiality for the Mohawks, with whom the Dutch came in immediate contact at Fort Orange, excited the jealousy of the River Indians. Their anger was also kindled by the bad conduct of dishonest traders, who sold them rum and cheated them in traffic while they were intoxicated. Kieft's avarice having obtained the mastery of his justice, he winked at these offenses and shared in the plunder. He also exacted tribute of furs, corn and wampum from the tribes around Manhattan but when they came with the costly offerings and cast them at the feet of the oppressor, they turned away with a bitter curse against the Hollanders. Kieft saw that a cloud of vengeance was gathering, and his fears awakened his cruelty. With the instinct of a bad nature, he sought to further injure those whom he had wronged. Some swine had been stolen by white people from De Vries's plantation on Staten Island. The governor charged the innocent Raritans of New Jersey with the crime and sent an armed force to chastise them, with a belief that a show of power would disarm the vengeance of the savages. Several Indians were killed. The event was the fore shadowing of the fate of others and all the neighboring tribes were aroused, and prepared for war. The River Indians refused to pay tribute any longer. The Raritans murdered Hollanders whenever they met them in the forests of New Jersey, and the innocent settlement on Staten Island was ruined by them. The Raritans were outlawed, and a bounty was offered for the head of every member of the tribe.

Fifteen or twenty years before, some of Minit's men had murdered an Indian belonging to a tribe seated beyond the Harlem River. His nephew, then a boy, who saw the outrage and made a vow of vengeance, had now grown to be a lusty man. He proceeded to execute his vow by murdering an unoffending Dutchman in his wheelwright shop high upon Manhattan Island. While the mechanic was stooping over his chest of tools, the young Indian seized an axe and almost severed his head from his body. With his scalp and the plunder of his dwelling, the savage returned in triumph to his tribe. Kieft demanded the murderer, but his chief would not give him up, saying he had been revenged according to the customs of his race.

The governor determined to chastise that tribe as he had the Raritans. He called upon the people to shoulder their muskets for the fray. They saw the danger to which the rashness of Kieft as leading them, and refused. They had been witnesses of his rapacity and greed, and they now charged him with seeking war that he might "make a wrong reckoning with the Company." They also reproached him with a selfish cowardice. "It is all well for you," they said, "who have not slept out of the fort a single night since you came, to endanger our lives and our home in undefended places."

This bold attitude of the people transformed the autocrat. He invited all the heads of families in New Amsterdam to meet him in convention to consult upon public affairs. They assembled at Fort Amsterdam, and promptly chose twelve select men to act as their representatives. So appeared the first popular assembly, and so was chosen the first representative congress for political purposes, in the seeds of a representative democracy, in New Netherland. So were planted the year 1641, almost on the very spot where, a century and a half later, our Republic, founded upon similar principles, was inaugurated, when Washington took the oath of office as first President of the United States.

De Vries was chosen president of the Twelve. To that body Kieft submitted the question whether the murderer of the wheelwright ought to be demanded of his chief, and whether, in case of the chief's refusal, the Dutch ought to make war upon his tribe and burn the village wherein he dwelt. The Twelve counselled peace, and proceeded to consider the propriety of establishing in New Netherland a government similar to that of the Fatherland. The governor was alarmed by this proposed blow at his absolute rule in the colony, and he cunningly offered a compromise. He agreed to make popular concessions if the Twelve would authorize him to make war on the offending tribe at a proper time. They foolishly trusted his honor and agreed to his proposition. Then the wily governor dissolved them, saying he had no further use for them, and forbade them a popular assemblage there after.

Kieft sent an expedition against the offending tribe early in the spring of 1642. His thirst for blood was disappointed by a treaty. It was soon gratified, however. The River Indians were tributary to the Mohawks, and in midwinter, 1643, a large party of these Iroquois came down to collect, by force of arms, tribute which had not been paid. The native dwellers along the lower Hudson, five hundred in number, fled before the invaders. They took refuge with the Hackensacks at Hoboken, and craved the protection of the Dutch. At the same time many of the offending Westchester tribe and others fled to Manhattan and took refuge with the Hollanders. The humane De Vries proposed to make this an occasion for establishing a permanent peace with the savages, but the wicked governor and some leading citizens, who pretended to speak for the people, overruled his wisdom and mercy, and it was made the occasion for treacherously spilling innocent blood.

On a cold night late in February, 164 the fugitives at Hoboken, and those at "Corlaer's Hook," Manhattan, were slumbering in fancied security. Without provocation - without the shadow of an excuse, Kieft sent eighty Hollanders to murder those at Hoboken, and a less number to slay those

at Corlaer's Hook. Forty of those at the Hook were massacred, while the Hollanders, who had stealthily crossed the river among floating ice, were making the snows at Hoboken crimson with the blood of confiding Indians, and lighting up the heavens with the blaze neither age nor sex. "Warrior and squaw, sachem and child, mother and babe," says Brodhead, were alike massacred. "Daybreak scarcely ended the furious slaughter. Mangled victims, seeing safety in the thickets, were driven into the river; and parents rushing to save their children, whom the soldiery had thrown into the stream, were driven back into the waters and drowned before the eyes of their unrelenting murderers." Almost a hundred of the dusky people perished there.

De Vries watched the butchery by the light of the burning wigwams from the ramparts of Fort Amsterdam. He told the blood-thirsty and cowardly governor, who was careful to remain within the walls of the fortress, that he had now commenced the ruin of the colony. Kieft ridiculed the clemency of De Vries and when the soldiers returned to the fort next morning, with thirty prisoners and the heads of several Indians upon pikes, the governor shook their blood-smearred hands with delight, praised them for their bravery, and made each of them present.

This treachery aroused the fiery hatred of the savages far and near, and a fierce war was kindled. The mutual animosities of tribes disappeared, and zeal for a common cause everywhere prevailed. Farms, hamlets, and villages were swept away by the broom of devastation. The white people were butchered wherever they were found by the incensed Indians. The Long Island tribes, hitherto friendly, joined their kin red in race, and, for awhile, the very existence of the Dutch settlements was in jeopardy. For two years the war continued, and the colony was on the verge of ruin.

Kieft was frightened by the fury of the tempest which his wickedness and folly had raised, and he humbly asked the people to choose a few men, again, to act as his counsellors. Eight were chosen. The colonists had lost all confidence in the governor, and relied wholly upon these eight citizens to relieve them from the fearful web of difficulties in which they were involved. The Council of Eight possessed no legal executive power, and their plans for a pacification of the Indians were often frustrated by the faithless Kieft. Disorder everywhere prevailed, and there appeared no hope of relief so long as Kieft was governor. In obedience to the wishes of the people, the Eight sent an energetic and respectful letter to the States General, setting forth the critical condition of the province, and asking them to recall Kieft. Their prayer was granted; and there was much rejoicing throughout New Netherland when the despised governor sailed for Europe in the spring of 1647. The vessel in which Kieft departed was richly laden, and bore much of his ill-gotten wealth. It was wrecked on the coast of Wales, and there the governor and his treasure perished.

Chapter XXVII

The Government of New Netherland - Peter Stuyvesant Appointed Governor - Reception of Stuyvesant - He Defines His Policy by Words and Deeds - A Representative Government - Stuyvesant's Vigorous Administration - Settles Disputes with Connecticut - Spirit of Freedom Combatted by Stuyvesant - The Dutch Sigh for the Freedom of the English - Revolutionary Proceedings - Popular Representatives - Stuyvesant's Pluck - The Swedes Subdued - Troubles with the Indians - New Netherland Surrendered to the English - The English Rule - The Dutch Re-possess and Re-surrender the Province.

THE College of XIX changed the mode of government in New Netherland in the spring of 1645. All power for the management of the public concerns of the colony was vested in a Supreme Council, consisting of the director- general or governor, a lieutenant-governor, and fiscal or treasurer. At that time Peter Stuyvesant, a brave Dutch soldier, who had served gallantly in the West Indies and lost a leg in an attack upon the Portuguese island of St. Martin, was at Amsterdam. He had been governor of Curacoa, in which capacity he had shown great vigor and wisdom. The loss of his leg compelled him to return to Holland for surgical aid, and the College appointed him to succeed Kieft as governor of New Netherland. He was then forty-four years of age; strong in physical constitution fond of official show admiring the arbitrary nature of military rule a thorough disciplinarian, and a stern, inflexible, just and honest man. Owing to disagreements concerning some of the details of policy in the proposed management of New Netherland, Stuyvesant did not arrive at Manhattan until late in May, 1647. Meanwhile the inhabitants, who had been informed early of his appointment, openly showed their dislike of Governor Kieft. Dominie Bogardus, whom the governor had charged with drunkenness and sedition, denounced Kieft and some of his official companions from the pulpit as men who thought of nothing but to plunder the property of others, to dismiss, to banish, to transport to Holland. To avoid these severe censures, they absented themselves from church, and the governor encouraged all sorts of noisy amusements near the place of public worship on Sundays. Drums were beaten and cannon were fired in the fort in which the church was situated, while the people were worshipping; and the communicants were insulted. The quarrel ended only when Kieft and Bogardus left for Holland in the same ship and were lost on the coast of Wales.

Stuyvesant came with the commission of director-general over New Netherland and the adjoining places, and also over the islands of Curacoa, Buenaire, Aruba, and their dependencies. He was accompanied by Lubbertus Van Dincklagen, who had caused the recall of Kieft, as vice.-director or lieutenant-governor. They landed on a fine morning in the presence of all the people, who came out with guns and received them with shouts. So vehement was their welcome that nearly all the breath and powder of the city was exhausted. Stuyvesant marched to the fort in great pomp, displaying a silver-mounted wooden leg of fine workmanship. After keeping the principal inhabitants who went to welcome him waiting for several hours bareheaded, while he remained covered, as if he were the "Czar of Muscovy," he told the people that "he should govern them as a father his children, for the advantage of the chartered West India Company, and these burghers and this land." He assured them that justice should rule at the same time, he asserted the

exclusive privileges of the directorship, and frowned upon every expression of republican sentiment. He declared it to be treason to petition against one's magistrates, whether there be cause or not and he defended Kieft's conduct in rejecting the interference of the Twelve saying: "If any one during my administration shall appeal, I will make him a foot shorter, and send the pieces to Holland, and let him appeal in that way." These sentiments made the people suspect that the new governor would be an inflexible despot instead of an indulgent father.

Stuyvesant was despotic, yet honesty and wisdom marked all his acts. He set about needed reforms with great vigor. The morals of the people, the sale of liquors to the Indians, the support of religion and the regulation of trade, commanded his attention; and it was not long before he infused much of his own energy into the community, and enterprise took the place of sluggishness. His foreign policy was as decided, and its execution was energetic. He sent a protest southward to the offending governor of the Swedes, and an invitation eastward to commissioners of New England to meet him for the adjustment of mutual rights. His kindness toward the Indians soon won their confidence and friendship and so affectionate was their bearing toward him, that the foolish story went abroad that he was forming an alliance with the savages to exterminate the English.

The grand principle announced by the founders of our Republic, that taxation without representation is tyranny, had prevailed in Holland for two centuries. The principle was favorable to the growth of republicanism in New Netherland, for Stuyvesant was compelled to respect it. He found the finances of the colony in such a low state that taxation was a necessity. He dared not tax the people without their consent, for fear of offending the States-General so he called a convention of citizens, and directed them to choose eighteen of their best men, of whom he might select nine as representatives of the tax-payers, who should form a co-ordinate branch of the local government.

Stuyvesant was careful to hedge around this germ of representative government as closely as possible, with restrictions. The first Nine were to select their successors, so that the people should not be choosers after that and the governor was careful to hold nearly all the power in his own hands. But the Nine were far more potent than the Twelve, under Kieft. They nourished the prolific seed of democracy which burst into vigorous life in the time of Jacob Leisler, fifty years afterward.

By prudent and adroit management, Stuyvesant soon swept away annoyances in the shape of territorial claims. When the Plymouth Company, at the time of its dissolution, mentioned in the XVIIIth Chapter of the present volume, assigned their American domain to twelve persons, they conveyed to Lord Stirling, the proprietor of Nova Scotia, a part of New England and an island adjacent called Long Island. Stirling had tried to take possession of Long Island, but failed. At his death, in 1647, his widow sent a Scotchman to assert the claim, and act as governor. He proclaimed himself as such, at Hempstead. Stuyvesant had him arrested, and put on board a ship bound for Holland. She touched at an English port, where the "governor" escaped, and no further trouble with the family of Lord Stirling ensued.

In 1650, Stuyvesant went to Hartford, and, by treaty, settled all disputes with the New Englanders which had annoyed his predecessors. Then he turned his attention to the suppression of the expanding power and influence of the Swedes on the Delaware. The accession of a new queen to the throne of Sweden made it necessary to make a satisfactory adjustment of the long-pending dispute about the territory. Stuyvesant was instructed to act firmly but discreetly. Accompanied by his suite of officers, he went to Fort Nassau, on the New Jersey side of the Delaware, whence he sent to Printz, the governor of New Sweden, an abstract of the title of the Dutch to the domain, and called a council of the Indian chiefs in the neighborhood. These chiefs declared the Swedes to be usurpers, and by solemn treaty gave all the land to the Dutch. Then Stuyvesant crossed over, and near the site of New Castle in Delaware he built a military work, which he called Fort Cassimer. Governor Printz protested in vain. The two magistrates held friendly personal intercourse, and they mutually promised to keep neighborly friendship and correspondence together. That was in the year 1651.

An important concession was made to the inhabitants of New Amsterdam the following year. There was continual antagonism between Stuyvesant and the Nine. The governor tried to repress the spirit of popular freedom; the Nine fostered it. They wished to have a municipal government for their growing capital, and made direct application to the States General for the privilege. It was granted. To the people of New Amsterdam was allowed a government like the free cities of Holland, the officers to be appointed by the governor. Under the new arrangement, New Amsterdam (afterward New York) was organized as a city, early in 1653. The soul of Stuyvesant was troubled by this imprudent entrusting of "power with the people."

Stuyvesant had scarcely recovered from his chagrin, when a new danger appeared. For several years English families had come to New Netherland from the East, to escape the intolerance of the authorities of New England, excepting in Rhode Island, and to enjoy liberty of conscience in church and state. They had been encouraged by the Dutch. Land was freely granted to them, and an English secretary for the colony had been appointed. They intermarried with the Dutch, and readily embraced the republican doctrines of the Hollanders. These formed strong allies of the friends of the Nine, and bore a conspicuous part in the democratic movements which gave Stuyvesant so much trouble during the latter years of his administration.

Republicanism, like any other truth, has remarkable vitality. Persecution promotes its growth. The more Stuyvesant attempted to stifle it, the more widely and vigorously it spread. His methods of rule were so arbitrary that all classes of citizens became discontented. He made his own will the supreme law. His councillors had to be his obedient servants or the subjects of his animosity. The powerful patroons of Rensselaerwyck and the poorest laborer were alike regarded as his subjects, and were required to submit to his tyrannous rule. He was an honest despot - it was his nature to be so - and opposition to his commands as governor he regarded as rank rebellion. The Dutch sighed for the freedom enjoyed in Holland, and the English settlers determined to exercise the liberty which English subjects then enjoyed under the rule of Cromwell. Stuyvesant saw the tidal wave of popular feeling rising, but like Canute he sat still, firm in his integrity and convictions of his righteousness, until he was compelled to yield or perish.

That popular feeling had expression when, late in the autumn of 1653, a convention of nineteen delegates, who represented eight villages or communities, assembled at the town-hall, in New Amsterdam, ostensibly to take measures to secure themselves against the depredations of savages and pirates. The governor tried to control their action, but they paid very little attention to his wishes and none to his commands. When they adjourned, they gave a parting collation, to which Stuyvesant was invited. Of course he would not sanction their proceedings by his presence; and the delegates told him bluntly that there would be another convention soon, and that he might do as he pleased and prevent it if he could.

The ire of the governor was fiercely kindled by the revolutionary movement in his capital. He stormed and threatened, but prudently yielded to the demands of the people that he should issue a call for another convention, and so give legal sanction for the election of delegates thereto. These met in New Amsterdam on the 10th of December, 1653. Of the eight districts represented, four were Dutch and four were English. Of the nineteen delegates, ten were of Dutch and nine were of English nativity. As this was the first real representative assembly in the great State of New York in its infancy - now an empire containing about 7 1/2 million souls - it seems proper to give here the names of the delegates, and the districts they represented. They were as follows:

From the capital (New Amsterdam), Van Hattem, Kregier, and Van de Grist; from Breucklen (Brooklyn), Lubbertsen, Van der Breck, and Beeckman; from Flushing, Hicks and Flake; from Newtown, Coe and Hazard; from Heemstede (Hempstead), Washburne and Somers; from Amersfoort, (Flatlands), Wolfertsen, Strycker, and Swartwout; from Midwout (Flatbush), Elbertsen and Spicer; and from Gravesend, Baxter and Hubbard. Baxter was the English secretary of the colony, and led the English delegates.

The object of the Convention was to form and adopt a remonstrance against the tyrannous rule of the governor. It was drawn by Baxter. After expressions of loyalty to the States-General, it proceeded with a statement under six heads, of the grievances endured by the colonists. It was a severe indictment of Stuyvesant for maladministration or bad management of public affairs. The paper was signed by all the delegates and sent to the governor, with a demand for a categorical answer to each of its heads.

Stuyvesant met this severe document with his usual pluck. He denied the right of some of the delegates to seats in the Convention. He denounced the whole thing as the wicked work of the English, and doubted whether George Baxter, the author, understood what he was about. He wanted to know if there was no one among the Dutch in New Netherland sagacious and expert enough to draw up a remonstrance to the director and council, and severely reprimanded the city government of New Amsterdam for seizing "this dangerous opportunity for conspiring with the English [with whom Holland was then at war, who were ever hatching mischief but never performing their promises, and who might to-morrow ally themselves with the North," meaning Sweden and Denmark.

The Convention was not to be silenced by bluster or threats. They told the governor by the

mouth of Beeckman, of Brooklyn, that if he refused to consider the several points of the remonstrance, they would appeal to the States-General. At this threat the governor took fire, and, seizing his cane, ordered Beeckman to leave his presence. The plucky ambassador folded his arms and silently defied the magistrate. When Stuyvesant's wrath had subsided, he politely begged the representative to excuse his sudden ebullition of passion and receive assurances of his personal regard. But he was not so complaisant with the Convention as a body. He ordered them to disperse on pain of his "high displeasure." He said, "We derive our authority from God and the Company, not from a few ignorant subjects and we, alone, can call the inhabitants together." The Convention executed their threat by sending an advocate to Holland, with papers, to ask the reforms which their enumerated grievances demanded.

In the midst of these domestic troubles, the tranquillity of Stuyvesant's foreign relations was disturbed. Governor Printz had returned to Sweden, and in his place was John Risingh, a more warlike magistrate, who came to the Delaware with some soldiers under the bold Swen Schute. They soon appeared before Fort Cassimer and demanded its surrender. "I have no powder; what can I do?" said Bikker, the commander, to the Dutch residents, who fled to the fort for protection. Bikker went out an hour afterward, leaving the gate of the fort wide open, and shook hands with Schute and his men, welcoming them as friends. The Swedes fired two shots over the fort in token of its capture, and then blotting out its Dutch garrison and its name, called it Fort Trinity. The surrender occurred on Trinity Sunday, 1654.

When news of this event reached Stuyvesant, he was enraged and perplexed. He was expecting an attack from the English. They did not come, and the governor prepared to wipe out the stain on Belgic prowess by that infamous surrender. After a day of fasting and prayer, and after a sermon on the first Sunday in September, the following year (1655), seven vessels, carrying more than six hundred soldiers, sailed from New Amsterdam for the Delaware, under the immediate command of Stuyvesant. His flagship was *The Balance*. Some of his civil officers, and the pastor of the church, were with him. They landed on the beach between Fort Cassimer and Fort Christina near Wilmington. An ensign with a drum was sent to demand the surrender of the former. Schute complied the next day, and in the presence of Stuyvesant and his suite, he drank the health of the governor in a glass of Rhenish wine. So ended the bloodless expedition against Fort Cassimer; and before the end of the month, the conquest of New Sweden was accomplished. Like Alfred of England, Stuyvesant wisely made citizens of the conquered, and they became loyal friends of the Dutch.

When Stuyvesant returned to Manhattan, he found the wildest confusion there. Van Dyck, a former civil officer, detected a squaw stealing peaches from his garden, and killed her. The fury of her tribe was kindled. The long peace with the savages for ten years was suddenly broken. Before day-break one morning almost two thousand of the River Indians appeared before New Amsterdam in sixty canoes, landed, distributed themselves through the town, and under pretense of looking for Northern Indians, they broke into several dwellings in search of Van Dyck. A council of the inhabitants was immediately held at the fort, and the sachems of the invaders were summoned before them. The Indian leaders agreed to leave the city and pass over to Nutten (now

The Governor's) Island before sunset. They broke their promise, and in the evening they shot Van Dyck and menaced others. The people flew to arms and drove the savages to their canoes. The Indians crossed the Hudson, and ravaged New Jersey and Staten Island. Within three days a hundred inhabitants were killed, one hundred and fifty were made captives, and the estates of three hundred were utterly desolated by the dusky foe. Stuyvesant returned at the height of the excitement, and soon brought order out of confusion. Yet distant settlements were broken up, the inhabitants, in fear, flying to Manhattan for safety. To prevent a like calamity in the future, the governor issued a proclamation ordering "all who lived in secluded places in the country to gather themselves into villages after the fashion of our New England neighbors."

Excepting difficulties between the governor and the citizens, growing out of his arbitrary rule, New Netherland prospered in quiet for almost ten years after the Indian invasions, when a crisis in its political affairs approached. The people were generally industrious, and happy homes abounded. If, then, there were many uncultured minds but affectionate hearts, and life was enjoyed in a dreamy, quiet blissfulness, unknown in these bustling days. The city people arose at dawn, dined at eleven o'clock, and went to bed at sunset in the summer. Fashionable parties began at three o'clock in the afternoon in winter and ended at six, so that all the members of a family might be ready for evening devotions and bed at seven. Very little attention was paid to political questions by the commonality or the mass of the people; but there were many wide-awake men and women who were restive under the sharp administration of Stuyvesant. Some declared that they would be willing to endure English rule for the sake of enjoying English liberty. They very soon had an opportunity to try both.

Charles the Second assigned to his brother James, Duke of York, the whole territory of New Netherland, with Long Island and a part of Connecticut. Charles had no more right to that domain than the Prince of Darkness had to the "kingdoms of the world which he offered to the Redeemer if he would worship the Evil One." But the brutal argument that might makes right justified the royal brothers, in their own estimation, in sending ships, men and cannon, the "last argument of kings," to take possession of and hold the territory. Four ships-of-war, bearing four hundred and fifty soldiers commanded by Colonel Richard Nicolls, a court favorite, arrived before New Amsterdam at near the close of August, 1664. Stuyvesant had been warned of their approach, and tried to strengthen the fort; but money, men, and will were wanting. English influence and the governor's temper had alienated the people, and they were indifferent. Some of them regarded the invaders as welcome friends. Stuyvesant began to make concessions to the popular wishes. It was too late; and New Amsterdam became an easy prey to English conquerors - freebooters in the eye of justice.

Revolutionary movements had taken place among the English on Long Island, early in this year, which the governor could not suppress, and the province was rent by internal discord for several months. A war with the Indians above the Hudson highlands had also given the governor much trouble, but his energy and wisdom had brought it to a close. The anthems of a thanksgiving day had died away, and the governor, assured of peace, had gone to Fort Orange (Albany), when news reached him of the coming English armament. He hastened back to his

capital, and on Saturday, the 30th day of August, Nicolls sent to the governor a formal summons to surrender the fort and city. He also sent a proclamation to the citizens, promising perfect security of person and property to all who should quietly submit to English rule.

Stuyvesant assembled his council and the burghers or magistrates, at the fort, to consider public affairs. They favored submission without resistance. The governor, true to his superiors and to his own convictions of duty, would not listen to such a proposition, nor allow the inhabitants to see the proclamation. The Sabbath passed without any answer to the summons. It was a day of great excitement and anxiety in New Amsterdam, and the people became impatient. On Monday the magistrates explained to them the situation of affairs, and they demanded a sight of the proclamation. It was refused; and they were on the verge of open insurrection, when a new turn in events took place.

Governor Winthrop, of Connecticut, with whom Stuyvesant was on friendly terms, had joined the English squadron. Nicolls sent him to Stuyvesant as an ambassador, with a letter in which was repeated the demand for a surrender. The two governors met at the gate of the fort. When Stuyvesant read the letter, he promptly refused to comply. Closing the gate, he retired to the council chamber and laid the letter before his cabinet and the magistrates. They said, "Read the letter to the people and so get their mind." The governor stoutly refused. The council and magistrates as stoutly insisted that he should do so, when the enraged governor, who had fairly earned the title of Peter the Headstrong, unable to control his passion, tore the letter into pieces. The people at work on the palisades, hearing of this, hastened to the State-House, where a large number of citizens were soon gathered. They sent a deputation to the fort to demand the letter. Stuyvesant stormed. The deputies were inflexible, and a fair copy of the letter was made from the pieces, taken to the State-House and read to the inhabitants. At that time the population of New Amsterdam did not exceed fifteen hundred souls. There were not more than two hundred men, excepting the little garrison, capable of bearing arms.

The impatient Nicolls sent a message to the silent governor, saying: "I shall come for your answer to-morrow with ships and soldiers," and anchored two war-vessels between the fort and the Governor's Island. Stuyvesant's proud will would not bend to circumstances, and from the ramparts of the fort he saw their preparation for attack, unmoved. And when men, women and children, and even his beloved son, Balthazar, entreated him to surrender that the lives and property of the citizens might be spared, he replied:

"I had much rather be carried out dead." At length, when the magistrates, the clergy and many of the principal citizens entreated him, the proud old governor, who had a heart as big as an ox and a head that would have set adamant to scorn, consented to capitulate. He had held out for a week. On Monday morning, the 8th of September, 1664, he led his troops from the fort to a ship on which they were embarked for Holland, and an hour afterward the red cross of St. George, as the flag of England (whose most conspicuous figure is a red cross) is sometimes poetically called, was floating over Fort Amsterdam, the name of which was changed to Fort James, in compliment to the duke.

The remainder of New Netherland soon passed into the possession of the English, and the city and province were named New York, also in compliment to the duke. Colonel Nicolls, whom the duke had appointed his deputy-governor, was so proclaimed by the magistrates of the city and all officers within the domain of New Netherland were required to take an oath of allegiance to the British crown.

In the curious fort the new governor made his abode. It must have appeared ludicrous as a fortification, to the eyes of an experienced European soldier like Nicolls. It contained besides the governor's house and barracks, a steep gambrel-roofed church with a high tower, a wind-mill, gallows, pillory, whipping-post, prison, and tall flag-staff. There was, generally, a cheerful submission to the conquerors on the part of the inhabitants, and profound quiet reigned in New York after the turmoil of the surrender.

So passed into the domain of perfected history the Dutch dominion in America, after an existence of half a century. By that unrighteous seizure of a territory which had been discovered and settled by the Dutch, England became the mistress of all the domain stretching along the coast of the Atlantic Ocean from Florida to Acadia, and westward across the entire continent. But upon New Netherland the Dutch, in that brief space of time, had made so deep an impression of their institutions, their social and religious habits, their modes of thought and peculiarities of character, that, like the Greeks when overcome by the brute force of the Romans, they remained unconquered in the loftier aspect of the case. The best characteristics of the Dutch of New Netherland are now, after the lapse of more than two centuries, marked features in the society of New York.

In 1665, Stuyvesant went to Holland to report to his superiors. They wished to shift the responsibility of the disaster from their shoulders to that of their last director. They declared that the governor had not done his duty, and asked the States-General to disapprove of the "scandalous surrender" of New Netherland. Stuyvesant made a similar counter-charge and begged the States-General to come to a speedy decision of his case, that he might return to America for his family. The High Mightinesses, as the representatives of Holland were called, required him to answer the charges of the West India Company. He sent to New York for sworn testimony, and at the end of six months he made an able report, its allegations sustained by unimpeachable witnesses. Among other affidavits was that of Van Ruyven, the then agent of the Company at New York and former secretary of the province, in which it was distinctly charged that the disaster was owing to the neglect of the Company. The latter made a petulant rejoinder, when circumstances put an end to the dispute. War between England and Holland, then raging, was ended by the peace concluded at Breda in 1667, when the latter relinquished to the former its claim to New Netherland. This finished the controversy between Stuyvesant and the West India Company.

Stuyvesant now departed for New York by way of England, where he obtained from King Charles the concession of the privilege for three Dutch vessels to have free commerce with New York for the space of seven years. Then he sailed for America, with the determination of

spending the remainder of his life in New York. He was cordially welcomed by his old friends; and he was kindly received by his political enemies, who had learned by experience that he was not a worse governor than the duke had sent them. Stuyvesant retired to his bowerie or farm on the East River, and in the quiet of domestic life he enjoyed the respect of his fellow-citizens. There he died in 1682, at the age of eighty years and under the venerable St. Mark's Church, in the city of New York, his remains repose. With all his faults magnified by prejudice, Peter Stuyvesant stands out conspicuous in our annals as a grand historic character.

The dreams of freedom under English rule were never realized. The inhabitants of New York soon found that a change of masters did not increase their prosperity or happiness. Fresh names and laws, they found, says Brodhead, did not secure fresh liberties. Amsterdam was changed to York, and Orange to Albany. But these changes only commemorated the titles of a conqueror. It was nearly twenty years before that conqueror allowed, for a brief period, to the people of New York, even that partial degree of representative government which they had enjoyed when the three-colored ensign of Holland was hauled down from the flag-staff of Fort Amsterdam. New Netherland exchanged Stuyvesant, and the West India Company, and a republican sovereignty, for Nicolls, and a royal proprietor, and a hereditary king. The province was not represented in Parliament, nor could the voice of its people reach the Chapel of St. Stephen at Westminster as readily as it had reached the Chambers of the Binnenhof at the Hague."

Nicolls ruled wisely, and Francis Lovelace, his successor in 1667, ruled mildly. The latter was a quiet man, unfitted to encounter great storms, yet he showed considerable energy in dealing with the hostile Indians and French on the northern frontier of New York during his administration. He held friendly intercourse with the people of New England; and in the summer of 1672, when a hostile squadron of Dutch vessels of war appeared before his capital, he was on a friendly visit to Governor Winthrop, of Connecticut. There was war, again, between England and Holland, at that time, and the Dutch inhabitants of New York had shown signs of discontent because of the abridgment of their political privileges, and a heavy increase in their taxes, without their consent. Personally they liked Lovelace, but they were bound to consider him as the representative of a petty tyrant. When, in menacing attitude, they demanded more liberty and less taxation, the governor, in a passion, unwisely declared that they should "have liberty for no thought but how to pay their taxes." This was resented, and when the Dutch squadron came, nearly all the Hollanders regarded their countrymen in the ships as liberators. When Colonel Manning, who commanded the fort, called for volunteers, few came, and these not as friends but as enemies, for they spiked the cannon in front of the State-House.

Manning sent an express for Lovelace, and seemed to do what he might to defend the fort. When the ships came up and fired their broadsides upon it, he returned their fire and shot the Dutch flagship "through and through." Then six hundred Holland soldiers landed on the bank of the Hudson above the town, where they were joined by four hundred Dutch citizens in arms, who encouraged them to storm the fort. They were marching down Broadway for the purpose, when they were met by a messenger from Manning with a proposition to surrender the fort, if his troops might be allowed to march out with the honors of war. The proposition was accepted. The

English garrison marched out with their colors flying and drums beating, and laid down their arms. The Dutch soldiers marched in, followed by the English troops, who were made prisoners of war and confined in the church.

On that hot summer day, the 9th of August, 1672, the flag of the Dutch republic waved over recovered Fort Amsterdam, and the name of the city of New York was changed to that of New Orange, in compliment to William Prince of Orange, the stadtholder or chief magistrate of Holland. The rest of the province soon submitted to the conquerors, and British sovereignty over it was extinguished. Stuyvesant, a quiet but exultant spectator of these momentous events, was avenged. The Dutch had taken New York!

Chapter XXVIII

New Netherland Restored to the British - Andros and the Duke of York - Governor Dongan and the First General Assembly in New York - James II and the Colonies - A New Heir to the Throne - Jacob Leisler and His career - Republicanism in New York - Governor Fletcher and His Discomfiture at Hartford - Indians Invade New York - Governor Bellamont - Captain Kidd, His Associates and Career - Governor Hyde and His Administration - Other Governors of New York - Political Parties - Freedom of the Press Vindicated - Negro Plot.

THE swift conquest of New York by the Dutch was speedily supplemented by the submission of the settlers on the Delaware within the domain of New Netherland. The other English colonists were amazed by the unlooked-for event, and some of them prepared for war. Connecticut foolishly talked of an offensive war others prepared to stand on the defensive. Anthony Colve, the governor of re-conquered New Amsterdam, was wide-awake. He kept his eye on the movements of the savages and Frenchmen on the North; watched every hostile indication in the East, and sent proclamations and commissions to towns on Long Island and in Westchester to compel hesitating boroughs to take the oath of allegiance to Prince William of Orange. He had strengthened his fortifications; and upon the fort and around the city of New Orange he had planted one hundred and ninety cannon. But all anxiety was ended by a treaty of peace between the Dutch and English, made at London early in 1674, by which New Netherland was restored to the British crown. Some doubts arising about the validity of the duke's title after these changes, the king gave him a new grant of territory in June, 1674, within the boundary of which was included all the domain west of the Connecticut River, to the eastern shores of the Delaware also Long Island and a territory in Maine. King Charles had commissioned Major Edmund Andros to receive the surrender of the province from the Dutch governor. He was now appointed governor of New York. The surrender took place, in a formal manner, at Fort James, in October.

Andros, who was destined to play an important part in American affairs' was then thirty-seven years of age. He had been brought up in the royal household, and accompanied the exiled family to Holland, where he began his military career. As major of Prince Rupert's regiment of dragoons, he performed gallant service, and being a favorite of the king and the duke, a good Dutch and French scholar, a thorough royalist and an obedient servant of his superiors, he was well fitted to perform the part which his masters appointed him to play. His private character was without blemish, and the evil things spoken of him relate to his public career. The duke's instructions favored the constitution of the province of New York, and Andros enforced them with ever-increasing vigor. In his zeal he even exceeded his instructions and in a short time he acquired the just title of "tyrant." The duke, his master, was a strange compound of wickedness and goodness; slow to perceive right from wrong and seldom seeing the truth in its purity. Bancroft says of him - "A libertine without love, a devotee without spirituality, an advocate of toleration without a sense of the natural right to freedom of conscience, - in him the muscular force prevailed over the intellectual. He was not blood-thirsty but to a narrow mind fear seems the most powerful instrument of government, and he propped his throne with the block and the

gallows. He floated between the sensuality of indulgence and the sensuality of superstition, hazarding heaven for an ugly mistress, and, to the great delight of abbots and nuns, winning it back again by pricking his flesh with sharp points of iron, and eating no meat on Saturdays." Of the two brothers, the Duke of Buckingham said well, that "Charles would not, and James could not see." The fact that he was the destined successor of Charles on the throne of England - a king whose irregularities of life were rapidly hurrying him to the grave - made James an object of intense interest to the Protestants of the realm, and the subject of intrigues to prevent him ascending to the seat of his brother.

With all their political disabilities under Andros, the people of New York were prosperous and therefore comparatively happy. Luxury had not corrupted their tastes, and wants were few. A man worth three thousand dollars was rich, the possessor of five thousand dollars was opulent. There was an almost dead level of equality in society. Beggars were unknown.

Ministers were few, but religions many and out of matters of faith grew many controversies. There seemed little reason for the twenty thousand inhabitants of the domain to be unhappy but the divine instinct of freedom, which demanded a free exercise of the rights of self-government, made many of them discontented and in some places mutinous.

It was then a stormy time in England. Theological disputes culminated in bloodshed and universal disorder, and thousands were sent to America, and other thousands fled to the colonies. Of the former, women were often burnt in the cheek, and men marked by cutting off their ears. These fugitives, many of them people of good families and education, inoculated all the provinces with healthful republican aspirations.

At about this time the duke's daughter Mary married her cousin Prince William of Orange. These nuptials were distasteful to the duke, who was becoming more and more a confirmed Roman Catholic; for William was recognized as the leader of the Protestants of Europe. "I predict," said the French ambassador in London to James, "that such a son-in-law will inevitably be your ruin." The prediction was soon fulfilled, as we shall observe presently. The nuptials of those cousins led to very important events in the history of England and America.

The career of Andros outside of New York was more striking - more dramatic - than within that domain. This career we shall have occasion to notice hereafter. It is sufficient to say here, that after an administration of about nine years, he was succeeded in 1683 by Thomas Dongan, a mild mannered and enlightened Irishman of the Roman Catholic faith, who reached New York in August. Andros had ruled with vigor, keeping peace with the powerful Iroquois Confederacy curbing religious enthusiasts; frowning upon every sign of republicanism, and asserting with great tenacity the powers of the duke within the chartered limits of his territory. Meanwhile the duke had listened to the appeals of the inhabitants of New York and heeded the judicious advice of William Penn, to give the people liberty; and Dongan was clothed with authority to call an assembly of representatives of the people. Dongan's sympathies were with the popular desires, and performing the duty with alacrity, he saw a Legislative Assembly in session in Fort James at

New York, on the 17th of October, 1683 - about thirty years after the Dutch, in the same city, made a demand for a popular convention. It is a memorable day in the history of the State of New York. Then was established the first General Assembly of the Province of New York, composed of seventeen representatives, who sat three weeks, and passed fourteen acts, all of which were assented to by the governor and his council. The first of these was entitled "The Charter of Liberties and Privileges, granted by his Royal Highness, to the inhabitants of New York and its Dependencies." It declared that supreme legislative power should forever be and reside in the governor, council and people, met in general assembly; that every freeholder and freeman should be allowed to vote for representatives without restraint that no freeman should suffer but by judgment of his peers that all trials should be by a jury of twelve men that no tax should be assessed, on any pretense whatever, but by the consent of the Assembly; that no seaman or soldier should be quartered on the inhabitants against their will that no martial-law should exist; and that no person, professing faith in God, by Jesus Christ, should, at any time, be any wise disquieted or questioned for any difference of opinion. Not a feature of the intolerance and bigotry of New England charters appeared in this first Charter of Liberties for the province of New York.

The hopes raised by the ratification of this Charter of Liberties were doomed to early disappointment. When, at the beginning of 1685, James ascended the throne, on the death of Charles, he refused to confirm as king what he had solemnly promised as duke. He immediately began to demolish the fair fabric of civil and religious liberty which had been reared in New York. A direct tax was ordered; the printing press - the right arm of knowledge and of freedom - was forbidden a place in the colony; and as he had determined to establish the Roman Catholic faith as the state religion throughout his realm, the provincial offices were filled by adherents of the Italian Church. The liberal-minded Dongan lamented these proceedings; and when the stud king instructed the governor to introduce French priests among the Five Nations, Dongan resisted the measure as dangerous to the English power on the continent. Fortunately the Iroquois Confederacy remained firm in their friendship for the English, in after years, and stood as a powerful barrier against the French, when the latter twice attempted to reach the white settlements at Albany.

The clear-headed and right-minded Dongan stood by the people and the interests of England with a firmness that finally offended the monarch. He knew that James had a great love for the French, and when he saw the advantages which he gave them in America by unwise acts, he could not but regard the sovereign's conduct as treason to his country. For his faithfulness, he was rewarded with the gratitude of the people of New York, and with dismissal from the office of governor by the king. In the spring of 1688, he received a letter from James, ordering him to surrender the government into the hands of Andros, who had a vice-regal commission to rule New York and all New England.

The viceroy journeyed from Boston to New York early in August, where he was received by Colonel Bayard's regiment of foot and horse, and wad entertained by the loyal aristocracy. In the midst of the rejoicings, the news came that the queen, the second wife of James, had been blessed

with a son, who became heir to the throne. The event was celebrated the same evening by bonfires in the streets and a feast at the City Hall. At the latter, Mayor Van Cortlandt became so hilarious, that he made a burnt sacrifice to his loyalty of his hat and periwig, waving the burning victims over the banquet table on the point of his straight sword.

The Dutch inhabitants of New York, as well as the Protestant republicans, were disappointed by the royal birth, for they had looked forward with hope for the accession of Mary, the wife of their own Prince of Orange, to the throne of England. This event intensified the general discontent because of the consolidation of New York with New England and the abridgment of their rights, and the people were on the verge of open rebellion when a revolution in England changed the whole aspect of affairs there and in America, and satisfied the aspirations of the Dutch at New York by seating William and Mary on the throne. The general result of that revolution has been recorded at near the close of the XXVth chapter of the present volume.

The effect of the accession of William and Mary, in New England, will be noticed hereafter. Andros and his political associates were seized at Boston, and sent to England. This act was followed in New York by the seizure of Fort James. In this movement Jacob Leisler, an influential merchant and commander of militia, took a leading part. He was a German colonist, a Presbyterian in church-fellowship, an enthusiastic admirer of William of Orange, but with democratic tendencies. About five hundred men in arms rallied around him at the fort, whence he issued this declaration: "As soon as the bearer of orders from the Prince of Orange shall have let us see his power, then, without delay, we do intend to obey, not the orders only, but also the bearer thereof."

Leisler refused to proclaim the accession of William and Mary, until he should be officially certified of the fact. At his request, delegates from a few towns assembled in convention, formed a Committee of Safety of ten, and proceeded to organize a provisional government. They commissioned Leisler commander of the province, when Nicholson, whose time-serving policy had alienated from himself the confidence of the people, fearing the populace, fled on board a vessel and sailed for London. This flight gave Leisler and his adherents an unexpected advantage. The people consented that he should act as governor in the absence of regularly constituted authority. The aristocracy were offended because an insolent foreigner and plebeian was in the high seat of power. They bitterly opposed him, but he managed public affairs so well that his enemies were compelled to praise him. Van Cortlandt, Bayard and other leaders of the aristocracy retired to Albany, where a convention of the people acknowledged allegiance to William and Mary, defied the power of Leisler, and denounced him as a treasonable usurper. Their influence in the province was great, and the communities on the Hudson generally disapproved of the mutinous proceedings in New York.

When, late in the year (1689), royal letters were received addressed to the governor, or, in his absence, to such as, for the time being, take care for preserving the public peace and administering the law in New York, Leisler considered that his own authority had received the royal sanction. He now, with clouded judgment and inconsiderate rashness, determined to bring into obedience

the aristocratic party, whose focus of strength was at Albany under the lead of Peter Schuyler, the mayor of that city. He sent his son-in-law, Jacob Milborne, with a few troops to enforce that obedience. He was resisted by argument and physical force until the awful destruction of Schenectady by the Indians in February, 1690, spread universal alarm and pointed to the necessity for uniting for the common defence. The authority of Leisler was acknowledged, for the people of the north sorely needed his help.

Another year passed by. Meanwhile the ears of the monarchs had been filled with reports of Leisler's usurpation and disloyalty, and they appointed Henry Sloughter governor of New York, who sent forward his lieutenant, Ingoldsby, to take possession of the province. When that officer arrived early in 1691, he haughtily demanded of Leisler the surrender of the fort. He did not deign to show his credentials, and Leisler properly refused compliance with his demands, at the same time treating Ingoldsby, and the few soldiers whom he brought with him, with respect. The aristocratic party were enraged by Leisler's refusal, and for several weeks the city was fearfully excited by the violence of factions. And when, in March, Governor Sloughter arrived, and Leisler sent him a letter loyally tendering to him the fort and province, that functionary, under the influence of the aristocratic leaders, answered it by sending an officer to arrest the "usurper" and Milborne, and six of the inferior "insurgents," on a charge of high treason. They were taken to prison, and when they were arraigned, the two principal offenders, denying the authority of the court, refused to plead, and appealed to the king. They were condemned, and sentenced to death (as were, also, the other six) but Sloughter, who, in his sober moments, was just and honest, refused to sign the death-warrant until he should hear from the king. The implacable enemies of the "usurper," determined on causing his destruction, invited the governor to a dinner party on Staten Island on a bright day in May. One of them carried to the banquet a legally drawn death-warrant, and when the governor had been made stupid by liquor, he was induced to sign the fatal paper. It was sent to the city that evening, and on the following morning Leisler and Milborne were summoned to prepare for execution. Leisler sent for his wife, Alice, and their older children, and after a sorrowful parting with them, he and his son-in-law were led to the gallows in a drenching rain. They confessed their errors of judgment, but denied all intentional wrongdoing. The blamelessness of their lives confirmed their declarations of innocence. Before Sloughter was permitted to recover from his debauch, they were hanged. It was a foul murder. The governor was tortured with remorse for his act, and died of delirium tremens three months afterward.

Leisler's appeal to the king was not sent. His son repeated it. The result was the return to the families of Leisler and Milborne of their confiscated estates, and before four years had passed, the British Parliament declared them innocent of treason, by reversing the attainder. Their death created a deep feeling of sympathy for the cause of popular sovereignty, of which they were representatives and proto-martyrs. From that hour republicanism had a very vigorous growth in the province of New York, and gave future royal governors a great deal of trouble.

Benjamin Fletcher succeeded Sloughter as governor of New York. He was a man of violent passions, weak judgment, greedy, dishonest and cowardly, and as dissolute as his predecessor.

How he came to be intrusted with the governorship at all, and especially with the large powers of commander of the militia of Connecticut, New York and New Jersey with which he was invested, is a problem not easily solved. He soon disgusted all parties and the recklessness of his administration caused more decided resistance to imperial power than ever before. Among his acts of petty tyranny, which displayed his folly and weakness, was his visit to Hartford, with Colonel Bayard and others, late in the autumn of 1693, to assert his disputed military authority there, by ordering out the Connecticut militia at a season when parades had ceased. The charter of the colony denied Fletcher's jurisdiction, and the Assembly, then in session, promptly gave utterance to that denial on this occasion. "I will not set my foot out of this colony, till I have seen his majesty's commission obeyed," said Fletcher to the governor of Connecticut. The latter yielded so much as to allow Captain Wadsworth to call out the train-bands of Hartford.

When the troops were assembled, Fletcher stepped forward to take the command, and ordered Bayard to read his excellency's commission. At that moment Captain Wadsworth ordered the drums to be beaten. "Silence!" angrily cried the petulant governor, and Bayard began to read again. "Drum! drum! I say," shouted Wadsworth; and the sonorous roll drowned the voice of Bayard. Fletcher, in a rage, stamped his foot and cried "Silence!" and threatened the captain with punishment for insubordination. Whereupon Wadsworth stepped boldly in front of the governor and said, while his hand rested on the handle of his sword: "If my drummers are interrupted again, I'll make the sunlight shine through you. We deny and defy your authority." The cowardly governor sullenly folded up his commission, pocketed it and the affront, and with his retinue returned to New York in a very angry mood. He complained to the king. The matter was compromised by making Fletcher commander of the Connecticut militia only in time of war.

During the whole of Fletcher's administration of seven years, party rancor, kindled by the death of Leisler, burned intensely, and, at one time, menaced the province with civil war. At the same time it was threatened with a destructive invasion by the French and Indians from Canada, under the guidance of the venerable Count Frontenac, the energetic governor of that province. These foes were then traversing the wilderness in northern New York, seeking for a passage through the country of the Five Nations to the English settlements below. Fortunately the governor listened to the wise advice of Mayor Schuyler, of Albany, who had a marvelous influence over the Iroquois Confederacy and under his leadership, about three hundred English and as many Mohawk warriors beat back the foe to the St. Lawrence. They so desolated the French settlements in the vicinity of Lake Champlain, slaying about three hundred French and Indians at the north end of the lake, that Frontenac was glad to remain quiet at Montreal.

Although the New York Assembly was filled with the bitter enemies of Leisler, they, as boldly as he, asserted the supremacy of the people, and would suffer no encroachments on colonial rights and privileges. They rebuked the interference of the governor in legislation, by insisting upon amendments to bills, and drew from him, on one occasion, the reproachful words which tell of their independence and firmness: "There never was an amendment desired by the Council Board, but what was rejected. It is a sign of a stubborn ill-temper." With that "stubborn ill-temper" of the Assembly, Fletcher was almost continually in conflict; and when, in 1698, he was superseded

by the Earl of Bellamont, he seemed as glad to leave the province as the people were to get rid of him.

Bellamont was an honest and energetic Irish peer. He had been on the Committee of Parliament appointed to make inquiry concerning the trial and death of Leisler, and was well acquainted with the questions which divided the factions. He rebuked the little aristocratic oligarchy who had hovered around Fletcher; and his wise and liberal course strengthened the republican cause. It opened the way to just legislation, and the ascendancy of liberal men in the Assembly. That body, in the year 1700, on receiving a letter from the king, asking them to indemnify the family of Leisler from a gracious sense of the father's services and sufferings, confirmed the verdict of Parliament in favor of the innocence of the martyr by granting the request.

Bellamont labored earnestly to reform existing abuses in the management of public affairs. It was a sharp commentary on the character of his predecessor, when he uttered the promise I will pocket none of the public money myself nor shall there be any embezzlement by others' much confidence had the Assembly in his integrity, that they voted a revenue for six years and placed it at the disposition of the governor. Notwithstanding his character was above reproach, it passed under a cloud because of his unfortunate connection with the famous pirate, Captain William Kidd. The story may be briefly told:

English commerce suffered greatly from the depredations of pirates and French privateers. The English government could not suppress the evil. A company was formed to do that work. It was composed of several English noblemen and the king, and Robert Livingston, the first Lord of the Manor, and Governor Bellamont, in America. They fitted out a galley called the Adventure, as a privateer. Livingston, then in England, recommended Captain Kidd, of New York, to be her commander, and he was duly commissioned as such by the king. In the Adventure, Kidd did noble service in protecting the commerce in American waters from the sea-robbers. He recruited from time to time, until his crew numbered one hundred and fifty men. Then he resolved to measure strength with the pirates of the Indian Ocean. Arming his men with pistols, cutlasses and pikes, and the Adventure with a swivel gun at her stem and stern, he sailed for Madagascar, where he turned pirate. He respected no flag, no nationality, no circumstance; but swept the seas for booty alone, roving over the vast expanse of ocean from Farther India westward to the coasts of South America. Thence he sailed up among the West India Islands and along the shores of North America, to the vicinity of his home and on Gardiner's Island, eastward of Long Island, he buried much treasure, consisting of gold, silver, and precious stones.

The piracies of Kidd were long known in England before the Company noticed them. At length the matter became so scandalous that they felt it necessary to vindicate their character. The belief was general that the king, the earl, the lord of the manor, and their associates had shared the plunder with Kidd, and the odium of complicity in piracy rested heavily upon them. They needed a scape-goat, and Kidd was made the victim. He appeared openly in the streets of Boston, unsuspecting of real danger, for he had his king's commission in his pocket, and

Bellamont was his business partner. But the governor, expressing horror at his crimes, ordered his arrest, and very soon the pirate appeared before the earl a prisoner in irons.

Kidd now saw that he was to be sacrificed, and he sought to win the earl's favor and aid, by telling Bellamont where he had hidden the treasure. In immovable firmness at that critical moment lay the governor's safety; and he turned a deaf ear to the prayers of the prisoner with bowed head, and the entreaties of his wife who begged for mercy, human and divine, for her erring husband. There was a struggle between the pride and fear and the better nature of Bellamont. The former triumphed. Kidd was sent to England and tried for murder and piracy. Convicted of the former, he was hanged. So the penalty of the sins of omission, at least, of the monarch and nobles and rich civilians, were borne by the commoner on the scaffold. The earl received the buried treasure, and at his coffers its history ends in impenetrable mystery.

The king and the earl died soon after Kidd perished, and Sir Edward Hyde, uncle of Queen Anne, who was then monarch of England, became governor of New York. He was a libertine and a knave, who cursed the province with misrule for about seven years. He was a bigot, too, and persecuted all denominations of Christians outside of the Church of England. He embezzled the public money, involved himself heavily in debt, and on all occasions was the persistent enemy of popular freedom. "I know no right which you have as an assembly," he said to the representatives of the people, "but such as the queen is pleased to allow you." That was in 1705, the year when that Assembly won the first substantial victory for democracy over absolutism or despotic rule. They obtained from the queen permission to make specific appropriations of incidental grants of money, and to appoint their own treasurer to take charge of extraordinary supplies. That was a bold and important step in the direction of popular independence and sovereignty.

So the very vices of the governor disciplined the people to resistance of oppression, and secured to them the recognition of rights which might have been postponed for many years. The governor, who was weak-minded, mean-spirited and vacillating, was so overpowered by the indomitable will of the people - a hardy, mixed race - that he meekly submitted to reproof, and in his poverty of soul and purse humbly thanked the Assembly for simple justice. In 1708, the queen, yielding to the wishes of the people, recalled him. When he left the chair of state his creditors cast him into prison, where he remained until the death of his father made him Lord Cornbury. Then he was released by the unjust law of England yet in force, which will not permit a peer of the realm, and consequently a member of the House of Lords, to be arrested for debt.

Lord Lovelace was Hyde's successor. With his brief administration began those contests between democracy and absolutism in the province of New York which ended only with the victory of the former at the close of the old War for Independence. Already the political friends of Leisler had achieved a signal triumph over his enemies. Colonel Bayard and others, who had published libels on the royal lieutenant-governor (Nanfan) before Hyde's arrival, had been arrested by that energetic officer and tried for and convicted of treason under a law which these men had made in 1691 to meet Leisler's case. Bayard was sentenced to be "hanged, drawn and quartered," but was reprieved until the pleasure of the monarch should be known. When Hyde arrived, soon

afterward, he reversed the attainder, and the 366 offender was set at liberty. The power of the self-constituted aristocracy was broken, and their controlling influence disappeared. When Lovelace came, and the crown demanded a permanent revenue without appropriation, the legislature of New York, in the exercise of popular sovereignty or rule of the people, and taking the ground that "taxation without representation is tyranny," would raise only an annual revenue for specific purposes. From that time, until 1732, the royal representatives, unable to resist the will of the people, as expressed by the Assembly, allowed democratic principles to grow, flourish, and bear fruit.

From Lovelace to Cosby, there were three governors - Robert Hunter, William Burnet and John Montgomery - and three acting governors. The first was a literary man, fond of good cheer, but unfitted by temperament to be governor of New York at that crisis. He brought with him three thousand German Lutherans from the Palatinate of the Rhine, who had been driven from their homes by the persecution of Louis the Fourteenth. These settled in different parts of the province of New York, and in Pennsylvania. They were chiefly the ancestors of the German population of the latter State.

Hunter and his council, under instructions, insisted that the popular Assembly, like themselves, existed only by the mere grace of the crown. The Assembly as vehemently insisted that "they possessed an inherent right to legislate, that was derived not from any commission or grant from the crown, but from the free choice and election of the people who ought not, nor justly can be, divested of their property without their consent." The governor could not assent to this doctrine. The Assembly were inflexible; and Hunter's administration was marked by violent political contests between the chief magistrate and the representatives of the people. "I have spent three years," he wrote at one time, in such torture and vexation that nothing in life can make amends for it." He loved his ease, and sighed for quiet. Failing health compelled him to return to England in 1719, when he left the government in the hands of Peter Schuyler, the oldest member of the council. That accomplished gentleman completely restored the friendship between the English and the Five Nations, which had been disturbed.

Hunter was succeeded by William Burnet, son of the celebrated Bishop Burnet. For awhile he was very popular, but at length he incurred the displeasure of a powerful party of merchants who controlled the Assembly, and his position was made so very uncomfortable that he was transferred to the government of Massachusetts. It was during his administration, that William Bradford, in the autumn of 1725, established the first public newspaper in New York. He had set up the first printing house in the province, in 1693, when Fletcher was governor. His paper was entitled "The New York Weekly Gazette." John Montgomery succeeded Burnet in 1728. Death closed his uneventful administration, in the summer of 1731, when Rip Van Dam, the senior member of the council, took charge of public affairs until the arrival of William Cosby as governor, in 1732.

Cosby was avaricious and arbitrary by nature, and opportunity made him exercise his passions almost without stint. His first act was to demand of Van Dam an equal share of that councillor's salary received by him while acting as governor. "Give me half the perquisites of your office from

the time of your appointment until your arrival," said Van Dam, "and I will agree to your proposition." This fair proposal was rejected, and Van Dam refused compliance with the governor's requisition. Cosby sued him in the Supreme Court. A majority of the judges were the governor's personal friends, and gave judgment against Van Dam. Chief-Justice Morris decided against the governor. The latter removed the chief justice without consulting his council, and put James De Lancey in his place.

The sympathies of the people were with Van Dam, and the governor's high handed proceedings aroused their indignation to an intense pitch. They induced John Peter Zenger, who had been an apprentice and business partner with Bradford, to establish a newspaper to be the organ of the democratic party. He did so in November, 1733, calling it the "New York Weekly Journal," with Van Dam behind him as financial supporter. Bradford's paper was then controlled by the government.

The "Journal" made vigorous warfare upon the governor and his political friends. It kept up a continual fire of squibs, lampoons and satires, and finally charged them with violating the rights of the people, the assumption of tyrannical power, and the perversion of their official stations for selfish purposes.

The officials endured these attacks for a year. In the autumn of 1734, the governor and council ordered Zenger's papers, containing his offensive articles, to be burned publicly by the common hangman, and he was arrested and thrown into prison on a charge of libelling the government. The Grand Jury refused to find a bill of indictment for this offence, but he was held by another process, and was kept in jail until early in the next August, when he was brought to trial in the City Hall, New York. The case excited intense interest throughout the whole country, for it involved the great question of liberty of speech and of the press.

Meanwhile an association called the "Sons of Liberty" had worked diligently for Zenger. The venerable Andrew Hamilton, of Philadelphia, then eighty years of age and the foremost lawyer in the country, was engaged as the prisoner's counsel. On the hot morning when the trial commenced, the court-room was densely crowded. Chief-Justice De Lancey presided. A jury was empaneled. The prisoner pleaded "Not Guilty," but boldly admitted the publication of the alleged libel, and offered full proof of its justification. The attorney-general had just risen to oppose the introduction of such proof when the venerable Hamilton unexpectedly entered the room, his long white hair flowing over his shoulders, instead of being queued in the fashion of the day. The excited audience, most of them in sympathy with the prisoner, arose to their feet, and in spite of the voice and frowns of the chief-justice, waved their hats and shouted loud huzzahs. When silence prevailed, the attorney-general took the ground that facts in justification of an alleged libel were not admissible in evidence. The court sustained him.

When Hamilton arose, a murmur of applause ran through the crowd. In a few eloquent sentences he scattered to the winds the sophistries which supported the pernicious doctrine that "the greater the truth the greater is the libel." He declared that the jury were themselves judges of

the facts and the law that they were competent to judge of the guilt or innocence of the accused, and reminded them that they were the sworn protectors of the rights, liberties and privileges of their fellow-citizens, which, in this instance, had been violated by a most outrageous and vindictive series of persecutions. He conjured them to remember that it was for them to interpose between the tyrannical and arbitrary violators of the law and their intended victim, and to assert, by their verdict, in the fullest manner, the freedom of speech and of the press, and the supremacy of the people over their wanton and powerful oppressors.

Notwithstanding the charge of the chief-justice was wholly adverse to the doctrines of the great advocate, the jury, after brief deliberation, returned a unanimous verdict of "Not Guilty." Then a shout of triumph went up from the multitude, and Hamilton was borne out of the court-room upon the shoulders of the people to a grand entertainment which had been prepared for him. On the following day a public dinner was given him by the citizens. At the close of September following, the corporation of the city of New York presented to Mr. Hamilton the Freedom of the City and their thanks, in a gold box weighing five-and-a-half ounces, made for the occasion. In this document they cordially thanked him for his "learned and generous defence of the rights of mankind, and the liberty of the press," and for his signal service which "he cheerfully undertook, under great indisposition of body, and generously performed, refusing any fee or reward."

This triumph of the popular cause - this vindication of the freedom of the press - this evidence of the determination of the people to protect their champions, and this success of an organization in its infancy which appeared in power thirty years later under the same name of "Sons of Liberty," was a sure prophecy of that political independence of the colonies which was so speedily fulfilled. Yet the stupid governor, staggered by the blow, could not understand the meaning of the prophecy; and only his death, a few months after the trial, put an end to his vindictive proceedings.

From the arrival of Cosby until the beginning of the French and Indian war at the middle of the century, the history of the province of New York is composed chiefly of the records of party strife. Only one episode in that history demands special attention here. It is known in our annals as the Negro Plot as unsubstantial in fact as was the "Salem Witchcraft." Several incendiary fires had occurred in quick succession in the city of New York, in 1741. The idea suddenly took possession of the minds of the inhabitants that it was the work of negroes, who had conspired to burn and plunder the city, murder the white inhabitants and set up a government under a man of their own color. A fearful panic ensued. Suspected negroes of both sexes, and some white men and women, were arrested and tried and before the excitement was over, four white people were hanged, and eleven negroes were burned. Eighteen of the latter were hanged, and fifty were sent to the West Indies and sold as slaves. On the site of the present City Hall, three negroes were burnt at the stake at one time. Two of them were men and one was a woman. All who suffered at that time were, undoubtedly, innocent victims of terror created by imaginary danger.

Chapter XXIX

Governor Bradford - The First Public Thanksgiving in New England - Friendship with the Indians - Canonicus and His Challenge - Weston's Colony and Its Career - Social Changes - Enterprise of the Pilgrims - Religious Matters - Colony at Cape Ann - Endicott at Salem - His Austerity - Massachusetts Bay Colony - Governor Winthrop and the Indians - Republican and Representative Governments Established - Intercourse with Other Colonies - Persecution in England and Intolerance in Massachusetts - Preparation to Resist Tyranny.

WILLIAM BRADFORD, the first historian of Massachusetts, was the official successor of John Carver, the earliest governor of the Plymouth colony. He entered upon his duties as chief-magistrate a few weeks before the States-General of Holland chartered the Dutch West India Company, under whose auspices the province of New Netherland, as we have observed, was first settled by Europeans.

Bradford was a native of Ansterfield, Yorkshire, in the north of England, where he was born in the year 1588. His pecuniary circumstances were easy, when he followed persecuted Puritans to Holland and became fully identified with them in exile. From early life he had been accustomed to their teachings and at the age of seventeen years, he attempted to fly to the Netherlands, with some others, whither their harassed brethren had gone. Betrayed, he was seized and imprisoned at Boston, in Lincolnshire, for awhile, but finally escaped and joined the fugitives at Amsterdam, where he learned the silk weaver's art and pursued it. On receiving his patrimony, he entered into unsuccessful commercial operations, and lost a greater portion of it. When the establishment of a free colony in America was projected at Leyden, he was one of the most zealous promoters of the measure; and he and his young wife were among the earliest emigrants to that land of promise. Before a site was selected for a settlement, and while the May-Flower was yet riding at anchor in Cape Cod Bay, Mrs. Bradford fell into the sea and was drowned. That was the first death among the Pilgrims after their arrival on the coast of America. Shrewd, wise, active, humane and generous, Bradford was very popular; and he was in the chair of state almost continually from 1621 until his death in 1657, a period of thirty-six years.

We have observed toward the close of Chapter XVI of the first volume, that the Pilgrims at Plymouth rejoiced in an abundance of food in the autumn of 1621, the first year of their settlement. Thereby their hearts were filled with gratitude, and after the fruits of their labors had all been gathered, the governor sent out huntsmen to bring in supplies for a general and common thanksgiving. That was the first celebration of the great New England festival of Thanksgiving, now annually held in almost every State and Territory of the Union in the month of November. Great quantities of wild turkeys and deer were gathered at Plymouth, and for three days the Pilgrims indulged in rejoicing, firing of guns and feasting - entertaining, at the same time, King Massasoit and ninety of his dusky followers, who contributed five deer to the banquets. Seven substantial houses had been built during the summer; the inhabitants were in good health; a few emigrants from England had come in a second ship, and there were happy homes in the wilderness the ensuing winter. Among the new comers was the Rev. Robert Cushman, one of the founders

of the colony, who, in December, 1621, preached the first sermon in New England.

Governor Bradford's chief anxiety, at first, was for the establishment of friendly relations between the English and the Indians. That was already secured with Massasoit and his people but Canonicus, the haughty chief of the Narragansets, living on Canonicut Island opposite the site of Newport, was loth to be friendly at first. To show his contempt for and defiance of the English, he sent a messenger to Governor Bradford with a bundle of arrows in a rattlesnake's skin. That was at the dead of winter, 1622. It was a challenge to engage in war in the spring. Like the venomous serpent that wore the skin, the symbols of hostility gave warning before striking - a virtue seldom exercised by the Indians. Bradford acted wisely on the occasion. He accepted the challenge to fight the multitude of savages, by sending the significant quiver back, filled with gunpowder and shot. "What can these things be?" inquired the ignorant and curious savage mind, as they were carried from village to village in superstitious awe as objects of evil omen. They had heard of the great guns at the seaside, and they dared not keep the mysterious symbols of the governor's anger, but sent them back to Plymouth in token of peace. The pride, if not the hatred, of Canonicus was subdued, and he and other chiefs humbly begged the English for friendship. But the alarmed colony spent the remainder of the winter and spring in fear, for Canonicus could send five thousand warriors to the field, it was said. The English, with much labor, built the fort mentioned in Chap. XVI of the first volume, which served, also, for a meeting-house. And when tidings came of the massacre by the Indians in Virginia, in April (see Chap. XXIV, Vol. I), every man worked diligently. Their houses were all barricaded, and "watch and ward were constantly kept."

Not long after this, the first war between the English and savages broke out. Weston, a wealthy and dissatisfied member of the Plymouth Company, sent over a colony of sixty unmarried men to plant a settlement on his own account, somewhere on the shores of Massachusetts Bay. He boasted of the superior strength of such a settlement by bachelors to that of Plymouth, which was "weakened by women and children." They were mostly idle and disorderly young men like those who went early to Virginia. Many of them were very dissolute. After living several weeks upon the scanty means of the Plymouth families, they went to the site of Weymouth, where they began a settlement. Idle and wasteful, they were soon compelled to confront gaunt Famine; and beggary and starvation were the alternatives presented to them. They exasperated the Indians by plundering their corn-fields and other sources of supplies. The savages, failing to discriminate between the righteous and the unrighteous, or fearing the vengeance of the other white people if they should destroy the young men at Weymouth, formed a plot for the extermination of all the English in their land. The peril was great, and was discovered only a few days before the fatal blow was to be struck. Massasoit, who had been nursed into health after a deadly sickness, by the brave hands of Edward Winslow, revealed the plot to his benefactor. The Plymouth people immediately sent Captain Standish, with a few soldiers, to protect the offending Englishmen, and in a contest that ensued an Indian chief and several of his followers were killed. The victor carried the chief's head upon a pole, in triumph, into Plymouth, and placed it on the palisades of the fort. When the good Robinson, at Leyden, heard of this, he wrote: "O, how happy a thing it would have been, had you converted some, before you killed any." If they were not "converted," the

savages were very much frightened, and sued for peace. So the settlement of strong unmarried men was saved by the Plymouth people, who were "weakened by many women and children." The childless Lord Bacon, in one of his essays, says "Certainly the best works and of greatest merit for the public have proceeded from the unmarried or childless men." Weston's experience was the reverse. His colony, too weak to endure, was broken up within a year after it was planted, and the most worthless of its members, happily for the Plymouth people, returned to England.

We have observed (Chapter XVI, Vol. I) that the Pilgrims and London merchants and others, formed a partnership in making the settlement of the Plymouth colony. The speculation, as such, was a failure. Ill-feeling arose between the two classes of proprietors. The merchants and others wished to dissolve the league, whose prescribed term of existence was seven years. It continued to the end of that time, when the colonists purchased the interest of their partners in England. Then the community system, or the common sharing of labor and its products, was abandoned, and the whole property was divided among the inhabitants. New incentives to industry were thereby created; and very soon the blessings of plenty drawn from the unfruitful soil of New England, rewarded labor there. The cultivators of the soil became free-holders, and general prosperity was soon manifested.

The restless enterprise of the children of the Pilgrims of our day marked the Fathers. While their number was few and their strength feeble, they stretched forth their hands to grasp other landed possessions. At an early day they acquired rights of domain on Cape Anne and on the borders of the Kennebec. Nothing but the interfering spasms of the dying Plymouth Company, of whom the veteran Gorges was the latest survivor, prevented their extending the jurisdiction of Plymouth over all New England. His efforts to sustain the claims and existence of the Company, and his ambitious aspirations in his old age as governor-general of New England and lord proprietor of Maine, have been already considered in the XVIIIth chapter of the first volume.

The colony had been spared the affliction of a governor sent by Gorges, and from the beginning had enjoyed self-government without the royal sanction. That government was simple. At first the only officers were a governor and one assistant magistrate. In 1624, five assistants were chosen and in 1630, when the colony numbered about five hundred souls, seven assistants were chosen by the whole people. This pure democracy existed at Plymouth until 1639, a period of nineteen years, when a representative government was established and a pastor was chosen as a spiritual guide.

From the beginning the Pilgrims had cause for uneasiness concerning religious matters. They greatly desired to have their pastor, Mr. Robinson, come over from Leyden, but the greed of their speculating partners in England prevented his transportation to America. He was regarded as the head of the English Non-conformists or Puritans, though away in Holland. To please the Crown and the Church of England, for purposes of gain, these partners persistently opposed his emigration to America in any English vessel, and he never saw his beloved church that was planted in the wilderness. Meanwhile efforts were made, through the deception of false pretenses, to bring the Pilgrims under the control of the Church of England, but failed. A hypocrite named

Lyford was sent there to preach, and he and a confederate (John Oldham) conspired to overthrow both the political and religious system at Plymouth. Their wickedness was discovered, and on being arraigned before Governor Bradford, Lyford "burst into tears and confessed that he was afraid that he was a reprobate." His confederate was banished, but Lyford was pardoned on making loud professions of penitence. They were insincere and being caught in seditious tricks again, he was deposed from the ministry and banished from Plymouth.

The Pilgrims regarded Mr. Robinson as their pastor until his death in 1625. Religious services at Plymouth had been conducted, from the beginning, by Elder Brewster, in the form of prayer and exhortation, and were kept up until a regular pastor was provided. Some of their exercises were conducted in a democratic manner. On Sunday afternoons, a question would be propounded by the elder, to which all had a right to speak. In the exercise of private judgment these religious meetings sometimes became the arena of intemperate debates and after a pastor was called, it was difficult to retain one there, because of the restiveness of the people under even moderate discipline.

The independent colony of Weston failed, but another was attempted at Cape Ann, where Gloucester now stands, by the Rev. John White, rector of Trinity Church, Dorchester, England, and several influential persons whom he persuaded to join him. They expected to found there a flourishing fishing colony, but the enterprise failed and was abandoned. White was not disheartened. He infused his own spirit into other powerful citizens, whose names afterward appeared conspicuous in the annals of New England. They formed a Company in 1628, and purchased a tract of land extending from three miles north of the Merrimac River to three miles south of the Charles River, and westward to the South Sea or Pacific Ocean.

In the summer of that year, the Company sent John Endicott, one of their number (including his wife and children), with emigrants, to settle on the domain. Endicott was commissioned governor or general manager of the colony; and then he began his long and eventful career in New England. He was then forty years of age; possessed of an imperious and unyielding will was a most rigid Puritan in thought and manner; benevolent though austere, and was intolerant of all dissenting opinions.

Endicott conducted the little colony to Naumkeag, where some of White's men from Cape Ann were seated. After settling some disputes about the right of occupation and control, he named the place Salem, the Hebrew word for "peaceful." There he soon displayed his stern opposition to all "vain amusements," by causing a May-pole to be cut down, which the Dorchester people had set up. He lectured them on the folly of amusements, and warned them to "look there should be better walking."

Several persons of wealth and influence in Boston, Lincolnshire, and elsewhere, joined the company early in 1629, and in March a royal charter was granted creating them a corporation under the name of "The Governor and Company of the Massachusetts Bay, in New England." The administration of public affairs was intrusted to a governor, deputy, and eighteen assistants or

magistrates, who were to be elected annually by the stockholders of the Company. A general assembly of the freemen of the colony was to be held at least four times a year to legislate for the colony. The Icing claimed no jurisdiction, for he regarded the whole affair as a trading operation, and not as the founding of an empire. He could not comprehend the moral and religious movements going on around him, and was lavish of privileges which he could not easily recall. The charter conferred upon the colonists of Massachusetts Bay all the rights of English subjects without exacting many corresponding duties and it was afterward used as a text for many powerful discourses against the usurpations of royalty.

The Company were careful to make "plentiful provision of godly ministers for the colony," and in the summer after Endicott's departure, three of these - Skelton, Higginson and Bright - were sent to Salem, with about two hundred additional settlers. Soon after their arrival a church was organized by the choice of Samuel Skelton as pastor, and Francis Higginson as teacher or assistant. They were ordained by a simple ceremonial. Mr. Higginson and three or four of the gravest men laid their hands on Mr. Skelton's head, while he knelt, and then prayed. Mr. Higginson was consecrated by Mr. Skelton in the same way. Mr. Higginson then drew up a confession of faith and plan of church government, and an invitation was sent to the Plymouth people to be present at a formal organization of the society. On a warm day, the 6th of August, the people were gathered in the shade of great elms at Salem, when the two ministers preached, and thirty persons signed the covenant and associated themselves as a church. Governor Bradford and others, who came from Plymouth by sea, did not reach Salem until the ceremony was ended, when they "came into the assembly and gave them the right hand of fellowship." So was founded the first church in New England. They claimed that they were not Separatists - that is, separated from the Church of England - but a better part of it, discarding its corruptions and trying to reform it. Yet in all outward things they 'are Separatists. Endicott and his friends punished two brothers named Browne for worshipping in accordance with the prescriptions and rituals of the Book of Common Prayer, the governor declaring the liturgy and ceremonials to be sinful corruptions of the worship of God. The offenders persisted and Endicott sent them back over the ocean, telling them that New England was no place for such as they. The Company did not disclaim the act, but simply asked Endicott to be discreet, for fear of offending the home government.

This high-handed act unreproved, established the fact that the authorities of Massachusetts might, at their discretion, exclude all persons from the colony who did not conform to the pattern of morals and religion prescribed by the governor and ministers. This was the beginning of that blind intolerance of the Puritans of Massachusetts, which appears as a dark stain upon the annals of New England. We must judge those early settlers leniently by the standard of ethics which prevailed in civilized society at that time.

Toward the close of the summer of 1629, an important measure was adopted by the Company, which gave a mighty impulse to emigration to Massachusetts. It was the transferring of the government of the colony from the Company to the people there, and so establishing a democracy like that at Plymouth. That was done on the 29th of August. The old officers in the colony

resigned, and John Winthrop, one of the many wealthy and influential heads of families who had determined to emigrate to Massachusetts in the event of such a change in its political affairs, was chosen governor. John Humphrey, brother-in-law to the Earl of Lincoln, was chosen deputy-governor, but, on the eve of embarkation, his place was filled by Thomas Dudley, a veteran soldier and then the manager of the estates of the earl. Eighteen assistants were also chosen.

Winthrop was then forty-two years of age. He was a native of Groton, Suffolk county, where he had considerable landed property. A lawyer by profession, he had moved in the higher circles of society among eminent men in church and state, by which means he became learned in statesmanship and polished in manners. "Dudley had served as a soldier under Henry the Fourth of France thirty years before and was old enough," Palfrey says, "to have lent a shrill voice to the huzzahs at the defeat of the Armada. Of the assistants, Johnson, Saltonstall, Eaton, Bradstreet and Vassall were the most conspicuous. Isaac Johnson was the richest of the emigrants, and son-in-law of the Earl of Lincoln. Sir Robert Saltonstall, of Halifax, Yorkshire, was an opulent supporter of the enterprise. Theophilus Eaton was an eminent merchant of London, and a polished courtier who had been the earliest minister of Charles the First, in Denmark. Simon Bradstreet was the son of a Puritan minister in Lincolnshire and college graduate, and William Vassall was an opulent West India merchant."

Winthrop and his companions, consisting of about three hundred families sailed from Yarmouth in the spring of 1630. The governor was in the *Arabella*, a ship carrying twenty-eight guns, and so named in compliment to Arabella Johnson, wife of one of the assistants. Before leaving the port, the governor, in behalf of his company, sent an address, drawn by the Rev. Mr. White, to the rest of the brethren in and of the Church of England, saying that "they esteemed it a favor to call that church their "dear mother;" that they wished her prosperity, and that they left her and their native land with much sadness of heart and many tears." They declared that they went to establish an independent church, but not a separate one.

The *Arabella* arrived at Salem in June. They found there neither a church nor town. A rather stately house, in which the governor lived, and a few hovels, constituted the shelter of the settlers, among corn-fields. Death had been busy, during the previous winter and spring, with the older settlers, and many of the survivors were weak and sick. Provisions were scarce. Disease attacked the new comers, and before the close of autumn, of a thousand emigrants who had arrived that year, two hundred were in their graves. The charming Arabella Johnson - the "queen" of the colony who came from a home of luxury, died within a month after her arrival; and grief for her loss consigned her husband to the grave a few weeks afterward.

Winthrop sought a more attractive place than Salem for the seating of his colony. Endicott's people had built some huts at Charlestown, whither some of Winthrop's people went. Others seated themselves at Dorchester, Roxbury, Watertown, and Cambridge. It was proposed to found the capital of the colony at Charlestown, and there the first court of the assistants was held late in August. But an epidemic disease, caused, it was supposed, by unwholesome water at

Charlestown, induced the governor and magistrates, and others of the settlers, to remove to the peninsula of Shawmut, the site of Boston, where they found an abundance of pure spring water. There they built cottages and founded the capital of New England. The peninsula was composed of three considerable hills, and was called Tri-mountain for some time. The capital was named Boston, in commemoration of the native place of some of the emigrants from Lincolnshire. At the close of 1630, a large number of new emigrants had arrived, and the settlement on Shawmut was greatly increased. During the season, seventeen ships had brought almost fifteen hundred emigrants from England.

From the beginning the people were jealous of the power of the magistrates and ministers. They well knew the tendency toward tyranny of men exercising unrestrained control, and they thought it wise to assert popular rights - the rights of the people - at the outset. At a general court of the magistrates or assistants, in May, 1631, it was agreed that thenceforth all the officers of the government should be chosen annually by the freemen of the colony. These consisted of only men who were members in good standing of some church. This was an attempt to establish a sort of religious aristocracy for the control of the state, for, of the whole population, only one hundred and eighteen persons were qualified to be freemen, according to the prescription. This intimate relation between church and state gave rise to many disorders, and it was dissolved in 1665.

There was another change in 1634, when a representative government was established, the second in America. There were now eight distinct settlements in Massachusetts, and the growth of the colony was more rapid and sturdy than that of Plymouth. Winthrop, whom the people reelected, ruled wisely. Like Bradford, he courted the friendship of the surrounding Indians, and chiefs and sachems dined at his table. There might have been seen a sagamore from the Mohegans on the distant Hudson River to tell him of the beautiful Connecticut Valley, and invite him to send settlers there. There, also, might have been seen the son of the aged Canonius; his nephew Miantonomoh, the brilliant young chief of the Narragansets, and the representatives of the Nipmucs and Wampanoags with Massasoit, the good chief of the latter nation. Winthrop also cultivated friendly relations with the neighboring settlements and distant colonies. He journeyed on foot from Shawmut to Plymouth, to exchange courtesies with Governor Bradford; and he sent messengers to New Netherland to have a friendly talk there with the authorities about the occupation of a part of the Connecticut Valley. His policy was peace and good fellowship. A ship, trafficking with corn, that came from Virginia, met a friendly greeting when she sailed into Boston harbor.

For awhile after the arrival of Winthrop and his company, the flow of emigration to Massachusetts almost ceased. Men wished to see the experiment there fully tried before venturing. The intolerance of the authorities in church and state, in Massachusetts, was another cause for hesitation. The narrow views of civil and religious freedom entertained by those authorities and practically enforced, did not suit the more liberal-minded of the English Non-conformists, who were disposed to emigrate. There were too many shades of opinion among them to expect harmony before such an inexorable censor as they would meet in the

half-ecclesiastical or church government of Massachusetts. But political and religious events in England soon gave an amazing impetus to emigration to America. Laud, the primate or head of the church, in England, who hated Puritans intensely, was then carrying forward persecution with a high hand. He was an implacable inquisitor, and sent men to prison without mercy, because they did not conform to his requirements in their method of worshipping Almighty God. At the same time there was a violent struggle for power between the monarch and the people. The king had, in effect, abolished the Parliament, and was ruling England at the bidding of his uncontrolled will. Civil war was evidently brewing in the hearts and minds of the people, and those who loved quiet and foresaw the coming storm fled to America to avoid its consequences.

During the year 1635, full three thousand new settlers went to Massachusetts, among whom were men of wealth, influence, and distinction. Among these were the fiery Hugh Peters, an eloquent Puritan preacher, and Henry Vane, an enthusiastic young man twenty-five years of age, who took a conspicuous part in the affairs of the colony. Meanwhile the harsh proceedings of Endicott and others toward those who did not conform to their rigid discipline, and the intemperate zeal which characterized the authorities in Massachusetts, in their opposition to the church and crown, aroused the jealousy and resentment of both. These feelings were intensified by the intimations of the enemies of the colonists, that they named not at new discipline, but sovereignty, and action was taken to bring them into subjection. Much had been made of the fact that Endicott had caused a part of the red-cross of St. George to be cut out of the English flag at Salem, and that many of the citizens refused to follow it before it was so mutilated. These things were cited as evidence of disloyalty to the crown. On the contrary, it was loyalty to bigotry. Endicott regarded the cross in the flag as a relic of Anti-Christ, because the Pope had given it to the King of England as an ensign of victory. The whole aspect of the act was theological, not political but the royalists chose to interpret it otherwise, and it was one of the reasons for tyrannical action toward the colony, when orders were issued to the authorities of Massachusetts to produce their charter before the Privy Council in England. This was followed, in the spring of 1634, by the appointment of an arbitrary special commission for the colonies, with Laud, the primate, at their head. He and his associates received full power over the American colonies to organize new governments and dictate laws to regulate public worship, and to inflict punishments and revoke charters.

When the news of these proceedings reached New England, with a rumor that a governor-general or Viceroy was on his way, the authorities of Massachusetts took the boldest measures. Fortifications were ordered, and three thousand dollars - then a large sum for the poor colonists - were raised to pay for them and it was resolved not to receive a governor appointed by the crown. They determined to resist as long as possible. It was at that juncture that the great emigration just spoken of took place.

Chapter XXX

WHEN the fiery Hugh Peters and the gentler Henry Vane arrived at Boston in 1635, the colony was somewhat excited by theological disputes. The new-comers engaged in the controversy, and it soon took the form of a bitter quarrel. Peters was a rigid Puritan preacher just from a six years exile in Holland, and he was made pastor of the church vacated by Roger Williams when he was banished, whose doctrines the new preacher denounced, and whose adherents he expelled from the congregation.

Vane was only twenty-three years of age. He was a son of one of the king's high officers of state, and a young man of purest morals. Forsaking the preferments which awaited him at court, he fled to New England to enjoy the freedom of simple worship among those whose cause he had espoused. In after years Milton praised him for his goodness, and Clarendon regarded him as equal to Hampden in statesmanship.

The colonists regarded the advent of Vane as a token of the speedy emigration to Massachusetts of leading men of the realm. They received him with open arms, and in the delirium of their joy they seemed to forget their veterans, and elected him governor of the colony. With broad and generous views, he defended the tenets of Mr. Williams and Mrs. Hutchinson in the controversy - the leading points of which have been defined in the XXth Chapter of the first volume. This gave intensity to the partisan feeling, both in politics and theology, and a strong opposition to Vane was organized. After a tempestuous year Vane was defeated at the next annual election, when he returned to England.

Soon after Vane's departure Mrs. Hutchinson was banished, and she settled in Rhode Island. There she became a widow. Dreading the persecutions of bigots which menaced her, she left New England and took up her abode within the domain of New Netherland, among the sons of the forest. Her cabin was near the present village of New Rochelle, in Westchester county, and with her dwelt all her family, in peace, until the wickedness of Governor Kieft excited the wrath of the Indians. With blind fury they swept through the forest destroying every white settler and settlement. Mrs. Hutchinson did not escape. She and all her family, excepting a granddaughter, fair and curly-haired, eight years of age, were murdered. Her house and barns were burned; her cattle were butchered, and her grandchild was carried away captive. The young warrior who spared her life took her tenderly in his arms and soothed her with caresses, while an attendant bore upon a pole the scalps of some of her kinsfolk. When, four years afterward, little Anna Collins was delivered to the Dutch governor at New Amsterdam to be sent to her friends at Boston in accordance with the terms of a treaty, she had forgotten her own language and was unwilling to leave her Indian friends.

The good results of the war with the Pequods promised future security to the New England colonists against dangers from the wrath of the savages. The power of the English manifested in that war made the Indians peacefully inclined for a whole generation of time. Emigration, stimulated by persecution, began to flow into New England in a copious stream. The exodus of

Puritans from British shores, and the amazing development of a republican state in America, soon excited the jealousy and the fears of the church and the government. They put forth their strength to stay the tide, as we have observed, in vain. Other causes effected what royal decrees and armed men could not do. Troubles in England which threatened the overthrow of the monarchy and the hierarchy or church establishment withdrew the attention of both from the distant colonies; and when the civil war that ensued promised better times for the lovers of freedom at home, emigration to America almost ceased.

Meanwhile the ties of interest and common sympathy united the struggling colonists in New England. They were natives of the same country, and were the social and political products of persecution alike exposed to the weapons of hostile Indians and the greed for territory and power of the French and Dutch on their eastern and western borders. They were equally menaced with punishment by the parent government for non-conformity in matters of state and religion. They were, in fact, one people, bound by interwoven interests. Therefore when the civil war in Old England broke out in 1641, and the New England colonists, numbering more than twenty thousand, with fifty villages, almost forty churches, and their commerce expanding and manufactures of cotton from Barbados making them independent of the mother country so far, the aspect of the present and future made them seriously contemplate the establishment of a new nation. No tie of gratitude exacted their allegiance to the British. On the contrary, their happiness in freedom was the result of neglect and oppression, rather than of care and protection. In 1643, the British Parliament acknowledged that "the plantations in New England had, by the blessing of the Almighty, had good and prosperous success without any public charge to the parent state."

A confederation of New England colonies for mutual defence had been proposed by Connecticut immediately after the war with the Pequods. When the crown threatened to deprive Massachusetts of her charter, in 1638, the other colonies counselled resistance, and the people of the Bay threatened secession from the British realm. Now, relieved of the pressure of royal rule under royal displeasure, the inhabitants of New England resolved to unite in a political league. In May, 1643, deputies from the colonies of Plymouth, Connecticut and New Haven met those of Massachusetts in Boston. They very soon agreed upon twelve articles of Confederation, and constituted a confederacy under the title of "The United Colonies of New England." That written agreement was signed on the 20th of August following. Rhode Island and the settlements in New Hampshire and Maine asked to be admitted to the Union, but were denied, chiefly, as Winthrop said, because they ran a different course from us, both in their ministry and civil administration. They would not bend to the dictates of Massachusetts in matters which concerned the conscience. Whereupon, as we have observed, Rhode Island, which refused the required allegiance to Plymouth, took immediate and successful steps to procure an independent charter. See Chapter XX, Vol. I.

The New England Confederacy - the harbinger of the United States of America - was simply a league of independent provinces, as were our thirteen States under the "Articles of Confederation," as we shall observe hereafter, each jealously guarding its own privileges and rights against any encroachments of the "general government." That central body was really no

government at all. It was composed of a Board of Commissioners consisting of two church members from each colony, who were to meet annually or oftener if required. Their duty was to consider circumstances and recommend measures for the general good. They had no executive nor independent legislative powers, their recommendations becoming laws only after the separate colonies had acted upon and approved them. The doctrine of State supremacy was controlling.

That famous league, of which Massachusetts assumed the control because of its greater population and its being a perfect republic, remained in existence more than forty years, during which period the government of England was hanged three times. Unlike the Virginians, the New Englanders sympathized with the English republicans, and found in Oliver Cromwell, the ruler of England next to the beheaded Charles the First, a sincere friend and protector. The colony of Massachusetts, in particular, prospered. A profitable commerce between that colony and the West India Islands was created. That trade brought bullion, or uncoined gold and silver, into the colony, which led, in 1652, to the exercise of an act of sovereignty on the part of the authorities of Massachusetts by the establishment of a mint. It was authorized by the General Assembly, in 1651, and the following year silver coins of the denominations of three-pence, six-pence, and twelvepence, or shilling, were struck. This was the first coinage within the territory of the United States.

The Puritan of Massachusetts, at this time, was the straightest of his sect - an unflinching egotist who regarded himself as eminently his "brother's keeper," whose constant business was to save his fellow-men from sin and error; sitting in judgment upon their belief and actions with the authority of a God-chosen high-priest. His laws, found on the statute-books of the colony or divulged in the records of court proceedings, exhibit the salient points in his stern and inflexible character as a self-constituted censor, and a conservator of the moral and spiritual destiny of his fellow-mortals. He imposed a fine upon every woman who should cut her hair like that of a man. He forbade all gaming for amusement or gain, and would not allow cards or dice to be introduced into the colony. He fined families whose young women did not spin as much flax or wool daily as the selectmen had required of them. He would not allow a Jesuit or Roman Catholic priest to live in the colony. He forbade all persons "to run or even walk except reverently to and from church" on Sunday; and he doomed a burglar, because he committed his crime on that sacred day, to have one of his ears cut off. He commanded John Wedgewood to "be put in the stocks for being in the company of drunkards Thomas Petit, for suspicion of slander, idleness and stubbornness, "he caused to be "severely whipped;" Captain Lovell he admonished to "take heed of light carriage;" Josias Plaistowe, for stealing four baskets of corn from the Indians, was ordered by him to return to them eight baskets, to be fined five pounds, and thereafter to "be called by the name of Josias, and not Mr. Plaistowe, as formerly. He directed his grand jurors to admonish those who wore apparel too costly for their income, and if they did not heed the warning to fine them; and in 1646, he placed on the statute-book of Massachusetts a law which imposed the penalty of flogging for kissing a woman in the street, even in the way of honest salute.

Almost a hundred years after that law was passed, its penalty was inflicted upon the commander of a British man-of-war. She arrived at Boston after a long cruise. As her

commander was going toward his home in that city, he met his wife in the street hastening to greet him, when he gave her an affectionate kiss. A stern old magistrate in a cocked-hat and powdered hair in a queue, who was "learned in the law," seeing the act, caused his immediate arrest. The next morning, after due trial, the captain was convicted and the punishment of flogging was administered in a very mild way, but in a public place, causing much merriment. When the victim was about to sail on another cruise, he invited that magistrate and others whom, he understood, had approved of his punishment, to a complimentary dinner on board of his vessel, as a token of his forgiveness and submission. They accepted it, and when they were all merry with good cheer, and were on deck ready to depart, he ordered his boatswain and mate to give the magistrates a sound flogging. Each officer was armed with a knotted cat-o'-nine-tails, and they drove the astonished guests pell-mell over the side of the vessel into the boat waiting to receive them. The captain sailed away, and the law was soon afterward repealed. Governor Winthrop tempered these laws with merciful mildness in their execution. On one occasion it was reported to him that a man had been stealing from his store of winter's firewood, and he was urged to punish him. "I will soon put a stop to that bad practice," said the governor sternly. He sent for the offender. "You have a large family," he said to the offending culprit, "and I have a large magazine of wood; come as often as you please, and take as much of it as you need to make your dwelling comfortable." Then turning to his accusers, he said: "Now I defy him to steal any more of my firewood."

The bigotry and austerity of the Puritans in Massachusetts were vehemently condemned at the time of their iron rule in New England, and have been ever since. But there are peculiar considerations in their case, which the eye of justice cannot overlook. Their theology and their ideas of church government were founded upon the deepest heart-convictions of a people not broadly educated. They had encountered and subdued a savage wilderness for the purpose of planting therein a church and a commonwealth fashioned in all their parts after a narrow but cherished pattern. They felt that the domain which they had conquered with so much peril and toil was their own, and that they had as good a right to regulate its internal affairs according to their own notions, and exclude all obnoxious persons, as had a householder the affairs of his family and the avoidance of an unwelcome visitor. They had boldly proclaimed the right to the exercise of private judgment in matters of conscience, and so they tacitly invited the persecuted of all lands to come to them. Therefore, unsettled persons, libertines in unrestrained opinions, came to Massachusetts from abroad to disseminate their peculiar views. In that dissemination the Puritans saw clear prophecies of a disorganization of their church. They took the alarm early, and with a mistaken policy they resisted such encroachments upon their domain and into their society with fiery penal laws implacably executed. But it was only in respect to religion that the Puritan laws were specially harsh as compared with the general jurisprudence or science of law of that day. "God forbid," said Governor Dudley in his old age, our love for the truth should be grown so cold that we should tolerate errors - "I die no libertine." "Better tolerate hypocrites and tares than thorns and briars," exclaimed that famous man of God," as Norton called Parson John Cotton. "To say that men ought to have liberty of conscience is impious ignorance," said Parson Ward of Ipswich, author of "The Simple Cobbler of Agawam." "Religion admits of no eccentric notions," said Parson Norton, the colleague of Ward, biographer of Cotton, and persecutor of the

Friends or Quakers.

Friends or Quakers. The peculiarities of this sect, we have considered in Chapter XXII of the first volume. Among the earlier disciples of George Fox were many enthusiasts whose zeal led their judgment. They were absolute fanatics, and sometimes became lunatics in their religious views and actions, and were utterly unlike the sober, mild-mannered members of that society to-day. They ran into the wildest extravagances in the exercise of the liberty of speech openly reviling magistrates and ministers with intemperate language overriding the rights of all others in maintaining their own, and scorning all respect for human laws. They made the most exalted pretensions to the exclusive possession of the gifts of the Holy Spirit and the power of persuasion with which they were endowed. Some, in the pride of their egotism, went to Rome to convert the Pope; others went to the East to convince the Grand Turk and his people of their errors; and some came to America to proselyte the Puritans in New England, the Roman Catholics in Maryland, and the Cavaliers and Churchmen in Virginia. Some of them behaved so wildly and disorderly in Boston that they suffered intensely from the indignation of the magistrates and clergy there and they so disgusted the tolerant Roger Williams, that he tried to root them out of Rhode Island.

The first of the sect who appeared conspicuous in New England were Mary Fisher and Anna Austin, who arrived at Boston in the summer of 1656, when John Endicott was governor. There was then no special law against them, but under a general act against heretics, they were arrested their persons were examined to find marks of witchcraft, with which they were suspected; their trunks were searched, and their books were burned publicly by the common hangman. These innocent and well-behaved women were so treated because of the stories of the disorderly acts of some of the sect in England who had come over the sea. After keeping them in prison several weeks, the authorities of Massachusetts sent them back to England. Mary Fisher afterward visited the Sultan of Turkey, passing everywhere unharmed because his people revered a crazy person, for such they took her to be.

This harsh treatment of the first comers fired the zeal of the more enthusiastic of the sect in England. They sought martyrdom as an honor. They flocked to New England and fearfully vexed the souls of the Puritan magistrates and ministers. One woman came all the way from London to warn the authorities against persecutions. Others came for the purpose of reviling and denouncing - vehemently scolding - the powers in church and state. They would rail at magistrates and ministers from windows, as these functionaries passed by. They mocked the institutions of the country and some fanatical young women appeared without clothing in the churches and in the streets, as emblems of the unclothed souls of the people, while others, with loud voices, proclaimed that the wrath of the Almighty was about to fall like destructive lightning upon Boston and Salem. Horrified by their blasphemies and indecencies, the authorities of Massachusetts passed some very cruel laws. At first they forbade all persons harboring "Quakers," imposing severe penalties for each offence. Then they imposed mild punishments upon the Friends themselves. These statutes were ineffectual; and finally, driven by resentment and mistaken judgment, they passed laws which authorized the cropping of the ears, boring of the tongues with

hot irons, and hanging on a gibbet, of offending Quakers. Yet these terrible laws did not keep them away. They were fined, imprisoned, whipped and hanged during the administration of the rigid Endicott, who was implacable. On a bright October day in 1659, two young men named William Robinson and Marmaduke Stevenson, with Mary Dyer, wife of the secretary of state of Rhode Island, were led from the Boston jail, with ropes around their necks, and guarded by soldiers, to be hanged on Boston Common. Mary walked between her companions hand in hand to the gallows, where, in the presence of Governor Endicott, the two young men were executed. Mary was unmoved by the spectacle. She was given into the care of her son who came from Rhode Island to plead for her life, and went away with him. But she returned the next spring, defied the laws, and was executed on Boston Common.

The severity of these laws caused a revulsion in public sentiment. The Friends stoutly maintained their course with decency, and were regarded by the more thoughtful as real martyrs for conscience sake. The people, at length, demanded a repeal of the bloody enactments, and by that repeal, in 1661, the Friends achieved a triumph. The fanaticism of both parties subsided. A more Christian spirit prevailed and the attention of the more sober-minded Friends was turned to the task of converting the Indians. They nobly assisted the Apostle Eliot and others in propagating the gospel among the pagans of the forests for whom that Apostle had labored for years. He had established a Christian church among them at Natic, and at the time of the repeal of the cruel laws, there were no less than ten villages of converted Indians in Massachusetts.

The reign of republicanism in England, under Oliver Cromwell and his son, was short. King Charles the First, after contending with the people for the royal prerogative and the throne for several years, was beheaded on a cold winter's morning in January, 1649, in front of his own palace of White hall. Royalty was then abolished. Late in May, 1660, the son of King Charles, who had been proclaimed monarch of England under the title of Charles the Second, rode into London on horseback between his brothers the Dukes of York and Gloucester, and took up his abode in the palace of Whitehall, while flags waved, bells rang, cannon roared, trumpets brayed, shouts rent the air and fountains poured out costly libations of wine as tokens of the public joy. After a struggle for about twenty years between royalists and republicans, the monarchy was restored, and the English people again became subjects of the head of the Scottish house of Stuart.

The members of the House of Commons had constituted a High Court of Justice for the trial of Charles the First, and many of them, signed his death-warrant. These were hunted by the royal vengeance. Some perished on the scaffold. Among these were Hugh Peters and Henry Vane, who had figured conspicuously in New England more than twenty years before. Many fled and so escaped the fatal block. Among these were Edward Whalley and William Goffe, who went to New England and gave the first news of the restoration of monarchy. The former was a cousin of Cromwell and of Hampden, and a distinguished cavalry officer. He had been intrusted with the custody of the royal prisoner, and was one of the signers of his death-warrant. Cromwell appointed him one of the major-generals who assisted in the government of the commonwealth, and was one of his most active lieutenants. Goffe, a son of a Puritan clergyman, was Whalley's

son-in-law, a colonel of infantry and member of the High Court who signed the death-warrant of the king. He, also, was one of Cromwell's ten major-generals.

Orders speedily followed the fugitives to New England for their arrest, and officers came from Old England for the same purpose. The "regicides," or king-killers, as they were called, were, after awhile, closely hunted, but the authorities and people of New England effectually concealed them from their enemies for years. When danger lowered, they fled from Boston to New Haven, and for a long time occupied a cave not far from that place. Finally they made their abode in the remote town of Hadley, where they were joined by Colonel Dixwell, another "regicide," who finally settled in New Haven. In Hadley, Whalley died. Goffe survived him until after King Phillips war, which we shall notice presently; but from the time when they took up their abode there, in disguise, they disappeared from public view. During that period, so terrible to New England settlers, Hadley was surrounded by hostile Indians. The people were in the meeting-house observing a fast day. They were armed, as usual, and sallied out to drive off the savages. At that moment a tall, venerable personage, with a white, flowing beard, clad in a white robe and carrying a glittering sword, suddenly appeared among the people, took the lead of the armed men, caused them to observe strict military discipline, and led them to victory. The people believed the stranger (who as suddenly disappeared) to be an angel sent by the Lord for their deliverance. The angel was General Goffe, who was stout in body and valiant in spirit. It is related that soon after his arrival in Boston, a fencing-master erected a stage on the Common, on which he walked several days, defying any man to fight him with swords. Goffe accepted the challenge. He wrapped a huge cheese in a linen cloth as a shield, and arming himself with a mop filled with muddy water from the gutter, he appeared on the platform. The fencing-master made a thrust at him, which Goffe received in the cheese in which he held the sword until he had smeared his antagonist with mud. The enraged fencing-master caught up a broad-sword, when Goffe exclaimed: "Stop, sir; hitherto, you see, I have only played with you, and not attempted to harm you but if you come at me now with the broad-sword, know that I will certainly take your life." The alarmed fencing-master cried out, as he dropped his sword, "Who can you be? You must be either Goffe, or Whalley, or the Devil, for there were no other men in England who could beat me."

The New England colonies, and especially that of Massachusetts, expected very little favor from the new monarch, for their republicanism was decided and conspicuous. In the course of a few months after the Restoration, the General Court of Massachusetts sent addresses to the King and Parliament, chiefly because enemies of New England evidently possessed the confidence of the monarch and his ministers. In those addresses, general loyalty was expressed, and they prayed for a "continuance of civil and religious liberties" which they had long enjoyed, and promised for the crown, in return for its protection of their freedom, the blessings of a people whose trust is in God.

The king returned a gracious answer in the form of general expressions of good-will, but his smiles were not propitious. He resolved not to show these distant political enemies of his father any favors. The stringent provisions of the navigation laws and commercial restrictions from

which Cromwell had exempted the New Englanders were now renewed and rigorously enforced. Expecting collisions with the Crown, the latter, in Massachusetts, issued a declaration of natural and chartered rights, in which they claimed the liberty to choose their own executive officers and representatives to admit freemen on their own prescribed terms; to appoint all officers and define their powers and duties; to exercise, by annually elected magistrates and deputies, any function of human government; to defend themselves by force of arms, if necessary, against every aggression, and to reject, as an infringement of their right, "any parliamentary or royal imposition prejudicial to the country and contrary to any just act of colonial legislation."

Massachusetts now sent agents to London to persuade the king of their loyalty, at the same time to secure their independence in local affairs, as a self-governing people. It was a difficult task, but John Newton and Simon Bradstreet successfully performed it. In the autumn of 1662, the king confirmed the Massachusetts charter, and granted a conditional amnesty of general pardon for all past offenses during the late civil war; at the same time the king asserted his right to interfere with the domestic concerns of the colony.

The people of Massachusetts did not concede this royal right, and in 1664, commissioners were sent over, in a royal fleet, destined to take possession of New Netherland (see page 350), commanded by Colonel Nicolls, one of the commissioners, to "settle the peace and security of the country on a solid foundation"-in other words, to rule New England as deputies of the monarch. The people of Massachusetts were greatly irritated by this measure, and spoke out freely. False stories were carried to the ears of the king respecting the rebellion of the colonies, and for awhile there was a general belief in London that Whalley and Goffe were at the head of a New England army, and that the New England Confederacy had been formed for the express purpose of casting off all dependence on the mother country and establishing a republic in America. At the same time the colonists regarded the commissioners as royal instruments of oppression who would destroy their liberties. Massachusetts boldly protested against the exercise of their authority within its domain. So did the other New England colonies excepting Rhode Island. The acts and orders of the commissioners were generally disregarded, and after producing much ill-feeling and stimulating a democratic spirit throughout New England, they departed in 1666, leaving the colonies triumphant. Massachusetts ever afterwards held a front rank in the sturdy battle for independence which was waged for more than a hundred years. Yet she had a fierce struggle, at times, with royalty abroad, royal agents in her bosom, and pale and dusky enemies on her borders. At about the time when she triumphed over the efforts of the Crown to enslave her, she was involved in a most disastrous war with Metacomet, or King Philip, a son of the then dead Massasoit. That contest is known in our history as KING PHILIP'S WAR.

Chapter XXXI

King Philip - His Patriotism - Anger of His People - He Declares War - Terrible Events of that War - Death of Philip and Fate of His Son - Death of Charles II and Accession of James II - Andros Made Governor-General - Revolution in England - Andros Driven from Boston - French Jesuits in America - The French and Indians - A Congress of Delegates in New York - Canada Invaded - The English Repulsed - New Charter for Massachusetts.

MASSASOIT, as we have observed, kept his treaty with the English inviolate so long as he lived. He died in 1661, at the age of about eighty years, leaving two sons whom the English called, respectively, Alexander and Philip. The former did not long survive his father, when Philip became chief sachem and warrior of the Wampanoags, with his royal residence on Mount Hope, not far from Bristol, Rhode Island. He was called King Philip. He resumed the covenants with the English made by his father, and observed them faithfully for a dozen years.

It had become painfully evident to Massasoit before his death that the spreading colonies would soon deprive his people of their land and nationality, and that the Indians would become vassals of the pale race. The more warlike Philip pondered these possibilities with deep bitterness of feeling, until he resolved to strike an exterminating blow against the English in defence of his country and his race. His resolution was natural and patriotic. His unaided warriors would be inadequate to the work; so, in the primeval forest at Mount Hope, surrounded by seven hundred fighting men, he planned a confederacy of the New England tribes, which might have numbered about twenty-five thousand souls. It was a difficult task, the power of so many being overshadowed by that of the English, weakening and dividing them. Before any actual conspiracy was effected, Philip found himself compelled to declare war and lift the hatchet.

At that time there were many Christian converts among the Indians, who were firmly attached to the English. The Wampanoags had always discouraged the spread of Christianity among themselves, but there were many "praying Indians" there. One of these - John Sassamon, who had been educated at Cambridge, where John Harvard had established a college - was a sort of secretary to Philip. Becoming acquainted with the plans of the sachem, he revealed them to the authorities at Plymouth. For this treachery he was murdered, and three Wampanoags, who were convicted of the crime on very slender testimony, were hanged. The anger of the tribe was fiercely kindled by the event, and they were clamorous for war. The cautious Philip hesitated, for he knew his weakness. His young warriors would not listen to reason. They taunted him with causing the wrongs which his people endured because of his unwillingness to fight. Then they pointed to the humiliation and disgrace of his people when, a few years before, their firearms were taken from them by the jealous white men. His eyes kindled with rage. He had never forgotten nor forgiven that injury. The reminder excited his fiercest wrath. Springing from his seat he snatched up a bow and quiver, a gleaming hatchet and a keen knife, and vowed that none of these weapons should sleep whilst a pale-face remained in New England. He sent his women and children to the Narragansets for protection and yielding his judgment to passion, he trampled upon solemn treaties and kindled the flames of war. Swift runners were dispatched to other tribes

to arouse them to co-operation, and he required all of his followers to curse the white man and to swear eternal hostility to his race. It was but a foolish rushing to destruction. It has been well said Frenzy prompted their rising. It was but the storm in which the ancient inhabitants of the land were to vanish away. They rose without hope, and therefore they fought without mercy. To them, as a nation, there was no to-morrow.

Philip struck the first blow at Swanzey, twenty-five miles southwest from Plymouth. It was on the 4th of July, 1675. Expecting hostilities, the people had been to the house of worship to engage in fasting and prayer. As they were returning - men, women and children - the savages fell upon them furiously, slaying and capturing many, while others fled to the surrounding settlements. The country was aroused. Armed men from Plymouth, Boston, and other places near, joined, and making a forced march toward Mount Hope, besieged the Wampanoags in a swamp several days. Philip escaped with most of his followers, and took refuge with the Nipmucs in the interior of Massachusetts, who espoused his cause. At the head of fifteen hundred warriors he pressed through the forests to the beautiful valley of the Connecticut to lay waste the settlements there.

Meanwhile the armed white men entered the country of the Narragansets, and compelled Canonchet, son of Miantonomoh, then chief sachem of that people, to make a treaty of friendship with the English. When Philip heard of this he was amazed. His stout heart almost failed. But reflecting upon the perilous nature of his enterprise and his position, and that everything depended upon vigorous action, he aroused other tribes to join him in exterminating the pale-faces by the methods of treachery, ambush, and surprise. The scourge that now appeared was terrible. Men in the fields, families in their beds at midnight, and congregations in houses of worship, were murdered. The English settlements east of the Hudson then numbered about fifty thousand souls, and, at one time, it seemed probable that few of them would escape the fury of the savages, who hung upon and enveloped the parties like a consuming fire.

The Wampanoag chief entered the Connecticut Valley at Springfield, and swept northward almost to the present line between Massachusetts and Vermont like a destructive tornado, leaving desolation in his track. Near Brookfield, a party of twenty Englishmen, while on their way, at near the middle of August, to treat with the Nipmucs, fell into an ambush and were treacherously murdered. Almost every house in Brookfield was set on fire - excepting a stone one - into which the people had gathered for safety. There they were besieged two days, when the Indians set the house on fire. Just at that moment a shower of rain came like a providence and put out the flames, and at the same time a relief party of white people, under Major Willard, arrived, and drove away the savages. Early in September a hot battle was fought at Deerfield, where seven hundred Indians were defeated by one hundred and eighty Englishmen; but a week later, prowling savages laid the town in ashes. On the same day - the Sabbath - Hadley was attacked, and, as we have seen, was saved by the bravery of Goffe the regicide.

For a moment the scourge was stayed at Hadley, but it soon swept mercilessly over other settlements. The blood of many valiant young men, under Captain Beers, flowed freely in the paths of Northfield, late in September. A few days afterward a company of young men of highest

character - "the flower of Essex" - under Captain Lathrop, were murdered by many hundred Indians on the banks of a little stream near Deerfield, which is yet known as Bloody Brook, when the savages were beaten off by others who came to the rescue. Springfield was burned, and Hadley was again assailed.

The Indians were masters of the situation, and Philip, encouraged by his successes, now resolved to attack Hatfield, the chief settlement above Springfield. He was joined by the natives there who, until then, had been friendly to the English. They showed much zeal, and at near the close of October, Philip gathered his warriors around a huge fire, when the braves engaged in the wild scalp-dance, chanting heroic songs. Upon long poles they exhibited trophies of their horrid work - the long shining tresses of women and even the bright curls of little maidens whom they had slain - as they whirled around the flames with fearful contortions of limbs and body. Then, with almost a thousand warriors, the Wampanoags fell upon the settlement. The people were prepared for the onslaught. They had palisaded their houses with heavy timber standing upright in the ground bound close together with green withes, and the upper ends sharpened. Behind these stood armed men and resolute women waiting for the approach of the Indians, and when they came they were repulsed with such slaughter that Philip left the Connecticut Valley, with his shattered forces, and fled to Rhode Island. The Narragansets, in violation of their recent treaty with the English, received him with open arms, became his allies, and, late in the year, went out upon the war-path with him.

This perfidy of Canonchet and his people was terribly punished by the English at the close of the year. Fifteen hundred armed men from Massachusetts, Plymouth and Connecticut, under Captain Josiah Winslow, marched into the Narraganset country. The Indians, three thousand strong, had gathered in their wigwams within a large fort in the bosom of a dark swamp near the present village of Kingston, Washington county, Rhode Island, with their store of winter provisions. Snow had fallen to a great depth, and the savages felt secure for the season. Suddenly, at near the end of December, Winslow and his little army appeared before the fort in the frozen swamp. They soon beat down the feeble palisades, and in the course of a few hours hundreds of men, women and children, with all the provisions, perished in the fire. About a thousand warriors were killed or wounded, and several hundreds were made prisoners. Among the latter was Canonchet, who was put to death. Philip, and a remnant of the Narragansets, escaped, and took refuge with the Nipmucs. Eighty Englishmen were killed, and one hundred and fifty were wounded. The surviving savages suffered fearfully. Hiding in a cedar swamp, with no shelter but evergreen boughs, no food but nuts and roots which they might find beneath the deep snow, many of them perished. So disappeared the dominion of the Narragansets.

Philip was not idle during the winter. He tried in vain to induce the Mohawks to join him. Some of the exasperated Indians eastward of Massachusetts flocked to his standard, and early in the spring of 1676 the work of destruction began. In the course of a few weeks, the war spread over an area of almost three hundred miles. Villages and isolated dwellings were burned, and their inmates were destroyed. Weymouth, Groton, Medford, Lancaster and Marlborough, in Massachusetts, were laid in ashes and Warwick and Providence, in Rhode Island, were given to

the flames.

A terrible scene occurred at Lancaster. Forty-two persons took shelter in the house of Mary Rowlandson. It was set on fire by the Indians. "Quickly," wrote Mrs. Rowlandson in her narrative, "it was the dolefullest day that ever mine eyes saw. Now the dreadful hour is come. Some in our house were fighting for their lives others wallowing in blood the house on fire over our heads, and the bloody heathen ready to knock us on the head if we stirred out. I took my children to go forth; but the Indians shot so thick that the bullets rattled against the house as if one had thrown a handful of stones. We had six stout dogs, but none of them would stir." A bullet went through Mrs. Rowlandson's side, and another through a child in her arms, and she was made captive, having of her family only one poor wounded babe left. Down I must sit in the snow," she continued, "with my sick child, the picture of death, in my lap. Not the least crumb of refreshing came within our mouths from Wednesday night until Saturday night, except a little cold water."

Quarrels among themselves soon weakened the power of the Indians. The Nipmucs and the Narragansets charged their misfortunes to the ambition of Philip. The alliance was dissolved. The eastern Indians hastened to their mountain fastnesses. Many who had been in arms surrendered to avoid starvation. Others marched off to Canada and joined some of the tribes there and Captain Benjamin Church, the most famous Indian fighter of his day, hunted and slew all the hostile red-men he could find. Between two and three thousand of them perished or submitted in the course of the year 1676, and the proud Narragansets, to whom other tribes had paid homage, were reduced to a hundred bowmen. Like the Pequods, they were utterly ruined.

Philip eluded his pursuers for several months, hiding in many places, with a resolution to never surrender. He had a handful of faithful followers, but he cleaved the head of one of these friends with his hatchet, because he counselled submission. At last circumstances conquered his pride and his will. He returned secretly to Mount Hope. His wife and son were soon afterward made captive, when the "last of the Wampanoags" bowed beneath this crushing misfortune, and said "Now my heart breaks I am ready to die." Captain Church was then close upon his track; and a few days afterward, a faithless Indian shot him in a swamp. Church cut off the dead king's head with his sword, and it was borne upon a pole into Plymouth while hymns of thanksgiving were sung by the people. The ghastly trophy was placed upon the palisades and the people slept that night with a sense of security which they had not felt for years.

The disposition of Philip's little son - the heir to the throne of Massasoit - was a subject of grave debate. Some of the elders proposed putting him to death. Others suggested selling him as a slave. The most profitable measure appeared to be the most merciful, and the boy was sold to be a bond-slave in Bermuda. So perished the dynasty of the good Massasoit, and so ended the famous King Philip's War. The Mohegans, who held sway in Connecticut, were firm friends of the English, and not a drop of blood was shed in that colony during the war. The other colonies had suffered dreadfully. More than six hundred men, chiefly young, had fallen in the struggle. Thirteen villages had been destroyed. A large number of women and children had been murdered

or carried into captivity. Full six hundred houses were burned, and the cost of the expenditures and the losses equalled in value half a million dollars. The war was carried on a little longer by the Eastern Indians, for they drew supplies from the French in Acadie. Finally, in 1678, hostilities were ended by a treaty.

While Massachusetts was feeling the heavy losses of her sons and treasure, the English government attempted to carry out a long-cherished desire of the king to resume the control of the colony. The Privy Council sent Edward Randolph, a greedy adventurer and faithful servant of his royal master, to collect the customs at Boston, to exercise other authority as the agent of the crown, and to spy out the strength and weakness of the people. Randolph excited the cupidity, fears and jealousy of the king and his court, by exaggerating the number of the population, wealth, power and independence of the colony; and, being rejected by the authorities of Massachusetts, his wrath gave vehemence to his assertions. The governor (Leverett) was firm in his opposition to Randolph's pretensions. "The king," he said, "can in reason do no less than let us enjoy our liberties and trade, for we have made this large plantation in the wilderness at our own charge, without any contribution from the crown." Because of this spirit of independence, the people were reproached. "You are poor," said the Earl of Anglesey, "and yet proud."

They were justly "proud." They had established a free and flourishing state, and were resolved to maintain their natural and chartered rights at all hazards. When Randolph, by royal authority, declared the charter of Massachusetts to be void, and attempted to govern, the people spurned him. Then the king resolved to make the colony a "more palpable dependence," and issued a writ of quo warranto - a command for the authorities to appear before the monarch and his council and show by what warrant they held jurisdiction in Massachusetts. It was his intention to exercise the arbitrary power of his grandfather, James the First, if necessary, by taking possession of the domain without forms of law; but a pliant High Court of Chancery decided in the king's favor. Before the monarch could effect his object he died. That was early in 1685.

Charles's brother, the Duke of York, now ascended the throne as James the Second. More tyrannical than his predecessor, he declared, without the formalities of law, the charter of Massachusetts to be void, and appointed

Joseph Dudley president of the country from Rhode Island to Nova Scotia. All England, misinformed by the rulers, approved the measure, and the tone of society there was one of contempt for the plantations. Dryden, whose muse was then subservient to the crown, wrote in a dramatic prologue:

"Since faction ebbs, and rogues go out of fashion,
Their penny scribes take care In inform the
nation, How well men thrive in this or that plantation."
How Pennsylvania's air agrees with
Quakers, And Carolina's, with Associators.
Both e'en too good for madmen and for traitors.
Truth is, our land with saints is so run o'er,
And every age produces such a store,
That now there's need of two New Englands more."

Dudley was succeeded by Edmund Andros, who arrived in Boston late in 1686, bearing the commission of viceroy or governor-general of all New England. His character and purpose have already been considered in an earlier section. The rigid executor of his master's will, he soon made the rod of oppression keenly felt. He abridged the freedom of the press; interfered with marriage contracts, and frequently extorted money - levied "blackmail" - advanced the fees of all officers of government, and threatened to make the Church of England the established religion in all America. The people of Massachusetts resented his conduct, and, in compliance with the doctrine of Cromwell's motto, "resistance to tyrants is obedience to God," they were about to drive him out of the colony by force of arms, when the news came from England that James had been driven from the throne. That news reached Boston in April, 1689, with the welcome tidings that Protestant William and Mary were on that throne.

This intelligence, like an electric spark, kindled an insurrection which burst out spontaneously in Boston, and in a few hours the revolt became universal. Andros sent soldiers to arrest the venerable Simon Bradstreet, then ninety years of age, as the most obnoxious republican in the city. He was governor when the king struck down the liberties of Massachusetts by taking away its charter. The people immediately reinstated him. From the balcony of the State-House, the vigorous old man, with long white hair and beard flowing over his shoulders and breast, addressed the populace with eloquent words. They seized Andros and fifty of his most obnoxious associates, and cast them into prison. A Committee of Safety was appointed. An assembly of representatives were soon convened. That body, by unanimous vote, declared their ancient charter to be resumed. In May, William and Mary were proclaimed in the colony; and from their sovereigns the provisional government of Massachusetts received a letter sanctioning their late proceedings, and directing them to send Andros to England to answer the charges preferred against him.

Another storm of disaster was now brooding over Massachusetts. King James (who was a Roman Catholic) had fled to the court of Louis the Fourteenth, a co-religionist and kinsman, who espoused his cause. William, as Prince of Orange, was then at the head of a coalition of several powers in a Protestant league against Louis and soon after his accession, England became a member of that league and declared war against France. Hostilities between the two nations began the same year (1689) and the quarrel soon extended to their respective colonies in America. Here it became a strife chiefly for a monopoly of the fur-trade and the fisheries. The conflict then opened, and which continued more than seven years, is known in our history as KING WILLIAM'S WAR.

There was a powerful and controlling religious element in that contest, and in others which occurred between the French and English in America. In fact the power of France had been carried into the heart of the American continent more by the zeal and patience of religious enthusiasts, than by the ambition of monarchs, the wisdom of statesmen, or the greed of commoner.

Coeval with the rise of Protestantism in Germany, was the foundation of a society designed to

counteract its influence. It was established by Ignatius Loyola, a Spanish enthusiast, and was called the Society of Jesus. It is better known in later times as the Order of Jesuits. Their organization was as perfect as any which human wisdom has yet devised for a special object. They are not a society of priests, but of Roman Catholics of every degree, bound by a solemn oath to extend the sway of the Church of Rome, and to fight Protestantism wherever it may be found. Their missionaries were soon found proselyting in every quarter of the globe. They regarded as a brother every man, without respect to skin or lineage and the French Jesuits, who were the pioneers of French dominion in America, regarded every convert to Christianity among the savages an enfranchised citizen of France. Whole tribes came under their spiritual sway, and many of the votaries of commerce, who followed them into the wilds of America to traffic with the Indians, made wives of the native maidens, and so established strong social ties between the French and the savages. When, therefore, the former quarrelled with the English, they could rely upon the latter as faithful allies and this barbarian element in the contest made border wars tenfold more distressing to the English colonists, especially to those of New England. The border settlers in New York had the powerful Iroquois Confederacy, like a strong wall, between themselves and the Indians in Canada.

The eastern Indians were easily excited into hostility by those white allies. Dover, a frontier town of New Hampshire, was the first to feel the violent hands of the mongrel foe. There three hundred Indians had been treacherously doomed to slavery years before. Revenge had slumbered now it was awakened and was gratified. The venerable Major Waldron, then eighty years of age, and a local magistrate, had been a party to the treachery. On a warm evening in July, 1689, two squaws craved lodging at his house. They lay upon the floor, and in the night they unbarred the doors and let in several painted warriors. The aroused old man seized his sword and fought valiantly, until he was overpowered, when, with bitter taunts, they tortured him to death in his own hall. Then they laid his house in ashes, killed twenty of the garrison, and carried away nearly thirty persons and sold them as slaves to the French in Canada.

In August, a party came from Penobscot, after being purified by confession by Thury a Jesuit priest, and captured the garrison at Pemaquid, which Andros had established there. In February following, Governor Frontenac sent three hundred French and Indians from Montreal to destroy Albany. Through deep snows they made their way as far as Schenectady, a frontier town on the Mohawk, and at midnight burned the dwellings and murdered more than sixty of the inhabitants there. Seventeen of the slain were children. Early the next spring several eastern villages shared the same fate, and scores of women and children were carried away captives and suffered untold cruelties.

These atrocities - murders in cold blood - aroused all the colonies to a sense of danger, and on the suggestion of Massachusetts, a congress of delegates from several colonies met at New York on the first of May, 1690, to devise measures for the general security. Already the colony of Massachusetts had fitted out an expedition against Acadie, under Sir William Phipps, of Pemaquid, consisting of eight vessels with eight hundred men. He seized Port Royal, and obtained plunder sufficient to pay the expenses of the expedition. The town was again plundered

by English privateers from the West Indies, in June so retaliation went on. The Congress at New York resolved to invade Canada by land and sea, with an army that should march from the Hudson River by way of Lake Champlain to Montreal and, at the same time, a strong naval armament was to ascend the St. Lawrence and attack Quebec. The army was placed under the command of a son of Governor Winthrop, of Connecticut, the cost of the expedition being borne jointly by that colony and New York; and Milborne, son-in-law of Leisler [see Chap. XXVIII of this work], undertook to furnish the supplies. The command of the fleet, which was composed of thirty-four vessels manned by two thousand New Englanders, was given to Phipps.

The army moved from Albany early in July, at a snail's pace. At the beginning of September the bulk of them had only reached the head of Lake Champlain, where they remained, while some troops, and Indians of the Five Nations, under Colonel Peter Schuyler, pushed on toward the St. Lawrence. Old Frontenac was in Montreal when an Indian runner told him of the approach of the invaders. He called out his Indian allies. Taking a tomahawk in his hand, he danced the war-dance and chanted the war-song, in their presence, and then led them against the foe. Schuyler was repulsed, and the whole army returned to Albany. Leisler charged Winthrop with treachery, and Winthrop, in turn, charged the failure of the expedition to the inefficiency of Milborne in furnishing supplies.

Meanwhile Phipps, without charts or pilots, had crawled cautiously around Acadie and up the St. Lawrence for nine weeks, giving a swift Indian runner an opportunity to go from Pemaquid to Canada with the news of Phipps' departure, in time to allow Frontenac to reach Quebec before the arrival of the hostile fleet. The fortifications of the ancient town were strengthened; and when Phipps arrived before it, and sent a summons for its surrender, his message was treated with derision. It was then the middle of October. Hearing of the failure of the land expedition, Phipps weighed anchor and crawled cautiously back to New England before the winter storms set in. The French and Indians in Canada and Acadie were greatly elated, and the repulse was considered so important by Louis that he ordered a commemorative medal to be struck, with the legend: FRANCE VICTORIOUS IN THE NEW WORLD. These military operations exhausted the treasury of Massachusetts, and the government emitted bills of credit to the amount of about one hundred and thirty-four thousand dollars. This was the first paper-money ever issued on the American continent.

Soon after his return from the St. Lawrence, Sir William Phipps went to England to solicit aid for the colonies in their further warfare with the French and Indians, and to assist in efforts there to procure a restoration of the charter of Massachusetts which King James had annulled. Aid was refused and instead of restoring the old charter, William gave a new one, by which Massachusetts, Plymouth, Maine and Nova Scotia were united under the name of Massachusetts Bay Colony," and was made a royal province, with Phipps as governor. The baronet was a man of dull intellect, rudely educated, utterly lacking in qualities of statesmanship, headstrong, egotistical, superstitious, patriotic, and every way unfitted as a leader in civil and military affairs. He had gained distinction in his native colony only by his wealth and title, both of which were acquired by his successful raising of treasure from a Spanish ship with a diving-bell. He returned to

Massachusetts in 1692, bringing the new charter with him.

The people of Massachusetts were not only dissatisfied with the new charter, but offended by it, for it greatly abridged their liberties. Wise and enlightened statesmen and churchmen in England advised William and his Parliament not to make the liberties of the colonists less. Tillotson, the Archbishop of Canterbury, charged the king "not to take away from the people of New England any of the privileges which Charles the First had granted them." to wise advice. Others did likewise but the government refused to listen. The king reserved the right, in the new charter, to appoint the governor, his deputy and the secretary of the colony, and of repealing all the laws within three years after their passage. This robbery of their liberties alienated the affections of the people from the mother country. It was one of the series of blunders made by the crown and ministers which fostered discontent in the colonies and tended to the final dismemberment of the empire in 1776.

Yet in some respects the new charter was an improvement upon the old. While the rights of citizens were abridged in some things, they were enlarged in others. Toleration was granted to every form of the Christian religion excepting, unfortunately, the Roman Catholic and the right of suffrage - to vote - was no longer restricted to members of Congregational churches, but was made almost universal. Bigotry and intolerance were, so far, disarmed and they never afterward held controlling sway in the policy of the State.

Here let us pause a moment in our narrative of political transactions and of the horrid war then raging, to consider a strange social feature in the story of Massachusetts, known as SALEM WITCHCRAFT.

Chapter XXXII

Witchcraft - The Sad Story of "Salem Witchcraft" - Superstition and Wickedness Hand-in-Hand - Result of the Delusion - King William's War - New England's Sufferings - Capture of Pemaquid - The Baron De Castin - French and Indians Make War Together - The Exploit of Hannah Dustin and Her Companions - Treaty at Ryswick - The Pretender - Queen Anne - New England More Tolerant.

IN the seventeenth century, a belief in witches and witchcraft was almost universal. The Church of Rome, more than three hundred years ago, sanctioned punishments for the exercise of witchcraft and after that, thousands of suspected persons were burned alive, drowned or hanged. During the sixteenth century, more than one hundred thousand accused and convicted persons perished in the flames, in Germany alone. In England, enlightened men embraced the belief. The eminent Sir Matthew Hale, who flourished during the civil war, the commonwealth and the period of the restoration of monarchy, repeatedly sentenced persons to death accused of witchcraft. The Puritans brought the belief with them to America. They established laws for the punishment of witches and before 1648, four persons had suffered death for the alleged offence, in the vicinity of Boston. The ministers of the gospel there were shadowed by the delusion; and, because of their powerful social influence, they did more to foster the wild excitement and produce the distressing results of what is known in history as "Salem Witchcraft," than all others.

In 1688, a wayward daughter of John Goodwin, of Boston, about thirteen years of age, accused a servant girl of stealing some of the family linen. The servant's mother, a wild Irish woman and a Roman Catholic, vehemently rebuked the accuser as a false witness. The young girl, in revenge, pretended to be bewitched by the Irishwoman. Some others of her family followed her example. They would alternately become deaf, dumb and blind; bark like dogs and purr like cats, but none of them lost their appetites nor sleep. The Rev. Cotton Mather, a credulous and egotistical clergyman (who seems to have believed, with Hubbard, the Puritan historian, that America was originally peopled with a crew of witches "transported thither by the devil"), hastened to Goodwin's house to allay the witchery by prayer. Wonderful were the alleged effects of his supplications. The devil was controlled by them for the time. Then four other ministers of Boston and one of Salem, as superstitious as himself, joined Mather, and they spent a whole day in the house of the afflicted in fasting and prayer, the result of which was the delivery of one of the family from the power of the witch. This was sufficient proof for the minds of the ministers that there must be a witch in the case, and these deluded clergymen prosecuted the ignorant Irish woman as such. She was bewildered before the court, and spoke sometimes in her native Irish language, which nobody could understand, and which her accusers and judges construed into involuntary confession. Mather and his clerical associates had the satisfaction of seeing the poor old Irish woman hanged as a witch, "for the glory of God."

Skeptics ridiculed Mather. He defended his cause by the assertion of alleged facts. He called the afflicted daughter of Goodwin to his study, when the artful girl thoroughly deceived him. The devil would allow her to read Quaker books, the Common Prayer and Popish books, but a prayer

from the lips of Mather, or the reading of a chapter of the Bible, threw her into convulsions. The credulous parson believed all he saw and heard, and cried from his pulpit, with outstretched arms and loud voice, "Witchcraft is the most nefarious high-treason against the Majesty on High. A witch is not to be endured in heaven or on earth." Mather's discourse on the subject was scattered broadcast among the people by means of the printing press and with it went out his narrative of the events in the Goodwin family, which led to greater tragedies in the spring and summer of 1692, when an epidemic disease resembling epilepsy broke out in Danvers (then a part of Salem), and spread rapidly. The physicians could neither control nor cure it and with the sermon and statements of Mather before them, they readily ascribed the malady to the work of witches.

A niece and daughter of the parish minister at Danvers were first afflicted. Their strange and unaccountable actions frightened other young women, who soon exhibited the same symptoms, such as convulsions and spasmodic swellings in the throat, undoubtedly produced by hysterics. A belief quickly spread over Salem and throughout the province that evil spirits having ministering servants on earth had been permitted to overshadow the land with an awful visitation. Terror took possession of the minds of nearly all the people, and the dread made the malady spread widely.

Other old and ill-favored women now shared with the Irish woman in the suspicion of being witches, and several of them were publicly accused and imprisoned. "The afflicted," under the influence of the witchery, "professed to see the forms of their tormentors with their inner vision," and would forthwith accuse some individual seen. At length the afflicted and the accused became so numerous that no person was safe from suspicion and its consequences. Even those who were active in the prosecutions became objects of suspicion. A magistrate who had presided at the condemnation of several persons, becoming convinced of the wrongfulness of the proceedings and protesting against it, was himself accused and suffered much. A constable, who had arrested many and refused to arrest any more, was accused, condemned and hanged. Neither age, sex nor condition were considered. Sir William Phipps, the governor of Massachusetts, his lieutenant-governor, the near relations of the Mathers, and learned and distinguished men who had promoted the dreadful delusion by acquiescing in the proceedings against accused persons, became objects of suspicion. The governor's wife, Lady Phipps, one of the purest and best of women, was accused of being a witch. The sons of Governor Bradstreet were compelled to fly to avoid the perils of false accusations and near relatives of the Mathers were imprisoned on similar charges. Malice, revenge and rapacity often impelled persons to accuse others who were innocent and when some statement of the accused would move the court and audience in favor of the prisoner, the accuser would solemnly declare that he saw the devil standing beside the victim whispering the touching words in his or her ear. And the absurd statement would be believed by the judges on the bench. Some, terrified and with the hope of saving their lives or avoiding the horrors of imprisonment, would falsely accuse their friends and kinsfolk while others, moved by the same instinct and hopes, would falsely confess themselves to be witches.

When the magnates in church and state found themselves in danger, they thought of the golden rule, and suspected they had been acting unrighteously toward others. They cautiously expressed

their doubts of the policy and justice of further proceedings against accused persons. A citizen of Andover, who was accused, wiser and more bold than governor and clergy, immediately caused the arrest of his accuser on a charge of defamation of character, and laid his damages at five thousand dollars. The effect of this act was wonderful. The public mind was in sympathy with it. The spell was instantly broken, and witchcraft was no more heard of in Andover. The impression then made quickly spread over the province, and deluded and wicked persons hastened to make amends for their errors and crimes.

The abashed clergy were compelled to take action because of the unexpected change in public opinion. At a convention held in June, 1693, they declared that it was not inconsistent with Scripture to believe that the devil might assume the shape of a good man, and that he may so have deceived the afflicted. So his Satanic majesty as usual was conveniently made the scapegoat for the sins and follies of magistrates, clergy, and people. Many of the accusers and witnesses came forward and published solemn recantations or denials of the truth of their testimony, which had been given, they said, to save their own lives. Governor Phipps, after his wife was accused and the Andover citizen had killed the monster delusion, give orders for the release of all persons under arrest for witchcraft. The Legislature of Massachusetts appointed a day for a general fast and solemn supplication that God would pardon all the errors of his servants and people in a late tragedy raised among us by Satan and his instruments. And Judge Sewall, who had presided at many trials in Salem, stood up in his place in church on that fast day, and implored the prayers of the people that "the errors which he had committed might not be visited by the judgments of an avenging God on his country, his family, or himself." Mr. Paris, the parish minister in Danvers, in whose family the delusion had its rise, and who, throughout the "reign of terror," was one of the most earnest prosecutors of alleged witches, was compelled to resign his charge and leave the country.

These recantations, acknowledgments of error and pleadings for mercy, could not restore to the bereaved the spirits of those who had been hanged, nor make amends for the pains others had suffered. The delusion had prevailed in greatest vehemence more than six months, and it was not allayed for more than a year. During that time nineteen persons had been hanged, and one had been killed by the horrid process of pressing to death; fifty-five had been tortured or frightened into a confession of guilt; one hundred and fifty had been imprisoned, and full two hundred had been named as worthy of arrest. Amongst those hanged was the Rev. Mr. Burroughs, an exemplary clergyman, whose purity of character was conspicuous. Others, whose innocence and good name should have shielded them from harm, were coarsely assailed at the scaffold. One aged citizen, as was afterward proven, was falsely accused by a malignant enemy. While declaring his innocence to the multitudes, smoke from the executioner's pipe choked his utterances, then his accuser and his associates brutally shouted "See how the devil wraps him in smoke!" A moment afterward he was hanged.

During the prevalence of this terror, all mutual confidence was suspended, and the noblest sentiments of human nature were trampled under- foot. The nearest blood relations became each other's accusers. One man was hanged on the testimony of his wife and daughter, who impeached

him merely for the purpose of saving themselves. But this dreadful delusion was not an unmixed evil. "It is likely," wrote a contemporary, "that this frenzy contributed to work off the ill humors of the New England people - to dissipate their bigotry, and to bring them to a more free use of their reason."

The belief in witches did not end with the strange excitement. Cotton Mather and his clerical associates and others wrote in its defence. Mather's account of the delusion is unprofitable reading, because it deals in the absurd fancies of a man deluded by bigotry, superstition, and childish credulity. This may be seen in scores of sentences similar to the following:

"It is known that these wicked spectres [ghosts] did proceed so far as to steal several quantities of money from divers people, part of which individual money dropped sometimes out of the air, before sufficient spectators, into the hands of the afflicted, while the spectres were urging them to subscribe their covenant with death. Moreover poisons, to the standers-by wholly invisible, were sometimes forced upon the afflicted, which, when they have with much reluctancy swallowed, they have swollen presently, so that the common medicines for poison have been found necessary to relieve them yea, sometimes the spectres, in their troubles, have so dropped the poisons that the standers-by have smelt them and viewed them, and beheld the pillows of the miserable stained with them. Yet more, the miserable have complained bitterly of burning rags run into their forcibly distended mouths; and though nobody could see any such cloths, or indeed any fires in the chambers, yet presently the scalds were seen plainly by everybody on the mouths of the complainers, and not only the smell, but the smoke of the burning, filled the chambers.

"Once more, the miserable exclaimed extremely of branding irons, heating at the fire on the hearth to mark them now the standers-by could see no irons, yet they could see distinctly the print of them in the ashes, and smell them too, as they were carried by the not seen furies unto the poor creatures for whom they were intended; and these poor creatures were there upon so stigmatized with them that they will bear the marks of them to their dying day. Nor are these [he had related many others] a tenth part of the prodigies that fell out among the inhabitants of New England.

"Flashy people may burlesque these things, but when hundreds of the most sober people, in a country where they have as much mother-wit certainly as the rest of mankind, know them to be true, nothing but the absurd and froward spirit of sadducism [disbelief in spirits] can question them."

They were burlesqued. Robert Calef a merchant of Boston, in a series of letters which he wrote and published, exposed Mather's credulity, and greatly irritated the really good man. Mather retorted by calling Calef a "weaver turned minister." Calef tormented him the more by letter after letter, when Mather, wearied with the fight, called his opponent "a coal from hell," and prosecuted him for slander. When these letters were published in book form, Mather's kinsman, then president of Harvard College, caused copies of the work to be publicly burned on the college grounds.

This strange episode in the history of Massachusetts astonished the civilized world, and made an unfavorable impression on the surrounding Indians, who despised a people that cherished a religion which sanctioned such cruelties toward their countrymen. It gave a large advantage to the French, whose Jesuit missionaries, then laboring among the savage tribes on the frontier, contrasted their own mild and beneficent system of religion as exhibited there with that of the Puritans, whose ministers had been so prominent in the fearful tragedy. It had a serious effect upon the future destiny of New England, for the barbarians on the frontiers were, henceforth, strongly wedded to the fortunes of the French.

We paused to consider "Salem Witchcraft." Let us resume the narrative of general events.

"King William's War" continued in Europe and in America until it was closed by a treaty at Ryswick in 1697. Meanwhile the New England people had suffered much from the incursions of the French and Indians. Governor Phipps visited some of the tribes with whom he had made a treaty at Pemaquid, on Bristol Bay in Maine, and endeavored to secure their friendship and alliance with the English. They were willing to abide by the terms of their treaty, but, more attached to the French than ever, they refused to listen to any proposition for an English alliance, for Jesuits had told them that Protestants were enemies to the true religion of Christ. "The French," they said, "have driven witchcraft from among us, and we do not care to associate with a people who cherish it." Phipps returned disappointed, and soon afterward sailed to England, leaving the government in the hands of Stoughton, his deputy, who exercised the authority of chief magistrate about three years.

During Stoughton's administration, internal feuds disturbed, and border wars distressed the province continually. The French and Indians now prosecuted their peculiar warfare with relentless vigor. They spread death and desolation over the frontier. The French, by conquest, extended their colonial dominion. Nova Scotia submitted to the rule of France again and in the summer of 1696, a strong force of French and Indians, under Colonel Iberville, attacked and captured Fort William Henry, at Pemaquid. They were accompanied by the Baron de Castin, a colonel of the French army, who came to America with his regiment, remained, and in 1687, set up a trading-post at the mouth of the Penobscot River, which spot yet bears his name. There he married a daughter of a powerful Indian chief, and exercised great influence over the dusky tribes. With two hundred of such followers, he joined Iberville, assisted in the capture of the fort and with his own hands helped to level it with the ground. So Castin was avenged for the burning of his house by the English.

This severe blow mortified and alarmed the New Englanders and excited the victors to a more distressing warfare. The French and Indians penetrated New England further than they had ever done before, destroying villages, and dispersing settlements, and carrying away people into captivity. Among the places that felt the severest blasts of the storm was Haverhill, within thirty miles of Boston, which was attacked by Indians in March, 1697, when forty persons were killed or made captives. Among the latter was a part of the family of Thomas Dustin, who was in his field when the savages suddenly appeared with horrid yells and gleaming knives and tomahawks.

Seizing his gun and mounting his horse, he hastened to his house to bear away his wife, eight young children and a nurse to a place of safety. His youngest child was only a week old. He ordered the other seven to fly in a direction opposite to the approach of the savages, and was lifting his wife from the bed when the Indians attacked his house. "Leave me," cried the mother, "and fly to the protection of the other children." Seeing no chance to save his wife, Dustin again mounted his horse and soon overtook his precious flock, who were filled with joy when they saw their father. The Indians had pursued. Placing himself between the savages and his precious charge, he defended his children so valiantly as the foe pressed him back, that the savages gave up the pursuit, and the children were saved in an unoccupied house.

Meanwhile the scenes at Mr. Dustin's house were most distressing. The savages found Mrs. Dustin in bed, and the nurse attempting to fly with the infant. They ordered the feeble mother to rise instantly, while one of the savages, taking the infant out of doors, dashed out its brains against an apple-tree. Then they plundered and set fire to the house; and before the terrified mother was dressed, they compelled her to follow them in a hasty retreat. She was forced to walk twelve miles the first day, in the March slush of snow and mud, without shoes, encounter the chilling winds half-clad, and lie upon the ground, when resting, with no covering but the cold gray sky. This was repeated day after day until, by a circuitous route, they reached the island in the Merrimac River, at the mouth of the Contotook Creek, six miles above Concord, New Hampshire, now known as Dustin's Island. There was the home of the chief, who claimed Mrs. Dustin and her nurse as his captives. They were lodged with his family, which consisted of two men, three women, seven children and a captive English lad, who had been with them more than a year. The savage pretended to be a Christian. "When I prayed the English way," he said, "I thought it was good; but I think the French way better."

A few days after their arrival at the island, the prisoners were told that they were soon to start for a distant Indian village, when they would be compelled to "run the gauntlet"-that is, to be stripped naked and run for their lives between two files of Indian men, women and children, who would have the privilege of scoffing at them, beating them, and wounding them with sharp hatchets. The two women resolved not to endure the indignity and danger, preferring death. Mrs. Dustin planned a means for escape, and her nurse and the lad leagued with her in the execution of it. The Indians believed the lad to be faithful to them, and did not suppose the women would have courage to attempt to escape. So they did not keep watch.

On the day before the plan was to be carried out, Mrs. Dustin ascertained, through inquiries made by the lad, how to kill a man instantly, and how to take off his scalp. "Strike him here," said the Indian inquired of placing his finger on his temple, "and take off his scalp so," showing the lad how. With this information, the plot was ripe. Before daylight the next morning, when the whole family were in deep slumber, Mrs. Dustin arose, awakened her nurse and the lad, and with their assistance instantly killed ten of the twelve sleepers, she slaying her captor and the lad killing the man who told him how to do it. A squaw and a child fled to the woods and the prisoners, after scuttling all the boats there but one, to prevent pursuit, started in that one down the river, with provisions from the wigwam. They had not proceeded far when Mrs. Dustin, reflecting that they

had not scalped their victims, and that her friends might demand ocular proof of the truth of her thrilling story, went back with her companions, took off the scalps, and carried them away in a bag.

With strong hearts the three voyaged down the Merrimac to their homes, every moment in peril from savages or the elements, and were received as persons risen from the dead. Mrs. Dustin found her husband and children saved. Soon afterward she went to Boston, carrying with her a gun and tomahawk which she had brought from the wigwam, and her ten trophies; and the General Court of Massachusetts gave these brave sufferers fifty pounds as a reward for their heroism. Ex-Governor Nicholson, of Maryland, sent a metal tankard to Mrs. Dustin and Mrs. Neff as a token of his admiration. That tankard is now (1875) in the possession of Mr. Emery Coffin, of Newburyport, Massachusetts. During the summer of 1874, one hundred and seventy-seven years after the event, citizens of Massachusetts and New Hampshire erected on the highest point of Dustin's Island an elegant monument commemorative of the heroic deed. It displays a figure of Mrs. Dustin, holding in her right hand, raised in the attitude of striking, a tomahawk, and a bunch of scalps in the other. On it are inscribed the names of HANNAH DUSTIN, MARY NEFF, and SAMUEL LEONARDSON, the English lad.

Other places suffered dreadfully during the summer of 1697. Haverhill was again attacked and desolated. The treaty at Ryswick (a small village near the Hague, in Holland), soon afterward stayed the flow of blood in Europe and America. There a peace was agreed upon between Louis the Fourteenth of France, and England, Spain, Holland and the German Empire, which ended a war of more than seven years duration. Louis was compelled to acknowledge William of Orange to be the sovereign of England. That war cost Great Britain one hundred and fifty million dollars in cash, besides a hundred million dollars loaned. The latter laid the foundations of the enormous national debt of Great Britain, now a heavy burden to the English people.

A little before the treaty at Ryswick a Board of Trade and Plantations was established in England, whose duty it was to have a general oversight of the affairs of the American colonies. It was a permanent commission, the members of which were called "Lords of Trade and Plantations." It consisted of seven members, with a president, and was always a ready instrument of oppression in the hands of the sovereign. It became, as we shall see, a powerful promoter of those discontents in the colonies which finally broke out into a flame of rebellion in 1775.

The lull in the storm of war, caused by the treaty at Ryswick, was of short duration. Aspirants for power again tormented the people with the evils of war. King James the Second died in France in September, 1701. He had been shielded by Louis after his flight from his throne to France, and now the French monarch acknowledged James's son, James Francis Edward (who is known in history as The Pretender), to be the lawful king of England. This act offended the English because the crown had been settled upon Anne, James's second and Protestant daughter. Louis likewise offended the English by placing his grandson, Philip of Anjou, on the throne of Spain, so increasing French influence among the dynasties of Europe. William was enraged, and was preparing for war, when a fall from his horse, while hunting, caused his death. He was

succeeded by Anne, and the causes already mentioned, with others of less importance, impelled her to declare war against France after her accession to the throne. Hostilities began in 1702, and, as before, the colonies of the two governments in America became involved in the conflict. In the war that ensued, and which lasted almost a dozen years, the New Englanders again suffered dread - fully from incursions of the French and Indians. That contest is known in our annals as QUEEN ANNE'S WAR.

It may be observed that at this opening of a new era in the history of New England, when the liberal and enlightened reign of William was making a deep impression upon England and her American colonies, the people of our present Eastern States were more united, more enlightened, and less bigoted than they had ever been before. The Earl of Bellamont, whom we have mentioned as governor of New York, was made governor of Massachusetts and New Hampshire also. When he visited Boston in 1699, he found controversies allayed, passions cooled, and the prevalence of a general disposition to promote harmony and good-fellowship. Wisdom and moderation had taken the places of folly and vehemence in thought and action and there was a happy toleration abroad. The printing-press was doing its beneficent work efficiently in scattering the seeds of knowledge, thereby creating a sentiment of brotherhood among separated religious communities. From the beginning, the New Englanders were distinguished for their appetite for knowledge and the ready reception, when untrammelled by arbitrary restraints, of truths of every kind. This disposition formed the springs of that love for liberty which has always distinguished the inhabitants of New England.

Chapter XXXIII

Bellamont Governor of Massachusetts - French Claims in New England - Queen Anne and Others Declare War Against France - Struggle with the French and Indians - Influence of the Jesuits - Death of Father Rale - Destruction of Deerfield - Fate of the Williams Family - The Village Bell - Acadie Invaded - Progress of French Dominion - Indian "Kings" in England - Expedition Against Canada - A Long Peace - Capture of Louisburg - French Attempt to Retake it - Treaty of Aix-la-Chapelle.

WE have observed that the Earl of Bellamont found public affairs in pleasant shape in Massachusetts, on his arrival in Boston in 1699. He was the only English-born nobleman who ever governed a New England province. His conduct won for him the profound respect of the rigid puritan republicans, for he fairly estimated the mutual dependence of ruler and people, and acted accordingly. One day at his table, at which sat many representatives of the people of the commonwealth, he said to his wife Dame, "we should treat these gentlemen well they give us our bread."

Nothing disturbed the serenity of Bellamont's administration excepting the encroachments of the French, who had out-generaled the English in securing the control of the mouth of the Mississippi River, and were then preparing to extend their territorial jurisdiction in the East as far westward as the Kennebec River.

According to the Interpretation of the English court, the St. Croix River, now the eastern boundary of the United States, was to be the western boundary of the French dominion in that quarter. The French king chose to interpret it otherwise and his representatives in Nova Scotia gave notice to the authorities of Massachusetts that it was their intention to assert jurisdiction as far westward as the Kennebec. Bellamont informed the British ministry of the threatened invasion, but his communication received little notice. No doubt the invasion would have been successfully carried out had not the war between England and France began soon afterward.

In May, 1702, Queen Anne and her allies the Emperor of Germany and the States-General of Holland declared war against France and Spain. When hostilities began in Europe, they were the signal for the English colonists in America to prepare for another fierce struggle with the French and Indians. Governor Dudley and some magistrates of Massachusetts held a conference with the Eastern Indians at Casco, in June, 1703. The savages, with well-feigned friendship, readily renewed former treaties. They declared that the French had asked them to take up the hatchet against the English, but they had refused because the friendship for the people of Massachusetts was "as firm as the mountains, and as enduring as the sun and moon."

Some believed in the sincerity of the Indians. Wise men shook their heads in doubt, and others declared their belief that the savages, under the tutelage of the French, were playing a treacherous part. Circumstances soon settled the question. Only a few weeks after the conference these same Indians fell, with remorseless fury, upon the frontier settlers of Massachusetts and New

Hampshire. The solemn treaties were scattered to the winds. The tribes from the Merrimac to the Penobscot desolated the border settlements, murdering the innocent, plundering the thrifty, and laying in ashes cabins, mansions, and villages. Not even the benefactors of the Indians, the Friends or Quakers, were spared. They respected neither the milk-white brows of the grave ancient, "nor the mournful cries of tender infants."

This treachery greatly exasperated the English against the French Jesuits, to whose counsels they professed to trace the cause of the dire calamity. Already this Order had incurred the intense hatred of the New Englanders, because many circumstances pointed to Jesuit influence inciting the Indians to make war on the English. The revelation of Bomaseen, a sachem who visited Boston, intensified that hatred. He declared that the Jesuits had told the Indians that Jesus Christ was a Frenchman that his mother, the Virgin Mary, was a French woman that the English had murdered him; that he had gone up to heaven to plead for mankind, and that he who would receive his favor must espouse the cause of his countrymen, the French, in the pending quarrel. Bomaseen was a crafty Indian, and may have invented this story but it was believed by the colonists. The Legislatures of both New York and Massachusetts had already passed laws for the expulsion of the Jesuits from their respective provinces; but nothing could diminish their secret influence over the Indians. Warriors from Canada joined those south of the St. Lawrence, and in their murderous forays they were often accompanied by French troops and ecclesiastics.

The white men and Indians all confessed their sins to the priests and received pardon for them, before engaging in their bloody work. A day was appointed for such confession and pardon. "I exhorted them," [the Indians], says Father Rale, of Norridgewock, to maintain the same interest in religion as if they were at home to observe carefully the laws of war to practice no cruelty; to kill no one except in the heat of battle and to treat their prisoners humanely." What a ghastly commentary on their merciful instructions were the savage cruelties of these absolved men, as they swept along the frontier from Casco to Wells immediately after leaving the presence of the priest, staining the fields with the blood of the innocent, and lighting up the heavens at night with the flames of burning dwellings! Twenty years afterward, Rale fell a victim to the fiery indignation of the English against him and his fellow Jesuits for their alleged complicity in the atrocious acts of the Indians for more than a quarter of a century. Norridgewock, where he had labored as a missionary more than thirty years, was attacked by the English in 1723. Rale was shot dead, it is said, at the foot of a cross, where his flock, with wild cries, bewailed his death. On that spot, in 1833 a monument was erected to his memory. With Rale, Bomaseen and some of his kindred also fell.

During the winter of 1703-4, the people along the New England frontier lived in perpetual dread of the foe. At length, late in February, a party of French and Indians, who had traveled with snow-shoes all the way from Canada, approached the pretty village of Deerfield on the Connecticut River, in Massachusetts. The snow lay four feet deep in that region, and was covered with a crust that bore the invaders. The drifts around the town were almost as high as its encircling palisades. Over these Major Hertel de Rouville, the commander of the motley party, and his followers, easily crept into the village while the inhabitants were slumbering before the

dawn of the first day of March. The first intimation the villagers had of danger was the bursting open of their doors and the sound of the horrid war-whoop of the savages. The people were dragged from their beds and murdered or carried into captivity. The village was set on fire, and every building excepting the chapel and one dwelling-house was laid in ashes. Forty of the inhabitants were killed, and one hundred and twelve were borne to the wilderness an hour after sunrise.

Among the victims was the Rev. John Williams, the village pastor, and his family. Two of his children and a black servant were murdered at his door. With his wife and five children he began the toilsome journey. Mrs. Williams fainted with fatigue on the second day. The tomahawk of an Indian cleft her skull, and so they were relieved of the burden. Her husband and children were taken to Canada, and after a captivity among the Caughnawagas, near Montreal, for nearly two years, they were ransomed and returned home. Only a daughter, ten years old, was kept. The Indians would not part with her. She grew up to womanhood in Indian habits and tastes, became a Roman Catholic, married a young Mohawk brave and bore children and when she visited her relations in Deerfield in after years, she could not be induced to abandon her Indian mode of life, nor leave the church to which she was attached.

The chief object of this expedition was to procure the little bell in the meeting-house in Deerfield. It had been bought in France for the church of St. Louis, at Caughnawaga. The vessel that bore it to America was captured by a New England privateer and taken into Boston. The bell was purchased by the congregation at Deerfield, and hung in the belfry of the meeting-house. The invaders carried it away, under the charge of Father Nicolas, of the church at Caughnawaga, who accompanied the expedition. It was borne in triumph to its original destination, and it now summons the people to worship from the belfry of the church of St. Louis at Caughnawaga.

For years these tales of horror were the true narratives of the experience of New Englanders on the border. Remote settlements were abandoned. The tillers of the soil gathered in palisaded villages and labored in the fields in groups, and well-armed. There was no semblance of civilized warfare in the methods of the French and Indians, and their cruelties inspired good men everywhere with horror. "I hold it to be my duty towards God and my neighbor," wrote the good Peter Schuyler, Mayor of Albany, to Vaudreuil, the French governor of Canada, "to prevent, if possible, these barbarous and heathen cruelties. My heart swells with indignation when I think that a war between Christian princes, bound to the exactest laws of honor and generosity, which their noble ancestors have illustrated by brilliant examples, is degenerated into savage and boundless butchery. These are not the methods for terminating the war thought with me on this subject."

Such protests were uttered in vain. Would that all the world The savages were unrestrained by their Christian allies. The power of the church and state encouraged then, in their bloody deeds. At length the New Englanders determined to make aggressive movements. In 1707, Massachusetts, New Hampshire and Rhode Island, resolved to carry war into the French domain on the East. Early in June a thousand men under Colonel Marsh sailed for Nantucket, under

convoy of a British warship, to attempt the conquest of Acadie. The French at Port Royal were prepared for them, and the expedition was a failure.

In 1710, another expedition, fitted out at the joint expense of the New England colonies and New York and New Jersey, sailed from Boston, with a fleet from England under the command of Colonel Nicholson. There were thirty-six vessels in all. They sailed in September, and six days afterward the fleet was anchored before the fort at Port Royal. The place was surrendered to the English on the thirteenth of October, and the name and fortress of Port Royal were changed to Annapolis, in honor of Queen Anne. Acadie was annexed to the realm of Great Britain, under the title of Nova Scotia or New Scotland. The British flag has waved perpetually over that fortress from that day to this.

Nicholson carried the good news to England, and urged the conquest of Canada. The people of the province of New York, though shielded from invasion by the French and Indians from Canada by the neutral Five Nations who stood an impassable barrier, favored the project, because they looked with concern upon the progress of French dominion in the West, its arms reaching from the great lakes on the North toward others extending from the Gulf of Mexico on the South. The French then claimed all the region in the Valley of the Mississippi to the South Sea named the country Louisiana in honor of their king, and were preparing to establish a great empire there.

The Legislature of New York sent a memorial to the queen on the subject of French encroachments, by the hand of Colonel Schuyler, just mentioned, who was accompanied to England by sachems of the Five Nations, as representatives of the Iroquois Confederacy.

In London these dusky "kings," as they were called, drew crowds of wondering gazers. Multitudes followed the sachems wherever they went, and the print-shops soon exhibited engravings of their portraits. They felt awkward in English small-clothes of black, and scarlet mantles trimmed with gold lace, in which they were clad, and preferred the scanty wardrobe of their forest homes. They were entertained at sumptuous banquets by the principal nobility of the realm, and shown the glory of the kingdom. They saw reviews of troops, and went on board some of the great ships of the Royal Navy; and at the London theatre they were amused by gorgeous displays. In the state carriage drawn by six horses, they were conveyed to the court and held an audience with the queen; and before their departure, they addressed to her Majesty, and to the Lords of the Privy Council, letters bearing their signatures in the form of rude pictures of the Wolf, the Bear, and the Tortoise - their respective totems or tribal arms - in which they promised perpetual friendship and alliance with the English, and confirmed them by presenting belts of wampum, their tokens of fidelity. With Schuyler, they returned to America in the ship Dragon, with Colonel Nicholson, and arrived in Boston early in the summer of 1711. They had seen evidences of the amazing strength, power and glory of Great Britain, which made a deep and abiding impression upon the ambassadors and their countrymen. They were ready to aid the English in the conquest of Canada.

An expedition for that conquest was planned by Henry St. John, afterward Lord Bolingbroke,

the friend of Pope and Swift, the brilliant orator and conversationalist, and the popular and unscrupulous Secretary of War of Queen Anne. Fifteen ships-of-war, forty transports and six store-ships were placed under the command of Admiral Sir Hovenden Walker, and with marines and battalions of veteran soldiers, then sailed for America and arrived at Boston in June, 1711. New England colonies promptly raised a provincial force, and the ships sailed for Quebec on the 10th of August, bearing about seven thousand troops. At the same time other colonies had formed a provincial army for the capture of Montreal and the holding of the region of the upper St. Lawrence. These were under the command of Nicholson, who held a general's commission and marched from Albany, on the Hudson, on the same day when the fleet left Boston. They were four thousand in number, and were chiefly furnished by New York and Connecticut. Six hundred of them were warriors of the Five Nations.

News of these movements soon reached Governor Vaudreuil at Montreal. He sent out Jesuit missionaries and other agents to secure Indian allies, and hastened to Quebec to prepare for the invaders. The fortifications were strengthened; and so enthusiastic were the inhabitants in the cause of defensive war, that women worked on the forts. But there was no occasion to fight for Quebec, for the British armament on the sea did not get into the St. Lawrence. When the ships arrived at its mouth after loitering by the way, they were overtaken by a storm of wind and a thick fog. It was a perilous place among rocks and shoals. Haughtily rejecting the advice of the New England pilots, the admiral listened to that of French pilots, who had an interest in misleading him. His fleet was soon driving on the shore, on the night of the 2nd of September. Just as he was going to bed the captain of his vessel came down to him and said, "Land is in sight; we are in great danger." Walker did not believe him. Presently a provincial captain rushed down and exclaimed: "For the Lord's sake come on deck, or we shall be lost I see the breakers all around us." Leisurely putting on his gown and slippers, the admiral ascended to the deck and saw the imminent peril. His orders for salvation, immediately given, were too late. The vessels were driven on the iron-bound shore, and eight of them were lost. Almost a thousand men perished in the sea.

A few days afterward, a council of war concluded that it would be wise to abandon the expedition. The disheartened admiral returned to England with his ships, while the provincial troops were sent to Boston. Hearing of the calamity and the result, Nicholson unwillingly retraced his steps to Albany, and left Montreal unmolested. Walker actually claimed credit for himself in retreating after falsely charging the disaster to the incompetence of the New England pilots. Had we arrived safe at Quebec, ten or twelve thousand men," he wrote, "must have been left to perish of cold and hunger; by the loss of a part, Providence saved all the rest." The admiral was disappointed in not receiving public honors for his exploits in assisting Providence.

In the spring of 1713, the war was ended by a treaty concluded at Utrecht, by which England obtained the privilege of being the chief trader of the world in African slaves, and received large accessions of territory from France. The eastern Indians, wearied with the war, sent delegates to Boston to sue for peace and at Portsmouth, the governor of Massachusetts and New Hampshire made a solemn treaty of amity with the chiefs of those tribes on the 24th of July.

A long peace now ensued. For thirty years the colonists of New England enjoyed comparative repose. It was broken only by discontented Indians in the East - the powerful Abenakes. They disputed the claims of Massachusetts to their territory, which the French had surrendered. Their chief said, I have my land where the Great Spirit has placed me and while there remains one child of my tribe, I will fight to preserve it." Finally, the English seized the young Baron de Castin, the son of an Indian woman. Smarting under this indignity, the Indians resolved to retaliate. The torch was again lighted, and Brunswick was laid in ashes. The Jesuit missionary, Rale, clearly perceiving their comparative weakness, told them plainly that their country was lost. The exasperated New Englanders overran portions of it with small military expeditions, striking blow here and there. It was in one of these forays upon Norridgewock that Rale was killed. He was the last Jesuit missionary in New England, and with him perished French influence over the Indian tribes in the East.

For several years after the close of these contests with the Indians, the history of Massachusetts consists chiefly of the record of warm political disputes by which the growth of republican principles was greatly stimulated. Controversies, sometimes violent and sometimes conciliatory, were carried on between the governors and the representatives of the people, the former contending for prerogatives and salaries which the latter deemed inadmissible. These disputes were suddenly arrested when, late in the spring of 1744, news came that France had declared war against Great Britain. The colonists knew that the evident result would be hostilities between their respective colonies in America, and they prepared for the conflict which is known in our history as King George's War." It was so called because King George the Second was then on the throne of England, and had espoused the cause of the Empress of Austria, the celebrated Maria Theresa, who fought for the crown of Austria against the Elector of Bavaria. The king of France espoused the cause of his opponent, and this led to war. In Europe it was known as "The War of the Austrian Succession."

This war was not marked by any very stirring events in America, excepting some military and naval operations in the East. Before war was declared, some French soldiers from the island of Cape Breton, surprised, captured and carried to Louisburg a small English garrison at Canseau. Then some Indians attacked the dilapidated fort at Annapolis, but were repulsed. These things compelled the English colonists to contemplate retaliation, and they resolved to attempt to capture the fortress at Louisburg, and so secure an important advantage. The men taken from Canseau had been sent to Boston on parole, and gave a minute account of that fortress. It had been built by the French after the treaty of Utrecht at a cost of five and a half million dollars, and because of its great strength it was called: "The Gibraltar of America."

At that time, William Shirley, a good soldier and energetic statesman, was governor of Massachusetts. He asked England for aid in the expedition against Louisburg. He appealed to the other colonies. The Legislature of Massachusetts made provision for the expedition. New York sent some artillery, and Pennsylvania some food. The New England colonies raised men, Massachusetts alone furnishing more than three thousand. So the common danger was extending the idea of a necessity for a political union of the English-American colonies long before it

assumed a practical shape in 1754, and especially in 1774.

The colonists had reason to expect the co-operation of a British fleet then in the West Indies, under Admiral Sir Peter Warren. They waited some time for its appearance, but in vain. Finally, at the beginning of April, 1745, New England troops sailed from Boston for Canseau, under the general command of William Pepperell, a wealthy merchant of Maine, who was afterward made a baronet for his distinguished services. The ice was yet floating around Cape Breton in such huge masses that ships could not enter the harbor of Louisburg, and the expedition was detained at Canseau almost a month, when it was unexpectedly joined by five war-ships and soon afterward by others from England, under Admiral Warren. That officer had received instructions from home to give to Massachusetts all the aid in his power. On the day after Warren appeared, some vessels arrived from Connecticut with a considerable land force from that colony.

The New England vessels of all sorts now at Canseau numbered one hundred. Governor Shirley had instructed Pepperell to have all of these vessels arrive near Louisburg at the same hour, in the night and no matter what might then be the condition of the surf, to land all the troops on the rocky shore before daylight, march at once through thickets and over morasses to the city and beyond it, and to take the fortress and town by surprise. Of course a strict compliance with these orders was impossible, but it was undertaken. The vessels all left Canseau, bearing about four thousand troops, and early in the morning of the 30th of April appeared in Gabarus Bay, eastward of Louisburg. The troops were disembarked on the same day, and most of the artillery, ammunition, and provisions were landed. The alarm bells of the city were rung, and cannon from the fortress were fired to warn the suburban inhabitants of danger.

The assailants had heavy work before them, with seemingly inadequate means for its execution. The walls of the fortress were forty feet thick at the bottom, of solid masonry, and from twenty to thirty feet in height. Around them was a ditch, filled with water, eighty feet wide. More than one hundred heavy cannon, and nearly eighty swivels and mortars, composed the armament of the fort. All the walls were swept by artillery from the bastions, and a garrison of sixteen hundred men defended these strong works. There were also batteries with many cannon outside the fort to defend the approaches to it. It seemed possible for two hundred men to defend it against five thousand. The heavy artillery of the assailants consisted of only eighteen cannon and three mortars.

The French sent out a force to oppose the landing, but they were soon put to flight. On the following morning, Lieutenant-Colonel Vaughan, of New Hampshire, a resolute volunteer, full of zeal and courage, conducted a small advance column through the woods within sight of Louisburg, and with three cheers greeted the first sight of the fortress. The same evening he marched to a part of the harbor where there were large warehouses containing a vast amount of naval stores, and set them on fire. The smoke driven by a strong wind into the grand battery situated near, so terrified its garrison that they spiked their guns and fled into the city. Vaughan took possession of the battery, and held it until he was reinforced, in spite of a resolute effort of a French force to retake it. The guns of the battery were unspiked by Major Seth Pomeroy, a

Massachusetts blacksmith, who afterward became a useful officer in the French and Indian war. "It looks as if our campaign would last long," the gallant Pomeroy wrote to his wife, "but I am willing to stay till God's time comes to deliver the city into our hands." "Suffer no anxious thought to rest on your mind about me," answered that patriotic New England woman. "The whole town is much engaged with concern for the expedition, how Providence will order the affair, for which religious meetings every week are maintained. I leave you in the hand of God." Such was the spirit of the descendants of the Puritans. The New Hampshire troops bore on their banners the motto given them by the eminent Whitefield - "Nil desperandum Christo subduce" - Nothing is to be despaired of with Christ for the leader. It inspired many of them with the zeal of crusaders, for they regarded it as an efficacious benediction by a highly gifted and holy man; a true servant of heaven.

The English troops encamped in a semicircle around Louisburg. The heavy cannon and mortars, under the charge of Captain Richard Gridley (who was conspicuous in the siege of Boston thirty years afterward, as an engineer), were dragged on sledges across morasses trenches were dug by the zealous soldiers batteries were erected, and on the last day of May a regular siege was commenced. Meanwhile Warren had captured a French seventy-four gun ship, with five hundred men and a large quantity of military stores.

Finally, a combined attack of the fleet and army was made, and on the 17th of June, the city, the fort and garrison, and the batteries, were surrendered to the English, together with the Island of Cape Breton. The value of the stores and prizes then captured was a little less than five million dollars. On the day of surrender New England ministers preached in the chapel of the fortress and in view of the amazing strength of the place, one of them said from the pulpit: "God has gone out of the way of his common providence, in a remarkable and almost miraculous manner, to incline the hearts of the French to give up, and deliver this strong city into our hands."

The pride of France was deeply mortified by the results of this daring and successful expedition. Her rulers determined to recover the lost city and fortress, and to desolate the colonies of the English in America. For that purpose a powerful fleet was sent to Cape Breton, under the command of the Duke d'Anville. His vessels were dispersed, and several of them were wrecked by violent storms and disease wasted hundreds of his men. He was compelled to abandon the enterprise without striking a blow, and with two or three ships - the remnant of his fleet - he took shelter in the harbor of Chebucto (now Halifax) in Nova Scotia. There he died, it is believed, from the effects of self-administered poison and his lieutenant who succeeded him, committed suicide because of mortified pride. As in the case of the capture of Louisburg, the New Englanders now regarded this delivery as the interposition of a special providence and the bells of Boston and other towns rang out merry peals of joy, while thousands knelt in the meeting-houses and poured out thanksgivings to God for his evident favors.

Hostilities continued two years longer, but the Americans suffered very little from the war, excepting from incursions by the French and Indians, on their frontiers. In October, 1748, a treaty at Aix-la-Chapelle put an end to the war, when it was agreed that all prisoners taken by either

party should be released, and all acquisitions of property or territory by either party should be restored. So Cape Breton and its fortress passed into the possession of the French by peaceful means, and the colonies were paid by the British government for their expenditures in capturing them, amounting to more than a million dollars. Both the principals in the contest were heavy losers. Nothing had been gained. Humanity had severely suffered.

National animosities, religious differences, and recent causes for irritation, had created the most intense hatred between the English and French colonists; and the acts of horrid cruelty by the Indians made the people on the frontiers regard them as almost as obnoxious as ravenous beasts of prey. Yet, firm in their allegiance to the crown of Great Britain, and loyal to the duty of obedience, the people of New England, and especially of Massachusetts, were impelled to a restraint of their resentment while England and France were at peace. But it was not long before disputes about territorial boundaries began which soon led to preparations for hostilities in America between the three races who occupied the country. At about the middle of the last century, they came to blows, and then began the fierce struggle of the English and French for dominion on this continent, known in history as "The French and Indian War." This we shall consider hereafter.

Chapter XXXIV

The Government of Maryland - Difficulties with Clayborne - The Indians Uneasy - A Civil War - Toleration Act - Disturbances in Maryland - George Fox in the Province - Rule of the Calverts - Insurrections - Revolution in England - Coode the Disturber of Maryland - Annapolis the Seat of Government - Lord Baltimore and William Penn - Tranquillity in Maryland - The French and Indian War.

AT the close of Chapter XVI II of the first volume, we have observed that in the year 1639, a representative government was established in Maryland. It was crude in form, but possessed the prolific seeds of a sturdy republicanism. The freemen chose as many representatives as they pleased. So did the proprietor. These, with the governor appointed by the proprietor, and a secretary, composed the government of Maryland.

In that first representative assembly, the people boldly asserted their rights and dignity. The proprietor presented to the Legislature a system of laws which he had framed. The representatives of the people, feeling that the inherent right to make laws resided in their constituents, rejected the whole system. They adopted a Declaration of Rights, defining the powers and duties of each branch of the government, and set to work to pass bills for the security to the people of every privilege that belonged to a British subject. This popular sovereignty was briefly contested by Lord Baltimore, by a series of vetoes or refusals to sign such bills. After vetoing more than forty, and finding the people firm, the proprietor gave up the contest and yielded gracefully to the popular will.

The province now had an aspect of profound repose, for the Indians regarded the new settlers as friends. Everything social and political promised for Maryland a long career of peace and prosperity, when personal ambition and greed, as usual, disturbed the serenity of society. A restless adventurer, named William Clayborne, had received authority from the governor of Virginia, so early as 1627, to explore the headwaters of Chesapeake Bay north of the 34th degree of latitude. Four years later, King Charles gave to Clayborne the privilege of making discoveries in the same region, and trafficking with the natives. He established a trading-post on Kent Island, in Chesapeake Bay, not far from Annapolis. When Governor Calvert visited Governor Harvey, while the colonists for Maryland were on their way to that province, Clayborne appeared and gave them ominous warnings of the hostilities of the Indians, to which they would be subjected. Not succeeding in frightening the emigrants, he insisted upon the exemption of Kent Island from the jurisdiction of the Maryland proprietor, because his grant was older than Lord Baltimore's thereto. The Virginia Assembly secretly supported his claim and when Calvert insisted that Clayborne should either leave the island or take an oath of allegiance to the governor; he would do neither, but fitted out an armed vessel to protect his domain and cruise against the colonists. His vessel was captured by a Maryland force, and Clayborne, who was not in the expedition, prudently fled to Virginia, and there effectually excited the hostility of the Indians against Calvert's colony, telling the savages that they were Spaniards. The governor of Maryland demanded the body of Clayborne as a rebel and traitor and he was saved from arrest only by

fleeing to England. The Maryland Legislature, in 1638, deprived Clayborne of his civil rights and property, within their jurisdiction. He laid his case before the king, and it was decided against him. For a few years afterward he did not appear as an open enemy of the Maryland government.

During the lull in Clayborne's active hostility, he had secretly poisoned the minds of the Indians with suspicions of dark designs on the part of the settlers toward them. The king of the Patuxents showed much unfriendliness, and the colonists were disquieted. But the more powerful king of the Piscataways resolved to become a Christian. He had been very sick. His forty conjurors could not kill the malady and it was likely to kill him, when Father White, the Roman Catholic priest already mentioned, by the judicious use of medicines, cured the monarch. With a grateful heart the king asked to be baptized. He urged his chiefs to receive the rite. On a warm summer's day in 1640, in a chapel made of bark for the occasion, the king, his queen, and their little child, with several of his council, were baptized in the presence of the governor and other distinguished citizens. The king was named Charles in honor of the British sovereign and in the afternoon he and his queen were married, in accordance with Christian rites. His daughter, an intelligent young woman, followed her father's example, and was sent to school at St. Mary's. His example was also followed by many other leading persons among the Indians; and they promised to be a shield for the colonists against outside barbarians. But the king soon afterward died, and his daughter at St. Mary's became queen. She could not protect the Christians against hostile pagans within their borders and beyond, with whom Clayborne and his emissaries had tampered.

The Indians, alarmed by the rapid increase of Englishmen in their country, and made suspicious by the false testimony of Clayborne, at length took a hostile position and made war on the intruders in 1642. The war was mild, but lasted between two and three years. It had just ended when Clayborne, assisted by Captain Richard Ingle, stirred up the people to rebellion. The insurrection flamed out with greater vehemence than the Indian war, but was not so long. Civil war was then raging in England, and the proprietor could not expect aid from the virtually dethroned monarch. The rebels, assisted by disaffected Indians, instantly triumphed, and the governor and his council were compelled to fly into Virginia. For about a year and a half the insurgents held the reins of power, and the horrors of civil war brooded over fair and once happy Maryland. The rebellion was crushed in the summer of 1646, when the governor returned to his chair of state. During the turmoil many of the records of the province were destroyed, and a greater portion of them were carried into Virginia by Captain Ingle and were lost. A wise clemency extended a general pardon to the rebels, excepting Ingle, and tranquillity was speedily restored.

Lord Baltimore displaced Green, a Roman Catholic, who had been acting- governor since the decease of Leonard Calvert, and commissioned William Stone of Virginia, a Protestant and warm friend of Parliament. Through his influence the Virginia Puritans came to the waters of the Chesapeake, insisting upon liberty of conscience. Soon after that the Maryland Assembly of 1649 met, says John Hammond (a friend of Lord Baltimore, in a pamphlet published in London in 1656), composed of Puritans, Church of England men, and a few Roman Catholics. It was this body of a majority of Protestants that passed the Toleration Act of which so much has been

written. That act seems to have been an outgrowth of statutes passed by the British Parliament in 1645 and 1647, and adopted by the Maryland Legislature under the pressure of the strong Puritan influence then existing there. By that act, every believer in Jesus Christ and the Trinity, was allowed the free exercise of his or her religious opinions, but from this toleration Jews and Unitarians were alike excluded, and it was far from being a full "Toleration Act." No man was allowed to reproach another on account of his peculiar religious doctrines, excepting under the penalty of a fine to be paid to the person so insulted and to Maryland the persecuted in other colonies now flocked to enjoy this broader freedom - Churchmen from New England, Puritans from Virginia, and Roman Catholics from all. That act is the pride and glory of Maryland's early legislation, yet it was not the first act of the kind (as has been often alleged) passed by a colonial assembly in America. In May, 1647 - two years before - the General Assembly of Rhode Island adopted a code of laws which closed with the declaration that all men may walk as their consciences persuaded them, without molestation - every one in the name of his God. This would include Jew or Mohammedan, Parsee or Pagan. It was absolute toleration.

For more than ten years republicanism prevailed in England. Lord Baltimore, whose politics and theology were easy-fitting garments, professed to be a republican when the king lost his head, but he had too lately been a decided royalist to secure the confidence of Parliament. They appointed a commission, of which Clayborne was a member, to govern Maryland. These commissioners entered upon their duties there with a high hand. They demanded a sight of Governor Stone's commission, and when he produced it, they snatched it from his hands, removed him and his subordinates from office, took possession of the records and abolished the authority of the proprietor of the province. A few months afterward they reinstated Governor Stone, put Kent and Polmer's islands into the possession of Clayborne, and so enabled the vigorous "outlaw" to trample over his enemy, Lord Baltimore.

When the Long Parliament was dissolved in 1653, Cromwell restored full power to Baltimore as proprietor. Stone proclaimed the movements of the commissioners to have been rebellious. He displaced all officers appointed by them, and in other ways acted very unwisely. The incensed commissioners returned to Maryland and compelled the governor to surrender his authority. Then they vested the government of the province in a board of ten commissioners.

Now the passions of the opposing political and religious parties were aroused into vehement action. The Protestants, who were still the majority in the General Assembly which convened in the fall of 1654, were imbued with the narrow bigotry of the early Puritans of Massachusetts, and, unmindful of the better principles of the Toleration Act of 1649, they wantonly disfranchised the Roman Catholics and members of the Church of England, by passing a law which declared that Papists and Churchmen were not entitled to the protection of the laws of Maryland. These zealots flogged and imprisoned Quakers; and their unworthy triumph was celebrated in a book published in London entitled "Babylon's Fall in Maryland."

When intelligence of these unrighteous proceedings reached London, Lord Baltimore obtained an audience with Cromwell, then Lord High Protector and real monarch of England. These

eminent men met in the Council Chamber at Whitehall, in friendly conference. Cromwell in power was not like Cromwell fighting for power. He was tolerant. His Latin Secretary, the eminent John Milton (who was present at the interview), had assisted in making him so. When Baltimore courteously protested against the injustice of Puritan legislation in Maryland, the Protector said: "I would that all the sects, like the cedar and the myrtle and the oil-tree, should be planted in the wilderness together," and assured Lord Baltimore that he disapproved of the ungrateful decree. That assurance was followed by an order which Cromwell sent to the commissioners "not to busy themselves about religion, but to settle the civil government."

So encouraged, Lord Baltimore determined to vindicate the rights of his people. He upbraided Stone for his want of firmness, and ordered him to raise an army for the restoration of the authority of the proprietor. Stone, smarting under rebuke, acted vigorously. He raised a force, chiefly of Roman Catholics, seized the colonial records, resumed the office of governor, and inaugurated civil war. Skirmishes followed. Finally, a sharp battle was fought, early in April, 1655, near the site of Annapolis, in which Stone was defeated and made prisoner, and about fifty of his party were killed or wounded. The governor and others were tried for treason. His life was spared, but four of his colleagues were hanged.

For several months, anarchy reigned supreme in Maryland, when Lord Baltimore appointed Josias Fendall, a former insurgent, to be governor of the province. Suspected of favoring the Roman Catholics, the Protestant Assembly ordered his arrest as a disturber of the peace, and for two years longer there was bitter strife between the people and the agents of the proprietor. The latter finally made important popular concessions, and Fendall was permitted to act as the governor. By prudent conduct he secured the confidence of the people, and Lord Baltimore anticipated a lasting relief from trouble on account of his American possessions, when Cromwell died and there were disquieting presages of a change in the government of England. The people of Maryland did not wait upon movements at home, but boldly asserting their supreme authority, dissolved the proprietary portion of the General Assembly in the spring of 1660, and assumed the whole legislative power of the State. The popular representatives then gave Fendall a commission as governor.

Three months after this political revolution in Maryland, monarchy was restored in England, and the son of the beheaded sovereign ascended the throne as Charles the Second. This event was soon followed by the restoration of his proprietary authority to Lord Baltimore. Fendall was tried for and found guilty of treason, because he had accepted office from the rebellious assembly. But Baltimore wisely proclaimed a general pardon for all political offenders, and for about thirty years afterward Maryland enjoyed comparative repose, while her neighbor, Virginia, was torn by civil war. Under the mild proprietary rule, the province prospered and the people were happy. Commerce flourished. The soil yielded rich rewards for labor. Industry was fostered by well-paid labor, and feminine hands found ample and profitable employment, as in peaceful Pennsylvania at the same time. A quaint writer of the period, discoursing on Pennsylvania, says in relation to the price of women's labor: "One reason why women's wages are so exorbitant is that they are not very numerous, which makes them stand upon high terms for their several services, and moreover,

they are usually married before they are twenty years of age, and when once in that noose, are for the most part a little uneasy, and make their husbands so too, till they procure them a maid-servant to bear the burden of the work, as also, in some measure, to wait on them, too."

Emigrants came to Maryland from almost every part of Europe to enjoy the tolerant rule there; and the pleasant spectacle was seen of George Fox, the founder of the sect called Friends, or "Quakers," preaching in the evening twilight on the shores of the Chesapeake to a multitude of people, comprising members of the Legislature and other distinguished men of the province, and a large group of Indian kings and chieftains, with their wives and children, led by their emperor. But the refusal of the Friends to perform military duty or take an oath, subjected them to fines and harsh imprisonments. This was a civil matter, and had nothing to do with their religious tenets.

When monarchy was restored, the people of Maryland were in full possession of the liberty founded upon popular sovereignty, and never parted with the precious treasure. The population of the province consisted of about ten thousand white people living together in comparative harmony, the fierceness of religious bigotry having been subdued by mutual concessions.

Lord Baltimore died in 1675, after a rule in Maryland, with several interruptions, for forty-three years. He was crowned in his old age with the blessings and honors of a colony which he had planted in his youth. He had never trodden the soil of Maryland, but a grateful people cherished his memory as they would that of a beloved father known to them in person. The commercial capital of that State bears the name of his title. His son and successor, Charles, followed in the footsteps of his liberal father in fostering toleration and humanity and he and his successors continued, with a few interruptions, to administer the government of the province until the storm of the revolution, which burst forth in 1775, swept away every vestige of proprietary and royal government in the English-American colonies. The title of Lord Baltimore became extinct in 1771, and the last of the family in England, of whom anything is known, was a prisoner for debt in the Queen's Bench prison in London, in 1860. In that, and the Fleet prison, he had then been confined, by the fiat of the barbarous law, twenty years.

Maryland, like the other colonies, was shaken by the revolution in England in 1688, and experienced deep sorrows for awhile. For several years before, the democratic ideas then rapidly spreading over the provinces, could not reconcile the rule of a lord proprietor with the principles of republicanism. Even so early as when Charles Calvert went to England after the death of his father, signs of political discontent were conspicuous in Maryland. In 1678, the General Assembly, influenced by the popular feeling, established the right of suffrage - casting of a vote for rulers - on a broad basis. When Charles returned in 1681, he annulled this act, and by an arbitrary ordinance restricted the right to freemen owning fifty acres of land or personal property of the value of forty pounds sterling. This produced great disquietude, and Ex-Governor Fendall planned an insurrection for the purpose of abolishing the proprietorship and establishing an independent Republican government. The king was induced to issue orders that all offices of government in Maryland should be filled by Protestants alone; and so, again, the Roman Catholics were deprived of their political rights.

In 1684, Lord Baltimore again went to England, leaving the government of his province in charge of several deputies under the nominal governorship of his infant son. There he found his rights in great peril but before the matter was brought to a direct issue by the operation of a writ of quo warranto, King James was driven from the throne and Protestant William and Mary ascended it. Lord Baltimore immediately acquiesced in the political change. Because his instructions to his deputies to proclaim the new monarchs were delayed in their transmission, he was charged with hesitancy and a restless spirit named Coode, an associate of Fendall in his insurrectionary movements - a man of loose morals and blasphemous speech - excited the people by the cry of a Popish plot. He circulated the false story that the local magistrates in Maryland, and the Roman Catholics there, had engaged with the Indians in a plot for the destruction of the Protestants in the province. An actual league at that time between the French and the Jesuit missionaries with the savages on the New England frontiers for the destruction of the English colonies in the East gave the coloring of truth to the story, which created great excitement. The old feud burned intensely. The Protestants formed an armed association. Led by Coode, they marched to the Maryland capital, took possession of the records and assumed the functions of a provisional government, in May, 1689. They met in convention in August following, when they prepared and sent to the new sovereigns a report of their proceedings and a series of absurd and false accusations against Lord Baltimore. In conclusion, they requested the monarchs to depose Lord Baltimore by making Maryland a royal province and taking it under the protection of the crown.

The sovereigns listened favorably to the representations of the convention and complied with their requests. Coode was ordered to administer the government in the name of the king, and so the people were punished for their folly in elevating him to leadership. He ruled with the spirit of a petty tyrant, until the people of every religious and political creed were heartily disgusted with him. He was displaced in 1692, when the king sent Sir Lionel Copley to be governor of Maryland.

The new governor arrived in the spring of that year and summoned a General Assembly to meet at St. Mary's in May. New laws were instituted. Religious toleration was abolished. The Church of England was made the state church for Maryland, to be supported by a tax on the whole people. "Thus," says McMahan, "was introduced, for the first time in Maryland, a church establishment sustained by law and fed by general taxation. Other laws oppressive in their bearings upon those opposed in religious views to the dominant party were enacted, some of which remained in force until the glorious emancipation day in the summer of 1776 gave freedom to our nation."

Partly because the whole people of Maryland might be better accommodated, but largely for the purpose of punishing the adherents of Lord Baltimore, who constituted a greater portion of the population of St. Mary's, the seat of government was moved from there to Anne Arundel town, on the shore of the Chesapeake, early in 1694, and there a General Assembly was convened in February. The following year the name of the place was changed by authority to Annapolis, and the naval station of the province was established there. Annapolis has continued to be the

capital of Maryland until now. St. Mary's, dependent for its existence upon its being the capital of the province, speedily sunk into insignificance and fell into ruins.

Lord Baltimore never recovered his proprietary rights. Neither did he return to America, but died in England in 1714, at the age of eighty-five years. He was succeeded by his son Benedict Leonard Calvert. That son had abandoned the faith of his father and died in the spring of 1715, when his title to the province devolved upon his infant son Charles, who, with his brothers and sisters, had been educated as Protestants.

Charles Calvert Lord Baltimore and William Penn were contemporaries, and were equally conspicuous for their beneficent disposition. They are regarded as the best of all the proprietaries who owned chartered domains in America. This sentiment is shadowed in the following lines by a minor English poet:

"Laws formed to harmonize contrarious creeds, And heal the wounds through which a nation bleeds, Laws mild, impartial, tolerant and fixed, A bond of union for a people mixed; Such as good Calvert framed for Baltimore, And Penn the Numa of th' Atlantic shore."

There being no longer any objection to the Baltimore family on account of religion, the British government restored to the young scion of that noble house, all the rights of proprietaryship in 1715. This restoration did not affect the republican sentiment of a great majority of the people of the province, except to stimulate its growth. The first legislature which met, after the Restoration, passed a body of laws based upon the broadest principles of civil and religious liberty, some of which yet remain in force in Maryland. There was a single blot on the legislation of that Assembly. They introduced into Maryland all of the odious test-oaths and disabilities which were enforced in England against the consciences of men.

For almost forty years after the Restoration the colony enjoyed remarkable tranquillity. Only the natural disputes that arose between a lord proprietor and a people of strong republican tendencies in thought and action, and the flutter of excitement caused by the furnishing of men to aid the northern colonies in their struggles with the common foe on the frontiers, disturbed the general repose.

Charles Lord Baltimore died in 1751, after ruling the province in person and by deputies about thirty-six years. During that period the growth of the province in wealth and population was remarkable. The inhabitants then numbered more than one hundred and thirty-five thousand souls, of whom about forty thousand were black men and women, who were mostly slaves. The several provinces were then agitated by the encroachments of the French upon the territory of the Ohio and Mississippi valleys, toward which English adventurers were casting longing eyes. In the French and Indian war that broke out in 1755, Maryland became involved, at first, simply in the maintenance of an attitude of self-defence and a generous assistant of its sister colonies. Its legislature for awhile persistently stood aloof from aggressive warfare in spite of the commands of the king and the entreaties of Virginia. They consented to send delegates to the colonial

convention which assembled at Albany in 1754, but the delegates offended their constituents by agreeing to a plan of union submitted by Dr. Franklin, by which the several colonies might act with national power in the prosecution of measures of defence against the common enemy. The Marylanders, ever jealous of their colonial rights and proud of their separate independence as a colony, and their inherent sovereignty, had always opposed every attempt to effect a fusion of the colonies into one government. When the plan agreed upon at Albany was submitted to the General Assembly of Maryland, it was unanimously disapproved as tending to the destruction of the rights and liberties of his majesty's subjects in the province.

The time soon arrived when the Marylanders could no longer stand in the attitude of separatist and avoid taking an active aggressive part in the war, for its surges were beating upon the borders of their province. The Indians were plundering their frontier. The General Assembly, aroused by immediate danger, voted men and money for a vigorous prosecution of the war; and the command of all the forces engaged against the French on the Ohio was given, by a royal commission, to Governor Sharpe, of Maryland. The people of that province were forced by circumstances to consent to a union which was finally cemented by the blood of the Revolution.

Chapter XXXV

The Connecticut Colonies - An Absurd Rumor about the Dutch - Charter for Connecticut Obtained - Tyranny of Governor Andros - His Attempt to Seize the Charter - The Charter Oak - Freedom Enjoyed in Rhode Island - Society There - New Charter for Rhode Island Obtained - Its Duration - Andros in Rhode Island - New Jersey Considered - Its Social and Political Condition - The Province Divided - The Quakers Settle There - Andros in New Jersey - It Becomes a Royal Province.

THE Connecticut colonists worked in harmony as brethren or the same nation and creed until their fusion into one commonwealth in 1665. They managed their private and public affairs prudently and were prosperous. Troubles with the Dutch, concerning territorial boundaries, were amicably settled with Stuyvesant when he visited Hartford in 1650; but the mutterings of dissatisfaction which fell from the lips of the neighboring Indian tribes gave them some disquietude, and made them heartily approve and join the New England Confederacy formed in 1643. The following year the little independent colony at Saybrook, at the mouth of the Connecticut River, which had been formed in 1639, was annexed to that of Connecticut at Hartford, and was the precursor of the final union of the three colonies about twenty years afterwards.

The repose of the colonists was broken in 1653, by a war between England and Holland. An alarming rumor had spread over New England that Ninigret, an old, crafty and wily sachem of the allied Niantics and Narragansets, who had spent part of a winter at New Amsterdam, had made a league with Stuyvesant for the destruction of the New England colonies. The majority of the commissioners of the New England Confederacy believed the absurd story, and decided to make war on the Dutch. The Connecticut people were specially eager for war, for they were more immediately exposed to the effects of such a plot than the other colonists. But Massachusetts refused to furnish men and arms for an aggressive war, before an investigation of the matter. Messengers were sent to Ninigret and his associate sachems for the latter purpose. These were questioned separately, and all concurred in the solemn assurance that they had no knowledge of such a plot. Ninigret, who went to New Amsterdam for medical treatment, said with emphasis, in his denial, "I found no such entertainment from the Dutch governor, when I was there, as to give me any encouragement to stir me up to such a league against the English, my friends. It was winter time, and I stood a great part of a winter day knocking at the governor's door, and he would neither open it, nor suffer others to open it, to let me in. I was not wont to find such carriage from the English, my friends." The story of the Dutch-Indian plot appears to have been a pure invention of Uncas, the crafty sachem of the Mohegans, who was a foe of Ninigret, and was extremely jealous of the supposed friendship between that sachem and the English. It caused the frightened Connecticut colonists, when Massachusetts refused to join them in war upon the Dutch, to ask Cromwell for aid. The Protector sent four ships-of-war, but before their arrival a treaty of peace had ended the war between England and Holland, and blood and treasure were saved in America.

On the restoration of monarchy in England, in 1660, the Connecticut colonists had fears regarding their future. Their sturdy republicanism and independent action in the past might be mortally offensive to the new monarch. The General Assembly of Connecticut, therefore, resolved to make a formal acknowledgment of their allegiance to the crown and ask the king for a charter. A petition was accordingly framed and signed in May, 1661, and Governor John Winthrop bore it to England. He was a son of Winthrop of Massachusetts, and was a man of rare attainments and courtly manners, and then about forty-five years of age. He obtained an interview with the king, and was received with coolness. His name and the people over whom he was the chosen ruler were associated with radical republicanism, and the king received the prayer of the petitioners with disfavor. Winthrop left the royal presence, disappointed but not disheartened, and sought and obtained another interview.

The "merry monarch" was now in more genial mood. He chatted freely with Winthrop about America - its soil, productions, the Indians and the settlers - yet he hesitated to promise a charter. Winthrop, it is said, finally drew from his pocket a gold ring of great value, which the king's father had given to the governor's grandfather, and presented it to his majesty with a request that he would accept it as a memorial of the unfortunate monarch, and a token of Winthrop's esteem for, and loyalty to King Charles, before whom he stood as a faithful and loving subject. The king's heart was touched. Turning to Lord Clarendon, who was present, the monarch said: "Do you advise me to grant a charter to this good gentleman and his people?" "I do, Sire," responded Clarendon. "It shall be done," said Charles, and he dismissed Winthrop with a hearty shake of his hand and a royal blessing.

The governor left Whitehall with a light heart. A charter was issued on the first of May, 1662. It confirmed the popular constitution of the colony, and contained more liberal provisions than any yet issued by royal hands. It defined the boundaries so as to include the New Haven colony and a part of Rhode Island on the East, and westward to the Pacific Ocean. The New Haven colony reluctantly gave its consent to the union, 1111665, and the boundary between Connecticut and Rhode Island remained a subject of dispute for more than sixty years. That old charter, engrossed on parchment, is among the archives in the Connecticut State Department. It bears the miniature portrait of Charles the Second, drawn in India ink by Samuel Cooper, it is supposed, who was an eminent London miniature painter of the time.

During King Philip's war, the colonists of Connecticut did not suffer much from hostile Indians, excepting some remote settlers high up the Connecticut River. They furnished their full measure of men and supplies, and their soldiers bore a conspicuous part in that contest between the races for supremacy. But while they were freed from dangers and distress of war with the Indians, they were disturbed by the petty tyranny of Governor Andros, whose advent in New England and New York has been noticed.

Seated at New York, Andros claimed jurisdiction as far east as the Connecticut River. To the mouth of that stream he went, with a small naval force, in the summer of 1675, to assert his authority. Captain Bull, the commander of a small fort at Saybrook, permitted him to land but

when the governor began to read his commission, Bull ordered him to be silent. Andros was compelled to yield to the commander's bold spirit and his superior military power, and in a towering passion he returned to New York, flinging curses and threats behind him at the people of Connecticut in general, and Captain Bull in particular.

For more than a dozen years after this flare-up of ambition and passion, nothing materially disturbed the public repose of Connecticut. Then a most exciting scene occurred at Hartford, in the result of which the liberties of the colony were involved. Andros again appeared as a usurper of authority - the willing instrument of his master King James the Second, who had determined to hold absolute rule over all New England. On his arrival in New York, as we have seen, Andros demanded a surrender of all the colonial charters into his hands. The authorities of all the colonies complied, excepting those of Connecticut. The latter steadily refused to yield their charter voluntarily, for it was the guardian of their political rights. To subdue their stubbornness, the viceroy proceeded to Hartford with sixty armed men, to demand the surrender of the charter in person. On his arrival there on the 31st of October (O. S.), 1687, he found the General Assembly in session in the meeting-house. The members received him with the courtesy due to his rank. Before that body, with armed men at his back, he demanded a formal surrender of the precious document into his own hands.

It was now near sunset. A subject of some importance was under debate, and the discussion was purposely continued until some time after the candles were lighted. Then the charter, contained in a long mahogany box, was brought in and laid upon the table. A preconcerted plan to save it from the grasp of the usurper was now instantly executed. As Andros put forth his hand to take the charter, the candles were all snuffed out and the document was snatched by Captain Wadsworth, whose train-bands were near to protect the Assembly from any violence which the royal soldiers might offer. Wadsworth bore away the charter, the crowd opening as he passed out, and closing behind him, and hid it in the hollow of a venerable oak tree on the outskirts of the village. When the candles were relighted, the members were seated in perfect order, but the charter could not be found. This was the same Captain Wadsworth who afterward silenced Governor Fletcher.

So, again, the tyrannical purposes of Andros were foiled in Connecticut. Wisely restraining his passion at that time, he assumed the control of the government declared the charter annulled, and Secretary Allyn wrote the word FINIS after the last record of the Journal of the Assembly. From that time until he was expelled from the country in 1689, he governed Connecticut as an autocrat - an absolute sovereign. Then the charter was brought out from its place of concealment, in May, 1689; a popular Assembly was convened; Robert Treat was chosen governor, and Connecticut again assumed the position of an independent colony. The tree in which the document was hidden was ever afterward known as the "Charter Oak." It remained vigorous, bearing fruit every year until a little after midnight in August, 1856, when it was prostrated by a heavy storm of wind. It stood in a vacant lot on the south side of Charter street, a few rods from Main street, in the city of Hartford.

About six years after Andros was out-generaled at Hartford, his successor in office Benjamin Fletcher, was foiled, at the same place, in his attempts to exercise control over the militia of Connecticut. The exciting scene has been recorded in the 28th Chapter of the first volume. From that time, during the space of about three-fourths of a century, the history of Connecticut is intimately woven with that of the other colonies planted in America by English people. The inhabitants of Connecticut, by prudent habits and good government, steadily increased in numbers and wealth. They went hand in hand with those of other colonies in measures for the promotion of the welfare of all and when, in the fullness of time, the provinces were ripe for union, rebellion and independence, the people of Connecticut were foremost in their eagerness to assert their rights as a free people.

We have seen that Rhode Island was favored with a charter from Parliament in 1644. Yet with this guaranty of strength, it was not free from the dangers which excessive liberty often creates. But Rhode Island passed that fiery ordeal almost unscathed. In the plenitude of freedom there enjoyed, each individual was, in a degree, a law unto himself. In religion and politics the people were absolutely free. The General Assembly, in a code of laws adopted in 1647, declared, as we have observed, that all men might walk as their consciences permitted them - every one in the name of his God. Almost every religious belief might have been encountered there; so that if a man lost his religious opinions, he might have been sure to find them in some village in Rhode Island. Society was in a continual ferment, but the agitation was healthful. Town meetings, and other like gatherings of the people, were stormy and the disputes of rivals were sometimes fierce, but never brutal. There was a remarkable propriety of conduct on all occasions and out of the political agitations came to the surface the best men in the colony to administer public affairs. Throughout the whole community, so independent in thought and action, appeared a healthier religious sentiment than in Massachusetts, where the people were straight-laced by creeds and dogmas, and were constantly tempted to be hypocrites. There was a high-toned morality, based upon that religious sentiment, which preserved society from many dangers. "Our popularity," says one of their records, "shall not, as some conjecture it will, prove an anarchy, and so a common tyranny for we are exceeding desirous to preserve every man safe in his person, name, and estate."

A little danger menaced the commonwealth when, in 1651, the Executive Council of State in England granted to William Coddington a commission for governing the islands within the limits of the Rhode Island charter. This threatened a dismemberment of the little empire and its absorption by neighboring colonies. The people were alarmed. Roger Williams and John Clarke hastened to England, and with the assistance of Sir Henry Vane, "the sheet-anchor of Rhode Island" - the noble and true friend to an outcast and despised people" - the commission was recalled and the charter given by Parliament was confirmed. That was in October, 1652. This act put an end to the persevering efforts of Massachusetts to absorb the little commonwealth.

While Roger Williams was in England, he partly supported himself by teaching. He then enjoyed the intimate friendship of Cromwell, Hampden, Milton, Sir Henry Vane, and other distinguished men. On his return, he was again hailed with joy as a benefactor and in the autumn

of 1654, he was chosen president of the colony. The following year, Cromwell, as ruler of England, confirmed the charter given by Parliament, and the colony prospered in peace. Religious disputes agitated the people but reason, left free to combat error, allowed no persecution.

On the restoration of monarchy in 1660, the inhabitants of Rhode Island sent to Charles an address, in which they declared their loyalty and begged his protection. This was followed by a petition for a new charter. The prayer was granted; and in July, 1663, the king issued a patent highly democratic in its general features, and similar, in every respect, to the one granted to Connecticut. Benedict Arnold was chosen the first governor under the royal charter, and it continued to be the supreme law of the land for the period of about one hundred and eighty years. In 1842, the people of Rhode Island adopted a constitution, and the power of the old royal charter ceased.

When, in 1687, Andros demanded the surrender of the colonial charters, the inhabitants of Rhode Island instantly yielded. When the order for the seizure of these charters was first made known, the Assembly of Rhode Island had sent a most loyal address to the king, saying: "We humbly prostrate ourselves, our privileges, our all, at the gracious feet of your majesty, with an entire resolution to serve you with faithful hearts." Andros, therefore, found no opposition in the little colony. Within a month after his arrival at Boston, he proceeded to Rhode Island, where he was graciously received. He formally dissolved the Assembly broke the seal of the colony, which bore the figure of an anchor and the word HOPE; admitted five of the inhabitants into his legislative council, and assumed the functions of governor. But he did not take away the parchment on which the charter was written.

The people of Rhode Island were restive under the petty tyranny of Andros; and when they heard of the imprisonment of the despot at Boston, in the spring of 1689, they assembled at Newport, resumed popular government under the old charter, and began a new and independent political career. From that time until the enforced union of the colonies for mutual defence at the breaking out of the French and Indian war, the inhabitants of Rhode Island always bore their fair share in defensive efforts, especially when the hostile savages hung along the frontiers of New England and New York like a dark and ill-omened cloud. The history of that commonwealth is identified with that of all New England, from the beginning of King William's war soon after the expulsion of Andros.

Let us now turn again to a consideration of the history of New Jersey as a colony. We have traced its progress from the period of its first settlements to that of its permanent political organization as a British colony, with a governor and council, and when a cluster of four houses at Elizabethtown were dignified with the title of a colonial capital. Agents were sent to New England to invite settlers, and a company from New Haven were soon seated on the banks of the Passaic. Others followed; and when, in 1668 the first legislative assembly met at Elizabethtown, it was largely made up of representatives of New England Puritanism. The fertility of the soil the salubrity of the climate; the exemption from fear of Indian hostilities and other manifest advantages, caused a rapid increase in the population and prosperity of the province; and nothing

disturbed the general serenity of society there until the year 1670, when specified quit-rents of a halfpenny for each acre of land was demanded. The people murmured. Some of them had purchased their land of the Indians before the proprietary government was established, and refused to pay the rent, not on account of its amount, but because it was an unjust tax levied without their consent.

Disputes concerning rents continued almost two years, and the province was cast into confusion. The whole people combined in resistance to the payment of the tax. There was actual rebellion; and in May, 1672, the disaffected colonists sent deputies to a popular Assembly which met at Elizabethtown. That body chose a weak and dissolute illegitimate son of one of the proprietors to be their governor, and compelled Philip Carteret, the proprietary ruler, to vacate his chair and leave the province. He went to England for more authority; and while the proprietors were making preparations to recover the province by force of arms, New Jersey and all the rest of the territory in America claimed by the Duke of York fell into the hands of the Dutch, with whom the English were then at war. That was in August, 1673.

When, fifteen months afterward, these territories were restored to the English, and the duke received a new charter from his brother the king, he appointed Andros governor of the whole domain. Carteret complained, and his authority was partly restored but sufficient was reserved to give Andros a pretext for asserting his authority and annoying the proprietors and the people.

Lord Berkeley was now so disgusted by the losses and annoyances which he had endured in connection with his ownership of New Jersey, that he sold his interest in the province to John Fenwick and Edward Byllinge, English Friends or Quakers, for the sum of five thousand dollars. The tract sold to these Friends was in the western part of the province. With some emigrants, mostly of the Society of Friends, Fenwick sailed for his new possessions. They settled at a spot not far from the Delaware River, which they named Salem, on account of the peaceful aspect of the country and the surrounding Indians. There, with the peculiar gravity of the sect, Fenwick and his two daughters, thirteen men (most of them heads of families) and one woman, the wife of one of the emigrants, sat in silent worship according to their custom, under the shadow of a great tree, with covered heads and quiet bodies, on the ensuing First Day after their arrival. Then they built log cabins for shelter, and so began a new life in the wilds of New Jersey.

Byllinge was the principal proprietor, but soon after the departure of Fenwick, heavy losses in trade made him a bankrupt, and his interest in New Jersey was first assigned to William Penn and others for the benefit of his creditors, and was afterward sold to them. These purchasers and others who became associated with them, unwilling to maintain a political union with other parties, bargained with Carteret for a division of the province. This was done in July, 1676. Carteret retained the eastern part of the province, and the new purchasers held the western part. From that time until they were united and became a royal province in 1702, these divisions were known as East and West Jersey. From this circumstance, the expression "The Jerseys," heard in our day, was derived.

The proprietors of West Jersey gave to the settlers, who were mostly Friends at first, a remarkably liberal constitution of government, entitled "The concessions and agreements of the proprietors, freeholders, and inhabitants of the province of West New Jersey in America." The following year (1677) more than four hundred Friends came from England and settled below the Raritan. Andros required them to acknowledge his authority as the representative of the Duke of York. They refused, and the matter was referred to the eminent crown-lawyer and oriental scholar, Sir William Jones, for adjudication. Sir William decided against the claims of the duke, who submitted to the decision, released both provinces from allegiance to him, and the Jerseys became independent of foreign control. The first popular Assembly in West Jersey met at Salem in November, 1681, and adopted a code of laws for the government of the people. One of these laws provided that in all criminal cases, excepting treason, murder and theft, the aggrieved party should have power to pardon the offender.

Carteret died late in 1679. The trustees of his American estates offered East Jersey for sale. It was bought in 1682, by William Penn and others, among them the Earl of Perth, the friend of Robert Barclay, whom the proprietors appointed governor of the domain for life. Barclay was an eminent young Friend, whose writings have ever been held in high estimation by his sect, especially his Apology for the true Christian Divinity, as the same is held forth and practiced by the people called in scorn Quakers, and his Treatise on Christian Discipline. The purchase was made, not in the interest of religion or liberty, but as a land speculation. Barclay governed the province by deputies until his death in 1690, when he was only forty-two years of age.

A large number of Friends went from England and Scotland to East Jersey, and other immigrants flocked in from Long Island, to find repose and peace. They soon found that repose was not to be enjoyed by lovers of freedom anywhere under royal rule. They were also impressed with the significance of the injunction: "Put not your trust in princes," for James the king failed to keep the promises of James the duke, and they were compelled to submit to the tyranny of Andros. When that detested viceroy was driven from the country in 1689, the Jerseys were left without a regular civil government, and so they remained several years.

Wearied with contentions with the people of the provinces and with the government in England, and annoyed by losses in unprofitable speculations; the proprietors of the Jerseys surrendered them to the crown in 1702, when Queen Anne was the reigning British monarch. The government of that domain was then confided to Sir Edward Hyde (Lord Cornbury), whose instructions constituted the supreme law of the land. He was then governor of New York, and possessed almost absolute legislative and executive control within the jurisdiction of his authority. In New Jersey the people had no voice in the judiciary or the making and executing of laws other than recommendatory. Liberty of conscience was granted to all but Roman Catholics, but the bigoted governor always showed conspicuous favors to the members of the Church of England. Under the rule of that dishonest libertine, the people of New Jersey were slaves. Printing was prohibited in the province except by royal permission, and the traffic in negro slaves was specially encouraged.

The province of New Jersey remained a dependency of New York, with a distinct legislative assembly of its own, until the year 1738, when, through the efforts of Lewis Morris, its chief justice, it was made an independent colony, and so continued until the war for independence. Mr. Morris was commissioned the first governor after the province had gained its freedom from New York. He was the son of an officer in Cromwell's army who, at about the year 1672, settled on a farm of three thousand acres on the Harlem River, New York, which was named Morrisania.

The last of the royal governors of New Jersey was William Franklin, son of Dr. Benjamin Franklin, who was appointed, in 1763, and closed his official career in the summer of 1776, when he was deposed by the Continental Congress, and sent under guard to Connecticut, where he was released on parole and sailed for England. He died there in 1813.

Chapter XXXVI

William Penn in Pennsylvania - Growth of that Province - Penn Goes to England - His Troubles There - He Returns to America - Gives a Third and More Liberal Charter to the Colonists - His Death, and the Fate of the Province - Attempts to Force the Fundamental Constitutions on the Carolinas - Effects of Navigation Laws - Rebellion in North Carolina - Archdale Made Governor of Both Carolinas - Social Condition of North Carolina - Settlements and Political Troubles in South Carolina - Growth of the Colony - The Huguenots and Their History - Rebellion in South Carolina - The Good Deeds of John Archdale.

WHEN William Penn, with the help of Thomas Holme, the surveyor, laid out the city of Philadelphia at the close of 1682, he caused the boundaries of the streets to be marked on the trunks of the chestnut, walnut, locust, spruce, pine and other forest trees that covered the land. Several streets of that city yet bear the names of those trees, then given to them. The growth of the new town was rapid. Within a year after the surveyor had finished his task, almost a hundred houses were erected there, and the Indians came daily with the spoils of the forest as presents for "Father Penn," as they delighted to call the proprietor.

In March following, the new city was honored by the gathering there of the second Assembly of the province, when Penn offered to the people, through their representatives, a new charter. It was so liberal in all its provisions that when the question, "Shall we accept the new constitution or adhere to the old one?" came up in that body, there was a solid vote in favor of the new one. It constituted a representative republican government, with free religious toleration and having justice for its foundation and the proprietor, unlike those of other provinces, surrendered to the people his chartered rights in the appointment of officers. From the beginning, the happiness and prosperity of his people appeared to be upper-most in the heart and mind of William Penn. It was this happy relation between the proprietor and the people, and security against Indian raids that made Pennsylvania far outstrip her sister colonies in rapidity of settlement and permanent prosperity.

Late in 1682, a small house was erected on the site of Philadelphia for the use of Penn. It survived until our day, occupying a place in Letitia Court, between Front and Second streets. There he assisted in fashioning those excellent laws which gave a high character to Pennsylvania from the beginning. Among other wise enactments, it was decreed that, to prevent lawsuits, three arbitrators, to be called peace-makers, should be appointed by the county courts, to hear and determine small differences between man and man that children should be taught some useful trade that factors wronging their employees should make satisfaction, and one-third over that all causes for irreligion and vulgarity should be repressed and that no man should be molested for his religious opinions. They also decreed that the days of the week and the months of the year "shall be called as in Scripture, and not by heathen names (as are vulgarly used), as ye First, Second and Third dais of ye week, and First, Second and Third months of ye year, beginning with ye day called Sunday, and ye month called March," so beginning the year, as of old, with the first spring month. At about the same time Pennsylvania was divided into three counties - Bucks, Chester

and Philadelphia and the annexed territory was also divided into three counties - New Castle, Kent and Sussex - known for a long time afterward the "Three Lower Counties on the Delaware."

In the summer of 1684, Penn returned to England. He left the government of the province, during his absence, in the care of five members of the council and Thomas Lloyd as president, who held the Great Seal. His mission in America had been one of solid triumph over the hoary prejudices of feudalism and the selfish instincts of man. His wise and beneficent conduct had given wings to a report that William Penn had opened, in a beautiful land beyond the ocean, an asylum to the good and oppressed of every nation and creed. These and others came from Scandinavia, the borders of the Rhine, and from England, Wales, Scotland and Ireland, to plant quiet homes in the dominions of the "Quaker King." His "City of Brotherly Love" had, in the course of two years, grown more rapidly than had the city of New York in almost half a century. At the close of the year following his departure for England, it contained six hundred houses schools were established, and William Bradford, who had landed where Philadelphia was afterward laid out, had set up a printing-press there. His "Almanack for the Year of the Christian's Account, 1687," was printed there on a broadside or single sheet, with twelve compartments, the year beginning with March. Looking upon the result of his work, Penn, with righteous exultation, wrote to Lord Halifax: "I must, without vanity, say I have led the greatest colony into America that ever any man did upon private credit, and the most prosperous beginnings that ever were in it are to be found among us." Penn bade the colonists farewell, with the most cheering forebodings for the future, saying: "My love and my life are to and with you, and no water can quench it, nor distance bring it to an end. I have been with you, cared over you, and served you with unfeigned love; and you are beloved of me and dear to me beyond utterance. I bless you in the name and power of the Lord, and may God bless you with his righteousness, peace and plenty all the land over And thou, Philadelphia, the virgin settlement of this province, my soul prays to God for thee, that thou mayest stand in the day of trial, and that thy children may be blessed." The blessings of the whole people rested upon the good man, when, on a bright day in August, the vessel that bore him to England weighed anchor at near the foot of Chestnut street.

Four months after Penn's return to England, Charles the Second died, and his brother James ascended the throne. Then began a period of great theological and political excitement in England, in the perils of which Penn became involved. He and the new king had long been personal friends; and through Penn's influence, twelve hundred persecuted Friends were released from prison, in 1686. When it was seen that James was under the powerful influence of the Jesuits, his Quaker friend was suspected of being one of them and after the revolution that drove James from the throne, he was arrested three times, on a false charge of treason, and as often acquitted. The last time was in 1690. Meanwhile there had been great political and theological commotions in Pennsylvania, and in April, 1691, the Three Lower Counties on the Delaware, offended at the action of the council at Philadelphia, withdrew from the Union, and Penn yielded to the secessionists so far as to appoint a separate deputy governor over them.

In consequence of representations which came from Pennsylvania, the monarchs William and Mary deprived Penn of his rights as governor of his province, in 1692, and the control of the

domain was placed in the hands of Governor Fletcher, of New York, who, in the spring of 1693, reunited the Delaware counties to the parent province. Fletcher appeared at the head of the council at Philadelphia on Monday, the 15th of May, with William Markham, Penn's deputy, as lieutenant-governor.

Powerful friends interceded with King William for the restoration of Penn's rights. He was called before the Privy Council to answer certain accusations, when his innocence was proven. A few months afterward his rights were all restored. That was in the summer of 1694. His fortune had been wasted, and he lingered in England, under the pressure of comparative poverty, until 1699, when, with his daughter, and his second wife, Hannah Callowhill, he sailed to Philadelphia. Meanwhile his colony under his old deputy, William Markham, had asserted their right to self-government, and made laws for themselves. Penn found them prosperous, but clamorous for political privileges guaranteed to them by law. Regarding their demands as reasonable, he gave them a new constitution or frame of government, in November, 1701, more liberal in its concessions than former ones, and perfectly satisfactory to all. Finding the people of the "Territories," or Three Lower Counties, restive under the forced union with Pennsylvania, he made provision for their permanent separation in legislation, in 1702 and the first independent legislature in Delaware was assembled at New Castle in 1703. Although Pennsylvania and Delaware ever afterward continued to have separate legislatures, they were under the same governor until the Revolution in 1776.

While Penn was in America, tidings came that measures were pending before the Privy Council, for bringing all of the proprietary governments under the crown. Penn had come to Philadelphia to live and die there; and had built a fine brick house to reside in, which stood on the corner of Second street and Norris alley, until a few years ago. But the news from England determined him to return to his native country to defend his rights. He did so late in 1701, and succeeded. He never returned to America. Harassed and wearied by business connected with his province, he was making arrangements in 1712 to sell it for sixty thousand dollars, when he was prostrated by paralysis. He survived the first shock six years, when he died, leaving his estates in America to his three sons. His family governed Pennsylvania, as proprietors, until the Revolution made it an independent State in 1776. Meanwhile the province had sustained its share of the burden of mutual defence with its sister colonies during the troubles with the French and Indians.

Let us now return to a consideration of the colonial history of the Carolinas from the formation of the "Fundamental Constitutions" by Locke and Cooper (afterward Lord Shaftesbury) for the government of the colonists of those regions, until the period of the old war for independence.

We have observed that the scheme for a splendid government was completed in 1669. The "constitutions" were signed in March, 1670, and were highly lauded in England as forming the wisest scheme for human government ever devised. Monk, duke of Albemarle, was created Palatine or viceroy for the new empire, who was to display the state parade of his office, with landgraves, barons, lords of manor, caciques, and courts of admiralty and heraldry, among the

scattered settlers in the pine forests living in log cabins with the Indians. The idea seems too ludicrous to have been seriously entertained. Yet it was entertained and, so far as the proprietors were concerned, this splendid government was established. But the simple settlers had something to say; and when the governor of the Northern or Albemarle county colony attempted to introduce the new government, they said, "No," with peculiar emphasis, as the question was forced upon them, "Will you accept it?" They had a form of government of their own far better adapted to their social circumstances than the one sent from England, and they resolved to adhere to it.

The attempts to enforce obedience to the new form of government; the oppressive taxation imposed upon the people, and especially the commercial restrictions authorized by the English navigation laws, produced wide-spread discontent. This was fostered by refugees from Virginia, who had been implicated in "Bacon's Rebellion," and who sought personal safety among the people below the Roanoke. These refugees scattered broadcast over a generous soil the germinal ideas of popular freedom and successful oppression was made difficult, if not impossible.

The whole State of North Carolina did not, at that time, contain quite four thousand inhabitants. They carried on a feeble trade in tobacco, maize and fat cattle, with the merchants of New England, whose little vessels brought in exchange those articles of foreign production which the settlers could not otherwise procure. English cupidity envied them their privileges, and the navigation laws of 1672 were put in force. An agent of the government appeared, who demanded a penny for every pound of tobacco sent to New England. The colonists resisted the levy. The tax-gatherer was rude, and had frequent personal collisions with the people. On one occasion he attempted to drive away a steer in satisfaction of a demand for the tax on the tobacco of a planter, which had just been shipped for Boston, when the sturdy wife of the yeoman beat him off with a mop-stick, and saved the animal from the tax-gatherer.

Finally, the exasperated people, led by John Culpepper, a refugee from the Southern or Carteret county colony, seized the governor and the public funds imprisoned him and six of his councillors called a new representative Assembly, and appointed a chief magistrate and judges. That was in December, 1677. For two years the colonists conducted the affairs of their government without any foreign control. Meanwhile Culpepper, whom the royalists denounced as an ill man, one who merited hanging for endeavoring to set the people to plunder the rich, conscious of his integrity, went boldly to England to plead the cause of the colonists. There he was arrested, just as he was re-embarking for America, on a charge of treason for which he was tried and acquitted. Returning to North Carolina, he was appointed surveyor-general of the province; and in 1680 he was employed in laying out the city of Charleston in South Carolina.

The Northern colony now enjoyed repose for awhile, until the arrival of Seth Sothel as governor. He had purchased the share of Clarendon in the soil of the provinces, and was sent to administer government there. On his voyage he was captured by Algerine pirates, but escaped, and reached North Carolina in 1683. Avaricious, extortionate, cruel, without the abilities of a statesman and mean-spirited - "the dark shades of his character not relieved by a single virtue" -

he sought the government with the hope of winning a fortune thereby. His advent disturbed the public tranquillity. He plundered the people, cheated the proprietors, and on all occasions seems to have prostituted his delegated power to purposes of private gain. After enduring his misrule for about six weeks, the people rose in rebellion, seized the governor, and were about to send him to England to answer their accusations before the proprietors, when he asked to be tried by the colonial Assembly. That body were evidently more merciful than his associates in England would have been, for they found him guilty and sentenced him to only one year's banishment and perpetual disqualification for the office of governor. Sothel then withdrew to the Southern colony, where we shall meet him presently.

Sothel's successor, Philip Ludwell, was an energetic and honest man. By the exercise of wisdom and justice, he soon restored order and good feeling in the colony. He was succeeded by other honorable men, among them the good John Archdale, a member of the Society of Friends, who came in 1695 as governor of the two colonies. His administration was a blessing. The people of North Carolina, over whom he ruled, were almost as free in their opinions and actions, as the air they breathed. There were few restraints of any kind, legal or moral, yet the people were generally enemies to violence, and gentle-tempered. They were widely scattered, with not a city or town, and scarcely a hamlet in their sylvan domain. There were no roads but bridle-paths from house to house, and these were indicated by notches cut in trees. There was no settled minister of the gospel among them until 1703. The first church erected in North Carolina appeared in 1705. No building for a court-house was constructed until 1722 and it was not until 1754 - about a hundred years after the first permanent settlement was made in the region of the Chowan - that a printing-press was set up in the province.

The Southern or Carteret County colony was, meanwhile, steadily advancing in population and wealth. The settlers there, perceiving the fatal objections to the Fundamental Constitutions as a plan of government for their colony, did not attempt conforming thereto, but established a more simple government adapted to their condition. It was crude. Under it the first legislative assembly of South Carolina convened in the spring of 1672, at the place on the Ashley River where the colony was first seated. In that body, jarring political, social and theological interests and opinions produced passionate debates and violent discord. There was a Proprietary party and a People's party; a High Church party and Dissenter's party, each bigoted and resolute. At times debates were so angrily carried on, that members almost came to blows; and it was a relief to the people when the Assembly adjourned, for it seemed to be a nest out of which might come the rapacious vulture of civil war, that would be perilous in the extreme, at that time, when surrounding savages were evidently hostile. The danger from these foes finally healed the dissensions among the settlers. Moved by the instinct of self-preservation, they joined in a successful warfare upon the Indians, who had begun to plunder the plantations of grain and cattle, and to menace the lives of the colonists. The savages were subdued in 1680, and those who were made captive were sent to the West Indies and sold for slaves. Then Old Town, as their first place of settlement was called, was abandoned, and on Oyster Point, as we have observed, was founded the city of Charleston, the future capital of the colony. It was settled chiefly by the English, for the Dutch and others spread over the country along the Edisto and Santee rivers.

Immigrants from different parts of Europe rapidly swelled the population of Charleston and its vicinity, and aspirations for political independence were manifested there at that early day.

A second popular Assembly met at Charleston in 1682. It was more harmonious than the first. Wise laws were framed, and a more tolerant religious spirit prevailed. Immigrants flowed in with a full and continuous stream. Families came from Ireland, Scotland and Holland; and when the edict of Nantes, which secured toleration to Protestants in France, was revoked, a large number of Huguenots fled from their country, and many sought an asylum in the Carolinas. The traditional hatred of the English for the French was shown at this time. For full ten years these French refugees were denied the privileges of citizenship in the land of their adoption.

Meanwhile a little colony of ten Scotch families who had fled from persecution in their native land, and led by the Presbyterian Lord Cardross, landed at Port Royal on the coast of South Carolina, and proceeded to plant a settlement there in 1682. The existence of that little colony was brief. The Spaniards claimed Port Royal as a dependency of St. Augustine; and in 1686, during the absence of Cardross in Britain, they attacked and dispersed his colony and laid waste their property. Some of them returned to Scotland, and others joined the colony between the Edisto and Santee rivers.

The Huguenots, who infused warm blood into the veins of the Southern colony, and carried the sunshine of their buoyant natures into other American provinces, deserve more than a passing notice here. We have already considered their forlorn condition in the time of Coligni, a hundred years earlier. The decree of Henry the Fourth, issued from Nantes in 1598, giving them free toleration within his dominions, secured them from severe persecution. They had prospered, and had become, as a body, the best citizens of France.

When the profligate Louis the Fourteenth approached old age, he became the slave of a fascinating woman, widow of the comic poet Scarron, who is better known in history as Madame de Maintenon. She was then fifty years of age, but was still beautiful, graceful and witty, and wise and discreet in all her ways. The king, then forty-eight, fascinated by the charms of her mind and person, married her secretly. From that time she fashioned his future life. She had been a Calvinist, but was now a devoted daughter of the Church of Rome. When remorse for past sins clouded the mind of the king, she shed the light of religious consolation into its darkened recesses. He would pass whole days with her alone in a library of the palace, listening to her charming conversation or her reading from books of devotion. As amends for past misconduct, she persuaded him to take measures for the conversion of the Huguenots and to win them back to the Church of Rome.

This work was begun in earnest, by every species of bribery, and every means of coercion excepting actual personal violence. These Huguenots were driven from all public employments, and were reinstated only upon the condition of entering the church as communicants. They were persecuted by being subjected to all kinds of disabilities, social and political, and finding relief only in a profession of the Romish faith. These measures operated powerfully, and, in a degree,

successfully. It was perceived that the surest road to popular favor was by converting Huguenots, and Louvois, the Minister of War, determined to outdo Madame de Maintenon in this work, by the use of soldiers, whom he quartered on the Huguenots with orders to torment them in every possible way short of personal violence. These Protestants were forbidden to leave France, and so, like hunted deer driven to close quarters, they were dreadfully worried by the hounds. At length, following the advice of Madame de Maintenon, the king revoked the tolerant edict of Henry, and the Huguenots were exposed to the unbridled passions of the soldiery and the intolerance of religious bigots. So, Louis hoped he had gained the favor of Heaven and secured the salvation of his own soul.

The sufferings of the Huguenots were now horrible. The most cruel torments were used to convert them. It is said that full ten thousand of them perished at the stake and other places of torture, for conscience sake. In the face of vigorous measures for preventing emigration, full five hundred thousand of these useful citizens, numbering multitudes of skilled mechanics, fled from their country, and so impoverished the kingdom. They created Huguenot villages in Germany. They swelled the army of William wherewith to win the throne of England. They filled a whole suburb of London, and introduced the art of silk-weaving into England. Some went to the Cape of Good Hope, and many of them sought peaceful homes among the American colonists. They were welcomed everywhere, and became blessings to every community among whom they settled. Many families were seated in New York and other colonies; but the warmer climate of the Carolinas was more congenial to these children of sunny France. They gave some of the best blood to the American colonies; and their descendants have borne a conspicuous part in building up our free Republic.

The South Carolinians resisted all attempts to make them submit to the authority of the "Fundamental Constitutions." Annoyed by persistent efforts to compel them to accept that form of government, they felt disposed to cast off all allegiance to the proprietors and the mother country. At that crisis, John Colleton, one of the owners, was appointed governor of the province, with full powers to bring the people into submission. That was in 1686. His administration of four years was a very turbulent one. Finally, his continual collisions with the people drove them into open rebellion. They seized the public records imprisoned the secretary of the province; called a new Assembly, and defined the power of the governor. The latter, pleading the danger of an impending invasion of Indians or Spaniards, made it a pretext for calling out the militia, with whom he hoped to suppress the insurrection. He declared the province to be under martial law, and proposed to rule by its vigorous code.

The militia were a part of the people, and no troops appeared at the call of the governor. His act greatly exasperated the colonists. He was impeached, and banished from the province by the Assembly, in 1690. The Revolution in England at the same time was initiated in miniature in South Carolina.

During the turbulence at near the close of Colleton's administration, Seth Sothel arrived from North Carolina, pursuant to his sentence of banishment. He espoused the cause of the people

against the proprietors, and the former, in the moment of their anger, unwisely chose him to be their governor. Their poor judgment was rebuked, and the people were punished for this rash act by the conduct of the new governor. While he followed the popular will in opposing the claims of the proprietors to political domination, he plundered the people, trampled upon their dearest rights, and ruled them with insolence and undisguised tyranny. His misrule was endured for about two years, when the people heartily seconded the measures of his fellow proprietors for his removal. When they heard of his usurpations, they sent him letters of recall, with an order from the king to appear in England to answer charges of disloyalty and other grave offenses. Sothel was compelled to retire from the office in 1692, when he withdrew to North Carolina, where he died two years afterward. It was during the administration of Sothel that the Huguenots in South Carolina were as fully enfranchised, or granted the liberty of citizens, as if they had been born on the soil. This act of enfranchisement was repealed in 1697.

Colonel Philip Ludwell, of Virginia, and then governor of North Carolina, as we have seen - a man wholly unconnected with the interests of the province - was appointed the successor of Sothel. When the people found that a part of his mission was to restore the authority of the proprietors and impose upon them the absurd "Fundamental Constitutions," they were restive under the rule of even so good a man as he. He was authorized to inquire into grievances, but had no power to redress them; and after a brief and unhappy administration, he gladly retired from the chair of state.

The proprietors were now satisfied that they could never impose upon the people of the Carolinas the form of government framed by Locke and Cooper, and after a trial of about twenty years, the scheme was abandoned. They sent good John Archdale, as we have seen, to govern both provinces under more simple forms of government prepared by the people themselves. His administration was short, but highly beneficial. He healed dissensions established equitable laws, and with the spirit of a true Christian he set a true Christian example of toleration and humanity. He made no distinction on account of religious creeds in the choice of his council. He cultivated friendly intercourse with the surrounding Indians, and ransomed Indian captives who were exposed for sale as slaves. Chiefs of tribes formerly hostile were sometimes seen at his table and two Indian maidens were paid servants in his family. With the Spaniards at St. Augustine he cultivated friendly relations, for the liberal spirit of the Quaker could respect the faith of the Roman Catholic. With keen foresight he introduced and promoted the growth of rice on the seacoasts of the Carolinas, some seed having been given to him by the captain of a vessel from Madagascar. It was distributed among the planters; and so the cultivation of this valuable cereal was begun in our country. The name and deeds of John Archdale were kept green in the memory of the Carolinians for generations.

From the close of Archdale's administration, the history of the two Carolinas should be considered separate and distinct, although they were not politically disunited until 1729.

Chapter XXXVII

The Carolinas - Disappearance of the Indians - Internal Commotions - Emigrants from France, Switzerland and Germany - An Indian Raid and Massacre of White People - Further Trouble with the Indians - South Carolina - The Governor Makes War on the Spaniards in Florida - War with Indians - Political Troubles - South Carolina Invaded by Spaniards and Frenchmen - The Foe Expelled - An Indian League - Revolution in South Carolina - The Two Colonies Become Royal Provinces - Georgia - Religious Missionaries There - Oglethorpe and the Spaniards in Florida - Condition of the Georgia Colony - Oglethorpe Invades Florida - The Spaniards Invade Georgia - Punishment of a Deserter - The Spaniards Driven Out of Georgia - Oglethorpe in England - Georgia Becomes a Royal Province.

WHEN the good Archdale had left the impress of his example and teachings upon the Carolinians, both provinces began their career of permanent prosperity. Although they were politically united, each acted independently of the other from the close of the seventeenth century. Both made a steady advance in population and wealth, and the arts of refined society.

The North Carolinians turned their attention to the richer lands away from the sea and hunters trapped the beaver and otter in the waters far in the interior among the hills. The Indians along the sea-board had melted before the warmth of civilization like snow in the sunbeams of spring-time. The powerful Hatteras tribe, that numbered about three thousand when Harriot healed King Wingina, were reduced to fifteen bowmen in the year 1700. Another tribe on the Chowan had entirely disappeared; and the remainder of the savages in that region had been defrauded of their lands and driven back into the deep forests, when they and their brethren there perished by hundreds by the vices and diseases of the white man. The broad domain from the sea to the Yadkin and the Catawba then lay almost uninhabited, and invited to its bosom the skill of the husbandman with promises of wealth and comfort.

At about that time the freedom of the North Carolinians - "every one of whom," it was said, "did what was right in his own eyes, paying tribute to neither God nor Caesar" - was disturbed by an attempt, in 1704, to establish there the ecclesiastical dominion of the Church of England. Deputy-Governor Daniells had been sent for that purpose. He caused the first church in the province, already mentioned, to be built at the public expense. The people opposed the scheme. The Friends led in the opposition, and the turbulence that ensued soon bore the aspect of a political quarrel. Anarchy prevailed for awhile. On one side in the dispute were Churchmen and Loyalists; on the other side were Dissenters and Republicans, among whom the Friends, who were rapidly increasing in numbers, were the most active, and were ranked by the adherents of the proprietors as a rabble of profligate persons. There were two governors and two legislatures for a time but their dissensions were soon quieted. The people passively acquiesced in the ecclesiastical scheme of the deputy-governor, but they did not become Churchmen. Several years afterward, there was only one clergyman in the provinces, for no congregations could be gathered.

Meanwhile some excellent immigrants had enriched the colony. In 1607 some Huguenots

came from their temporary settlement in Virginia, and seated themselves on the beautiful banks of the Trent, a tributary of the Neuse. They were followed two years afterward by emigrants from Switzerland, who founded New Berne at the head of the Neuse. At about the same time a hundred fugitive German families from the devastated Palatinates on the Rhine came to seek shelter and repose. They were led by Count Graffenreid, and founded settlements upon the headwaters of the Neuse and the banks of the Roanoke.

Soon after these inland settlements were fairly planted, and were spreading, a fearful calamity fell upon the Germans. The remnants of the exasperated tribes, who had been driven into the forests, had nursed their revenge until it became too strong for repression. Incited and led by the Tuscaroras, a fierce Algonquin tribe, they joined in an effort to re-possess their lost country. In this patriotic endeavor the Corees, a tribe near the seaboard further south, became their allies. They all fell with terrible force upon the scattered German settlers along the Roanoke and the borders of Pamlico Sound; and in a single October night in 1711, they slew one hundred and thirty men, women and children, and lighted up the country for scores of miles with the flames of burning dwellings. With the hatchet and torch they swept like fiends along the borders of Albemarle Sound, killing, plundering and burning, during the space of three days, until they were overcome with fatigue and drunkenness. On the eve of this murderous raid, John Lawson, surveyor-general of the province, and Count Graffenreid, were taken captive by the savages. They tortured Lawson to death by burning him at a sapling, but the Count saved his life and gained his liberty by adroitly persuading them that he was the sachem of a tribe of men who had lately come into the country, and were in no way connected with the English.

The wildest excitement spread over North Carolina. The people fled in affright toward the sea, and many left the province. Those who remained called upon their brethren of South Carolina for help. Colonel Barnwell hastened northward with some Carolinians and a body of friendly Indians composed of Creeks, Cherokees, Catawbias, and Yammasees. The savage tide was rolled back. The Tuscaroras were driven to their fortified town in the present Craven county, and there a solemn treaty of peace was made between the white men and the Indians. All might have been well but for the treachery of the South Carolinians, who, on their way homeward, violated the treaty by committing outrages upon the Indians. The latter were enraged, and speedily flew to arms. Terror everywhere prevailed. It seemed as if the purpose of the savages to annihilate the intruders would be accomplished. Back to the rescue of their brethren from destruction went the Carolinians. Colonel Moore, with a small number of white men and a large body of Indians, soon met and defeated the hostile savages. The Tuscaroras were driven to their fort in the present Greene county, where eight hundred of them were made prisoners. The remainder of the tribe fled to the north, and joined their kindred near the southern shores of Lake Ontario, when they became the sixth nation of the Iroquois Confederacy in the province of New York. A treaty of peace was made with the Corees afterward, and North Carolina never again suffered from the hostility of Indians. The war had cost the province a large sum of money, for the payment of which bills of credit were issued to the amount of forty thousand dollars. This was the first issue of paper money in North Carolina.

During the years when the people of the northern colony were suffering from civil commotions and Indian raids, the South Carolinians were excited by troubles with the Spaniards and the neighboring barbarians. The governor (James Moore) was more belligerent and aggressive than his predecessors. When he heard of Queen Anne's proclamation of war with France in May, 1702, and that Spain was involved in the quarrel, he proposed an expedition against the Spaniards at St. Augustine. The Assembly agreed with the governor and appropriated nearly ten thousand dollars for the enterprise. An army of twelve hundred men (one-half of them Indians) was raised, and in two divisions they proceeded, one by land and the other by sea, to make the attack. The governor commanded the forces on the ships, and Colonel Daniels the division that crossed the Savannah River, traversed Georgia along the coast, penetrated Florida, and made the first attack. The Spaniards retired within their fort, with provisions for four months, where they were quite safe from harm, for their enemies had no artillery.

Governor Moore arrived with his vessels and troops soon afterward, and blockaded the harbor of St. Augustine. When Daniels had plundered the town, he was sent to Jamaica for battering cannon, but before his return two Spanish war-vessels had frightened the blockaders away, and the colonel came very near being made captive. He reached Charleston in safety, and the ill-advised expedition was then at an end. It cost the colony a large sum of money, and to defray the expenses bills of credit were issued to the amount of twenty-six thousand dollars. This was the first issue of paper money in South Carolina.

Late in the following year, Governor Moore tried his skill again in making war. This time it was against hostile Indians who were in league with the Spaniards. These were the Appalachians, a Mobilian tribe, who occupied a region in Georgia between the Savannah and Alatamaha rivers. There their chief villages were situated, and there large gardens were cultivated. Against these the governor proceeded with a force competent to insure success. The villages were desolated the gardens were laid waste eight hundred men, women and children were carried into captivity, and the inhabitants of the whole region were made vassals or subjects of the English. By this movement a thorn of irritation was planted in the bosom of the surrounding Indians which rankled for years, and was one of the causes that spurred them into fierce hostility afterward.

Just as the province was becoming tranquil after the war with the savages, it was disquieted by turbulence in civil affairs in its own bosom. The proprietors resolved to establish the liturgy of the Church of England in South Carolina, as the standard order of public worship. Sir Nathaniel Johnson, who was the official successor of Governor Moore, found a majority of Churchmen in the Assembly, and easily executed the wishes of his masters. Dissenters were disenfranchised - deprived of the rights of free citizens - and actually suffered persecutions. After a season of much turbulence, they appealed to the crown, and in the autumn of 1706, the Assembly, by order of Parliament, repealed the law of disfranchisement. But the Anglican Church maintained its supremacy in ecclesiastical affairs in the province until the war for independence.

The attack of the South Carolinians on St. Augustine excited the anger of the Spaniards. An expedition, consisting of five vessels-of-war under the command of the French admiral Le

Feboure, and a large body of troops, was sent from Havana to attack Charleston, conquer the province and annex it to the Spanish territory in Florida. When, in May, 1706, the squadron crossed Charleston bar, and about eight hundred troops were landed at different points, the commander sent a flag to the city with a peremptory order for a surrender, and threatening to take it by storm in case of a refusal to submit. Governor Moore had been apprised of the expedition, and was prepared to meet it. When the flag arrived, he had so disposed the provincial militia and a host of Indian warriors, as to give an exaggerated idea of the strength of the Carolinians. Before the messenger could make any extended observations he was dismissed with the defiant reply that the people were ready to sustain the promised attack.

This was followed by a furious assault, just at dawn, upon the invaders on shore by a strong party of South Carolinians. They killed many, captured more, and drove the remnant back to their ships. At the same time the little provincial navy, lying in the harbor, prepared to attack the invading squadron. The French admiral, amazed and alarmed by the display of valor on shore, weighed anchor and fled to sea. A French war ship, uninformed of these events, sailed into the harbor soon afterward, with troops, and was captured. The victory was complete. The dark storm cloud, from which a destructive tempest was expected, suddenly dissolved, and the sunshine of peace and prosperity gladdened the colonists for a season.

At length a more frightful tempest was seen brooding over the colony. It had gathered with fearful celerity. A league had been formed among the surrounding Indian tribes to exterminate the English. It was the secret work of the Spaniards in Florida and the French in the Mississippi Valley. Within the space of forty days, a confederacy had been formed, including the whole Indian tribes from the Cape Fear on the north to the St. Mary's on the south, and back to the rivers beyond the mountains in the west. The warriors of the league were full six thousand strong. It comprised the Cherokees, Choctaws, Chickasaws, Catawbas and Congarees on the west, and the Creeks, Yammasees and Appalachians on the south. At the same time a thousand warriors broke forth from the forests of the Neuse region to avenge their misfortunes in the war two or three years before.

So secretly had the savages organized, that not a whisper of impending danger had reached the inhabitants of Charleston, before the news came that on the morning of Good Friday (April 13, 1715), the Yammasees had begun an indiscriminate massacre of the white people along the seaboard. The news had been carried from the scene of destruction by a swift-footed seaman who broke through the lines of the furious savages, ran ten miles and swam one, and told the dreadful tale to the settlers at Port Royal. These fled in canoes and in a ship, and carried the first intelligence of the sad event to Charleston. A stream of terror-stricken planters and their families began pouring into the city at the same time. The capital was in peril. The governor (Craven) acted promptly and efficiently in the emergency. He took measures to prevent men leaving the colony. He declared the province to be under martial-law took measures to secure all arms and ammunition to be found, and called upon the citizens to prepare to fight valiantly for their lives and property. He put arms into the hands of faithful negro slaves; and with a motley army of white men, Indians and black men, twelve hundred strong, he marched to meet the savages, who

were approaching from the interior with their knives and hatchets in fearful activity. After some severe encounters with them, the governor drove the Yammasees across the Savannah River and through Georgia, giving them no rest until they found it under the protection of the guns of St. Augustine. Meanwhile the warriors from the north had been driven back to the forests, and the Cherokees and their neighbors, who had not yet taken up the hatchet, had retired to their hunting-grounds, deeply impressed by the evidences of the strength and prowess of the white people. So, again, was sunshine brought to South Carolina, in the beautiful month of May, 1715.

Proprietary government in South Carolina was now drawing to a close. It had been a heavy burden upon the colonists from the beginning. The governors appointed by the proprietors, being independent of the people, had often been haughty and exacting, and they irritated rather than conciliated the popular mind. While the colonists were laboring to build up a permanent and prosperous State, the proprietors refused to assist them in times of danger or to reimburse their expenses incurred in defending the domain from invasion. The people were not only compelled to bear the whole expense of the late war with the Indians, but the proprietors enforced their claims for quit-rents more remorselessly than ever.

The colonists saw no way to cast off their chains but by revolution, and no security for the future but in royal rule and protection. So they resolved to revolt. Their popular Assembly declared that they would have nothing further to do with the proprietors, and asked Governor Johnson to rule in the name of the king. He refused, when a Convention of the people prepared to choose a governor for themselves.

Johnson had appointed the first day of December as the time for a general review of the militia of the province. The Convention chose the same day as the time for the election of a popular governor. Johnson then countermanded the order for the review. But the militia assembled in large numbers in the public square at Charleston. They were a part of the people; and when the governor ordered their commander to disperse them, he said: "I obey the Convention." Then the people proceeded to the election of a chief magistrate, when James Moore was chosen. Soon afterward proprietary rule was dismissed from the soil of South Carolina. The royal ear listened favorably to a petition presented by an agent of the colony, in England. The charter of the proprietaries was abrogated, and in 1720, South Carolina became a royal province, with Francis Nicholson as royal governor.

North Carolina was relieved of proprietary rule without enduring the throes of actual revolution. From the time when its southern sister passed under royal rule and protection, the people of the northern colony became more and more restive. They seemed to be on the verge of revolution, when, in 1729, the proprietors, seeing the inevitable drift of public sentiment, made a virtue of necessity, and sold that domain to the king for about eighty thousand dollars. It then became a royal province. The two Carolinas were then separated. George Burrington was appointed governor of North Carolina, and Robert Johnson was made chief magistrate of South Carolina. The people of the provinces were soon convinced that they had gained nothing by a change of rulers; and from the time of the separation until the French and Indian war, their history

is largely made up of the records of disputes between the people and the royal governors.

The latest planted of the English colonies in America was Georgia, the founding of which we have already considered. The settlers there had very little intercourse with or knowledge of the outside world, and thought of but little excepting the material interests of their new homes, until after Oglethorpe's return from England early in 1736. Then foreign politics threatened dangers from their neighbors, and religious teachings stirred the sluggish society into some activity.

With the great guns and the Highlanders skilled in military art, came with Oglethorpe many Germans to join their Moravian brethren who had settled in Georgia two or three years before. He was also accompanied by John and Charles Wesley, sons of an English poet and divine in the reigns of James, William, and Anne. They were religious enthusiasts, and were clergymen of the Church of England. The great guns and the Highlanders came to make war upon visible invaders of the domain the Wesleys came to make war upon the invisible foes of righteousness. John was then thirty-three years of age, and came as a missionary of the gospel among the settlers and the surrounding pagans. Charles came as an assistant to his brother in this warfare, and as secretary to Governor Oglethorpe. They had lately begun that course of independent action in England, which caused the pulpits of their church to be closed against them and led to the founding of the Methodist denomination.

John Wesley was fervent in spirit and eloquent in speech. A large congregation attended his ministrations at Savannah, at first; but the austerity of his maxims, his fearless denunciations of vice and even foibles, and his rigid exercise of ecclesiastical authority, soon involved him in serious disputes with the settlers, who were a peculiarly mixed people. He became unpopular, and was sorely vexed and irritated by opponents on every side. At length he became involved in a difficulty with a woman whom he had refused to admit to the communion, and he left the province in disgust at the end of two years, and returned to England, "shaking the dust off his feet," as he expressed it. His mission in Georgia was a failure.

At that time there was a sturdy young preacher in England who was swaying multitudes by his fervid eloquence. He was a friend of the Wesleys, and obtained permission to join them in Georgia. He was not quite twenty-four years of age when he arrived at Savannah. The Wesleys had departed, but the young missionary, George Whitefield, entered upon his sacred duties with fervor. More practical than Wesley, he became a blessing not only to Georgia, but to other American colonies, where he labored much as an independent itinerant preacher. He established an asylum for orphans at Savannah, which was founded and supported several years by voluntary subscriptions which he procured in England and elsewhere. He worked lovingly with the Moravians in Georgia, who made a most salutary impression upon society there.

On his return, Oglethorpe discovered that the Spaniards at St. Augustine were very jealous of the rapid growth of the Georgia colony. He was not fairly prepared to resist an invasion by arms, and he sent a messenger to St. Augustine to invite the commander to a friendly conference. At about the same time he went, with a number of his martial Highlanders, on an exploring

expedition among the islands and along the coasts of Georgia. On St. Simons' Island he founded Frederica and built a fort there. Sailing up Alatomaha Sound, he visited New Inverness (now Darien), where a few Scotch people had planted a settlement. He was dressed in Highland costume, and with his Gaelic followers he was warmly welcomed by the settlers, who came to the beach in their plaids, bearing various weapons, and expressing their delight with the sounds of the bagpipe in merry tunes. There, too, he marked out a small fortification.

It was now warm spring weather. Oglethorpe's messenger had not returned from St. Augustine, and he proceeded to manifest the intention of Great Britain to sustain its claims to the country as far south as the St. John's River. On Cumberland Island, to which he sailed on leaving Darien, he marked out a fort to be called St. Andrew's, which would command the mouth of the St. Mary's, the stream which finally became the southern boundary of Georgia. At the southern extremity of an island at the entrance of St. John's River, he also planned a small military work, which he called Fort St. George. He also founded Augusta far up the Savannah River, and erected a stockade there as a defence against Indians from the west who might be under the influence of French or Spanish traders.

These hostile preparations irritated the Spaniards at St. Augustine. They detained Oglethorpe's messengers as prisoners, and threatened war. The news spread among the friendly Indians. To-mo-chi-chi came with painted warriors to offer his aid. So, too, did other chiefs and the Chickasaws send a delegation to bear assurances of friendship and alliance to the ears of the governor, and a crown of brilliant feathers, adorned with the polished horns of the buffalo, for the brow of Oglethorpe. With these tribes at his back as allies, Oglethorpe felt strong. The governor of St. Augustine, who had tampered with them, hearing of their alliance with the English, expressed a willingness to treat for a settlement of all disputes. An honorable treaty was made. The messengers were released, and the Georgians abandoned Fort St. George. But the home government of Spain did not approve the treaty, and Oglethorpe was notified that a commission from Cuba would meet him at Frederica. He appeared with his secretary, after leaving three regiments of Spanish infantry at St. Augustine, and peremptorily demanded the evacuation by the British of all Georgia and of South Carolina below the parallel of Port Royal, claiming all of that region as a part of the dominions of Spain. The conference ended without an agreement.

Oglethorpe now hastened to England to confer with the trustees and seek military strength for his colony, for he was satisfied that it was in peril from the increased number of soldiers thrown into Florida. He was commissioned a brigadier-general, and invested with authority over the military in Georgia and South Carolina. He was also authorized to raise troops in England to serve in America. He did so, and with these he arrived in Georgia in the autumn of 1738, when he found general discontent prevailing. The colony was not prosperous, owing partly to the unwise regulations of the trustees referred to at the close of Chap. XXIII, and partly because many of the emigrants who came from England were men unaccustomed to manual labor and habits of industry. The use of slave labor, so productive in other colonies, was forbidden in Georgia, and tillage was neglected. Even the industrious Scotch, Swiss and German settlers in Georgia previous to the year 1740, when the colony contained twenty-five hundred souls, could not give

that vitality to industrial pursuits which was necessary for the development of the resources of that virgin soil.

The greed of English merchants, who were growing rich by illicit trade on the coasts of Spanish-America at the expense of Spanish commerce, was fostered by the English ministry, who were blindly bent on destroying the Spanish colonial system in the so-called New World. Spain resented this interference with her rights, and for this - the real cause - England declared war against that kingdom late in 1739.

Oglethorpe had been apprised of this measure at an early date. He knew that St. Augustine had been strengthened by more troops, and he resolved to strike a blow there before his enemy should be well prepared. He had just put an end to a conspiracy in Georgia to assassinate him, and a negro insurrection in South Carolina - both incited by Spanish emissaries. He first penetrated Florida with a small force, and captured some outposts, early in 1740. In May he marched into Florida with six hundred of his regular troops, four hundred Carolina militia, and a large body of friendly Indians. He was before St. Augustine in June, after capturing two little forts, one within twenty miles of the city, and the other only two miles distant. A demand was made for the instant surrender of the fortress and garrison. It was defiantly refused. Oglethorpe determined to starve the garrison by a close investment. He surrounded the town, and with a little squadron blockaded the harbor. For awhile supplies for the fort were cut off, and the English were promised success, but very soon swift-sailing galleys ran the weak blockade and placed ample supplies in the fort. Oglethorpe had no cannon wherewith to batter and breach the fortress. Warned by the increasing heats of summer and the approach of the sickly season, whose malaria had already invaded his camp, the general raised the siege and returned to Savannah.

Hostilities were now suspended for almost two years, when the Spaniards determined to invade Georgia. With a fleet of thirty-six vessels from Cuba and a land force about three thousand strong, they entered the harbor of St. Simons in July, 1742. The vigilant Oglethorpe, who had been informed of the expedition, was there before them, but with less than a thousand men including Indians. The governor of South Carolina had failed to furnish men or supplies, and upon the Georgians devolved the task of defending both provinces from invasion. The intrepid general, when he saw the white sails of the Spanish ships in the distance, went on board one of his own little vessels, and addressing the seamen, said: "We must protect Carolina and the rest of the colonies from destruction, or die in the attempt. For myself I am prepared for all dangers. I know the enemy are far more numerous than we; but I rely on the valor of our men, and by God's help, I believe we will be victorious."

When the fleet passed the English batteries at the southern end of the island, Oglethorpe saw that resistance would be vain. He ordered his vessels to run up to Frederica, while he spiked his guns at St. Simons and retreated to the same place with his troops. There he waited for reinforcements from Carolina, but they did not come. Spanish detachments annoyed him with frequent attacks, but he always repulsed them.

At length Oglethorpe resolved to act on the offensive, and make a stealthy night attack upon the Spanish encampment near St. Simons. He moved cautiously along a road which he had constructed, with a dense live oak forest draped with Spanish moss on one side, and a deep morass on the other. When he was near the camp, a Frenchman in his little army ran ahead, fired his musket, and deserted to the enemy. The Spaniards were aroused, and Oglethorpe fell back to Frederica.

The general punished the deserter in a novel way. He employed a Spanish prisoner to carry a letter to him, secretly, in which Oglethorpe addressed him as a spy in the enemy's camp. He told him to represent the Georgians as very weak in numbers and arms, and advise the Spaniards to attack them at once and if they would not do so, to try and persuade them to remain at St. Simons three days longer, for within that time a British fleet with two thousand land troops would arrive to attack St. Augustine. The bearer of the letter, as Oglethorpe expected and hoped he would, carried it to the Spanish commander. It produced a great commotion in camp. The Frenchman was arrested and put in irons, and afterward hanged as a spy. A council of war was called, and while it was in session some vessels from Carolina were seen at sea. They were mistaken for the British fleet alluded to, and the Spaniards determined to attack Oglethorpe immediately, and then hasten to the defence of St. Augustine.

An advanced division moved immediately on Frederica. On the narrow road flanked by the forest and the morass, within a mile of the fort, they were assailed by Oglethorpe and his Highlanders, who lay in ambush. Almost the whole party of the invaders were killed or captured. A second party pressing forward to their relief met the fate of the first. The Spaniards retreated in confusion, leaving about two hundred of their companions dead on the field. They fled to their ships and hastened to St. Augustine, only to find that they had been out-generaled by the governor of Georgia. The place of the battle has been called "The Bloody Marsh" to this day. The stratagem of Oglethorpe had worked such disaster to the Spanish expedition that its commander, Don Manuel de Monteano, was dismissed from the service. That stratagem probably saved Georgia and South Carolina from utter ruin.

Oglethorpe had settled, colonized and defended Georgia with rare courage, energy and skill, not for personal glory and worldly gain, but for a great and benevolent purpose. Having firmly established the colony, he returned to England in 1743, where, after performing good military service for his king against the "Young Pretender," he retired to his seat in Essex. When General Gage returned to England from America in 1775, he was offered the chief command of the British army in this country, though he was then almost eighty years of age. His benevolent ideas did not suit the temper of the British ministry then, and General William Howe received the appointment. When, at the close of the Revolution, John Adams went to England as American minister at the British court, Oglethorpe was among the first to congratulate him because of the independence of his country. The brave Founder of Georgia died the next year, at the age of almost ninety years, with all his mental faculties in full vigor.

Oglethorpe was a benefactor in the higher sense of that term. For the good of his fellow-men,

he had renounced ease of body and mind and the enjoyment of fortune and friends in his native land. He had encountered dangers in many forms unknown in England, not for the glory that leads a soldier to brave the perils of a strange land. He was gentle and good merciful toward offenders and enemies a father to the emigrants whom he led to the banks of the Savannah River; the warm friend of the Wesleys and kind guardian of the Moravians, with a missionary spirit ever anxious for the spiritual welfare and mental culture of the pagans around him and it always gave him pleasure to relieve the poor and the weak of their burdens. Oglethorpe outlived most of the companions of his youth; but he was so loving and lovable that he made "troops of friends" on his long journey of life, who were to him in his vigorous old age like green branches nourished by his abounding virtues. Even in that old age, his person was spoken of as "the finest figure that ever was seen." His prominent eyes retained their brightness undimmed, and his person, tall and straight, was like a vigorous pine until the close of his life.

After the departure of Oglethorpe, Georgia enjoyed repose from conflicts with hostile neighbors. He left the country in a state of tranquillity. The same year it passed from the control of a mild military government to that of a civil organization, managed by a president and five councillors or assistants, under the supreme authority of the trustees, in England. Yet the colony languished for reasons already mentioned, and general discontent prevailed. The restrictive laws were generally relaxed and were generally evaded, especially those relating to slave-labor. Slaves were brought across the Savannah from South Carolina, and hired to the Georgia planters for a hundred years, the sum paid for such life-service being the market value of the slave. The transaction was practically the introduction of the slave-labor system into Georgia. It was not interfered with; and very soon ships laden with negroes from Africa came to Savannah, and men, women and children were offered for sale, in a way somewhat evasive of law, in the open market, by the auctioneer. In the year 1750, Georgia was really a slave-labor province. Then agriculture flourished, and the colony took its place as a planting State in an equal position by the side of its sister across the Savannah.

In 1752, when the twenty-one years named in the charter had expired, the trustees gladly gave that instrument to the king, and Georgia became a royal province. So it remained until the old war for independence.

Chapter XXXVIII

Review of the History of Discoveries - Settlements and Colonization in America - Planting the Seeds of French Dominion in America - The Labors, Influence and Success of the Jesuits - Adventures Beyond the Great Lakes - Father Marquette and His Discovery of the Mississippi River - His Voyage upon that Stream and Its Results - La Salle - His Expedition to the Valley of the Mississippi - Voyages on that River to the Gulf of Mexico - He Discovers and Names Louisiana - His Attempts to Colonize that Region - Discovery of Texas - Death of La Salle - Subsequent Colonization by the French.

WE have now traced the history of our country from its discovery at near the close of the fifteenth century, until the time when European colonies planted here, were forming that political union for mutual defence which speedily crystallized into the grand form of an independent nation late in the eighteenth century.

In the course of these investigations, we have noted how the allurements of science, human enterprise, a lust for dominion and power, and the greed of individuals, impelled men to spend fortunes and risk their lives in making voyages of discovery along the coasts of the American continent, from the regions of the frozen ocean to those under the equator; also among the islands that lie in American waters within the tropic of Cancer. We have seen how the monarchs and navigators of Spain, Portugal, France and England struggled for the honors and emoluments to be derived from such discoveries; how the Spaniards extended their dominions by force over the islands and coasts of the western world in the space of a few years, by the help of the Roman Pontiff, and obtained the mastery over vast and fertile regions in the warm zone, while the French, English and Dutch discovered and took possession of extensive domains in the temperate zone and far toward the verge of the Arctic Circle.

These great movements were made in the fullness of time, as if in preparation for that expansion of the human intellect and those wonderful human achievements which had then begun in Europe. Geographical science was then a favorite study, and the cosmographers were enthusiasts in the field of speculative philosophy founded upon that science. Stimulated by the few revelations of the learning of the East which commerce had brought into Europe, men were impelled to make those great discoveries on the surface of our planet, which were soon succeeded by the marvels revealed by the newly-found telescope, by which astronomy was released from the dull chrysalis of astrology and allowed to soar into the higher regions of celestial truths.

Then followed the era of settlements. To this end, a desire for winning riches was the first powerful impulse given to men and women that led them to make the sacrifice. It was soon followed by the higher motives which were born of aspirations for personal, intellectual and spiritual liberty, at a time when the tocsin or alarm-bell of the Reformation had aroused the powers of church and state into the most active opposition to everything which seemed to endanger their absolute domination. These motives led to the plantation of devotees of freedom in isolated communities all along the Atlantic seaboard from Maine to Florida.

Then followed the gradual change of settlements into colonies. We have seen how many of these settlements seemed, at first, to be only temporary asylums from the grasp of oppression, or the abiding-place of men until they should get sufficient wealth to return to their native land and live in ease. But many of them, contrary to their early promise, became permanent colonies, whose members determined to make America their final earthly abode. We have traced the progress of these colonies, step by step, from their inception. We have seen how the spirit of liberty which pervaded these communities led them by cautious methods to assert their right to the exercise of self-government. New political ideas were then stirring the popular mind in Europe, and bold thinkers were expressing them audibly and through the new-born printing-press. These were the seeds of republicanism which, when wafted to America, found here a congenial soil. These ideas took vigorous root, as we have seen, in every community, and flourished even among the sour elements of theological controversy and the persecution of bigots. They were made vigorous by the peculiar circumstances of the colonists, among whom existed affinities of race, language, and Christian tenets of great strength, and they were accustomed to common political institutions and thought. These formed the groundwork in the structure of each colony for union, and composed the broad foundations of the nation that was finally developed.

We have traced, in rapid outline, the history of each of these colonies, showing their material and moral growth, their advance in political ideas and practices from feudalism to independence, and their general condition as great and flourishing commonwealths, animated by a national spirit, and coalescing in measures for the defence of the common domain on which they were destined to raise the strong and beautiful structure of our Republic. It now remains for us to take a brief survey of the history of the French dominion and influence among the savage tribes on and beyond the frontiers of the English settlements in America, and to view the social condition of the European colonists who, at the middle of the last century, occupied a selvedge of the continent along the Atlantic, averaging about a hundred miles in width and almost a thousand miles in length.

We have already observed that the French in America, through the influence of the Jesuits, made a powerful impression upon the minds of the savages of this country, and easily persuaded them to become the friends of Frenchmen in peace and their allies in war. We have seen how the seeds of French dominion in America were planted by Champlain at Quebec. He had selected for his companions and spiritual co-workers some of the mild and benevolent priests of the Franciscan Order, who, he said, were free from ambition, except to be instrumental in the salvation of souls. But these priests were not sufficiently aggressive to suit the ambitious Gallican Church, nor worldly-wise enough to serve the state in carrying out its political designs for enlarging its dominions in America. They were withdrawn, and the task of converting the heathen of Canada and serving the church and state at the same time was entrusted to the Jesuits. With their help Champlain established an alliance with the Hurons on the St. Lawrence and in the country westward and so began that wide-spread affiliation of the French and Indians that became so disquieting to the English colonists.

So early as 1636 there were fifteen Jesuit priests in Canada - a band of zealous, obedient,

self-sacrificing men, ready to endure every privation and encounter every danger in the service of their church. At an assembly of Huron chiefs and sachems at Quebec, Champlain introduced three of these black-robed missionaries to his savage allies as men who were to teach good things for themselves and their children. These were Brebeuf, Daniel and Davost. With faith that never forsook them, these men followed the bare-footed Indians through the dreadful forests of the Huron dominions stretching along the northern borders of the St. Lawrence and Lake Ontario to the shores of Lake Huron, near which they established the first mission-house of the Jesuits among the dusky barbarians. It was a journey full of fatigue and peril. The priests shared in all the toil. They waded streams and swamps; climbed rocks; plied the oar when on the waters assisted in carrying the canoes around almost forty waterfalls slept on the bare earth with no covering but the sky, and for daily bread ate pounded Indian corn mixed with water. In the script of Brebeuf were materials for the administration of the Holy Communion and around the neck of each was a cord that held a heavy breviary or order of the daily service in the Roman Catholic Church. The devotion of Brebeuf in particular, was marvelous in the eyes of the wondering savages. Twice a day, often, he whipped his own bare back with hard cords; he wore a bristling hair-shirt next to his skin, and under it an iron girdle studded with sharp points; and while others slept, he "watched and prayed." The barbarians regarded him with reverence and awe, as the greatest "medicine man" they had ever known; and when he told them of visits he had received from the Mother of God, and how he had battled with foul fiends, they believed him and it was not long before whole tribes bowed at altars in rude Jesuit chapels in the forest, and became nominal Christians. They were taught to believe in Jesus as the guardian spirit of their lives and that it was he, and not one of the many deities with which they had peopled earth, air and water, that had all along afforded them protection in great perils. So the Jesuits took a firm grasp of the savage minds, and held a controlling influence over the children of the forest far and near, from the Gulf of St. Lawrence to the Gulf of Mexico. The Church in France, and the Pope, took a deep interest in the work and a year before Massachusetts provided for the establishment of a college in that province, one was founded in Canada for the education of Indian boys. And very soon afterward a young and rich widow of France established the Ursuline Convent at Quebec for the education and religious training of Indian girls. She came with three nuns. They were received on the shore at Quebec by the governor and garrison of the fort. As they touched the ground when stepping from the boat, these devoted women stooped and kissed the earth in token of their adoption of the country as their home. Then they were escorted to the church, followed by a crowd of Indian men, women and children, where the Te Deum was chanted in the midst of thanksgivings.

So began the expansion of the dominions of the French in America. In 1640 they took possession of Montreal, and a united prayer went up from the people of France that the Queen of Angels might take that region under her protection. Missionary after missionary followed and in the space of thirteen years, forty-two of them had carried the Gospel and French power from the Niagara River to the remotest bounds of Lake Superior. They established mission-houses here and there, and encountered the greatest perils among the savages, who were continually at war. These Jesuits carried their lives in their hands, and often lost them. Upon those seemingly weak props rested the fabric of French colonization in America. At times these props seemed to be

giving way, for whole villages of converted Indians would sometimes be destroyed in an hour by some hostile tribe, and the pitiful sight of women and children clinging to the knees of the priest for protection from the tomahawk would be presented.

In 1654, two young traders went from Quebec to the wilderness far west-ward toward the Mississippi River. Two years afterward they returned with fifty canoes and a retinue of Indians. Their tales of the magnificent countries which they had traversed excited great enthusiasm, and the church and state determined to possess that goodly land. Father Allouez, a daring Jesuit, went boldly into that region. Among the Chippewas he proclaimed the King of France as their sovereign, and built mission-houses there. He preached to the fiery Sioux; and from them he heard of the magnificent Mississippi River, which the Indians called the Father of Waters. This intelligence was sent back to Quebec, and Fathers Marquette and Dablon, two energetic priests, set out to explore the mysterious land and plant the banner of the Cross in the very heart of the heathen world. Among the Chippewas they labored lovingly for their God and their king. And when Joliet, an agent of the French government of Canada, arrived there, Marquette gave him efficient aid in his political designs. He summoned a convention of all the surrounding tribes, at the Falls of St. Mary, between Lakes Superior and Huron, where he had erected a rude chapel and founded a mission. There, by the side of the cross, the national emblems of France were raised in token of the dominion of Louis the Fourteenth.

Marquette resolved to seek for the Mississippi River. "He, an ambassador of God," and Joliet, an "envoy to discover new countries," went up the Fox River to the water-shed between the Mississippi and the Lakes, in birch canoes, and crossing the portage went down the Wisconsin River until its waters were mingled with those of the great stream. Late in June, [1673, they were upon the bosom of that mighty river which De Soto had discovered, nearer the Gulf a century and a quarter before. The Indians called it Mississippi which, in their language, signified The Great Water. So it was that the seeds of civilization and Christianity were first planted in the Valley of the Mississippi.

Marquette and his companions spread light sails over their canoes and voyaged quite rapidly on the bosom of the Mississippi with winds and currents, past the inflowing waters of the Missouri and Ohio, and other less tributaries, stopping on the shores and holding friendly intercourse with the natives. At length they reached a point below the mouth of the Arkansas River, where they found a tribe of sun-worshippers who appeared hostile. The missionaries would, undoubtedly, have been destroyed had not a revered symbol been held by Marquette. On the borders of Iowa a chief had presented him with a beautifully wrought and richly ornamented calumet, or pipe of peace, which the good father held aloft. Its well-known form, and the rich plumage that adorned it, commanded the attention of the fierce savages, when their leader, a venerable man, with nine others in an immense log canoe, came toward those of Marquette and Joliet. The old man bore in his hand a calumet, and, singing as he approached, he offered it to Marquette as a token of friendship. These Indians had axes of steel, which implied intercourse with Europeans.

Having satisfied himself that the Mississippi did not flow into the Atlantic nor the Pacific Ocean, but at some intermediate receptacle, Marquette turned the prow of his canoe northward, and he and Joliet reached Green Bay before the frosts of October were seen there. Two years longer Marquette labored among the barbarians in the vicinity of Chicago, when he crossed to the eastern shore of Lake Michigan. Suffering from mortal sickness, and conscious that his death was near, he passed along that shore in his canoe, propelled by two men, until it entered a small stream which bore his name a long time afterward. They carried him tenderly ashore, and laid him upon the leaves in the shadows of the forest. He told them, with joy, that he was about to die, but requested them to leave him alone while they should unload the canoe and promising to call them when his end should be nigh. He did so very soon. Then he asked for some holy water which he had prepared, and taking a crucifix from his neck, placed it in the hands of one of his companions and desired him to hold it constantly before his eyes while he lived. With clasped hands he then pronounced aloud the profession of his faith, and soon afterward he died, as he had desired to do, in the bosom of the wilderness in the service of his Master, without human aid. Then his companions carried him to a grave they had dug, ringing his little chapel bell which he had brought with him and so wished them to do. Near his grave they erected a large cross as a mark for passers-by. So disappeared the mortal remains of a discoverer of the Mississippi and the founder of Michigan. "The people of the West," wrote Bancroft almost forty years ago, "will build his monument." Steps were taken late in 1873 for the fulfillment of the prophecy. Marquette's remains lie in the bosom of Michilimackinac or Mackinack.

At this time Robert Cavalier de la Salle, a young Frenchman who had been educated for the priesthood in a Jesuit seminary, but who preferred a secular life, was seated at the foot of Lake Ontario, and was enjoying a monopoly of the fur trade with the Five Nations south of the lake. He had built a fort on the site of modern Kingston and named it Frontenac, in honor of his patron. The mild Franciscans, who were now tolerated in Canada, were carrying on their religious work among the Indians under the favor of La Salle.

The enterprising young Frenchman had been stirred by accounts of the Spanish voyages to America, and especially by the adventures of De Soto, and the events attending his discovery of the Mississippi River in the warmer regions of the continent. His ambition was influenced by the story of Marquette's voyage on that stream so mighty in the higher latitudes, with a desire to become a pioneer in those far-off regions and perfect the explorations of "the Great Water." He had heard, also, of the Ohio River, and the beauty and wealth of the country through which it flowed; and he resolved to attempt the establishment of a widely-extended commerce with the natives there, and, if possible, plant colonies in the vast wilderness. With these aspirations he went to France, and there found favor with Colbert, the famous minister of Louis the Fourteenth.

The sagacity of Colbert comprehended the possibilities of La Salle's scheme, and he induced the king to extend La Salle's monopoly of the fur trade among the Indians, and to give him a commission to perfect the explorations of the Mississippi River. With some mechanics and others and Tonti, an Italian, as his lieutenant, La Salle returned to Fort Frontenac late in 1678. With these, and Franciscan priests, in a great canoe, they crossed Lake Ontario and went up the

Niagara River to the site of Lewis ton. In that region a trading-house was established and at near the site of Buffalo, above the cataract, they built a sailing vessel in which they crossed the lakes to Mackinack, and pushing forward, anchored in Green Bay, west of Lake Michigan. From Mackinack or Mackinaw, La Salle sent back his brig laden with a rich cargo of furs, and awaited her return. He tarried impatiently among the Miamis at Chicago, for some time, when with Tonti, Father Hennepin and two other Franciscans, and about thirty followers, he boldly penetrated the wilderness westward on foot and in canoes, until he reached Lake Peoria, in Illinois. There he built a fort, and sent Father Hennepin forward to explore the Upper Mississippi, while he returned to Frontenac to look after his property.

Hennepin, with two oarsmen, went down the Illinois River to "the Great Water," which they reached late in March. When the floating ice in the Mississippi had passed by, he invoked the aid of St. Anthony of Padua, and ascended the stream to the great falls which bear the name of his patron saint. Hennepin was a man much given to romancing, and permitting the creations of imagination to be represented as realities. He claimed to have discovered the source of the Mississippi, when it is known that he never went above the Falls of St. Anthony. These he described with tolerable accuracy, and near them he carved across and the arms of France upon the forest trees. In the autumn of 1680 he returned to Green Bay by the way of the Wisconsin and Fox rivers. In the meantime Tonti had been driven out of Illinois by the savages, and had taken refuge among the barbarians on the western shore of Lake Michigan.

La Salle returned to the Illinois country with men and supplies for an exploration of the Mississippi. That enterprise was undertaken early in 1682. La Salle was accompanied by twenty-three Frenchmen, and eighteen New England Indians with ten women and three children. They reached the Mississippi in February, and embarked upon its bosom in a strong and spacious barge which had been constructed, and his people followed in canoes. They descended the Mississippi to the Gulf of Mexico, everywhere observing the evidences of unbounded wealth in the bosom of the soil along its course. They stopped at many places and held intercourse with the natives, who came to the river banks in large numbers to meet them. At one place below the mouth of the Arkansas River, they found a powerful king over many tribes, to whom La Salle sent presents. His ambassadors were received with great respect, and the monarch sent word by them that he should visit their chief in person. He came in great state. He was preceded by two horses, and by a master of ceremonies with six men, who cleared the ground over which his majesty was to pass, and erected a pavilion of mats to shield the king from the sun. The monarch was dressed in a white robe falling to his knee, that had been beautifully woven of the inner bark of trees. He was on foot, and was preceded by two men bearing immense feather fans as white as snow. A third carried plates of copper highly polished. With grave demeanor and gracious words, he held an interview with La Salle, and they parted with mutual assurances of friendship. The people over whom the king ruled were a part of those barbarians of the Gulf region who worshipped the sun. They were called Taenses.

La Salle proceeded southward, planted a cross and the arms of France on the borders of the Gulf of Mexico, and proclaimed that the whole Mississippi Valley was a part of the dominions of

King Louis. He named the magnificent domain Louisiana in honor of that monarch, who was then at the height of his power. So was planted in the heart of our continent the germ of the French empire that grew up there early in the eighteenth century.

Having performed this great service, La Salle went back to Quebec, and thence hastened to France and laid a report of his great discovery before the delighted court. Colbert was dead, but his son was in power and inherited his father's genius and enterprise. He procured for La Salle the king's commission to colonize Louisiana. With four ships and almost three hundred emigrants, La Salle sailed from Rochelle late in July, 1684, for the Mississippi River by way of St. Domingo. His company was composed of one hundred soldiers, and the remainder (one hundred and eighty souls) were chiefly artisans and farmers, with a few young women. Unfortunately Beaujeu, the commander of the ships, was cold and proud. He could not comprehend the lofty purposes of La Salle, and often thwarted them in a degree. His pride would not allow him to listen to La Salle, and caused him to miss the mouths of the Mississippi while sailing westward over the Gulf of Mexico. They soon found themselves in Matagorda Bay, on the coasts of Texas, and there La Salle determined to disembark. His storeship was wrecked at the entrance to the bay, and its precious cargo was scattered over the bosom of the sea by a gale that arose in the evening. Despondency seized a part of the company, and they returned to the vessels. The remainder adhered to La Salle. The ships with the timid ones sailed away to France, leaving two hundred and thirty emigrants on the beach. These, with La Salle for the architect, soon constructed a fort on a stream that flowed into the western part of Matagorda Bay, and called it Fort St. Louis. This was the beginning of the settlement of Texas, and so it was made a portion of Louisiana. France took possession of the domain, and caused the arms of the kingdom to be carved on the great trees of the forest there.

La Salle now proposed to seek the Mississippi. In December, 1685, he departed, with some of his men. They forded small streams, crossed the larger ones on rafts which they constructed, and encountered many fearful perils. One man was eaten up by alligators. The bite of a rattlesnake killed another. Some of the Indians were hostile. Discontent arose in the party and some of the men deserted. La Salle had penetrated almost to the Red River, when his necessities compelled him to retrace his steps. When he reached the fort he had a dozen men less than when he departed.

La Salle was now allured in another direction by stories concerning rich mines in New Mexico. With a few followers he started in search of the treasures. He found a country wealthy in fertile soils, but not in precious metals and he returned to the fort disappointed. That was in the spring of 1686.

La Salle now determined to go to Canada for reinforcements and supplies for his colony in Louisiana. Leaving a garrison at Fort St. Louis, he departed with sixteen men and five wild horses which he had procured in New Mexico. They had crossed Texas to the uplands of Trinity River, when some of the men became mutinous. Two of them, who had embarked all their fortunes in the enterprise, and who blamed La Salle for their losses, conspired against his life.

One of them, named Duhaut, invited one of La Salle's nephews (who was of the party) to go with him on a buffalo hunt. Duhaut quarrelled with the young man, and murdered him. The leader, ignorant of the cause of his nephew's absence, went in search of him, and found the two conspirators near the brink of the river. Duhaut hid in the grass, but his companion approached La Salle with apparent friendliness. "Where is my nephew?" inquired the leader. He was answered by a musket-ball from the skulking Duhaut, and fell dead. Then the conspirators plundered his body, and left it to be devoured by eagles and wolves. Joutel (a friend of La Salle), and two of the great leader's kinsmen, escaped, made their way to the Mississippi, and returned to Canada with the sad tidings of the explorer's death.

The French had now traversed the interior of America from Newfoundland and Nova Scotia by way of the St. Lawrence, the chain of the great lakes and the Mississippi River, to the Gulf of Mexico, and asserted the authority of King Louis everywhere. Trading-posts, mission-stations, and colonies followed in the path of the explorers. New Orleans was founded early in the eighteenth century. Other places were settled on the Mississippi, the Illinois, and the lakes. At the middle of the last century, the French claimed dominion over the whole continent north of the Spanish possessions, excepting the narrow border of territory on the sea-coasts occupied by the English. They coveted the whole country, and resolved to possess it. Their alliance with the Indians, through the influence of the Jesuits, had that permanent object in view and we have seen how fearfully those allies worked along the frontier settlements of New England, with torch and hatchet, to accomplish that end. Had they succeeded in their attempted conquest of New England, the Iroquois Confederacy, that stood like a wall of defence for the settlers in New York and Pennsylvania, might have been swept away, and the day-dreams of Louis the Fourteenth, that he was to become sole master of North America, been realized. The struggle for that mastery continued forty-five years after his death, and was ended only when the English had destroyed French dominion in America, by force of arms, and by conquest stripped France of a great portion of its claimed territory in our country.

Chapter XXXIX

Nationalities of the American Colonists - Their Social Characteristics - Their Industries and Commercial Restrictions - Their Educational Institutions - Newspapers in the Colonies - The Tendency of the People to Local Self-Government and Union - Plans for a National Union - Congresses - Designs of the Royal Governors - A Crisis - Lords of Trade and Plantations - Resistance to the Royal Prerogative - Complaints by Royalists in America - Revolution Prevented by the French and Indian War.

SEVERAL European nations, as we have seen, contributed materials for the English-American colonies. They were people of varied and opposite tastes, habits and theological views, but, as a rule, they commingled without asperity and when the time came for a political union, no serious antagonisms were apparent. Churchmen and Dissenters, Roman Catholics, Puritans and Friends, finally settled down quietly together, and labored with a generous faith in each other for the public good. The Puritans of New England, the Friends of Pennsylvania, the Roman Catholics of Maryland and the Churchmen of Virginia, though often narrow in their theological views, manifested a common love of liberty, and acted upon the common rule that the majority should govern.

A great majority of the emigrants who settled the English domain in America were of Teutonic origin. The English, Lowland Scotch, Dutch and Swedes, were decidedly of German blood. The Irish and French were few at first. Denmark and the Baltic regions contributed a considerable number, and natives from Africa were soon scattered among the white population of all the colonies. With the exception of Georgia, the emigrants had founded settlements and colonies without the aid of the British government, and often in defiance of its expressed wishes and absolute decrees. Subjects of the same perils and hardships, there grew up among them, insensibly, a brotherhood of feeling that prepared the people of thirteen of the colonies, after uniting in resistance to the aggressions of the French during a war of more than seven years duration, to resist, almost as one man, every form of oppression, when the government to which they acknowledged their allegiance became an oppressor.

There was a great diversity of character seen among the inhabitants of the several colonies, owing, chiefly, to their origin, early habits, and the climate. Those of Virginia were from classes in English society wherein a lack of rigid moral discipline allowed free living and its attendant vices. This circumstance, combined with the influence of a mild climate, produced a tendency to voluptuousness and ease among the Virginians and their southern neighbors. They generally exhibited less moral restraint, more hospitality, and greater frankness and social refinement, than the people of New England. The latter were from the middle classes of society. They included a great many religious enthusiasts, possessing more zeal than knowledge. Very rigid in their manners, shy and jealous of strangers, they were extremely strict in their notions, and attempted to regulate the habits and tastes of society by formal standards. Their early legislation, as we have seen, recognizing as it did the right to control the most minute regulations of social life, often presents food for merriment for their descendants. The General Court of Massachusetts, on one

occasion, required the proper officers to notice the "apparel of the people, especially their ribbands and great boots." Drinking of healths in public or private; wearing funeral badges; celebrating the Church festivals of Christmas and Easter, and many other things that seemed quite improper to magistrates and legislators, and especially to the Puritan clergy, were forbidden. At Hartford, the General Court kept an eye constantly upon the conduct of the people. Freemen were compelled to vote under a penalty of six-pence; the use of tobacco was prohibited to persons under twenty years of age, without the certificate of a physician; and no others were allowed to use it more than once a day, and then they must be more than ten miles from any house. The people of Hartford were compelled to rise in the morning when the watchman rang his bell. And so, in a great variety of enactments, the law-makers, with pure intentions, noble purposes and virtuous aims, tried to make the whole people Christians after their own pattern. If they did not accomplish these higher designs, they erected strong bulwarks against the smaller vices which compose, in a great degree, private and public evils. They dwelt upon a parsimonious soil. Possessing neither the means nor the inclination for sumptuous living indulged in by their southern brethren, the New Englanders lived in very plain houses and their habits were frugal.

The ideas, manners, customs and pursuits of the Dutch made a deep impression upon the colonists of New York and portions of New Jersey and Pennsylvania, which is not yet effaced, but appears conspicuous in many places. They were a race of industrious, frugal, plodding money-getters, loving personal ease and freedom from disturbance. They possessed very few of the elements of progress. They were constitutionally averse to change, and had very little faith in anything not known to their fathers. They were distinguished by many of the more substantial virtues that are necessary in giving health to society and stability to a State. The Swedes and Finns on the Delaware did not differ much from the Dutch in their general characteristics but the habits of the Friends, whose influence predominated in West Jersey and Pennsylvania, were quite different. There was a refined simplicity in the manners and habits of the latter that won the esteem and confidence of virtuous and cultivated people, and the respect of every class. They made no ostentatious display in their dress or of their piety. They were governed in their daily life by a religious sentiment without fanaticism, which was a powerful safeguard against vice and immorality.

The Maryland settlers were greater formalists in religion and less restrained in their conduct than the New Englanders or the Dutch. They were generally more refined than the colonists of the East, and equally industrious, but they lacked the unwearied perseverance in pursuits of the latter. As in New England, so in Maryland, the peculiarities of the inhabitants had been greatly modified by inter-migration at the middle of the last century. Religious intolerance had been subdued; and when common danger called for common defenders of the soil and of the chartered rights of the colonists, they stood shoulder to shoulder in battle-array and in legislative halls.

The principal pursuit of the English-American colonists was agriculture. At the time we are considering, commerce and manufactures were struggling here against unwise and unjust laws for existence. With forced self-reliance, the people had been compelled, from the beginning, to make their own apparel, their simple furniture, and their implements for labor, which they could not buy

from the looms and workshops of Old England; and manual labor was regarded as honorable and dignified, especially in New England and the immediately adjoining provinces. The evil example of an idle privileged class was never before the settlers in the forests of America.

The commerce of the English-American colonies had a feeble infancy, and was stunted in its growth by oppressive navigation laws. Indeed, their trade may not properly be dignified with the name of commerce before the Revolution. So early as 1636, a Massachusetts vessel of thirty tons made a voyage to the West Indies and two years later another vessel went from Salem to New Providence, and returned with a cargo of cotton, salt, tobacco and negroes. This was the beginning of negro slavery in New England. It was recognized by law in Massachusetts, in 1641 in Connecticut and Rhode Island, about the year 1650; in New York, in 1656; in Maryland, in 1663; and in New Jersey, in 1665. There were but a few slaves in Pennsylvania. Some were there as early as 1690, and were chiefly in Philadelphia. At about the same time a few appeared in Delaware. In Virginia, as we have seen, they were introduced in 1619; and in the Carolinas, at the time of their settlement. By an evasion of law they were taken into Georgia about the year 1752.

The successful voyages of these vessels from Massachusetts were regarded with joy, as the harbingers of a flourishing American commerce; and the New England people, especially, looked forward with expectations of much wealth to be derived from the ocean, for they were then quite extensively engaged in fishing. But a navigation act passed by the republican parliament in 1651 gave them warning of English jealousy and its restoration, with more stringent clauses, by the royal parliament in 1660, satisfied the colonists that their commerce was doomed, because it seemed to be regarded as a promising rival of that of Great Britain. After that the attention of parliament was called from time to time to the industries of the American colonies, and laws were made to regulate them. In 1719, the House of Commons declared that erecting any manufactories in the colonies tended to lessen their dependence on Great Britain, and they were discouraged. A little earlier a British author had written "There be fine iron works which cast no guns no house in New England has above twenty rooms; not twenty in Boston have ten rooms each; a dancing-school was set up here but put down; a fencing-school is allowed. There be no musicians by trade. All cordage, sail-cloth and mats, come from England; no cloth made there worth four shillings per yard; no alum, no salt made by their sun.

Later, woolen-goods, paper and hemp were manufactured in New England, and almost every family made coarse cloth for domestic use. A heavy duty had been laid on pig-iron sent from the colonies to England, and the Americans made successful attempts to manufacture it into bars for native blacksmiths, and to make steel. Hats, also, were manufactured and sold in different colonies and small brigantines (square-rigged, two-masted vessels) were built in Massachusetts and Pennsylvania, and exchanged with West India merchants for rum, sugar, wines, and silks. Again the jealousy of the British government was awakened, and greater restrictions upon colonial manufactures were imposed, they being foolishly considered as detrimental to the interests of the English at home. It was ordained by a law that all manufacturers of iron and steel in the colonies should be considered a nuisance to be abated within thirty days after notice being given, under a penalty of one thousand dollars. A law was enacted in 1750 which "prohibited the

erection or continuance of any mill or other engine for slitting or rolling-iron, or any plating-forge to work with a tilt-hammer, or any furnace for making steel in the colonies." The exportations of hats from one colony to another was prohibited; and no hatter was allowed to have more than two apprentices at one time. The importation of sugar, molasses and rum was burdened with exorbitant duties; and the Carolinians were actually forbidden to cut down a tree in their vast pine forests for the purpose of converting its wood into staves, or its juices into turpentine. The raising of sheep in the colonies was restrained, because wool was then the great staple of England. The interests of the landed aristocracy were consulted more than justice. In the preamble to a restraining act, it was avowed that the motive for its enactment was a conviction that "colonial industry would inevitably sink the value of lands in England." And so, for about a hundred years, the British government had attempted, by restrictive laws, to confine the commerce of the colonies to the interchange of their agricultural products for English manufactures only. The trade of the colonies was certainly worth preserving, for the exports from Great Britain to them averaged, in value, at that period, about three-and-a-quarter million dollars annually. But the unrighteous measures adopted to secure that trade produced (as unrighteousness generally does in the end) a great loss. These acts of oppression constituted the chief item in the bill of particulars presented by the Americans in the account with Great Britain when, on the fourth of July, 1776, they gave to the world their reasons for declaring themselves "free and independent" of the British crown.

Education had received special attention in most of the colonies, and particularly in New England, from the beginning. So early as 1621, schools were established in Virginia for the education of white and Indian children. This was the first provision for education made in the colonies. For reasons not clearly defined, these schools did not flourish, and the funds appropriated for their support were finally given to the trustees of William and Mary College, which was founded at Williamsburg, in Virginia, in 1692. Fifty-four years before, the Rev. John Harvard had given half his estate and three hundred of his books for the founding of the college at Cambridge, Massachusetts, which bears his name. And eight years after the establishment of William and Mary College, ten clergymen met at Saybrook, near the mouth of the Connecticut River, and each contributing some books, took measures for founding a college there. It was accomplished in 1701. The most generous patron of the institution in its infancy was Elihu Yale, then president of the English East India Company. He was born in New Haven, Connecticut. His name was given to the college, and in 1717 it was removed to the place of his nativity, where it still flourishes. King's (now Columbia) College was established in the city of New York in 1750 and these four seminaries composed the chief seats of learning in the English-American colonies when the French and Indian war broke out.

While these higher institutions of learning were struggling even for existence, the common schools - the glory and pride of New England especially - were flourishing. At the beginning of the existence of the Connecticut colony, a law provided that every town organized religious communities - containing one hundred householders, should maintain a grammar school. Similar provision was made for popular education throughout New England, and that region was soon conspicuous for the intelligence of its people. The school teacher in many places had a variety of

duties, so that his time was wholly employed in and out of school. At Portsmouth, New Hampshire, an ordinance of the selectmen defined the duties of the schoolmaster, as follows: "To act as a court messenger; to serve summonses to lead the choir on Sundays to ring the bell for public worship to dig the graves to take charge of the school, and to perform other occasional duties."

Reading took the place of frivolous amusements, which were discouraged by law in New England. History and theology were the chief topics of most of the books then read in that region, and many volumes were sold. A traveler mentioned the fact that before the year 1686, several booksellers in Boston had "made fortunes by their business."

In time newspapers began to appear in the colonies, but were of little worth, as vehicles of general information, until the period of our Revolution. The first one issued in America was published in Boston in September, 1690. It was printed on three pages seven by eleven inches square, on a folded sheet, and was entitled "Public Occurrences both Foreign and Domestic." The editor said of it "It is designed that the country shall be furnished once a month (or if any glut of occurrences happen, oftener) with an account of such considerable things as have arrived unto our notice." And he gave warning in his first number that his paper should be the vehicle for exposing slanderers and false reporters, saying: "It is supposed that none will dislike this proposal, but such as intend to be guilty of so villainous a crime." Only one number of this newspaper was published. The first permanent newspaper was "The Boston News-Letter," first issued in the spring of 1704. The first in Pennsylvania was "The American," published in Philadelphia in 1719. The first in New York was "The New York Gazette," in 1725 the first in Maryland was "The Maryland Gazette," issued at Annapolis in the summer of 1728. "The South Carolina Gazette," printed at Charleston at the beginning of 1732, was the first issued in that province; the first in Rhode Island was "The Rhode Island Gazette," printed at Newport in 1732; the first in Virginia was "The Virginia Gazette," printed at Williamsburg in 1736; the first in Connecticut was "The Connecticut Gazette," printed at New Haven in 1755 the first in North Carolina was "The North Carolina Gazette," printed at New Berne the same year; and the first in New Hampshire was "The New Hampshire Gazette," printed at Portsmouth in the summer of 1756. At the period of the French and Indian war newspapers were printed in all of the colonies excepting in New Jersey, Delaware and Georgia. The printing machines on which all the colonial newspapers and books were printed were simple in form and rude in construction, as may be seen in the picture of the Ephrata printing press here given. Of the number of the inhabitants of the colonies at that time, we have no exact enumeration. Mr. Bancroft, after a careful examination of many official returns and private computations, estimated the number of white inhabitants of all the colonies to be 1,165,000, and the blacks (who were mostly slaves) to be 260,000.

Since the English Revolution in 1688 - a period of only sixty-six years - the growth of the colonies in population had been marvelous. New England had increased from 75,000 to 425,000; New York, from 20,000 to 85,000; New Jersey, Pennsylvania, Delaware and Maryland, from 47,000 to 372,000; Virginia, from 50,000 to 168,000; and the Carolinas and Georgia, from 8,000 to 135,000. The assertion of a letter of an "American Farmer" was almost literally true when he

wrote "We are all tillers of the earth from Nova Scotia to West Florida. We are a people of cultivation, scattered over an immense territory communicating with each other by means of good roads and navigable rivers; united by the silken bands of mild government; all respecting the laws, without dreading their power because they are equitable."

While the English-American colonists were treated by the mother country as minor children or as absolute subjects to be governed, without questionings, by her capricious will and while every measure of the British ministry was calculated to trammel their advance toward local self-government, that lofty idea was working out in America the great problem of republicanism, whose demonstration by actual achievements the monarchs of Europe were dreading. It was an idea that had spontaneous birth in the minds of all the colonists when they first felt the stimulating air of the freedom of their forest homes; and it grew into a mighty force in the bosoms of individuals before any one dared to openly promulgate it. It was the early inspiration out of which grew the democracy that finally impelled the colonists to proclaim themselves independent and to establish a nation here.

The common danger, as we have seen, caused a confederation of New England colonies in 1643, but the national idea was lacking, and it was short lived. A half a century later, William Penn put forth a plan for a general union of all the colonies, for their mutual welfare, in which he proposed the appointment of persons in each colony, who should meet at specified times, in a general congress to mature plans for the common good, whose presiding officer should be a high commissioner appointed by the crown, and in time of war should command all of the colonial forces. Penn's plan was commended by many thoughtful persons, and it was likened to the Grecian Amphictyonic Council. After that, writers in England and the colonies publicly discussed the topic, not with any idea of the independence of the colonists as subjects of Great Britain, but with a feeling that a national union here would redound to the glory and happiness of Great Britain and her American citizens. When, early in the last century, public attention was called to the evident designs of the French to supplant the English in America, Daniel Coxe, who had been a prominent man in New Jersey, published a volume in London (1722), in which he proposed that all the British colonies here should be united by a national covenant, in a national government, over which a supreme viceroy or governor, appointed by the crown, should preside in some part of America, the governors of the several colonies to be subordinate to him; and also that there should be a general congress of deputies chosen by the several colonies to promote unity of action in times of danger. Men of all shades of political opinion made similar suggestions; and Dinwiddie, governor of Virginia, recommended, not only a union of the colonies for mutual defence, but a confederation of the Indians then friendly toward the English, with the tribes more in the interior and under the influence of the French.

Meanwhile there had been several congresses or conventions of leading men in the colonies, having for their object the union of the people of the several provinces for the public good, or to cultivate the friendship of the Indians. One of these was held at Albany in 1684, composed of the officers of the governments of Massachusetts, New York, Maryland and Virginia, and sachems of the Five Nations. In 1693, Governor Fletcher, of New York, in compliance with a letter of

instructions from the king, called a congress of commissioners from New England and other colonies to consult about the quotas of men and money which the several provinces should raise for common defence against the French. The call was so feebly answered that nothing was done by the few present. This was followed the next year by a meeting of commissioners at Albany with sachems of the Iroquois Confederacy, the object being to prevent the Five Nations from making a peace with the French in Canada.

When it was resolved to invade Canada with a land and naval force, in 1711, a convention was held at New London, Connecticut, to consult upon the matter, at which the governors of several of the colonies appeared and agreed upon the quotas. The expedition that followed, under Colonel Nicholson on land and Sir Hovenden Walker on the water, proved disastrous, as we have seen. In 1722, a congress of colonial officials and Indian sachems was held at Albany for the promotion of a friendly feeling and the strengthening of the alliance then existing with the Iroquois Confederacy. And in 1744, a similar congress, for the same purpose, met at Lancaster, in Pennsylvania, whereat over two hundred and fifty representatives of the Six (late Five) Nations were in attendance.

The last of these colonial congresses, all exhibiting tendencies toward a national union, was held at Albany in the summer of 1748, soon after news had reached the colonies of a preliminary treaty of peace having been signed by the commissioners of England and France. The congress was called for a two-fold purpose. The antagonisms between the royal governors and the people were alarming to the crown officers in America, and the latter wished to secure a colonial revenue through British interference, and not be subjected, in the matter, to the will or caprice of colonial assemblies. Foremost among these crown officers who were willing to abridge the rights of the people, were Governor Clinton, of New York, and Governor Shirley, of Massachusetts. They had promoted the assembling of the congress with a hope that that body would favor their scheme, and they were both there with their political friends. Another purpose of the meeting was the strengthening of the bond of friendship between the Six Nations and their savage neighbors on the west, and the English. A vast concourse of barbarians were there. The royal governors gained nothing for themselves; but a satisfactory arrangement was made with the Indians. They agreed that no Frenchman should abide within their borders; also, not to send any delegation to Canada, and to have their warriors ready for the service of the English whenever they should be called for.

A crisis in political affairs in the colonies was now at hand. The royal governors perceived that something must speedily be done to curb the democratic spirit of the people, or local self-government would supersede royal authority. It was necessary to convince parliament of this truth. Only through the Lords of Trade and Plantations could this be done. This was a Board or Committee appointed by the crown in 1696, to whom was entrusted a general oversight of the affairs of the American colonies. It was originally composed of seven members and a president. To them the royal governors were requested to give frequent and full information of the condition of their respective governments concerning political and commercial affairs, and particularly of the proceedings of the assemblies also of the appropriations for the public service, and how they were expended. To this Board the royal agents in the colonies addressed their letters. "It was the lion's

mouth," says Frothingham in his "Rise of the Republic of the United States," "into which the accusations and complaints against the colonies were indiscriminately cast."

To arouse the Lords of Trade and Plantations to action, some overt act of disobedience on the part of the colonies must be obtained. The bluff Admiral Clinton, then governor of New York, was chosen to bring on the crisis, and that province was to be the theatre of the collision. The royal governors were to aid him by representations to the Board of the turbulence of the people and their disloyalty. Governor Shirley took occasion, when the people of Boston had liberated some of their citizens from the grasp of a British admiral who had impressed them into the naval service, to represent the act as a rebellious insurrection. "The chief cause of the mobbish turn of a town inhabited by twenty thousand inhabitants," he continued, "is its constitution, by which the management of it devolves on the populace, assembled in their town meetings." Royalists in Pennsylvania wrote words of warning, saying that "the obstinate, wrong-headed Assembly of Quakers" in that colony, "pretended not to be accountable to his majesty or his government," and that "they may, in time, apply the public money to purposes injurious to the crown and the mother country." "Virginia," wrote its governor, "formerly an orderly province, has nothing more at heart than to lessen the influence of the crown." In a similar strain loyalists wrote from all the provinces; and the Earl of Halifax, a young man a little more than thirty years of age, who had been placed at the head of The Lords of Trade, was satisfied that royal authority in the colonies was in peril, and so informed the ministry. In a letter to Governor Glen, of South Carolina, he promised "a very serious consideration on the just prerogatives of the crown and those defects of the constitution which have spread themselves over many of the plantations, and are destructive to all order and government."

Governor Clinton sought, and soon found an occasion for a quarrel with the New York Assembly. He demanded of that body an appropriation for the support of the government, for five years next ensuing, with a view of making himself, as governor, independent of the assembly. As he expected, they refused their compliance. Then he warned them of the danger of incurring the displeasure of parliament, and dissolved the assembly. He at once wrote letters to the Lords of Trade, complaining of the rebellious tendencies of a greater portion of the assembly, charging them with claiming all the powers and privileges of parliament that they had set up the people as the high court of American appeal that they had "virtually assumed all of the public money into their own hands, and issued it without warrant from the governor," and, also, had assumed the right to nominate all officers of government to reward all services by granting the salaries annually, "not to the office, but by name to the person in the office," and that the system if not speedily remedied, "would effect the dependency of the colonies on the crown." He besought the king to "make a good example for all America, by regulating the government of New York." He declared that until that should be done he could not "meet the assembly without danger of exposing the king's authority," and himself, "to contempt."

After violent quarrels with all political factions in the province, Clinton abandoned the government in disgust, and returned home. He was succeeded by Sir Danvers Osborne, who came with instructions to demand from the assembly a permanent revenue to be disbursed solely

by himself. His council assured him that the assembly would refuse compliance with the demand. Foreseeing much trouble ahead, he became despondent. This state of mind was aggravated by grief because of the recent death of his wife, and he hanged himself with his pocket-handkerchief to the garden fence at his lodgings in New York.

The attitude of the New York Assembly was applauded by the leaders of popular opinion in the other colonies; and had measures for the maintenance of the royal prerogative and the supreme authority of parliament which Halifax proposed been pressed with vigor much longer, the revolution which broke out about twenty years later would doubtless have occurred then. But more urgent considerations occupied the attention of the British government and the American colonies at that time. Ever since the English captured Louisburg, in 1745, and D'Anville experienced his naval disasters, the French had put forth the most vigorous efforts for the extension and strengthening of their dominion in America. They were resolved on a persistent strife for power; and their aggressive movements about the year 1753, aroused the British government and the American colonial assemblies and people to the necessity of employing equally vigorous measures for opposing their common enemy. Then the colonists united among themselves and with the Home Government in defence of British dominion in America. Then began the conflict known in America as the French and Indian War, and in Europe as the Seven Years War, which we will now consider.

Chapter XL

The Treaty of Aix-la-Chapelle - Efforts of the English to Maintain Their Dominion in America - The Ohio Land Company - Events in Nova Scotia - Sufferings of the French Inhabitants There - Attempts to Enslave the Americans Resisted - Mahew's Patriotic Sermons - Movements of the French Alarm the English - The Ohio Country Explored - Treaty with the Indian Tribes - Hostile Attitude of the French - Major Washington's Embassy to the French Commander.

THE famous treaty at Aix-la-Chapelle in 1748 produced the pacification of Europe, and a lull in warfare in America. It seemed to promise a long repose from war in both hemispheres. In that ancient city of Rhenish Prussia, where Charlemagne was born and where he died, and where fifty-five emperors have been crowned, the representatives of Great Britain, France, Holland, Germany, Spain and Genoa, signed a solemn treaty which ended a war begun in 1740. That was the consequence of the ascension of the throne of Austria by Maria Theresa in conformity to the "Pragmatic Sanction" - a royal ordinance - of her father, Charles the Sixth of Germany, made in 1713. That treaty confirmed six other treaties which had been made in the space of a century and hopeful men looked for the peace of the millennium almost. But that treaty was made delusive by a further struggle between France and England for dominion in America.

The commissioners at Aix-la-Chapelle had hardly reached their homes before the rash and inexperienced Earl of Halifax, at the head of the Board of Trade and Plantations, observing the steady encroachments upon claimed English domain in America, and the menacing attitude of the French there, resolved to employ measures for securing to England the conquered territory on the east and the Valley of the Ohio River on the west: the latter by settlements and colonization. The Indians there were friendly to the English, and the Six Nations held the passes from Canada to that rich valley.

Virginians and Marylanders had proposed the planting of an English colony beyond the Alleghany Mountains, where there was seen only here and there the solitary cabin of an English trader. Halifax regarded that region as "the centre of the British dominions," and he persuaded the king to instruct the governor of Virginia to grant to a company of speculators five hundred thousand acres of land on the north side of the Ohio, between the site of the present city of Pittsburgh and the mouth of the Kanawha River. This association was known as The Ohio Land Company. It was agreed that the company should not be called upon for quit-rent for the space of ten years. It was also agreed that within seven years at least one hundred families should be settled on the tract, and the company, at their own expense, was to build a fort there. Among the proprietors was Robert Dinwiddie of Scotland, the surveyor-general for the southern colonies, who was soon afterward made a lieutenant-governor of Virginia.

At the same time cruel measures were adopted by the English government for securing dominion in Acadie, or Nova Scotia. The French government and French priests proceeded to coax the simple French inhabitants to leave their ancient settlements on the peninsula and take a position near the frontier, the object being to make them a barrier against the encroachments of

the English. At about the same time Governor Shirley, of Massachusetts, proposed to remove the Acadians altogether, and distribute them among the English colonies, because they were French Roman Catholics, and to settle their country with Protestants. This atrocious proposal was opposed by the British ministry at first. A more humane policy was adopted. It was to settle so many Protestants among the Acadians that the obedience of the French inhabitants to British authority would be secured. Protestants in European countries were invited to settle there, under English protection, but responses were few. Finally, the British government induced disbanded British soldiers and marines to accept lands among the Acadians and to settle there. During the year 1749, about fourteen hundred of these, led by Colonel Cornwallis, went among the Acadians and planted the first English town east of the Penobscot, in a dreary place, and named it Halifax. This was in compliment to the energetic earl who had actively promoted the emigration.

Now the serious troubles of the simple-minded Acadians began. When, twenty years before, they bowed submissively to English rule, they had been promised freedom in religious matters, and exemption from bearing arms against the French and Indians. This gave them the name of French Neutrals. Now they were ordered to take an oath of allegiance to Great Britain, and the supremacy of the crown in religious matters, and be subjected to all the duties of English subjects. A thousand of the men signed a petition humbly asking permission to sell their lands and remove to some place to be provided by the French government. Their hearts bore allegiance to France and the ancient church, and they begged not to be compelled to take up arms against the one, nor to forswear the other. The haughty Cornwallis said to the ambassadors who brought the petition to him: "Take the oath or your property will be confiscated. It is for me to command: you to obey."

More cruel were the proceedings against the Indians on the peninsula, whom Jesuit priests had incited to furious raids along the New England frontiers. Cornwallis summoned a powerful Micmac chief to his presence. He came, feathered and painted, with two young warriors. Wrapped in his blanket, he stood erect and defiant before the English commander. Cornwallis demanded the instant submission of all the tribe to British authority. The chief haughtily replied: "The land on which you sleep, is ours; we sprung from it as do the trees, and the grass, and the flowers. It is ours forever, and we will not yield it to any man;" and turning on his heel went back to his people. Under the orders of his superiors, who declared that "the Indians on the peninsula were banditti, ruffians or rebels," Cornwallis offered ten guineas for every one of them "taken or killed," to be paid on producing the body or scalp of the savage. Such were the measures adopted by the English at the middle of the last century for checking the encroachments of the French on the east and west of their domain. At that time the English in America numbered almost a million and a half; the French were not more than a hundred thousand strong, but they controlled much of the Indian power of the continent. France and England were heirs to an ancient quarrel originating far back in feudal ages and kept alive by frequent collisions.

While the French power in America seemed to be confined to a narrow strip of territory along the St. Lawrence and the Lakes, the remote northeastern portion of the continent, and in the western wilderness to very distant missionary stations, very little apprehension of real danger to

their colonies was felt by the English but when, after the French lost Louisburg in 1745, they built strong vessels at the foot of Lake Ontario made stronger their little trading fort at Niagara built a cordon of fortifications, more than sixty in number, between Montreal and New Orleans; claimed dominion over all the territory drained by tributaries of the Mississippi, with the plausible plea that the French were the discoverers of a greater portion of that stream, and were negotiating treaties with the powerful Delawares and Shawnees, on the frontiers of Pennsylvania and Virginia, the English perceived real and impending danger. The American colonists saw it first, and were alarmed hence the proposition to plant an English settlement west of the Alleghanies. It was at that moment, when there appeared the plausible pretext of a necessity for united action, under a single head, against the French, that the British government resolved to assert its supreme authority in the colonies. Governor Shirley, a thorough royalist, proposed the building of frontier forts, under the direction of royal officers and engineers, at the expense of the colonies, and demanding from them the levying of a tax sufficient for the purpose. The crown officers of New York approved the measure. Shirley went to England to perfect his schemes, and found the government eager to do anything to check the democratic spirit in America which was evidently aiming at legislative independence, if not the setting up of an independent sovereignty. The English-Americans found themselves in the critical position of being compelled to fight the French and Indians for the preservation of their domain, and to contend with the mother country for their chartered rights and natural liberties. The French were their political and religious enemies, and menaced them with open hostility their British brethren were their social foes, nestling in their bosoms, and seeking to conquer their noble and holy aspirations under false pretenses. Yet the Americans were hopeful and firm. When the Lords of Trade induced the parliament to attempt to assert its supremacy in the colonies, and royal governors, under instructions, demanded of the colonial assemblies, in haughty words, the money and the rights of the Americans, their demands were met by a quiet defiance in the form of positive refusals and energetic protests of an indignant people. These had, many of them, been driven from England by persecution; had founded homes and built up states without England's aid, and had spent blood and treasure freely for England's honor and glory without even the poor return of thanks therefore this insidious attempt to enslave them gave vehemence to their determination to assert their right to local self-government at all hazards. Their bold attitude at this time made the imperial government pause, and reserve its wrath for a more convenient season.

The words of young Mahew went forth from his pulpit in Boston, at that time, with the seeming unction and authority of the ancient prophets, "Thus saith the Lord"-when, with fervid eloquence, he denounced the unholy alliance of church and state for stamping out the freedom of Americans. It was then no secret that the English hierarchy were conspiring with the crown for the establishment of an episcopacy in America, and making the liturgy of the Church of England the state form of public worship. It was a part of the plan for enslaving the Americans. Whitefield had sounded the alarm-bell in New England, and Mahew was among the first to openly avow the public dissatisfaction. He vehemently reprobated the impious bargain between the sceptre and the surplice. "Resist the small beginnings of civil tyranny," he said, lest it should swell to a torrent and deluge empires. "The divine right of kings, and non-resistance," he said in a sermon in 1750, "are as fabulous and chimerical as the most absurd reveries of ancient or modern

visionaries. If those who bear the title of civil rulers do not perform the duty of civil rulers - if they injure and oppress - they have not the least pretense to be honored or obeyed. If the common safety or utility would not be promoted by submission to the government, there is no motive for submission." And he declared that disobedience, under such circumstance, became "lawful and glorious." The sentiment of the colonists was responsive and the temper manifested by the people then was the herald of that flame of feeling which, a quarter of a century later, kindled the old war for independence. It aroused the animosity of the crown and its creatures against the Americans, and history was repeated. Demosthenes said to the Thebans two thousand years before: "We are well aware of that inextinguishable hatred which kings and the slaves of kings have ever felt towards nations which have plumed themselves on being free."

A crisis was now at hand. The disputes between the French and English in America ripened into action.

The French were offended by the planting of Halifax, in Nova Scotia; and a partisan named La Corne, professing to act under the orders of Joncaire, chief captain in Canada, took possession of the isthmus that connects the peninsula with the main, with a large force of French and Indians. He summoned the Acadians to renounce their allegiance to the English and take refuge with the French; and that poor people were at their wits end. He held a village (now Fort Lawrence), and compelled the inhabitants to take an oath of allegiance to France.

When Cornwallis heard of this he called upon Massachusetts to help in dislodging the intruders. The Assembly replied "by the constitution of this province we must first be convinced of the necessity of raising supplies." So they politely refused, and Cornwallis was compelled to rely upon the slender means at his command. With four hundred soldiers he appeared in transports before the town. The alarmed Jesuit priest set fire to the church, and compelled the bewildered inhabitants to lay their houses in ashes and flee across the river. The French were too strong for the English, and the latter withdrew. A second expedition, a few months later, was successful. Fort Beau Sejour, which the French had built opposite the desolated town, was captured, with loss of life. This was the first blood they had shed in war since the treaty at Aix-la-Chapelle. It was now August, 1750.

This event was followed by the capture of French vessels by an English man-of-war off Cape Sable. The French government, exasperated by these insults to their flag, broke off negotiations for a peaceful settlement of boundaries in America, and resolved to appeal to the arbitrament of the sword. At near the head of the valley of the Ohio was the theatre of the first passage at arms.

The Ohio Land Company took measures for defining and occupying their domain. Thomas Lee, Augustine and Lawrence Washington, and other leading Virginia members of the Company, ordered goods to be sent from London suitable for the Indian trade and as no attempt at settlement could be safely made without some previous arrangement with the Indians, the Company petitioned the Virginia government to invite the savages to a treaty council. As a preliminary movement, the Company took measures to obtain information concerning the best

lands beyond the mountains. English traders with the Indians had traversed the passes through them, and spoke of the beauty and fertility of the country beyond, but the Company wished more definite knowledge. In the autumn of 1750, Christopher Gist, from the borders of the Yadkin, was in Virginia. He was a bold and skillful woodsman, and acquainted with Indian life; and he was employed to cross the great hills and spy out the land. He was instructed to observe the best mountain passes to explore the country as far down as the Falls of the Ohio (Louisville) examine the most useful streams and count their falls; search out the fertile level lands; ascertain the strength of the Indian tribes, and make as accurate a chart of the region as his observations would allow.

Gist left Alexandria on horseback at the close of October; crossed the Blue Ridge and the Shenandoah Valley; waded through snow-drifts in the Alleghany Mountains swam his horse across the Ohio River, and made his way through a rich narrow valley to Logstown, where it was proposed to hold the Indian council. He presented himself as an ambassador from the British sovereign. As such he was respected by the chief but the savages received him with coolness. "You are come to settle the Indians' land," said the chief; "you never shall go home safe." Undaunted by this covert threat, Gist pressed forward to the Muskingum, stopping at a village of Ottawas, who were friends of the French. The Wyandots at Muskingum received him cordially, and there he found George Croghan, an emissary of the Pennsylvanians who were jealous of the Ohio Company, regarding them as rivals seeking a monopoly of the trade with the Indians of the northwest.

Gist crossed the Muskingum as he had crossed the Ohio - the "beautiful river," in the language of the Iroquois - and pushing on with Croghan and other traders through the stately forests and across savannahs then white with snow, he reached the Scioto River a few miles from its mouth. There dwelt some Delawares; and a short distance below the Scioto there were Shawnees on both sides of the Ohio. Both professed friendship for the English, and a willingness to attend a general council at Logstown.

Northward lay the beautiful land of the Miamis, a confederacy really more powerful than that of the Iroquois, with whom they were friendly. Thither the representatives of Virginia and Pennsylvania went. They were kindly received. Strings of wampum were exchanged as tokens of friendship. A treaty of peace and alliance was concluded with the confederacy, and arrangements were made for all the friendly tribes to meet at Logstown in grand council.

Just as the treaty was signed, four Ottawas came with presents from the French. The Indian sovereign, who presided at the council, immediately set up the flags of France and England side by side. Addressing the Ottawas, he said: "The path of the French is bloody, and was made so by them. We have made a road plain for our brothers, the English, and your fathers have made it foul and crooked, and have made some of our brethren prisoners. This we look upon as an injury done to us." Then suddenly turning his back upon the Ottawas, he left the council. The French flag was removed, and the emissaries who bore it were ordered to return to their Gallic friends at Sandusky.

Gist viewed the magnificent country he was in with deepest admiration, and bidding his English companions and the dusky barbarians farewell, he went down the valley of the Little Miami to the Ohio and along that stream almost to the Falls. Then he penetrated the famous blue-grass region of Kentucky, with its marvelous forests climbed over the mountains to the headwaters of the Yadkin and the Roanoke, and at the end of a journey of seven months, he stood before Lawrence Washington, at Mount Vernon, then chief director of the Ohio Company, with a vast amount of valuable information.

The promised council of the western tribes was not held until June, 1752. Gist was there as the agent of the Ohio Company, and Colonel Fry and two other commissioners represented Virginia. Friendly relations with the Western Indians were established by the treaty, but the barbarian chiefs steadily refused to recognize any English title to lands west of the Alleghany mountains. On that point they had been equally firm with the French, and resisted the importunities and claims of both. A shrewd Delaware chief said to Gist: "The French claim all the land on one side of the river, and the English claim all the land on the other side of the river where is the Indians' land?" It was a question difficult to answer. Gist did not attempt it, but said: "Indians and white men are subjects of the British king, and all have an equal privilege of taking up and possessing the land, in conformity with the conditions prescribed by the sovereign."

The Ohio Company sent out surveyors to explore the country, make definite boundaries and prepare for settlements. English traders penetrated the Ohio country to the domain of the Miamis and beyond, and the Indians found profit by their friendly relations with them. The jealousy of the French was aroused. They regarded the English as intruders. They saw with alarm the waning French influence among the tribes of the upper Ohio Valley, and presaged the ultimate destruction of their fortified line of communication between Canada and the Gulf of Mexico. Finally, in 1753, they seized and imprisoned some of the surveyors and traders and about twelve hundred French soldiers were employed to erect forts in the wilderness between the upper waters of the Alleghany River and Lake Erie. One of these was erected at Presquise, now Erie, on the southern shore of the lake of that name. Another was reared at Le Boeuf on French Creek, now Waterford and a third was constructed at the junction of French Creek and the Alleghany River, on the site of the village of Franklin.

The Ohio Company complained of these hostile demonstrations. Their lands lay within the chartered limits of Virginia, and the authorities of that colony felt it their duty to interfere in defence of the rights of the Company. Already the governors of Virginia and Pennsylvania had received instructions from England to repel the French by force of arms, if necessary. Robert Dinwiddie, one of the Company, and now governor of Virginia, determined to first send a letter of remonstrance to M. de St. Pierre, the French commander. Now, George Washington, who was destined to occupy a conspicuous place in the history of our country and of the world, first appeared on the theatre of public action, at the very opening of that illustrious drama whose closing scene was the founding of a mighty nation.

Young Washington was then a little more than twenty-one years of age He was of an excellent

and honorable family, whose roots lay far back in English history. He was a sort of foster-son of old Lord Fairfax; and as a public surveyor and skillful hunter, had traversed the forests of Virginia far and near, in the direction of the Ohio. At the age of nineteen years he had been commissioned a major of militia, charged with defending the colony against incursions of the Indians, and had entered upon the duties of his office with alacrity and zeal. Fraternal affection had called him from them to attend upon a dying brother, but he had evinced, during his short service, such an aptitude for military pursuits, and such faithfulness in performance, that he was marked for promotion.

Dinwiddie sent for Major Washington. He appeared promptly at the room of the governor (more exactly the lieutenant-governor) in the old statehouse at Williamsburg, late in October, 1753. Dinwiddie was a bald-headed Scotchman, sixty-three years of age, with thin sandy hair, stout built, and so extremely nervous that his writing bore the marks of a trembling hand. Young Washington was full six feet in height, strongly built, with a florid complexion and every indication of high health and physical strength. The governor then first revealed to the major the object of his summons, and received his cheerful agreement to perform whatever duty might be required of him. The governor gave him a commission and instructions to proceed to the quarters of the French commander, and present to him in person a letter from Dinwiddie, in which the governor inquired by what authority French troops had presumed to intrude upon the territory of the British monarch, and what were his designs. It was a mission of great delicacy, and was accompanied by not a little peril. Discretion, ability, courage, physical endurance, experience in wood-craft and a knowledge of Indian manners, were requisite. Believing young Washington to be possessed of all of these, in an eminent degree, the governor chose him to be his ambassador, out of hundreds of the more pretentious aristocracy of Virginia. The result was creditable alike to the character of Major Washington and the sagacity of Governor Dinwiddie.

Washington was directed to proceed to Logstown (on the right bank of the Ohio, about fourteen miles below the site of Pittsburgh) convene influential Indian chiefs there tell them the object of his visit, and request them to furnish him a competent escort as a safeguard to the headquarters of the French commander. There he was to demand an answer to Dinwiddie's letter in the name of his king to observe, with caution, the number of troops that had crossed the lake perceive the strength and number of their forts, and their distance from each other, and gain all information possible concerning the French on the English frontier. With these instructions Washington left Williamsburg, the Virginia capital, on the thirty-first of October, and was joined by John Davidson as Indian interpreter, and Jacob Van Braam, a Hollander by birth, and acquainted with the French language, to assist him in his intercourse with the people he was going to see. On his way he was joined by Mr. Gist, who acted as guide. With these, and four other men (two of them Indian traders), with horses, tents and baggage, they left the borders of civilization at the mouth of Will's Creek (now Cumberland, Maryland), and made their way over the Alleghany Mountains, then covered with snow. They endured every hardship incident to a dreary wilderness and the rigors of winter. The streams in the valleys were full to their brims. Over the large ones they passed upon frail and rudely constructed rafts, wading and swimming their horses through the floods of the smaller streams. Late in November they reached the forks

of the Ohio, on the site of Pittsburgh, where they rested a few days, and then proceeded to Logstown, accompanied by an influential sachem of the Delawares.

The headquarters of M. de St. Pierre was one hundred and twenty miles from Logstown. A bold and patriotic chief named Half-King, who, when the French came with arms and built forts in his country, had vehemently protested against the invasion of the rights of the Indians, and had been treated with disdain, volunteered, with two other chiefs and a skillful hunter, to escort the English company of eight to the headquarters of the French. In the simplicity of his heart he thought the English were only seeking to establish a trade with the tribes for mutual benefit. He and his people soon found that the French and English were equally governed by the ethics of the mailed hand - "Might makes Right," and came to deprive them of their domain and liberty.

After braving perils and hardships, the little company found themselves; early in December, at Fort Venango (now Franklin), the French outpost commanded by M. Joncaire. He received the English with civility, but tried to detach and detain the Indians. He remembered the patriotic speech of Half-King at a previous meeting, when the chief said: "The Great-King above allowed the land to be a place of residence for us, so I desire you to withdraw, as I have done our brothers, the English; for I will keep you at arm's length. I lay this down as a trial for both, to see which will have the greatest regard to it and make equal sharers with us." Joncaire hoped to gain his confidence by shaking his faith in the English, but did not succeed.

Further up the French Creek, Washington found St. Pierre, at Fort Le Boeuf. Here was the end of the Virginia ambassador's journey of forty-one days. The French commandant received him and his companions with great politeness. He was an elderly and courtly knight of St. Louis who, in his early years, had served in the army of Louis the Great, and had escaped the corruptions of the licentious court of his successor. He received the governor's letter with thanks entertained the bearer and his friends four days, and then delivered into the hands of Major Washington a sealed letter in reply to Dinwiddie's. With this letter and much useful information respecting the forts and forces of the French, gathered by himself and his associates, Washington returned to Williamsburgh at the middle of January.

The return journey was more perilous and fatiguing than the first. A greater portion of it was performed by Washington and Gist alone and on foot. At one time they were fired at by Indians supposed to have been incited to the deed by Joncaire. On another occasion, after working a whole day in constructing a raft, they attempted to cross the swift and swollen current of the Alleghany River upon it. The stream was filled with floating ice. They embarked at twilight, each with a pack on his back and gun strapped to it. They soon found themselves buffeted by great perils. Washington, with a setting pole, was trying to hold the frail structure that the ice might pass by, when he was jerked off into water ten feet deep, and saved himself from drowning by catching hold of a raft-log. The raft was crushed, and the travelers, thoroughly drenched, were cast upon a desert island, where they lay upon the snow all night, hungry and half-frozen. Mr. Gist had all of his fingers and some of his toes frozen. Fortunately the ice was so thick over the channel in the morning that they crossed to the main, and toward evening, suffering with cold, they reached the

cabin of a Scotch settler, near the spot where, a year and a half afterward, Braddock fought the French and Indians in the battle of the Monongahela. The island on which the travelers were wrecked is directly opposite the United States Arsenal, at Lawrenceville, Pennsylvania, and is known as Washington's Island.

After this adventure, Major Washington and his companion rested two or three days for their own refreshment and to procure horses. During that time the major paid a complimentary visit to the Indian Queen Aliquippa, who resided at the confluence of the Monongahela and Youghiogany rivers, in the southeastern part of Alleghany county. She had complained of his neglect in not calling upon her when on his outward journey. Young Washington explained the circumstances that prevented him, and with an apology he gave her a coat and a bottle of rum. "The latter," Washington wrote, "was thought the much better present of the two," and harmony of feeling was restored. Aliquippa, who was a woman of great energy, and had performed some brave deeds, was held in respect amounting almost to reverence by the Indians in Western Pennsylvania.

Chapter XLI

Reply to Dinwiddie's Letter - Virginia Prepares for War - A Fort Commenced on the Site of Pittsburgh - The French Seize It and Name It Fort Du Quesne - Washington Leads Troops to Recover It - Attacks and Defeats Some French Troops - Compelled to Surrender to the French Afterward - Colonial Convention at Albany - Plan of Union Adopted - It is Rejected by the British Ministry and Colonial Assemblies - American Affairs in England - A Mad Military Scheme Abandoned - Washington Leaves the Military Service in Disgust - Braddock Sent to America with Troops - Plan of the Campaign for 1755 Arranged.

ST. PIERRE'S letter in reply to Governor Dinwiddie's caused immediate preparations for war. It was soldierly in tone and courteous in expression. He said it did not become him as a soldier to discuss civil matters that Dinwiddie's letter should have been sent to the Marquis Du Quesne, then governor of Canada, by whose orders he acted and whose instructions he should carefully obey and that the summons of the governor of Virginia to the French to retire from the country immediately could not be complied with.

Dinwiddie laid this letter before his council. The burgesses had shown themselves indifferent to the alleged dangers from the French; and the chief magistrate and his advisers determined not to wait for the assembling of the legislature. Under the general instructions from the king, they authorized the enlistment of two hundred men to march to the Ohio River and build two forts there before the French could descend that stream or its tributaries in the spring. Major Washington was commissioned a lieutenant-colonel, and placed in chief command of the troops to be raised and the journal of his mission to the French commander was published to arouse the people to action. Washington made his headquarters for recruiting at Alexandria, and authorized Captain Trent to enlist men among the traders and frontier settlers.

Governor Dinwiddie now convened the legislature, and sent an appeal to the other colonies for help in the work so gallantly begun by Virginia. All hesitated excepting North Carolina, whose Assembly immediately voted men and money for the purpose. The royal governors and colonial assemblies were then wrangling fiercely about the supremacy of parliament and the rights of the Americans. The former insisted upon the exclusive right of parliament to fix quotas, direct taxation and disburse moneys through the agents of the crown in the colonies the latter insisted upon their right to do these things themselves in their own way. Universal jealousy produced perilous procrastination. The danger was imminent. The warm spring days were approaching, when the snows and ice would disappear, and the French might be seen upon the waters of the "Beautiful River."

After much debate, the Virginia House of Burgesses, who, as Dinwiddie complained, were in a republican way of thinking, voted men and money. They authorized the raising of a regiment of six companies, and appointed Joshua Fry, an English-born gentleman, colonel, with young Washington as his lieutenant. To stimulate enlistments, Dinwiddie was authorized to offer as a bounty two hundred thousand acres of land on the Ohio, to be divided among the soldiers who

should engage in the expedition.

Alexandria was made the place of military rendezvous. On the recommendation of Washington, the Forks of the Ohio - the site of the city of Pittsburgh - was chosen the place on which to build the first fort and Captain Trent was instructed to employ his recruits in its construction. As the spring was passing away, Washington, who was yet at Alexandria, was ordered to join Trent with the advance of the military force and assist in the speedy completion of the fort. He was instructed "to drive away, kill and destroy, or seize as prisoners all persons not the subjects of the king of Great Britain, who should attempt to take possession of the lands on the Ohio or any of its tributaries."

Early in April, Lieutenant-Colonel Washington left Alexandria with a small force, and reached Will's Creek (now Cumberland) on the 20th. On the way he was met by a swift runner sent by the friendly Half-King on the Monongahela, bearing a wampum-belt and this message from the chief: "Come to our assistance as soon as you can come soon or we are lost, and shall never meet again. I speak it in the grief of my heart." The French had been seen embarking on the Alleghany at Venango, and news of the movement had spread alarm among the barbarians friendly to the English. After giving the heated Indian runner food and a flask of rum, Washington sent him back with a belt and the words: "Your friend and brother is coming; be strong and patient."

As he approached Will's Creek, Washington was met by another runner who said the French were at the Forks; and the next day an ensign from Trent's company came with the startling news that the French, a thousand strong, with eighteen cannon, sixty bateaux and three hundred canoes, had come down the Alleghany, under the command of Captain Contrecoeur, and taken possession of the unfinished fort. These numbers were exaggerations, but the fact remained that the French were occupying the important position at the Forks of the Ohio. They immediately finished the fort on a stronger plan, and named it Du Quesne in honor of the governor of Canada.

Colonel Fry had not yet joined the advance. The young lieutenant-colonel assumed the responsibility of pressing forward with his handful of raw recruits - not more than one hundred and fifty in number - and a few pieces of light artillery. Leaving the borders of civilization on a cool morning in April, these pioneers penetrated the wilderness in the direction of the Ohio. Without shelter from cold and rain in scanty clothing and with a small supply of provisions, they dragged the cannon over the great wooded hills; felled trees; bridged streams; made causeways over marshes, and removed rocks, to make the march of the main army easier; and late in May they stood on the banks of the Youghiogany, within forty miles of Fort Du Quesne. There Washington received a message from Half-King, saying:

"Be on your guard. The French are near, and intend to strike the first English whom they shall see." On the same day this report was confirmed. Ignorant of the number of the French, Washington fell back to a fertile plain which he had crossed, called the Great Meadows, and there built a stockade and named it Fort Necessity. It was near the modern national road between Cumberland and Wheeling, in the southeastern part of Fayette county, Pennsylvania. There Mr.

Gist, who had a settlement near, came to him and reported that he had discovered the tracks of the French within five miles of the Great Meadows.

At about nine o'clock in the evening of the same day, a message came from Half-King, who was about six miles distant, saying that a party of armed Frenchmen were lying in ambush not far away. Notwithstanding the night was intensely dark and the rain was falling copiously, Washington immediately set off with forty men, in single file, for the camp of the friendly Mingo Chief with whom he made arrangements to surprise the common foe and jointly strike him. The night had been consumed in the difficult journey to the Mingo camp, and it was after sunrise when the English and Indians, each marching in parallel lines, in single file, sought the hiding-place of the foe. It was found among some rocks. Washington, who was at the head of the party and carried a musket, when he saw the Frenchmen, shouted Fire! and at the same moment discharged his own gun among them. The volleys of the assailants were returned with spirit. After a fight for about fifteen minutes, when Jumonville, the commander of the French party and ten of his men were killed, the conflict ceased. Only one Virginian was killed. Twenty-two Frenchmen were made prisoners, taken to Fort Necessity, and then sent over the mountains into Eastern Virginia. Of the fifty followers of Jumonville, only fifteen escaped.

This was the first blood shed in the French and Indian War. So was opened by young Washington, who fired the first gun, that long and bitter contest for the rights of man which, like an earthquake, shattered into fragments the institutions of feudal ages that had been transplanted in our country, and shook the foundations of society in Europe.

This skirmish, which occurred on the 28th of May, 1754, made a profound impression. It was exaggerated by French publicists and diplomats. France and England were then at peace, and were saying sweet things to each other, disguising bitterest hatred with a cloak of false professions of friendship. The attack on Jumonville was denounced as an outrage by the French. It was alleged that Jumonville was a civil messenger, bearing a peaceful despatch, and therefore Washington was a murderer. This fiction passed into French history, and has never been expunged. There is no clearer point in national annals than the fact that Jumonville was the bearer of a hostile summons, and his skulking in ambush is proof of his hostile intention. Contrecoeur had begun war by capturing the fort at the Forks; and every circumstance justified the conduct of Washington.

Two days after this event, Colonel Fry died at Will's Creek, leaving Washington in chief command. A few troops pressed forward to join him, and he was burdened at Fort Necessity with about forty families of friendly Indians, among them those of Half-King and Queen Aliquippa. With his little army swelled to about four hundred men, he moved toward Fort Du Quesne, when news came that M. de Villiers, brother of Jumonville, had marched with some Frenchmen and more than a thousand Indians to avenge the death of his kinsman. Washington fell back to Fort Necessity and strengthened it. There he was attacked on the 3rd of July by six hundred Frenchmen and about three hundred Indians, a reserve being concealed in the woods. After a conflict for about nine hours, De Villiers, finding his ammunition to be failing, proposed a

parley. It was now twilight. Washington, whose force was much inferior, agreed to surrender the fort and troops on the condition that he and his men should retire from the stockade with the honors of war and return to the inhabited portion of the country the Virginians agreeing to restore the prisoners taken from Jumonville's party, and not to erect any establishment west of the mountains for the space of a year.

On the morning of the 4th of July, the two commanders, seated upon a log outside of the fort, with Indian chiefs and Virginia officers looking on, signed the capitulation. Then the troops moved away, re-crossed the mountains to Will's Creek, and returned to their homes, while their commander hastened to Williamsburg to report to the governor. The conduct of Washington and his men was highly approved and when the House of Burgesses met, the thanks of the colony were voted them for their "bravery and gallant defence of their country." So ended the first campaign of the French and Indian war.

Meanwhile a civil movement in the colonies of great importance had taken place. It was a movement in the direction of a national union. For some time there had been indications that the Indians, and particularly the Six Nations, influenced by French emissaries, were becoming alienated from the English. The colonists were uneasy and the British government, acting upon the advice of the colonial governors, took measures to strengthen the good-will of the barbarians. The British Secretary of State issued a circular-letter to the various colonial assemblies proposing a convention to be held at Albany, composed of committees from the several assemblies, and representatives of the Six Nations. To this proposition seven of the assemblies cheerfully responded, and on the 19th of June, 1754, twenty-five delegates from these colonies met in the old City Hall in Albany. James De Lancey, acting governor of New York, was chosen to preside, and he was authorized by the Virginia Assembly to represent that colony in the convention. It was an assembly of remarkable men, such as had never before been seen on the continent. The most remarkable man of all was Dr. Franklin, of Philadelphia, then almost fifty years of age.

The chiefs of the Six Nations were there in very great force. Among them, as chief orator, was King Hendrick, the eminent Mohawk sachem who was killed near Lake George, the following year, while battling for the English. These barbarians received the first attention in the convention. The proceedings were opened by a speech to them by De Lancey, to which Hendrick responded. While they accepted the belts of wampum as tokens of alliance and friendship, there was evident dissatisfaction with the conduct of the English, whom the orator frankly reprovved. Standing in the midst of the council, he spoke of the injustice and want of spirit of the English, with significant gestures. "We thank you," he said, "for renewing and brightening the covenant chain. We will take this belt to the Onondagas, where our council fire always burns, and keep it so securely that neither the thunderbolt nor the lightning shall break it. Strengthen yourselves, and bring as many as you can into this covenant chain." Then, with his dark eyes flashing with scorn and indignation, he raised his voice, and with impassioned manner, he exclaimed, "Look at the French! They are men, they are fortifying everywhere but, we are ashamed to say it, you are like women, bare and open, without any fortifications. It is but one step," he said, from Canada hither, and "the French may easily come and turn you out of doors." Already many of the

Onondagas had settled at Oswegatchie (now Ogdensburg, on the St. Lawrence), under the protection of the French and some of the Mohawks complained bitterly of the seizure of lands in the west, by New Englanders, that belonged to the Indians but the conference closed amicably, and, on the whole, satisfactorily to both parties.

The Massachusetts delegation had come to the convention prepared to suggest business quite as important as a treaty with the Indians. They were authorized to invite the convention to a consideration of the question whether a union of the colonies for mutual defence was not desirable. They were also authorized by the General Court to agree to articles of union or confederation. The proposition when submitted was favorably received by the convention, and a committee, composed of one member from each colony represented, was appointed to draw up a plan. That committee consisted of Hutchinson, of Massachusetts Atkinson, of New Hampshire Pitkin, of Connecticut; Hopkins, of Rhode Island; Smith, of New York; Franklin, of Pennsylvania; and Tasker, of Maryland.

The fertile brain of Dr. Franklin had conceived a plan before he went to the convention. It was similar in its leading features to those proposed by William Penn and Daniel Coxe, already mentioned. He submitted it to the committee in writing, and it was adopted after slight modifications. It was debated in the convention day after day, for almost a fortnight, hand-in-hand with the Indian business," Franklin wrote, and was agreed to on the 11th of July by all but the delegates from Connecticut, William Pitkin, Roger Wolcott, and Elisha Williams. The union was "for the general defence of his majesty's subjects and interests in North America, as well in time of peace as of war."

Franklin's plan proposed a grand council or congress of forty-eight members, chosen by the several assemblies, the representatives of each colony to be, in number, in proportion to the contribution of each to the general treasury that the congress should choose their own speaker and have the general management of all civil and military affairs, and to enact general laws in conformity to the British constitution and not in contravention of acts of the imperial parliament to have a President-General (with Philadelphia the seat of government) appointed and paid by the crown, who should bear a negative or veto power on all acts of the congress, and to have, with the advice and consent of the congress, the appointment of all military officers and the entire management of Indian affairs, the civil officers to be appointed by the congress with the approval of the President-General. This plan of government was similar, in its leading features, to our National Constitution, in the framing of which Dr. Franklin bore a conspicuous part more than thirty years after the convention at Albany.

Franklin's thoughts had been occupied with the topic of union for some time. Several weeks before, he had published the following paragraph in his newspaper, the Pennsylvania Gazette, in an account of the seizure, by the French, of the position at the Forks of the Ohio The confidence of the French in this undertaking seems well-grounded in the present disunited state of the British colonies, and the extreme difficulty of bringing so many different governments and assemblies to agree in any speedy and effectual measures for our common defence and security while our

enemies have the very great advantage of being under one direction, with one council and one purse." At the close of the article was a rude wood-cut representing a serpent, the ancient emblem of vigor, separated into as many parts as there were English-American colonies, and under it, in large letters, the words JOIN or DIE. This significant device, which seems to have been first used by Franklin, figured conspicuously at the opening of the Revolution twenty years afterward.

The Pan of Union adopted by the convention was submitted to the Lords of Trade and Plantations. That body did not approve of it, nor even recommend it to the consideration of the king. Neither was it favorably received by the assemblies, partly because the royal governors at first warmly recommended it. In endeavors to please both royalists and republicans, the convention utterly failed. Franklin wrote "The assemblies all thought there was too much prerogative in it, and in England it was thought to have too much of the democratic," and it was rejected.

When intelligence of the expulsion of the English from the Ohio Valley reached the royal cabinet, measures were taken for the recovery of what had been lost, and for the creation of a new colony west of the Alleghany Mountains for its security in the future. The Earl of Albemarle was then governor-in-chief of Virginia, with Dinwiddie as his lieutenant. He instructed the latter to grant lands to any persons desiring to settle in the Ohio region, not more than a thousand acres to each. So it was that Virginia became the pioneer in the extension of the colonies westward, and the mother of States in the great basins of the Ohio. At the same time the ministry were eager to regain, by military power, what had been lost. They could not wait for the slow process of colonization. Indeed the exigencies of the case would not permit. The direction of American affairs was left to the warlike Duke of Cumberland, then captain-general of the British army, and by his orders Dinwiddie prepared for a winter campaign against the French. He ordered Washington to join his regiment at Alexandria, to fill up the companies by enlistments, and to hasten to Will's Creek, where Colonel Innis was building Fort Cumberland, and with his own troops, and the remnants of companies from other colonies, march over the Alleghany Mountains and drive the French from Fort Du Quesne. It was so late in the year that the mountains would be impassable on account of snow-drifts by an army inadequately supplied with food, clothing, and transportation. Washington knew this and in a letter to one of the governor's council, he vehemently remonstrated. His words were heeded, and the mad scheme was abandoned.

Meanwhile French emissaries were busy among the savage tribes west of the mountains, inciting them to a war of extermination against the English. The same influence had caused a murderous Indian raid upon the frontiers of New England and yet, in full view of the impending danger, some of the colonies were strangely apathetic. Governor Shirley put forth energetic efforts in Massachusetts to avert the evil. New York subscribed twenty-five thousand dollars for military service, and Maryland thirty thousand dollars for the same. The British government sent over fifty thousand dollars to aid the colonists, and Virginia made an appropriation of the same amount.

The crown appointed Governor Sharpe, of Maryland, temporary commander-in-chief of all the colonial forces. This led to injurious disputes about military rank and precedence among the Virginia officers, when Dinwiddie, more zealous than wise - more rash than discreet - having a large sum of money at his disposal, and entirely ignorant of military affairs, assumed the responsibility of arranging these affairs in his colony as he pleased. He enlarged the provincial army to ten companies of one hundred men each and broke it up into companies, so that the highest rank in that little army was captain, and at the same time inferior in position to the same rank of those commissioned by the crown. Washington would not submit to the degradation, but resigned his commission and retired from the military service.

Knowing the value of Washington's services at that critical time, Governor Sharpe urged him to remain in the army, and intimated that he might hold his former commission. This idea," wrote the indignant young Virginian, has filled me with surprise, for, if you think me capable of holding a commission that has neither rank nor emolument annexed to it, you must entertain a very contemptible opinion of my weakness, and believe me to be more empty than the commission itself." He declined the appointment and added I shall have the consolation of knowing that I have opened the way, when the smallness of our numbers exposed us to the attacks of a superior enemy; and that I have had the thanks of my country for the services I have rendered."

The early portion of the ensuing winter was spent by the colonists in anxious solicitude. France and England had been coquetting, with mutual professions of friendship, while every movement of the French in America indicated hostile intentions. The necessity of a colonial union was never more apparent than then, and Franklin, who had set his heart on the project, visited Shirley to confer with him on the subject. At the governor's house in Boston they discussed the topic long. Shirley was favorable to union, but it must be effected by the fiat of the British government, and not by the spontaneous act of the colonists. Franklin's love of popular liberty would not consent to such a union, and he parted from Shirley with the assurance of the latter that he would immediately recommend not only a union planned by parliament, but a tax.

Meanwhile the British government, perceiving the peril of English dominion in America, resolved to send military aid to the colonists. Edward Braddock, an Irish officer of distinction then in Ireland, was appointed commander-in-chief of all British forces in America, and was ordered to proceed immediately to Virginia with two regiments of regular troops. He was a man soured by broken fortunes haughty in spirit brutal in manners conceited and brave. He was ordered to call a council of royal governors on his arrival in America, and to exact a revenue from the colonies for military service. They were also to be informed that it was the king's pleasure "that a fund be established for the benefit of all the colonies collectively in North America" - a financial union - and that the general and field officers of the provincial forces should have no rank when serving with the general and field-officers commissioned by the king.

Braddock sailed with his two regiments. What does that mean inquired the French minister. Only defence, that the general peace may not be disturbed," replied the perfidious Due of Newcastle, of whom it had been written:

"He makes no promise but to break it; Faithful to nought but his own ends; The bitterest enemy to his friends; But to his fixt, undaunted foe, Obsequious, base, complying, low. Cunning supplies his want of parts Treason and lies are all his arts."

Each government, evidently playing false toward the other, made friendly propositions for mutual concessions that were simply impossible and so the matter stood when Braddock arrived in Chesapeake Bay, with his two regiments borne by vessels under Admiral Keppel. He first visited Governor Dinwiddie, at Williamsburgh, and then repaired to Alexandria, on the Potomac, with the admiral, where, at the middle of April, he held a council with royal governors at the fine house of Jonathan Carey. The governors present were Shirley, of Massachusetts De Lancey, of New York Sharpe, of Maryland; Morris, of Pennsylvania Dobbs, of North Carolina; and Dinwiddie, of Virginia. These crown-officers told Braddock at the outset that the Assemblies would not comply with his demand for a revenue, nor the wishes of the king for a general fund for military purposes and they agreed that it would be proper to recommend the government to take measures to force the colonies to bear their share of the expenses of the regular troops sent here. A communication to that effect, signed by the governors and the general, was sent to the ministers but events would not wait on governors nor legislation. The council at Alexandria were compelled to take immediate action, or all would be lost. The warm weather was coming, and so were the French and Indians. So the council planned the campaign for 1755, depending upon the imperial government and the free-will of the colonists for the necessary supplies in executing it. Three separate expeditions were projected. One was to proceed against Fort Du Quesne, led by General Braddock a second was to attack Fort Niagara at the mouth of the Niagara River, and Fort Frontenac at the foot of Lake Ontario on the site of Kingston, and was to be led by General Shirley. A third expedition, led by William Johnson (a nephew of Admiral Sir Peter Warren, and then the government superintendent of Indian affairs among the Six Nations), was to attempt the seizure of Crown Point on Lake Champlain. A fourth expedition had already been planned in the East, for the expulsion of the French from Nova Scotia, and possibly the recapture of Louisburg.

The colonists were delighted by evidences that the imperial government intended to help them in their unequal contest with the French and Indians. They laid aside their grievances, and with zeal and patriotism joined the government in preparations for war. All of the colonial legislatures, excepting Pennsylvania and Georgia, voted men and supplies for the impending conflict. The Quaker Assembly of Pennsylvania were conscientiously opposed to military movements, and Georgia was too indigent in men and money to do anything.

Chapter XLII

The English Begin Hostilities at Sea - Expulsion of the Acadians from Nova Scotia - Hatred of the Acadians by British Officials - Braddock's Pride and Folly - His Army Moves Slowly toward Fort Du Quesne - Washington on Braddock's Staff - Gives Good Advice - A Detachment of the Army Moves More Rapidly - Washington's Wise Advice Rejected - Braddock's Army Defeated and Himself Slain - Retreat of the Army - Washington Marvellously Protected - Shirley's Expedition a Failure - Expedition under Johnson at the Head of the Lake George - Approach of the French Army.

THE French, false themselves, did not believe Newcastle's assurance; and when Keppel sailed with Braddock's troops, they sent a fleet with soldiers, under the veteran Baron Dieskau, to reinforce their army on the St. Lawrence. With Dieskau went Vaudreuil, the successor of Din Quesne as governor of Canada. Admiral Boscawen, with some English ships, pursued the French fleet, and they came together south of Newfoundland. "Are we at peace or war asked the French. They were answered by the thunder of Boscawen's cannon. Two of the French ships were captured; the remainder escaped and landed the governor, with Dieskau and his troops, at Quebec, late in June.

Meanwhile the eastern expedition had moved. Three thousand men sailed from Boston on the 20th of May, 1755, under the command of General John Winslow, a great grandson of Edward Winslow of the May-Flower, and then major-general of the Massachusetts militia. They landed at near the head of the Bay of Fundy, where they were joined by Colonel Monckton and three hundred British regulars and a small train of artillery from a neighboring garrison. The French at Beau-Sejour and other military posts on the peninsula were ignorant of the hostile preparations of the two governments, until the appearance of this armament. Resistance would have been in vain. The peninsula became an easy prey to the English before the close of June. The French soldiers were sent to Louisburg, and the Acadians, who had been forced into the service, were granted an amnesty. But a sad fate awaited them.

The simple Acadians expected forbearance and went on cultivating their lands. They readily took an oath of allegiance, but could not pledge themselves to bear arms against their kindred in nation and religion. The English coveted their fertile lands, and made their refusal a pretext for possessing them. A technical question in law was raised, whether one who refuses to take all required oaths could hold lands in the British dominions. It was referred to the chief-justice of Nova Scotia, who decided against the Acadians; when it was determined to drive them out of the province and force them to settle in the English colonies. Not a word of suspicion reached the ears of the intended victims until the cruel plot was ripe for execution. The command went forth for their distribution among the English colonists. The French government asked for them the privilege of leaving their lands, taking with them their effects, and choosing for themselves their future home. "No," was the reply they are too useful subjects to be lost we must enrich our colonies with them." A touching memorial to the council at Halifax was borne by a deputation of educated men, in which they asked for the restitution of the guns and canoes of the people for

domestic use, and promising fidelity as the ransom for them. The document was read in an humble manner by the leading deputy, to the governor. That official treated it and its bearers with scorn. It is highly arrogant, insidious and insulting," said Governor Lawrence. He charged them with intending to carry food to the enemy in their boats, and reminded them that a law of the British realm forbade all Roman Catholics having arms in the houses. He scolded the deputies without stint. It is not the language of British subjects," he said, "to talk of terms with the crown, or capitulate about their fidelity and allegiance. What excuse can you make for your presumption in treating this government with such indignity as to expound to them the nature of fidelity? Manifest your obedience by immediately taking the oaths required, before the council." The deputies meekly replied We will do as our people may determine," and asked leave to return home and consult them.

On the following day they saw the peril of themselves and their people, and offered to take the oaths. By a law of the realm," said the governor, Roman Catholics who have once refused to take the oaths cannot be permitted to do so afterward, and are considered Popish recusants and as such they were cast into prison. The chief-justice insisted' that all the French inhabitants - hundreds of innocent families - were rebels and Popish recusants that they stood in the way of English interests in the country that they had forfeited their possessions to the crown, and advised against the receiving of any of the French inhabitants to take the oath, and also the removing of all of them from the province.

Execution of the cruel measure recommended speedily followed the utterances of the opinion of the chief-justice. A general proclamation was issued ordering all the Acadians, old men and young men, and lads ten years of age," to assemble at designated places, on the 5th of September, 1755. They obeyed. The proceedings at one place afford a fair picture of those at all others. At Grand Pre, four hundred and eighteen unarmed men were assembled. They were marched into the church, where they were addressed by Winslow, the Massachusetts militia general. He told them they had been called together to hear the decision of the King of England in regard to the French inhabitants of the province. Your lands and tenements," he said, cattle of all kinds, and live-stock of all sorts, are forfeited to the crown, and you, yourselves, are to be removed from this, his province. I am, through his majesty's goodness, directed to allow you liberty to carry off your money and household goods, as many as you can, without discommoding the vessels you go in." Then he said, You are now the king's prisoners."

Consternation suddenly filled every household in Grand Pro. Nineteen hundred and twenty-three men, women and children were driven on board British vessels at the point of the bayonet, from Grand Pro alone. The men and boys assembled at the church, went first the sisters, wives and daughters had to wait for other transports. They marched from the church to the water's edge, some in sullen despair, others with hands clasped and eyes uplifted, praying and weeping, and others singing hymns, while on each side of the sad procession was a row of women and children on their knees imploring blessings upon the heads of the dear ones.

The fate of the people of Grand Pre was the fate of all. The wrath of the English excited

against the French for their long and cruel warfare upon the frontier settlements of New England, with their savage allies, was poured out in full measure upon the heads of this innocent pastoral people, who had never voluntarily lifted sword nor spear nor firebrand to harm the English. Many, forewarned, tried to escape. A hundred families near Annapolis fled to the woods, where they were hunted by the troops like noxious wild beasts. Many were shot dead by watching sentinels. An English officer wrote in cool blood "Our soldiers hate these French Catholics, and if they can find a pretext to kill them, they will." Some hid in the forests and among the rocks in remote parts of the peninsula some found their way to Quebec, and many were sheltered from the English and fed in the wigwams of the so-called savages. But seven thousand were borne away by English ships, and scattered among the English colonies. To prevent their return, their villages and rural homes in Nova Scotia were, laid waste by flames, and their live-stock was used by English officials. A large, beautiful and fertile tract of country became a solitude and desolation - a precious offering upon the altar of greed, hatred, bigotry and fear.

The sufferings of the Acadians were acute in exile. Many families, separated at the outset by the cruel arrangements for their transportation, were never reunited, and the English colonial newspapers contained advertisements seeking information about parts of dismembered families. They were dropped along the shores of the colonies from the Penobscot to the Savannah without resources, and ignorant of the language of the people among whom they were cast excepting in South Carolina, where they received great kindness from the Huguenot families there. They abhorred the almshouse, and dreaded servitude in English families. They yearned for their native land with sadness as intense as that of the Hebrews on the borders of the rivers of Babylon and many wandered through the forests to Louisiana and Canada - men, women and children - sheltered by bushcamps and partaking of the hospitalities of the Indians, that they might rest under French dominion. Some families actually went to sea in open boats, to find their way back to Acadie, and coasting along the shores to New England, were there met by orders from Nova Scotia to stop all returning fugitives.

Many touching stories are told of parents seeking and finding children of children seeking and finding parents, and of the wanderings of lovers in search of each other, and of unexpected meetings. This portion of the history of these captive exiles lends beauty and pathos to many a page of Longfellow's *Evangeline*. When I was in Montreal, many years ago, the following well-authenticated story was told to me: A beautiful maiden, daughter of a wealthy citizen of Grand Pre, was to be married in the church there, to a son of the local magistrate of that village, on the day when Winslow pronounced the doom of the colony. They were dressed for the nuptials that were to be celebrated immediately after the conference with the English officers, in the presence of the old and young men and lads of ten years, there assembled. Alas the young man was among the prisoners then made and doomed to perpetual exile. As he passed to the ship in the sorrowful procession, he kissed the kneeling, weeping, heart-broken maiden, and said hurriedly: Adele, trust in God and all will be well. He was landed at the city of New York, and made his way to the St. Lawrence, where he became a trader with the Indians. The maiden and her mother followed a fortnight later, and were also landed at New York. They accepted the hospitalities of a Huguenot family far up the Hudson River. Soon afterward a band of Mohawks,

because of some affront, made a raid into the settlement, and the maiden was carried away captive by an old chief who led the band, into the deep wilderness of the Saeondaga.

Meanwhile Jean Baptiste Le Coeur, the young Acadian, had never lost his faith in the prophecy of his heart at parting, that he and Adele would meet again and be happy. He was now trading with some Mohawks at the French mission at Crown Point. One of the young barbarians told him that a beautiful French girl, the captive of an old chief who treated her tenderly as a daughter, was then in the Scarron (Schroon) Valley. Le Coeur was instantly impressed with the belief that she was his lost Adele. He accompanied the young Mohawk to the borders of Scarron Lake, where he found the lodge of the chief. As he approached it, in the shadows of the forest, he saw a young woman, with her back toward him, sitting on a mat at the door of the wigwam feathering some arrows. On her head was a French cap. Her neck was fair. He approached her gently. Their eyes met. The maiden sprang from the mat, and uttering a wild cry of Jean! she fell, fainting, in her lover's arms. It was a moment of supreme joy. The prophecy of Le Coeur's heart was fulfilled. The old chief touched with mercy and compassion, gave away his pale-faced daughter before the altar at Crown Point, where the affianced at Grand Pre were married by a revered priest of the beloved church, in the bosom of the wilderness. Descendants of Jean Baptiste and Adele now occupy a high social position in Montreal.

The English officials pursued the smitten Acadians with a rod of hatred after their expulsion. When Lord Loudon was commander-in-chief of the British forces in America, some of the Acadians, settled in Pennsylvania, ventured to address a respectful petition to him. The cold blooded earl, offended because the document was in the French language, brutally seized five of the leading men who signed the petition, and who had been persons of wealth and distinction in Nova Scotia, and sent them to England with a request that, to prevent their being troublesome in the future, they should be consigned to hard service as common sailors in the British navy. The king appears to have approved the measure and the Lords of Trade, when the exodus from and the desolation of Acadia was completed, congratulated the British monarch - the profligate Hanoverian - that the zealous endeavors of Lawrence [governor of Nova Scotia] had been crowned with entire success." The annals of the most barbarous nations can afford nothing more exquisitely cruel than the treatment these poor people received from their English conquerors. We have been true to our religion and to ourselves, yet nature appears to consider us only as objects of public vengeance," said some of them who remained in Nova Scotia, sadly in, in a petition to the local government for relief.

During these movements in the East, the expedition against Fort Du Quesne had begun and ended. Braddock, sanguine and dogmatic, had written to Newcastle from Williamsburgh, that he should be beyond the Alleghanies before the close of April. In an interview with Dr. Franklin at Frederick, Maryland, he told the statesman, in a boastful manner, what he should do elsewhere in America, after he had captured the Ohio fort. He saw no serious obstacles in his way. The philosopher, seeing how shallow was the general's knowledge of the impediments before him, ventured to say at the commander's dinner-table that the mountains were hard to pass with troops and their supplies, and that the Indians were dexterous in laying and executing ambushes. The

savages," said Braddock haughtily, may be formidable to your raw American militia upon the king's regulars and disciplined troops, it is impossible they should make any impression." This remark was a key to the secret of his subsequent misfortunes.

The army for the recovery of Fort Du Quesne assembled at Alexandria. Colonels Dunbar and Sir Peter Halket were Braddock's chief lieutenants. There Colonel Washington, who had been invited by Braddock to join his military family as aid, and retain his title, and had agreed to accept the position, but as a volunteer only, had his first interview with the general. The young Virginian joined the army at Will's Creek (Cumberland) in May, where it had been detained by lack of horses and wagons for transportation, which Dr. Franklin, when called upon, promptly supplied from Pennsylvania. The whole force gathered there, regulars and provincials, each in about equal numbers, was two thousand men. Braddock looked upon the latter with contempt, and wrote to ministers that he did not expect much from them because they had little courage or goodwill." In his petulance because of frequent breaches of promise on the part of contractors, he charged the whole American people with a want of ability, honor and honesty, and raved at times like a madman. Washington found him, as he wrote to William Fairfax, incapable of arguing without warmth, or giving up any point he asserts, be it ever so incompatible with reason or common sense."

The distance from Cumberland to Fort Du Quesne was about one hundred and thirty miles. At the close of May, five hundred pioneers were sent forward to clear the pathway and collect stores at Fort Necessity but the main army was not ready to move until the 10th of June. This delay gave the French time to gather their barbarian allies and well-prepare to receive the English. Washington was impatient and at the middle of June, he ventured to advise Braddock to detach a part of the army in light marching order, with the artillery, and send them forward, leaving the remainder to move more slowly. The general consented, and with twelve hundred men under Sir Peter Halket, he pushed forward on the 19th of June. The provincials in the advance were entrusted to the command of Washington, and were eager to press on, but were restrained by the regulars and it was the 8th of July before the advanced division of the army reached the forks of the Monongahela and Youghiogany rivers, where they rested until the morning of the ninth. They were then about a dozen miles from Fort Du Quesne.

The English forded the Monongahela on the morning of the 9th of July, and advanced along its southern shores. Washington knew the perils of their situation, for the troops were disposed in solid platoons, after the fashion of European tactics. He ventured to demonstrate with Braddock and advise him to dispose his army in open order, and employ the Indian mode of fighting in the forests. The colonel was silenced by the general angrily saying, What a provincial colonel teach a British general how to fight!"

The army moved on, re-crossed the Monongahela to the north side, and were marching in fancied security on the part of the regulars at about noon on that hot July day, when they were suddenly assailed by volleys of bullets and clouds of arrows on their front and flanks. They had fallen into an ambush against which Washington had vainly warned the haughty general.

De Beaujeu, the commander of a party of less than three hundred French and Canadians, and little more than six hundred Indians, had been sent from the fort by Contrecoeur to meet the advancing English. They came upon the latter sooner than De Beaujeu expected, but the ambush was quickly and skillfully formed. He fought bravely and fell in the first deadly onslaught between the combatants. The suddenness of the attack and the horrid war-whoop of the Indians, which the regulars had never heard before, so frightened them that they were disconcerted and thrown into confusion; and nothing saved the little army from total destruction or capture but the more skillful maneuvers of the provincials under Washington, who fought as the Indians did.

The British officers behaved nobly and did all in their power to encourage their men, until they were disabled but the regulars soon became unmanageable. Braddock, seeing the peril, was in the front of the fight rallying his recoiling troops, and inspiring them with what courage he might by his own example. For more than two hours the battle raged. Of the eighty-six English officers, sixty-three were killed or wounded among the former was Sir Peter Halket. One-half of the private soldiers was also killed or wounded. All of Braddock's aids were disabled and Washington alone was left unhurt, to distribute the orders of the general. Braddock had five horses shot and disabled under him, and finally a bullet entered his body, and he, too, fell mortally wounded. So bravely did the provincials maintain their ground that they were nearly all killed. Of three Virginia companies, only about thirty men were left alive. The dastardly behavior of those they call regulars," Washington wrote to his mother from Cumberland, exposed all others that were inclined to do their duty to almost certain death and at last, despite of all the efforts of the officers to the contrary, they ran, as sheep pursued by dogs, and it was impossible to rally them."

Washington, perceiving that the day was lost - his dying general carried from the field, and the British regulars running for their lives - rallied the provincial troops, and gallantly covered the retreat. The French and Indians did not follow. Colonel Dunbar, in the rear, received the broken army on the 12th of July. Then they all fled first to Fort Cumberland, which was abandoned, and thence marched to Philadelphia. Washington and the southern provincials went back to Virginia; and so ended the second expedition of the campaign of 1755.

The British had left their cannon and their dead on the battle-field; and the body of Braddock, from which life had departed three days after the conflict, was buried in the forest more than fifty miles from Cumberland. It was borne to the grave and interred by torch-light on the evening of the 15th of July, when Washington, surrounded by sorrowing officers, read the impressive funeral service of the Church of England. That grave may be seen near the National Road, between the 54th and 55th milestones.

The protection of Washington from harm during that battle was wonderful. I luckily escaped without a wound," he wrote to his mother, "though I had four bullets through my coat, and two horses shot under me." At one time an Indian chief singled him out for death by his rifle, and directed his followers to do the same. Fifteen years afterward, when Washington was in the Ohio country, that chief traveled many a weary mile to see the man at whom he said he had fired more than a dozen fair shots, but could not hit him. We felt that some Manitou guarded your life," said

the chief and we believed you could not be killed." By the all-powerful dispensations of Providence," Washington wrote to his brother John Augustine, I have been protected beyond all human probability or expectation. Death was levelling my companions on every side." At Cumberland, he heard a circumstantial account of his death, and his "dying speech." Washington was never wounded in battle.

Governor Shirley was appointed Braddock's successor in the chief command of the British forces in America. The expedition led by him to operate against Forts Niagara and Frontenac was not exposed to great perils nor suffered serious disasters. Nor did it accomplish much. After a very fatiguing march through the wilderness from Albany to Oswego on the southern shore of Lake Ontario, he arrived at the latter place in August, his little army of fifteen hundred men reduced by sickness and dispirited by the news of Braddock's disaster. The Assembly of New York had freely voted men and money for the expedition, and the Six Nations had promised many warriors but on the first of September, not more than twenty-five hundred able-bodied men were in camp at Oswego.

The energetic Shirley was not disheartened. There was a small, dilapidated fort at Oswego. He at once began to strengthen the post by erecting two stronger forts, one on each side of the Oswego River, which there enters the Lake between high banks. Fort Pepperell (afterward Fort Oswego), on the west side, had a strong stone wall, with square towers Fort Ontario on the east was built of huge logs and earth. Shirley also constructed vessels to bear his troops over the bosom of the Lake to their future destination. But reinforcements did not come. He waited all through September. Storm after storm swept over the Lake, threatening any flotilla that he might launch upon it with great peril, if not actual disaster. The breath of approaching winter began to be keenly felt, and, disappointed, he was compelled to abandon the expedition for a season. Leaving seven hundred troops to garrison the fort, the general marched back to Albany with the remainder, where he arrived late in October. There he made vigorous preparations for reinforcing and supplying the garrison at Oswego, for the Marquis de Montcalm, a distinguished French soldier, was then governor of Canada, and would be likely to pursue aggressive measures the following spring. Colonel John Bradstreet was appointed commissary-general at Albany, with Captain (afterward General) Philip Schuyler as his chief assistant. Then Shirley returned to Massachusetts, leaving William Alexander (Lord Stirling), his secretary, in New York.

In the meantime, the expedition entrusted to the leadership of William Johnson (then swaying immense influence over the Indians in the Mohawk Valley), and destined for wresting the strong post of Crown Point, on Lake Champlain, from the French, had been more successful than either that of Braddock or Shirley, although it did not achieve its intended object. His army consisted chiefly of New England militia and Indians - the former from Connecticut, Massachusetts and New Hampshire, and the latter from the Mohawk Valley. These were assembled at Albany, the New England men having Phineas Lyman for their chief commander. There were also some New York and New Jersey militia, with the army, when, in July, it was at the head of small-boat navigation on the Hudson, fifty miles above Albany, and numbering about six thousand able-bodied men. Among them were Putnam and Stark, who afterward became famous leaders in

the War for Independence.

General Lyman was a graduate of Yale College, an acute statesman and brave soldier. While waiting on the banks of the upper Hudson for Johnson to join him, he employed his troops in the construction of a strong fort of logs and earth, which they insisted upon naming Fort Lyman, in honor of their beloved commander. When Johnson came in August, he deprived the general of that honor, and gave it the name of Fort Edward, in compliment to a royal scion. That act has been attributed to the jealousy of Johnson, who doubtless did not relish the popularity of his lieutenant but it is more probable that it was done to gratify his passion for flattering royal persons. He took command of the troops on his arrival, and with the main body he marched to the head of a beautiful lake, more than a dozen miles distant, which the French had named Holy Sacrament, but which Johnson, in compliment to the king, named Lake George. There he formed a camp for five thousand men, protected on the north by the lake and on both flanks by impassable morasses and tangled forests. There the troops sat down in idleness waiting for the coming of wagons with stores and cannon for the expedition. It was a beautiful summer camp; but no trench was dug, no mound was raised, as a defence against an active and skillful foe. The three hundred Mohawk warriors, under King Hendrick," were allowed to roam the forests at pleasure, for Johnson did not dream that a French army, like a wily serpent, was stealthily moving toward his camp.

While the English provincials were thus making feeble preparations for seizing Crown Point, the French had been busy in the execution of measures to defend that post. Vaudreuil, the governor of Canada, had called to arms every able-bodied man in the vicinity of Montreal, and invited laborers from below to come up and gather the harvests. With these recruits, sixteen hundred strong, seven hundred regulars and as many savages (almost half of them emigrants from the Six Nations), the French were prepared to defend their fortress at Crown Point. A greater portion of them were placed under the command of the Baron Dieskau, who proceeded to the head of Lake Champlain, whence he intended to make a swift march upon Fort Edward, and capture it and its garrison by surprise. Four days, as secretly as possible, he traversed the woods, when it was found that his guides had lost their way, and that he was in the path to the head of Lake George, and four miles from Fort Edward. Indian scouts had told his savage followers of the great guns at Fort Edward, and that there were more in the camp on the borders of the lake. The barbarians, afraid of cannon, refused to attack the fort, but were willing to fall upon the exposed camp at the head of the lake.

-continent. When the citizens, by the lips of the mayor, pleaded their rights as Englishmen, his lordship, with a vulgar oath, said to the magistrate: If you don't billet my officers upon free quarters, this day, I'll order here all the troops under my command, and billet them myself upon the city." A subscription for the purpose was raised, the officers were billeted on the city, and Loudon won his first victory. A similar contest, with a similar result, occurred in Philadelphia, and there Loudon won his second victory.

In the meantime the provincials had won a substantial victory on the Alleghany River, in

Pennsylvania. We have observed that Dr. Franklin had superintended the construction of a chain of small posts along the Pennsylvania frontier, from the Delaware to the borders of Maryland, as a defence against hostile Indians. But the savages continued to harass the remote settlements, until, on the borders of Pennsylvania and Virginia, almost a thousand white persons had perished, and much property had been plundered or destroyed. Franklin was satisfied that he was not in his right place, and abandoned military life forever. Colonel John Armstrong, of Pennsylvania, took his position, and with three hundred men, accompanied by Captain Mercer of Virginia, he proceeded, in the night of the 7th of September, 1756, to chastise the hostile Delawares at Kittaning, one of their principal villages (now in Armstrong county), within thirty-five miles of Fort Du Quesne. Stealthily, Armstrong and his followers passed the Alleghany Mountains and took post not far from Kittaning, at midnight, when the savages were sleeping without a dream of danger near. It was a warm night, and some were reposing in the open air on the outskirts. Upon them the provincials came at dawn. The savages sprang to their feet, gave the war-whoop, and flew to the village, closely pursued by the provincials, who killed many of their chiefs and utterly destroyed the town. Not a vestige of a dwelling was left. The chastisement was effectual. It inspired the Delawares with such fear of the white man, that they were completely humbled, and the frontier had peace. So ended the campaign of 1756. The chief results of that campaign were a gain of strength and territory by the French two victories in battle over the common foe by the provincials, and the bloodless conquest of the unarmed English cities of New York and Philadelphia by Lord Loudon and his British regulars, the spoils of his victories being free food and lodging for a few months and the contempt of the people. Fifteen hundred volunteers and drafted militia, under Colonel Washington, were placed in stockades during the ensuing winter, for the defence of the frontiers of Pennsylvania and Virginia; and on the western borders of the Carolinas, several military posts were established as a protection against the Cherokees and Creeks, and their neighbors, among whom French emissaries were at work.

Military Events at the Head of Lake George - Honors Wrongly Bestowed - An Opportunity for Success Lost - Perfidy of the British Cabinet - The Prophecy of John Adams and Its Fulfillment - Plans for the Campaign of 1756 - Franklin in Military Life - Washington's Embassy to Boston - His Love Affair in New York - Lord Loudon Commander-in-Chief - Abercrombie at Albany - His Folly and Supineness - Bradstreet's Expedition - The French Capture Oswego - Loudon's Imbecility Illustrated - The Results of the Campaign of 1756 - Loudon's Ignoble Victories.

IT was a beautiful evening, the 7th of September, 1755-when an Indian scout came to Johnson's camp, at Lake George, with the startling news that a French army had been seen landing at the head of Lake Champlain, near the site of the village of White Hall. This messenger was followed by another at midnight, with the more alarming news that French and Indians were making a rapid march toward Fort Edward. Early in the morning a council was held, and it was proposed to send out a small party in three divisions to meet the foe. The shrewd Mohawk sachem and chief King Hendrick, said If they are to fight, they are too few if they are to be killed, they are too many." Then taking in his hands three strong sticks, he said Put them together and you cannot break them take them separately and you can break them easily." His logic was apparent, and it was approved by the general, who ordered twelve hundred men in one body to hasten to the relief of Fort Edward. Colonel Ephraim Williams, of Massachusetts, was the chosen commander of the expedition, and with him went Hendrick and two hundred warriors of the Six Nations. Before their departure the white-haired chief whose snowy locks covered his shoulders, mounted a gun-carriage and harangued his braves with his powerful voice, in eloquent words, exhorting them to be strong and true to their allies. A provincial officer, Lieutenant-Colonel (afterward General) Pomeroy, who was present, declared that while he could not understand a word of the old warrior's language, such was the power of his voice, his gestures and his whole manner, that his speech affected him more deeply than any other he had ever heard.

The detachment had marched in fancied security to a defile at Rocky Brook, about four miles from camp, when they were assailed in front and flank by musketry and arrows. The French and Indians, who had been misled toward Johnson's camp, apprised by scouts of the march of the English, had formed an ambush in semi-circular shape, the centre cut by the path along which Williams' detachment was moving. The latter had fallen into the fatal trap. The attack was sharp and destructive. Williams and Hendrick were the only mounted men, and both were killed at the first volley. Williams fell dead, and Hendrick died soon afterward. The smitten detachment fled back to camp in a quick but orderly retreat conducted by Nathan Whitney, of New Haven, Connecticut. Colonel Williams was then about forty years of age. While he was passing through Albany on his way to join Johnson, he had made a will, by which he bequeathed his moderate estate to found and maintain a free school in Western Massachusetts. Such was the foundation of Williams' College, at Williamstown. When Hendrick's son heard of the death of his father, he placed his hand over his heart and said My father still lives here. The son is now the father, and stands here ready to fight." The travelers on the highway between Glenn's Falls and Lake George may see a monument near the road, erected to the memory of Colonel Williams, not far from the

spot where he fell.

With strange apathy Johnson had made no preparations for the defence of his camp. It was not until Williams had marched on the morning of the 8th, that he began to construct some breast works of felled trees, and placed two or three cannons upon them. The firing at the ambush had been heard at the camp, and three hundred men were sent to the relief of the first detachment. These met the flying provincials, and joining in the retreat, they all rushed pell-mell into the camp, pursued by the French and Indians, who had cast many of their slain foes into a slimy pool which is still known as Bloody Pond."

Dieskau intended to rush into the camp with the fugitives and capture it, but his Indians, fearing cannon, halted on the crest of a hill from which they could see the dreaded great guns. So likewise did the intimidated Canadians. Dieskau, whose armorial legend was, "Boldness wins," pressed forward with his regulars, and at near noon a battle began. The French had no artillery, and their musket-balls had no effect upon the breastworks. The Canadians and Indians tardily took positions in sheltered places on the flanks, and did little service. The New Englanders had only their fowling pieces. There was not a bayonet among them. They were good marksmen, and kept their enemies at bay during a conflict of more than four hours. Fortunately for the provincials, Johnson was slightly wounded in the thigh at the beginning of the action, and retired to his tent. He was not a skillful and experienced soldier like General Lyman who had just joined him, and into whose hands the conduct of the battle now fell. Lyman directed it with skill and bravery, until a greater portion of the French regulars were killed or wounded. A bomb-shell thrown by a howitzer from the provincial camp among the Canadians and savages had made them fly in terror to the woods, when the provincials, leaping over their breastworks, and clubbing their muskets, scattered the living remnants of the assailants. Dieskau, who had been three times wounded, would not retire, but sat upon a stump of a tree, with his saddle by his side, faint from loss of blood, when, from a musket discharged by a renegade Frenchman, he received an incurable wound. He was carried into the camp, where he was tenderly treated by General Johnson and his family. This kindness inspired the warmest gratitude in the breast of the baron, who, before he left America for France, presented an elegant sword to Johnson in token of that sentiment. The baron died in France, from the effect of his wounds in 1757.

This repulse was lauded in England as a great victory. Johnson had very little to do with it, personally. It was the work of General Lyman and his New England troops. Yet the services of Lyman were overlooked. Johnson did not even mention him in connection with the battle, in his despatch. The king created Johnson a baronet, and parliament voted him thanks and the sum of twenty-five thousand dollars wherewith to support the dignity of the title. The recipient being a nephew of Admiral Sir Peter Warren, the influential friends of that officer, at court, secured the honor for Johnson.

For reasons inexplicable just now, the provincial commander remained at the head of Lake George, instead of pursuing the shattered remnant of Dieskau's army and driving the French from Ticonderoga, which they were fortifying. It was possible also, immediately after the panic

produced by the repulse at Lake George, to drive them from Crown Point, the ultimate object of the expedition. General Lyman and others urged Johnson to pursue. The Mohawks were burning with a desire to be revenged for the loss of their beloved chief; and the Oneidas were willing to join them if immediate pursuit should be made. But Johnson refused to move. The Oneidas, three days after the battle, left him and returned home and the only harm which the French and their allies experienced after leaving the lost battle-field was a severe smiting by some New Hampshire militia under Captain McGinnes, and a small body of New York militia under Captain Folsom, who were making their way to the Lake from Fort Edward. They compelled the French to leave all their baggage and fly for their lives. In the affray McGinnes was mortally wounded, and his name was added to the list of the provincials, more than two hundred in number, who were killed that day. There were almost a hundred wounded. Among the four hundred lost by the French was M. de St. Pierre, the Knight of St. Louis, and the commander to whom Washington was sent on a mission at the close of 1753.

Johnson lingered at the head of Lake George all the autumn, and employed his men in the construction of a fort which he named William Henry. When the breath of approaching winter came from the north, he dismissed the New England militia to their homes, and leaving garrisons at Forts Edward and William Henry, he retired to his fortified stone mansion on the banks of the lower Mohawk, which he called "Fort Johnson." It is yet standing not far from the village of Amsterdam. So ended military operations in America in the year 1755.

France and England were still at peace with each other. The British cabinet was then controlled by absurd men, who were likely to embroil the nation in useless war at any time by their folly or by acts deserving a harsher name. They did so by rank perfidy. Secret orders were suddenly issued to the commanders of all British men-of-war to seize all French vessels, public or private. The British king's share of the spoils gathered under the operations of this order was three and a half million dollars and eight thousand French prisoners were made captives. What has taken place," indignantly exclaimed a French minister, is nothing but a system of piracy on a grand scale unworthy of a civilized people." He was right. Never," said the French monarch, "will I forgive the piracies of this insolent nation and in an autograph letter to the British king, he demanded full reparation for the insults offered to the French flag, and the injury done to the French people. But Great Britain then arrogantly claimed, and with reason, that she was 'Mistress of the Seas and Thomson had lately uttered the sentiments of the proud British nation in his stirring song, Britannia rules the Waves," saying boastfully; "When Britain first at Heaven's command, Arose from out the azure main, This was the charter of the land, And guardian angels sung the strain; Rule Britannia, Britannia rules the waves! Britons never shall be slaves." The exploit of the British ships-of-war in capturing so many French vessels was boasted of in the British parliament, and the people, rejoicing in their strength, were almost unanimously in favor of war with the French. That spirit prevailed for three-quarters of a century until the mistress ship of the seas was successfully contended for by the Americans in the War of 1712-15.

The home governments of the two nations now took up the quarrel. The campaign of 1755 had assumed all the features of regular war between their respective subjects. When the flowers

bloomed in the spring of 1756, the British ministry and people had resolved to make war, and the French were compelled to accept the issue. On the 17th of May, 1756, a declaration of war went forth from the British cabinet. This action was reciprocated by the French cabinet on the 9th of June following. The die was then cast. The peace solemnly guaranteed at Aux-la-Chapelle was ruthlessly broken to gratify a lust for power. While these two potential nations had been preparing, for several years, for the impending strife for dominion, the thoughtful men among the English-American colonists, who loved liberty more than power, had been musing upon the glorious probabilities of their future. John Adams, a school-teacher in Worcester in 1755, in a letter to Nathan Webb, wrote: "Mighty states and kingdoms are not exempted from change." Soon after the Reformation, a few people came over into this new world for conscience sake. This apparently trivial incident may transfer the great seat of empire into America. . . . If we can remove the turbulent Gallies, our people, according to the exactest calculations, will, in another century, become more numerous than in England itself. The united force of Europe will not be able to subdue us. The only way to keep us from setting up for ourselves, is to disunite us." This dream became a prophecy. Less than thirty years afterward, the dreamer stood before the monarch of England, as the representative of an American Republic where, only ten years before, were flourishing English colonies. And just a century after that dream, the number and strength of the people here exceeded the calculation of the dreamer. The population was more than double that of England; and while his country was fiercely torn by a savage civil war, its government defied the powers of Great Britain, France, Spain, the Papal States and other European nations whose rulers were the enemies of our free institutions. In the utterance of that defiance, a grandson of John Adams bore a conspicuous part. That government lives to enjoy the respect of the civilized world. In 1765, Lord Kames uttered a prophecy similar to that of young Adams.

Shirley, the commander-in-chief of the British forces in America, called a convention of royal governors at New York, late in 1755, when a plan for a splendid campaign in 1756 was arranged. It included the capture of Quebec, Forts Du Quesne, Frontenac, Niagara, Detroit, and other French posts in the northwest. They again urged the parliament to take vigorous measures for compelling the colonists, by a tax, to furnish a general fund for military purposes in America, and that body was disposed to do so, when the question assumed minor importance in the presence of grave dangers. The Indians were threatening the frontier settlements of Virginia, Maryland and Pennsylvania with desolation; and very soon whole families were flying back to the older settlements, leaving their dwellings and crops to the mercy of the savages. The authorities of those colonies took action to stay the flood of desolation surging upon their frontiers. Those of Virginia appointed Washington commander-in-chief of all her forces those of Pennsylvania gave Dr. Franklin the commission of colonel, with instructions to raise troops and construct a line of forts or block-houses along the frontier, which he did. Those of Maryland joined in measures for the common defence. But the selfish claims of the proprietaries of Pennsylvania, and the absurd and arrogant assumption of inferior officers commissioned by the crown, to superiority over provincial officers of much higher rank, stood in the way of efficient action. Delays were dangerous to the public good, and Washington was chosen by his brother provincial officers to go as an ambassador to General Shirley to seek a removal of the latter-named difficulty. Early in the month of February, 1756, he set out on a journey to Boston, five hundred miles distant, on

horseback, accompanied by Captains Mercer and Stewart, the former being his aide-de-camp. His fame had preceded him, and he received much attention in the several cities through which he passed. His mission to Shirley was successful, and at the end of seven weeks after his departure, he returned to Williamsburgh with a satisfactory arrangement for the future.

While he was on his way to Boston, Colonel Washington tarried a little in New York, where he was the guest of Beverly Robinson, son-in-law of the Lord of the Phillipse Manor on the Hudson. There he met Mrs. Robinson's sister Mary, who was young, vivacious, accomplished and beautiful. This maiden's charms made a deep impression on the mind and heart of the young hero. Her musical culture was displayed by the singing of sweet songs accompanied by a spinet and in every aspect of her character, she was a charming young lady. The day-dreams of the young Virginian, while on his way to Boston and back, were of her; and at their second meeting at Mr. Robinson's (where he was a guest on his return), he was still more deeply impressed with the charms of the heiress of money and broad acres. He left her with a resolution no doubt formed, but not expressed, to offer her his hand and heart. But a rival soon appeared in the person of Colonel Roger Morris, Washington's companion-in-arms in the field when Braddock fell, and he won the fair lady and her splendid fortune. All but the lady was lost in the fires of the Revolution that burst out twenty years later, for Morris was a Tory and so were his wife's family, and their property was swept away by remorseless confiscation. The colonel and his family were compelled to fly from the elegant mansion built on Harlem Heights (yet standing) with the money of Mary Phillipse, and it was used as headquarters by her Virginia lover in the autumn of 1776.

Shirley did not long remain commander-in-chief. The Earl of Loudon, a cold-hearted, bilious, indolent and inefficient peer, who was a zealous advocate of the prerogatives of the crown and despised republicanism, was appointed the successor of Shirley, and governor of Virginia. As an attempt to establish centralized royal government in America had failed, it was now determined to place the colonies under absolute military rule. The commission of Loudon and his instructions, carefully drawn by the Chancellor of England, did establish such rule throughout the continent, making it independent of and superior to the authority of the royal governors. This commission, so contrary to the spirit of the British constitution, remained a precedent for others until the general revolt of the colonies.

Procrastination marked every step of the campaign on the part of the English. Loudon did not send General James Abercrombie (his lieutenant) with troops until near the close of April. The ship with money was not dispatched until the middle of June, at which time Abercrombie arrived and the commander-in-chief did not reach our shores until past midsummer. The plan of the campaign called for ten thousand men to attack Crown Point six thousand to proceed against Niagara three thousand against Fort Du Quesne, and two thousand to cross the country from the Kennebec to the Chaudiere a feat performed by Arnold and a few followers, twenty years afterward - to attack some French settlements in Canada. Many of those destined for Crown Point and Niagara were already at Albany when Abercrombie arrived. He was not remarkable for either vigor or forethought. He loved his ease, and was a great stickler for the assertion of royal authority and instead of stimulating the provincials with hope and patriotism, he depressed them

with disappointment and disgust. Seven thousand troops were there, under General Winslow, impatient to be led to Lake Champlain and another party were anxiously awaiting orders to hasten to Oswego, for rumors came down through the forests from the St. Lawrence that the French were about to move in large force against the English frontiers.

But the Scotch general seemed more intent upon asserting royal authority by forcing the colonists to have the regular troops quartered upon them, than in pressing forward against the enemy; and he cast a firebrand into the army at Albany (composed of regular and provincial troops, about ten thousand strong), by compelling the officers of the latter to obey the commands of those of the former of equal rank. He and Mayor Sybrant Van Schaick had many stormy interviews about the billeting of regulars upon the people. On one occasion, there was an open quarrel between the lean Scotchman and the burly Dutchman, when the mayor, terribly excited, shook his fist at the general and exclaimed: "Go back again with your troops we can defend our frontiers ourselves." The general triumphed and he sent to his superiors, at a time when Crown Point should have been in his possession, and the garrison at Fort Niagara his prisoners, a shout of exultation because of his victory, saying: In spite of every subterfuge, the soldiers are at last billeted upon the town." This victory cheered the hearts of the Lords of Trade, who now believed that the absolute submission of the colonies was an event near at hand.

Abercrombie loitered in Albany, waiting for the arrival of Loudon, when he predicted mighty things would be done. He would go neither backward nor forward, but wasted strength there in constructing useless fortifications, when the best defence for that city would have been the security of the frontier posts. Meanwhile the brave and active Colonel John Bradstreet arrived from Oswego with the startling news that the French and Indians were threatening the forts there, and that a strong force was actually moving at the foot of Lake Ontario for the capture of the post. But Abercrombie was unmoved, and the ten thousand men, chafing with impatience and suffering from sickness, were kept at Albany.

Bradstreet had gained laurels at Louisburg eleven years before, and had been made lieutenant-governor of St. Johns, Newfoundland. Knowing his worth, Shirley had called him into active military service, and sent him from Albany, with a competent force, to provision the garrison at Oswego. With two hundred provincial troops and forty companies of boatmen, he crossed the country by way of the Mohawk River, Wood Creek, Oneida Lake and the Oswego River, and placed in the fort at Oswego provisions for five thousand troops for six months. He was accompanied by Captain (afterward General) Schuyler, as commissary.

Bradstreet had observed that his descent of the Oswego River had been watched by French and Indian scouts. He had gone only nine miles up that stream on his return, when he was attacked by a strong party of French regulars, Canadians and savages. The provincials drove some of them from an island in the river, and there Bradstreet made a defensive stand. One of the Canadians, too badly wounded to fly with his companions, remained, and a boatman was about to dispatch him, when young Schuyler saved his life. Soon afterward Bradstreet abandoned the island and drove the assailants back into the forest. Owing to accident, there was only one bateau

left at the island when the colonel ordered his men away. It was hardly sufficient to carry the commander and the little party with him. The wounded Canadian begged to be taken in, but he was refused. Then throw me into the river," he cried, and not leave me here to perish with hunger and thirst." The heart of Captain Schuyler was touched by the poor fellow's appeal, and handing his weapons and coat to a companion-in-arms, he bore the wounded man to the water, swam with him across the deep channel, and placed him in the hands of a surgeon. The soldier survived and nineteen years afterward, when Schuyler, at the head of the northern army of the Revolution, sent a proclamation in the French language into Canada inviting the inhabitants to join the patriots, that soldier, living, near Chambly, enlisted under the banner of Ethan Allen, that he might see and thank the preserver of his life. He went to Schuyler's tent, on the Isle aux Noix, and kissed the general's hand in token of his gratitude.

After a sharp fight in the forest near the Oswego River, Bradstreet dispersed his motley foe, and hastened to Albany with the startling news just mentioned. Meanwhile the more active French had been preparing for an attack on Oswego. So early as March, three hundred Frenchmen, led by Indian guides, had made their way on snow-shoes along the bases of the Adirondack Mountains, on the north and west, to the vicinity of Oneida Lake, destroyed a small English stockade there, called Fort Bull, and returned with thirty prisoners. Late in May, eight hundred men under De Villiers, pushed forward to Sandy Creek, at the eastern end of Lake Ontario, and from that party went the detachment that assailed Bradstreet. At about the same time, Field Marshal the Marquis de Montcalm arrived at Quebec as governor-general and commander-in-chief. He was small in stature, but very energetic in mind and body. He instantly surveyed the field of his future operations. By journeying night and day, he penetrated to Ticonderoga, where the French had built Fort Carillon. He saw the value of that position, as well as Crown Point, and hastening back to Quebec, he prepared an expedition, secretly, against Oswego. At the head of three regiments, he ascended the St. Lawrence to Fort Frontenac, and was joined at Montreal by a large body of Canadians and savages. With this force, about five thousand in number, he crossed the lake in bateaux and canoes, and anchored in what is now Sackett's Harbor, early in August.

Fort Oswego, on the west side of the river, was a strong work. Fort Ontario, on the east side, was weaker, and was considered an outpost to the other. Against Ontario, Montcalm led his forces. Behind Four-Mile Point, a long wooded cape eastward of Oswego, he landed his troops, unobserved by the English scouts, and was in full march through the woods before he was discovered. Colonel Mercer, the commander of the little garrison of one thousand men, at Ontario, prepared to receive the foe, who invested the fort in full force, with thirty pieces of cannon, some of which had been taken from Braddock the year before. Finding sharp resistance, Montcalm began a regular siege, and on the 14th of August, when he was about to storm the works, Colonel Mercer, who saw that further resistance would be useless, agreed to surrender the post to the French. One hundred and twenty pieces of artillery, six vessels of war, three chests of coin and a large quantity of ammunition and stores, were the spoils of victory. To allay the jealousy of the Six Nations, Montcalm destroyed both forts and the priests who accompanied him erected a cross, on which they placed the words, "THIS IS THE BANNER OF VICTORY."

Close by it they raised a wooden column, on which was placed the arms of France and the inscription: "BRING LILIES WITH FULL HANDS." Then Montcalm descended the St. Lawrence, with his prisoners, and sent the captured English flags to decorate the churches of Montreal and Quebec. The destruction of the forts at Oswego was an admirable stroke of policy on the part of the French commander. It pleased the savages, and, as he hoped, caused them to assume a position of neutrality toward the belligerents. French emissaries soon seduced the Oneidas, Onondagas, Cayugas and Senecas from the British interest.

Loudon arrived just in time to hear of the loss of Oswego, as the first military news that reached him. He congratulated the country because of its escape from greater disasters. If the attack had been made on the provincials alone," he said, it would have been followed with fatal consequences." He would not allow any merit in the character of a provincial soldier. For them he had nothing but contemptuous words. Notwithstanding the provincials had saved the remnant of Braddock's army, in spite of the cowardice of the regulars and the obstinacy of their general; had conquered Acadia defeated Dieskau, and had performed nearly all of the really useful military service against the French, he praised the British regulars and disparaged the Americans. Pleading the danger of another attack from the French, in greater force, as an excuse for his imbecility, he left the enemy to build a stronger work at Ticonderoga, dismissed the provincials to their homes, and placed the regulars in winter-quarters.

Under his instructions, Lord Loudon demanded of the city of New York, free quarters for himself his officers, and a thousand men. "Your demand is contrary to the laws of England and the liberties of America," said the mayor of the city. Free quarters are everywhere usual; I assert it on my honor, which is the highest evidence you can require," answered the haughty earl. The mayor was firm, and Loudon determined to make New York an example for the rest of the continent. When the citizens, by the lips of the mayor, pleaded their rights as Englishmen, his lordship, with a vulgar oath, said to the magistrate: If you don't billet my officers upon free quarters, this day, I'll order here all the troops under my command, and billet them myself upon the city." A subscription for the purpose was raised, the officers were billeted on the city, and Loudon won his first victory. A similar contest, with a similar result, occurred in Philadelphia, and there Loudon won his second victory.

In the meantime the provincials had won a substantial victory on the Alleghany River, in Pennsylvania. We have observed that Dr. Franklin had superintended the construction of a chain of small posts along the Pennsylvania frontier, from the Delaware to the borders of Maryland, as a defence against hostile Indians. But the savages continued to harass the remote settlements, until, on the borders of Pennsylvania and Virginia, almost a thousand white persons had perished, and much property had been plundered or destroyed. Franklin was satisfied that he was not in his right place, and abandoned military life forever. Colonel John Armstrong, of Pennsylvania, took his position, and with three hundred men, accompanied by Captain Mercer of Virginia, he proceeded, in the night of the 7th of September, 1756, to chastise the hostile Delawares at Kittaning, one of their principal villages (now in Armstrong county), within thirty-five miles of Fort Du Quesne. Stealthily, Armstrong and his followers passed the Alleghany Mountains and

took post not far from Kittaning, at midnight, when the savages were sleeping without a dream of danger near. It was a warm night, and some were reposing in the open air on the outskirts. Upon them the provincials came at dawn. The savages sprang to their feet, gave the war-whoop, and flew to the village, closely pursued by the provincials, who killed many of their chiefs and utterly destroyed the town. Not a vestige of a dwelling was left. The chastisement was effectual. It inspired the Delawares with such fear of the white man, that they were completely humbled, and the frontier had peace. So ended the campaign of 1756. The chief results of that campaign were a gain of strength and territory by the French two victories in battle over the common foe by the provincials, and the bloodless conquest of the unarmed English cities of New York and Philadelphia by Lord Loudon and his British regulars, the spoils of his victories being free food and lodging for a few months and the contempt of the people. Fifteen hundred volunteers and drafted militia, under Colonel Washington, were placed in stockades during the ensuing winter, for the defence of the frontiers of Pennsylvania and Virginia; and on the western borders of the Carolinas, several military posts were established as a protection against the Cherokees and Creeks, and their neighbors, among whom French emissaries were at work.

Chapter XLIV

Character of Lord Loudon - The Condition of England - Pitt Called to the Cabinet - His Dismissal from It - Plan of the Campaign of 1757 - Expedition Against Louisburg a Failure - Imbecility of Lord Loudon - Disgust of the Indians - Their Alliance with the French - Montcalm on Lake Champlain - Stark's Exploits - Fort William Henry Threatened - Capture of Fort William Henry by the French - A Massacre - Cowardice of General Webb - Public Discontent in England - Pitt Recalled to the Cabinet - His Policy and Its Effects - Preparations for the Campaign of 1758.

No better instrument could have been selected by the British government to render that government odious to the colonists than the Earl of Loudon. He was devoid of genius either civil or military. Imperious and undignified in his deportment; quick to threaten but slow to execute; possessing no semblance of public virtue; unsympathetic with any thing noble or generous in human character; always in a hurry and hurrying others, but excessively dilatory in the performance of duties, he excited the disgust, jealousy, dislike and contempt of the colonists. He could not understand how a public officer could be unselfish and honest. When Dr. Franklin urged him to reimburse money which the latter had spent for the public service, the earl told him he could afford to wait, as he had doubtless taken care to fill his own pockets in his public transactions. When Franklin repelled the insinuation by declaring his integrity, the corrupt earl spoke of it as a thing incredible. "I wonder much," wrote Franklin, "how such a man came to be intrusted with so important a business as the conduct of a great doing; but having since seen more of the great world, and the means of obtaining and motives for giving places and employments, my wonder is diminished." Referring to Loudon's hurry and tardiness, a person said to Franklin: "He is like St. George on a sign-post; always on horseback, but never goes forward."

Events equally disgraceful in England and America occurred during the year 1756. Quarrels, scandals, intrigues, corruptions and imbecility had marked the court and administration of the British monarch. The king's mistress governed the realm. Patriots trembled for the fate of their country. Satire and caricature assailed its governing ministers; and Hogarth arose in reputation. The only hope for the future of England, in the minds of thinking men, was given late in the year, by raising William Pitt, the great Commoner, to the dignity of Secretary of State. The English people were with the untitled minister; the English aristocracy were against him. The latter, in power, stood in the way of every wise and generous plan of Pitt. When he proposed to pursue a just and liberal course toward the American colonies, he was met by churlish cavils from the Lords of Trade, and demands for the taxation of the Americans. When he was pressed to recommend a stamp-tax for America, he replied "With the enemy at their back, and British bayonets at their breasts, in the day of their distress, perhaps the Americans may submit to the imposition." Pitt understood the Americans better, and had a clearer conception of justice and its wise policy, than any public man in England. He would not yield his country to the persuasion nor threats of the aristocracy he would not resign the office which he knew the English people desired him to fill; and in the spring of 1757, he was dismissed by the king, with other good members of the cabinet. The government of England was in a state of anarchy for several weeks, and Loudon was making infinite mischief in America.

In January, 1757, Loudon held a council in Boston. The governors of Nova Scotia and New England were there. The earl's behavior was that of an autocrat. His opinions, dogmatically expressed, swayed the council and determined its decisions. Better men acquiesced in his plans in violation of their wiser convictions, because they feared less injury from his imbecility than from his uncontrolled resentment. It was decided to confine the military operations of the campaign to the capture of Louisburg; an object of far less importance to Great Britain and her colonies at that time, than the expulsion of the French from the frontier posts and from Montreal and Quebec. The New England people were disappointed and alarmed, New Yorkers were amazed. Pennsylvanians and Virginians were distressed because of the exposed condition of their frontier settlers to the sanguinary visits of the savages and their allies. Yet the colonists responded generously to calls for men and supplies, and at the first of June, 1757, Loudon found himself at the head of an army of provincials who, alone, were competent, under a good commander, to crush French dominion in America.

The earl resolved to lead the expedition against Louisburg in person. His officers easily foretold the result. Before his departure he made precautionary provisions. He ordered Colonel Bouquet to watch the Carolina frontiers with a few troops. General Stanwix was ordered to guard the western frontiers with two thousand men and General Webb was sent with six thousand troops to defend Forts Edward and William Henry. Washington spent the summer with a few Virginia troops, in skirmishing with Indians and building a fort at Winchester, his headquarters.

The earl was ready for his eastern campaign late in June. Having exasperated the people of the whole country by impressing into the British service, at New York, four hundred men, he sailed from that port with a considerable force, and arrived at Halifax on the 30th of the month. There he was joined by ships under Admiral Holborne and six thousand troops commanded by George Viscount Howe. On the 9th of July he assembled his whole armament, composed of ten thousand soldiers, sixteen ships of the line, and several frigates and transports. It was supposed that an immediate attack upon Louisburg was intended, but the hope was delusive. The troops were landed. They were made to level the uneven ground for a parade; and for almost a month they were employed in the cultivation of a vegetable garden and exercises in sham fights and sieges. The army was dispirited, and the patience of the officers was exhausted. Major General Lord Charles Hay could no longer repress expressions of his indignation. One day while he was sitting under a tree near the seashore, discussing army matters with some fellow-officers, he sprang to his feet, and blazing with indignation, he said, as he pointed toward a noble ship lying near, and to the idle camp not far off "See how the power of England is held in chains by imbecility! Her substance is wasted by indecision With such ships and such men as we have here, led by an energetic and competent commander, Cape Breton and its fortress, and all this eastern region, might have been a part of the British empire a month ago." For these brave words, his lordship was arrested, sent to England and tried by courtmartial, and was acquitted. At that trial, there was a tragical event The President of the Board, while putting a question to Lord Hay, fell from his seat in an apoplectic fit, and died.

Stung by Lord Hay's remarks, Loudon bustled about a few days and embarked his troops as if

for Louisburg. During the delay at Halifax, that fortress had been reinforced, and ships had been added to the French fleet there. A reconnoitering vessel brought word to the earl that his enemy had one more ship than he; so his lordship abandoned the expedition and sailed for New York. The army was amazed and thoroughly disgusted. On the 10th of August, when the fleet had voyaged westward only two days, an express sloop was met. A messenger from her came in haste to Lord Loudon with a despatch, telling him that the French, in large numbers, had closely invested Fort William Henry, on Lake George. The earl immediately sent orders back for troops that he had left behind, to follow him to New York. When he arrived there at near the close of August, he was met with the news that the French were in possession of Fort William Henry and all northern New York. The province was trembling with alarm. That alarm was intensified fourfold when the stupid and stubborn earl proposed to encamp his forces on Long Island for the defence of the continental

For more than a year the English in America had acted so much "like women" that the Indians were disgusted. They admired the different spirit of the French, and warriors from more than thirty nations" were at Montreal at the beginning of the summer of 1757. Governor Vaudreuil told them of glory and plunder surely to be won by alliance with the French. Montcalm danced their wild war-dances with them; he sung their fierce war-songs with them, until their affection for him and enthusiasm for the cause of the French became intense, and they were ready to follow wherever that general might lead. He commanded them to meet his regulars and Canadians at St. Johns on the Sorel, for a voyage over the Lake. They went, in a wild, tumultuous march for Montreal, accompanied by priests who chanted hymns and anthems in almost every Indian dialect. In canoes and bateaux the motley army, led by Montcalm, went up Lake Champlain and landed at Ticonderoga. It was hot July. Under a wide-spreading oak high mass was celebrated, and voices chanting sacred hymns were mingled with the martial music of French instruments. Scouts were sent out and returned with prisoners and scalps. When Marin, who had destroyed the hamlet of Saratoga a dozen years before, came back from the hills near Fort Edward, and pointed to his canoe moored at the shore, in which lay a solitary prisoner and more than forty scalps, the savages set up a yell of exultation that awakened the echoes of Mount Defiance and Mount Independence, then bearing Algonquin names. Very soon the whole body of Montcalm's force moved to the foot of Lake George, for their destination was Fort William Henry, at the head of the Lake. His sailing," wrote Malartie from Montreal, when Loudon departed for Halifax, "is a hint for us to project something on this frontier." The expedition against Fort William Henry was the result of that hint.

During the previous winter, the Rangers commanded by Major Rogers, at Fort William Henry, had not been idle. The active and intrepid Lieutenant Stark (afterward the hero of Bennington), who commanded the Rangers when Rogers was absent, was frequently out, at the head of scouts, watching the foe and striking them a blow now and then near Fort Carillon - a name suggested to the French by the rushing waters of the outlet of Lake George, and which also suggested to the Indians their name of Che-on-de-ro-ga "Sounding Waters" - the origin of Ticonderoga. These Rangers glided over the frozen waters on skates, or traversed the pathless forests on snow-shoes. On one occasion a party of Frenchmen were traveling merrily on the lake between Ticonderoga

and Crown Point, on rude sledges drawn by Canadian ponies, when Stark and his followers rushed from the woods, and made some of them prisoners. Others were borne beyond danger by the frightened ponies, which fled over the ice with the fleetness of the wind. As Stark touched the shore with his prisoners, he was assailed by a large body of Indians at the edge of the woods. An unequal fight was kept up until dark, when Stark, leaving twenty of his men behind - killed, wounded, and missing - made his way back to the fort.

Meanwhile, fifteen hundred French regulars and Canadians followed the younger Vaudreuil from the St. Lawrence to Lake George, to capture Fort William Henry by surprise. They traveled on snow-shoes; their provisions were carried on small sledges drawn by dogs, and their beds were bear-skins spread upon the snow. Stealthily they went over the frozen lake, and appeared before the fort at midnight. The garrison were on the alert. The invaders set on fire the vessels there frozen in the ice, the store-houses and some huts, and escaped by the light of the conflagration. That was the night succeeding St. Patrick's day, in March, 1757. From that time until early in August, the garrison suffered very little molestation.

At the close of July, the garrison at Fort William Henry was composed of less than five hundred men under the brave Colonel Monro. A short distance from the fort, on a gentle rocky eminence, where may now be seen the ruins of the citadel of Fort George, seventeen hundred men lay entrenched.

A little more than a dozen miles distant was Fort Edward, where lay the timid General Webb, with about four thousand troops. At the same time Montcalm was at the foot of Lake George with six thousand French and Canadians, and about seventeen hundred Indians. There he held a grand council, and then he moved over the waters and along the western shore of Lake George. In a skirmish on the Lake, a great Indian warrior had been killed, and his body borne away by his comrades. Funeral honors were paid to it. It was dressed in full war-costume, and painted as if for the warpath. Brilliant ribbons, and glittering belts in which were his tomahawk and scalping-knife, and earrings and nose-jewels, adorned the dead body, which was placed upright on the green sward. In his hand was a lance; at his lips was a pipe, and by his side a filled bowl. In this presence there was an oration; then followed the death-dance and the death-song, accompanied by the low music of a softly-beaten drum and the tinkling of little bells. Then the body was placed in a grave, in a sitting posture, with plenty of food, and covered with earth; and the spirit of the warrior was dismissed to the happy hunting grounds beyond the setting sun.

On the 2nd of August, Montcalm, who had passed up the Lake with the main army, on bateaux, landed, with a heavy train of artillery, not far from the site of the village of Caldwell, and at once constructed siege batteries. La Corne, with Canadians, had landed on the east side of the Lake, and taken position across the road leading to Fort Edward; and De Levi, with French and Canadians, formed a camp northwest of La Corne.

This sudden appearance of so large a force was a surprise to the commander of the garrison. General Webb had come up from Fort Edward a day or two before, under an escort of Rangers

led by Major Israel Putnam. He examined the fort and the entrenched camp, and sent Putnam on a scout down the Lake, who discovered a large force of French and Indians. This fact Webb concealed from Colonel Monro, and immediately returned to Fort Edward, with the same scout. Not doubting the intention of his superior to give him all the aid in his power, the veteran, when, on the 4th of August, Montcalm demanded an instant surrender of the fort, refused compliance in a defiant tone. The siege was then prosecuted with vigor, but Monro held out, in continual expectation of aid from General Webb. Express after express was sent through by-ways to Fort Edward, imploring aid; but Webb, fearing an attack upon that post, would not spare a man. Finally, when Sir William Johnson was allowed to march with Putnam and his Rangers and some provincials to the relief of Monro, the whole force was recalled when within three miles of Fort William Henry. Instead of forwarding relief to the beleaguered garrison, Webb sent a letter to their commander, in which he gave an exaggerated estimate of the numbers of the French and Indians, and advised him to surrender to prevent the massacre of his whole force.

This letter was intercepted by Montcalm, at a moment when he was about to abandon the siege and return to Ticonderoga, for his ammunition and provisions had become almost exhausted during a siege of several days. He sent the letter in to Monro, with a summons for him to surrender. That commander perceived the hopelessness of his situation. His own means for defence were almost exhausted, and he could not expect aid from Fort Edward. He yielded reluctantly, after honorable terms had been agreed upon. The garrison were to march out with the honors of war, carrying with them their baggage and small arms, and one cannon in recognition of their gallant defence of the fort, Monro agreeing that his men should not bear arms against the French for the space of eighteen months also to deliver at Ticonderoga, all the French and Indian prisoners in the hands of the English. Montcalm pledged himself to furnish them with a strong escort half-way to Fort Edward. All this had been arranged at a council in which the Indians were represented. On the 9th of August, the French entered the fort and the English left it.

It was now near evening. Montcalm had kept intoxicating liquors from the savages, and admonished the English to do likewise. They did not heed the admonition, but supplied the Indians with rum. After a night's carousal, the savages were ready for any mischief. At daybreak they gathered around the English camp with hostile menaces. When the garrison began their march toward Fort Edward, the infuriated Indians fell upon them, plundered nearly all of them, murdered a large number of the soldiers and women, and made many prisoners. Montcalm and his officers did all in their power to arrest the fury of the savages. He and De Levi rushed in between them and their victims, at the peril of their own lives and finally stayed the massacre. The survivors were sent to Fort Edward under a strong escort, and the prisoners were afterward ransomed in Canada. The fort and all of its appendages were immediately destroyed by fire and pick, and its conquerors moved down the Lake the same day. Putnam, who visited the ruins as soon as the French had left, described the scene as appalling. He saw the bodies of murdered Englishmen scattered in every direction, many of them half-consumed among the dying embers. He counted the bodies of more than one hundred women shockingly mangled, and some of them scalped. The fort was never rebuilt. An irregular line of low mounds - the remains of Fort William Henry - might have been seen on the borders of the Lake until 1854, when the site was

covered by a large summer-hotel, already mentioned.

General Webb, at Fort Edward, with almost six thousand men, expecting to be attacked at any moment, sent off his private baggage to a place of safety, preparatory to a retreat to the Hudson Highlands. But his dreaded foe, having accomplished the chief object of his expedition, returned to Lake Champlain to rest upon his laurels. So ended Loudon's campaign in 1757. It was more inglorious than that of the preceding year. The British aristocracy had weakened British power and their representative in America had disgraced the British arms. The English had been expelled from the Ohio basin; they had been made powerless in northern New York, and contemptible in Nova Scotia; and the French bore undisputed sway over the St. Lawrence and the Great Lakes, and the Valley of the Mississippi. At that moment, French territory in America exceeded that of English full twenty-fold. The colonists were humiliated and exasperated. But they were learning, in a degree, the measure of their strength in union. It was a lesson of vast importance to them in their impending struggle with a power that sought to enslave them.

The position of American affairs alarmed the English people. "We are undone at home with increased expenses; abroad, by ill-luck and incapacity," exclaimed Chesterfield, one of the most enlightened of the English aristocracy. He uttered the opinions of the British nation outside of that aristocracy, and their rulers were soon compelled to listen. Light concerning the Americans was spreading over England. Thinking men saw justice in their demands for local self-government, and reason for their restiveness and irritation because they were continually plagued by the rapacity and haughty bearing of many of the royal governors and the unjust exactions of the British ministry. They saw the danger of the Americans being driven to the renunciation of their allegiance to Great Britain, if a more just policy toward them should not be speedily exercised and the English people became so clamorous for a change in the administration, that the alarmed king, after suffering England to be eleven weeks without a ministry, was compelled to recall Pitt to the cabinet in June, 1757, invested with powers which made him, in fact, prime minister of the realm. To him was intrusted the supreme direction of military and foreign affairs. He wielded his power with wisdom, and won glory for his country.

While Loudon was trying his best to conquer the Americans by overawing their assemblies and bringing the people into submission to the royal will, Pitt was devising plans for conciliating them by just and generous treatment. When, late in the year, Bostonians refused to submit to the billeting of royal soldiers upon them, the imperious earl sent a manifesto to the authorities of that city, saying: I have ordered the messenger to wait but forty-eight hours in Boston; and if on his return, I find things not settled, I will instantly order into Boston the three regiments from New York, Long Island and Connecticut and if more are wanted, I have two in the Jerseys at hand, besides three in Pennsylvania." When that message was on its way to the New England capital, another from Pitt was crossing the Atlantic for the recall of Loudon, for the minister could "never hear from him, and did not know what he was about." So the Americans were relieved.

"Give me your confidence," Pitt said to the king, "and I will deserve it." The monarch replied: "Deserve any confidence and you shall have it." Upon this foundation Pitt began his brilliant

administration, in the summer of 1757. American affairs demanded and received his early attention. General Abercrombie was appointed the successor of Loudon in chief military command in America. Relying upon the cheerful patriotism of the colonists, Pitt invited them to raise as many men as possible for an expedition against Montreal and Quebec. He assured them that England would provide arms, ammunition and tents, and that nothing would be required of them but the levying, clothing and pay of the men, for which expenditures the king would recommend parliament to grant a proper reimbursement. By order of the king, he sent instructions for all provincial officers no higher than a colonel to have equal command with officers of the same rank commissioned by the crown, according to the date of their respective commissions. These were cheering omens for the Americans, and they prepared for the campaign of 1758 with alacrity. In these liberal schemes Pitt was opposed by the aristocracy, because they yielded to the notions of independence cherished by the Americans, and the law-lords opposed the concessions as being contrary to the spirit of the British Constitution. The great Commoner met their decisions with this telling maxim "The lawyers are not to be regarded in questions of liberty."

Preparations for the campaign of 1758 were pressed with vigor. A strong naval armament was placed under the command of Admiral Boscawen, and twelve thousand additional English troops were allotted to the service of America. Equal vigor and more enthusiasm was observed in the colonies. Pitt asked for twenty thousand provincial troops. An excess of levies soon appeared. New England, alone, raised fifteen thousand. In Massachusetts the zeal of the people was unbounded, and the sacrifice of personal interest for the public good was marvelous. Public and private advances in that colony amounted to more than a million dollars, during the year 1758. In order to raise money, enormous taxes were levied and cheerfully paid. In many instances the tax was equal to two-thirds of the income of the taxpayer. It was levied by their own chosen representatives, and the people were content.

New York furnished twenty-seven hundred men; New Jersey, one thousand Pennsylvania, three thousand, and Virginia, two thousand. Some came from the more southern provinces; but to the people of that region was intrusted the defence of their frontiers, and, if opportunity should offer, the expulsion of the French from Louisiana. When Abercrombie took command of the army in May, 1758, he found fifty thousand men at his disposal - a number about equal to the entire masculine French population in America at that time.

The plan of the campaign was a renewal of that of General Shirley for 1756, spoiled by Loudon. It included expeditions against Louisburg, Fort Du Quesne, the strong posts on Lake Champlain, and Montreal and Quebec. To Sir Jeffery Amherst, a veteran soldier then about forty years of age, with the accomplished James Wolfe, ten years his junior, as his lieutenant, was intrusted the leadership of the expedition against Louisburg, in connection with Boscawen's fleet. General Joseph Forbes was placed in command of the troops that were to attempt the conquest of Fort Du Quesne and the Ohio Valley; and General Abercrombie, with young Lord Howe as his lieutenant, was directed to sweep the French from Lake Champlain, and attempt to expel them from Montreal and Quebec. To Wolfe and Howe Pitt looked for success, more than to Abercrombie and Amherst. They were both young men; experienced in military life; judicious,

magnetic, and full of energy.

Chapter XLV

The Siege and Capture of Louisburg - Expedition Against Ticonderoga - Capture of Fort Frontenac - Activity of the French - Adventures of Putnam - Expedition Against Fort Du Quesne - Washington's Deeds and Marriage - Plan of the Campaign of 1759 - Wisdom of Pitt - The French in Canada - Expedition Against Crown Point - Expedition Against Fort Niagara - Expedition Against Quebec - Arrival of the English There, and Their Operations.

THE campaign of 1758 opened with the siege of Louisburg. Admiral Boscawen arrived at Halifax early in May, with a fleet of most forty vessels, bearing an army of ten thousand effective men led by Sir Jeffery Amherst, with General James Wolfe as his chief lieutenant. At near the close of May the whole armament left Halifax for Cape Breton, and landed on the shores of Gabarus Bay, not far from Louisburg, on the 8th of June. The surf was running high and breaking in foam on the rugged shore. Wolfe, at the head of the first division, ventured among the turbulent waters before the dawn. Several of his launches bearing troops were upset or shattered. When he reached shoal water, the impatient young general leaped into the sea waist-deep, drew his sword, and in the morning twilight led his soldiers against breastworks and abatis in the face of a sharp fire from batteries. The French were driven from their outworks into the fort, and the siege immediately began. It lasted almost fifty days.

The garrison at Louisburg was composed of twenty-five hundred regulars and six hundred militia, under the command of Chevalier de Drucourt. In the harbor were several ships of the line and some frigates and vessels were sunk at the entrance of the harbor to prevent the ingress of an enemy. Wolfe was the soul of the expedition. Four days after the landing, he led some infantry and Highlanders to the capture of a battery on the northeast side of the harbor; and smaller works were soon secured. The English cannon were placed in battery and soon began to play upon other outworks, the fort, the town, and the vessels in the harbor. Four of the latter were burned and one was carried off by the English, late in July. The town of Louisburg was then reduced to a ruin. Almost all of the cannon of the fort had been dismantled by English shot and shell; and the French were compelled to capitulate on the 26th of the month. The next day the English took possession of the fort and town, with the islands of Cape Breton and Prince Edward; and all the coast nearly to the mouth of the St. Lawrence passed into the possession of Great Britain. The spoils of victory were about five thousand prisoners and a large quantity of munitions of war. After that victory, the French power in America began to wane. The attempt to capture Quebec was deferred until another year, and Wolfe returned home and received the plaudits of the nation.

Activity now prevailed throughout the colonies. The generous voice of Pitt had inspired the Americans with hope and enthusiasm. While Amherst and Wolfe were conquering in the East, Abercrombie and young Lord Howe were leading seven thousand regulars and nine thousand provincials through the forests of the upper Hudson, and over Lake George, against Ticonderoga. At the beginning of July, the whole armament, fifteen thousand strong, were at the head of Lake George.

Like Wolfe in the East, Lord Howe was the soul of the expedition in the North. He was a military Lycurgus, and introduced sweeping reforms. He abolished ornament in dress; caused the hair of his men to be cut short to prevent maladies engendered by wet locks; shortened the muskets to make them bore convenient in tangled woods, and had their barrels painted black to prevent discovery by their glitter; made his men wear leggings, like the Indians, 'to ward off briars and insects, and forbade the carrying of chairs and tables and other useless things. In these reforms his lordship led by his personal example. One day he invited officers to dine with him. He received them cordially in his tent. The ground was covered with bear-skins. For each guest was a log for a seat, such as his lordship occupied. Oily pork and beans were served. He drew a sheath-knife and gave one to each of the officers, and told them to eat. His example was cheerfully followed.

Early on the 5th of July, 1758, Abercrombie's army moved down Lake George in more than a thousand bateaux and whale-boats, accompanied by artillery on rafts. Just at twilight they landed on a long, grassy cape for rest and refreshments, after a sultry day. It was Saturday evening. The soldiers strolled over the cape, and Lord Howe spent hours in his tent in consultation with Stark and other provincials, who knew the country well, concerning the situation of Ticonderoga and the region between it and Lake George. At a little before midnight, the soldiers were re-embarked. A most inspiring scene was presented. Howe, in a large boat, and surrounded by Rangers as a guard, led the van of the flotilla. The regulars occupied the centre; the provincials, the wings. The sky was starry and serene. Not a breeze ruffled the waters sleeping quietly in the shadows of the mountains. The oars were muffled and so silently did the army move over the waters in the darkness, that not a scout upon the hills observed them. Day dawned just as they were abreast the Blue Mountain, four miles from their landing-place and the first intimation which the outposts of the enemy there had of the approach of the English, was the apparition of scarlet uniforms as the boats swept around a point and the army prepared to land.

In four columns - the regulars in the centre - the army moved forward as soon as they were landed, leaving their provisions, artillery and baggage behind. They were soon in a dense forest with incompetent guides. Suddenly the advanced guard, led by Lord Howe, fell in with a party of French soldiers, who had lost their way. A sharp skirmish ensued, and Howe was killed by a musket-ball. The whole army fell into confusion because of his death, and Abercrombie led them back to the borders of the Lake. The next day pioneers, under the command of the brave Colonel Bradstreet, opened the way to the Falls, and on the morning of the 8th, Abercrombie moved forward with his whole force, leaving his artillery behind, to attack the outworks of the French at Ticonderoga. That fort was then occupied by Montcalm with about four thousand men.

Relying more upon the reports of his own officers than upon those of the despised provincials, Abercrombie was deceived concerning the outworks and the men behind them. His troops, moving in three columns, were ordered to scale the woks, without cooperating artillery. Four hours they were endeavoring to cut their way through felled trees, and attempting to gain the entrenchments, in the face of a heavy fire, when they were compelled to retreat. Back to Lake George, Abercrombie fled, leaving two thousand men (chiefly regulars) dead or wounded in the

forest. He had kept himself away from danger during the struggle, and when he was needed to soothe and lead his defeated troops, he could not be found. Montcalm had been continually with his men, conducting every movement in the contest. The alarmed Abercrombie did not cease flight until his whole army had reached their old encampment at the head of Lake George. From that point Colonel Bradstreet was allowed, after earnest solicitation on his part, to lead three thousand men against Fort Frontenac (on the site of Kingston, Canada), which they captured late in August, with the shipping there. The garrison surrendered on the 27th of that month; and so English dominion over Lake Ontario was secured. Bradstreet lost only three men in the fight, but five hundred were destroyed by a fearful camp-fever that broke out soon afterward. With the remainder he assisted in building Fort Stanwix, on the site of the village of Rome, on the upper Mohawk. Meanwhile, Abercrombie, after garrisoning Fort George, which had been built near the head of the Lake, returned with the remainder of his troops to Albany. The body of Lord Howe was conveyed to that city by Captain Philip Schuyler, and placed in his family vault. When, in after years, the remains were removed to their final resting-place, under St. Peter's Church in Albany, it was found that his lordship's hair, which was short when he fell, had grown several inches in length, and was smooth and glossy.

Montcalm did not follow the retreating English, but he was not idle. He strengthened Ticonderoga, and sent out scouting parties to annoy the English and capture their foragers. These parties were watched by Major Rogers, of New Hampshire, and his Rangers, of which Israel Putnam was second in command. They were often actors in exciting scenes. On one occasion, not long after the attack on Ticonderoga, a party of French and Indians, under Captain Molang, captured a convoy of English wagoners. Rogers and Putnam hastened to intercept them on their return. Not far from the present village of Fort Ann, they fell into an Indian ambush, and a severe skirmish ensued. Putnam and some of his party, separated from the rest, were made prisoners. His comrades were scalped, but he was reserved for a more cruel fate. His captor bound him to a tree, where he remained during the rest of the fight, and his clothes were riddled with bullets by the cross-firing of the combatants. Before he was released, a young warrior amused himself in throwing his keen tomahawk as near Putnam's head as he could without hitting it. When the major was unbound, he was led deeper into the forest, and tied firmly to a tree. Faggots were piled around him a torch was applied, and the flames were crackling, when a furious thunderstorm burst over the country. The rain almost extinguished the fire, but it was soon revived with greater intensity. The victim had lost all hope, when Molang, who had heard of the scene, rushing through the band of Indians, released Putnam and conducted him to Ticonderoga.

Putnam had many other hair-breadth escapes from death in that region. He spent the winter of 1756-7 on an island in the Hudson, near Fort Edward. The barracks of the fort took fire. The flames spread rapidly toward the magazine, in which were three hundred barrels of gunpowder. Putnam hastened from the island to assist in putting out the fire. Nearer and nearer it crawled toward the magazine, when the intrepid major mounted to the roof and ordered buckets of water to be handed up to him. His labor seemed vain. The fire was charring the external planks of the magazine, and Colonel Haviland, the commander of the garrison, ordered Putnam to come down from his place of imminent danger. But the major persevered and put out the fire. He was several

weeks recovering from the burns he then received. It was at this post, and just before this occurrence, that Putnam had his famous duel with a regular officer. That officer challenged the major to fight. As the challenged had the right to choose weapons and methods, Putnam proposed that each should be seated upon a keg of gunpowder with a fuse attached that the fuse of each should be lighted at the same time, and that he who should sit longest should be regarded as the bravest man. Two kegs were brought from Putnam's quarters. The principals were seated upon them, and the fuses lighted by the seconds. The fire flashed along the trains for a few moments, when the British officer arose in haste and fled from the fatal keg. Putnam walked leisurely to his antagonist's fuse and put it out, and then seated himself again on his own keg, with perfect unconcern, cheered by his comrades. The kegs contained nothing more destructive than onions.

When Amherst, at Cape Breton, heard of the disaster at Ticonderoga, he sailed for Boston with four regiments and a battalion, and made forced marches across New England to Albany. He reached the camp of Abercrombie in October, and the following month he received a commission appointing him commander-in-chief. Abercrombie returned to England, and to divert public censure from himself he roundly abused the provincials.

While disaster was attending the army in the North, General Joseph Forbes had gathered about six thousand men at Fort Cumberland, in Maryland, preparatory to a march against Fort Du Quesne. Washington was there with about two thousand Virginians; and Colonel Bouquet had come up from the Carolinas with over a thousand Highlanders, three hundred royal Americans, and a body of Cherokee Indians. It was known that Fort Du Quesne was feebly garrisoned, and Washington advised an immediate advance over Braddock's road. It was then July. In less than thirty days the fort might have been taken. But other counsels prevailed, and Forbes, who was so ill that he was carried on a litter, determined to construct a new road for his troop over the Alleghanies. It was an almost fatal mistake. When autumn came, and it was known that the capture of Frontenac by Bradstreet had discouraged the Indians and caused many of them to leave the French, the army was yet creeping slowly over the mountains. Washington was impatient and indignant and he wrote to the Speaker of the Virginia Assembly, saying: See how our time has been misspent! Behold how the golden opportunity has been lost, perhaps never more to be regained !"

At about that time Bouquet was sent forward, with two thousand men to Loyal Hanna, in Westmoreland county, Pennsylvania, to build a fort. Bouquet, anxious to win renown, sent out Major Grant, with eight hundred Highlanders and some Virginians under Captain Bullitt, to reconnoiter Du Quesne. Grant took post on a hill near the fort, and dividing his force, tried to draw the garrison out into an ambush. They made a sortie in force, for four hundred men had lately been added to the garrison. They kept the English divided and defeated them in a severe skirmish, killing and wounding many, and taking some prisoners. As in the case of Braddock's defeat, the regulars gave way on this occasion, and the little army was saved from total destruction or capture only by the gallantry of Captain Bullitt and his provincials. The French, elated with their successes, proceeded to attack Bouquet at Loyal Hanna, but after a fight of four

hours, they were repulsed with considerable loss.

Washington had anxiously desired to be in the advance. He was now sent forward to Loyal Hanna, where he was placed at the head of a brigade composed of a thousand provincials, and ordered to move in front of the army. But it was November before General Forbes, with the artillery and main body, reached that point, and full fifty miles of rugged way lay between the army and Fort Du Quesne. A council of war was held, when it was decided that the lateness of the season made it prudent to defer the attack upon Fort Du Quesne until another season. Fortunately Washington, just at that time, heard of the desertion of the French by their Indian allies, and the weakness of the garrison at Fort Du Quesne. He obtained permission to push on with his brigade. The main army followed. The provincials, inspired with the zeal of their young leader, overcame every obstacle with alacrity, and very soon they stood upon a hill overlooking the object of their destination. The garrison, only five hundred in number, alarmed at their approach, set fire to the fort that night and fled down the Ohio in boats by the light of the conflagration. The ruins were entered the next day (November 25, 1758), and over the charred remains the British standard was unfurled. In honor of the great English statesman, the name of Fort Pitt was given to Fort Du Quesne, and the little village that soon grew around it was called Pittsburgh. Two Virginia regiments were left there as a garrison, and the main army returned to the borders of civilization. The great object of the war in the middle colonies was accomplished. The basin of the Ohio was secured to the English.

Washington marched the remainder of his troops to Williamsburg, where he took leave of them with the intention of quitting military life. He had been elected a member of the Virginia Assembly, and was affianced to the charming widow of Daniel Parke Custis, who was about his own age - twenty-six years. They were wedded at the White-House, the residence of the bride, on the 17th of January (6th, Old Style), 1759, by the Rev. David Mossom, for forty years rector of St. Peter's Church, New Kent, near by. Then Washington took his seat in the Assembly at Williamsburg; and at about the close of their honey-moon, the Speaker of the House, by its order, rising from his chair, thanked the young colonel in the name of Virginia for his public services. Washington, surprised, arose to reply, but could not summon words. His face flushed with confusion, when the Speaker relieved him by saying: "Sit down, Colonel Washington your modesty is equal to your valor, and that surpasses the power of any language I possess." That Speaker was Mr. Robinson, father of Beverley Robinson of New York, at whose house Washington met Mary Phillipse about ten years before.

With the expulsion of the French from Fort Du Quesne, the campaign of 1759 was ended. It had been a successful one for the English. They had captured three of the most important of the French posts Louisburg, Frontenac, and Fort Du Quesne. The faith of the Indians in the Invincibility of the French was eclipsed and at a great council held at Easton, on the Delaware, in the autumn of 1758, several powerful tribes were present, and joined the Six Nations in making treaties of friendship and neutrality with the English. The right arm of French power was thus paralyzed, and peace was secured to the frontiers of Pennsylvania and Virginia. The people of Canada were discouraged. Their resources were almost exhausted, and they cried for peace.

Montcalm wrote to Vaudreuil I am not discouraged, nor are my troops; we are resolved to find our graves under the ruins of the colony."

The final struggle for dominion in America was now at hand. Pitt had studied the geography of North America with diligence, and based his plans upon its teachings. Encouraged by the results of the campaign in 1758, in America and in Europe (where the victorious Frederick the Great of Prussia, who had opened the Seven Years War on the continent in 1756, was the ally of the English), Pitt conceived a magnificent scheme for conquering all Canada, and crushing French power in America forever. That dominion was now confined to the region of the St. Lawrence, for the settlements in the West and South were cut off from cooperation with the Canadians.

Pitt had the rare good fortune to possess the confidence of all parties at home and in the colonies. The English people were dazzled by his real greatness the colonists were deeply impressed by his justice. He had promptly reimbursed all the expenses of the last campaign incurred by the colonial assemblies, amounting to about a million dollars, and they as promptly seconded his scheme of conquest, which had been communicated to them under an oath of secrecy. Whatever he asked for he obtained. When he asked for sixty million dollars, and an immense force for service on sea and land in 1759, in Europe and America, the parliament almost unanimously granted his request. He declares only what they would have them do, and they do it," wrote Chesterfield.

The general plan of operations against Canada was similar to that of Phipps and Winthrop., almost seventy years before. A strong land and naval force, under the command of General Wolfe and Admiral Saunders, were to ascend the St. Lawrence and attack Quebec. Another force, led by Amherst, was to drive the French from Lake Champlain, seize Montreal and join Wolfe at Quebec; and a third expedition, commanded by General Prideaux, was to take possession of Fort Niagara, and then hasten over Lake Ontario and down the St. Lawrence to Montreal. To General Stanwix was intrusted the task of completing the occupation of the posts in the West from Fort Pitt to Lake Erie.

Pitt would not listen to the vicious twaddle about enforcing royal authority in America, that fell from the lips of the Lords of Trade. We want the limited cooperation of the Americans," said the wise minister, "and to have it we must be just and allow them freedom." These words ran like an electric thrill through the hearts of the colonists, and there was eagerness everywhere to manifest loyalty and to help the cause. Men and money were freely given while the French in Canada, growing poorer and diminishing in numbers, received scanty aid and little encouragement from France. The king relies on your zeal and obstinacy of courage," the French minister wrote to Montcalm. Without unexpected good fortune or blunders on the part of the English," the general plainly replied, Canada must be lost this campaign, or certainly the next." But France could do no more for her distant colony, for her wars nearer by had exhausted her treasury. With these relative prospects, the belligerents entered upon the contest in the early summer of 1759.

Late in June, Amherst was at the head of Lake George with about twelve thousand men,

regulars and provincials in equal numbers. There he lingered for about a month, and then passed over that beautiful sheet of water with banners flying and martial music resounding, for he felt strong and did not seek concealment. On the 22nd of July, he appeared before Fort Camillon, at Ticonderoga, with about eleven thousand men. Bouchard, the French commander there, had just heard that Wolfe and Saunders were before Quebec. Seeing no chance for successful resistance nor reinforcements, he actually destroyed the fort and fled with his garrison down the lake to Fort Frederic, on Crown Point, on the 26th. Amherst pursued, and on his approach on the 1st of August, the French abandoned that post also and fled to Isle-Aux-Noix in the Sorel River, the outlet of Lake Champlain. Amherst took possession of Crown Point, without opposition; and if he had still pursued as he intended to do, he might have unfurled the British flag in triumph over the walls of Montreal before the close of September. The country between Lake Champlain and the St. Lawrence had been shorn of men to reinforce Montcalm at Quebec, who called loudly for troops to avert impending danger there. Old men, women and children were compelled to gather in the harvests near Montreal, to avoid starvation, and the Indians with the French army had deserted their allies. But Amherst, deceived by reports of the strength of the French at the foot of the Lake, and of a strong-armed flotilla there, lingered at Crown Point until October, causing repairs to be made to the fort at Ticonderoga, and constructing a new one on the promontory where he was encamped. He had, meanwhile, been building vessels to transport his troops down the Lake. On these he embarked his army at the middle of October, when heavy storms sweeping over the waters, and a message from Quebec, caused him to turn back and put his army into winter quarters at Crown Point. Captain Loring, with a little squadron of armed vessels, defying the storms, went down the Lake and destroyed the French flotilla, and so gained the mastery over that important sheet of water. The troops at Crown Point built there that strong fortification whose picturesque ruins still attract the attention of the summer tourist on Lake Champlain.

Prideaux's little force, destined to capture Fort Niagara, sailed from Oswego on the first day of July, leaving Colonel Haldimand to repair the works there. The troops that embarked consisted of two New York battalions, one of Royal Americans, two British regiments, a detachment of artillery, and Indian auxiliaries under Sir William Johnson. They moved slowly along the southern shores of Lake Ontario, and on the 15th of July, landed six miles east of Fort Niagara without opposition. The siege was commenced immediately. The fort stood near the bank of the Lake at the mouth of the swift-flowing Niagara River, where La Salle planted his stockade. The garrison was composed of a little more than six hundred soldiers. The commander, aware of danger, had sent for forces to be drawn from the posts between there and Fort Du Quesne and from the South, and they were on the way, almost three thousand strong, of whom one-half were Indians.

At the beginning of the siege, Prideaux was killed by the bursting of one of his own cannons, and the command devolved on Sir William Johnson. He disposed his force so as to meet the approaching army for the relief of the fort. They came in collision on the 24th of July. A severe fight occurred, when the French and their allies were defeated and dispersed, leaving their killed and wounded lying in the forest. On the following day the fort and its dependencies, with the garrison, were surrendered to the English, and British dominion was immediately extended along

Lake Erie to Presque Isle, now Erie. The connecting link between Canada and Louisiana was now broken, never to be restored.

Sir William was so encumbered with his prisoners, and being unable to procure a sufficient number of boats for transportation, he could not proceed to Montreal, according to the original plan, to co-operate with Amherst, so he garrisoned Fort Niagara and returned with the remainder of the troops to Oswego, and thence to Albany. These events drew De Levi, Montcalm's second in command, from Quebec, with a body of troops to prevent the Americans descending the St. Lawrence. For awhile he watched the passes at the rapids below Ogdensburg, when he returned to Quebec.

The great event of the campaign was impending while those just described were occurring. The fleet of Admiral Saunders (whose lieutenant was Admiral Holmes), consisting of twenty-two line-of-battle ships and as many frigates and smaller vessels, and bearing eight thousand troops under General Wolfe, ascended the St. Lawrence as soon as the ice had left that stream, and anchored off the beautiful island of Orleans, a few miles below Quebec, and in full view of the city. Upon that island the troops landed on the 27th of June. Among the subordinate naval officers was James Cook, who afterward circumnavigated the globe and discovered the Sandwich Islands. Among the commanders of land troops were General Robert Monckton, afterward governor of New York; the impetuous Col. Murray; General George Townshend, who soon became a peer of the realm Colonel Guy Carleton, in command of grenadiers, and Lieutenant Colonel William Howe, a leader of light infantry, both of whom were conspicuous in the royal service in our War for Independence.

Quebec was partly on a high rocky promontory at the confluence of the St. Lawrence and St. Charles rivers, and upon a plain on the borders of the latter. The upper town was surrounded by a strong wall with five gates. Two of these opened out upon an elevated plateau, on the southwestern side, called the Plains of Abraham, whose border on the St. Lawrence is marked by steep declivities. The shores of that river were lined with batteries above and below the city, and the town was strongly garrisoned. Along the St. Lawrence between Quebec and the Montmorency River, a distance of some miles, lay Montcalm, with a force of French Canadians and Indians, in an entrenched camp, a larger portion of the former having been impressed into the service.

Wolfe prepared for a siege with amazing skill and vigor. On his left lay his proud fleet at anchor, and the beautiful island was dotted with the white tents of his army. During the day after his arrival, clouds gathered in ominous blackness. The evening was dark and tempestuous, lighted only, until about midnight, by flashes of lightning. Suddenly a lurid glare shot across the billows as a fleet of fireships went blazing down the river in wrath toward the English shipping. The skillful British seamen caught each vessel as it came, and turned it away from the English ships. Their flames expired in darkness far below Orleans, as they drifted on the current.

The English, under General Monckton, now proceeded to take possession of Point Levi,

opposite Quebec. There, on the 30th of June, they began to erect batteries within a mile of the town. From there red-hot cannon balls and blazing bomb-shells were hurled upon the city. These set fire to fifty houses in one night in the lower town, but the citadel, crowning Cape Diamond, the highest part of the promontory, was beyond the reach of their missiles, and the real military strength of Quebec remained untouched. It was upon this natural strength of the position that Montcalm relied for final victory, more than upon his exhausted troops and unwilling conscripts. Wolfe knew this, and resolved to attack the French commander in his fortified camp, and for that purpose he first landed a strong force, under Generals Murray and Townshend, below the Montmorency on the 10th of July, and formed an entrenched camp there. But when he looked for a place to cross that stream, he found the only fordable spot three miles from its mouth, and the opposite bank, Steep and wooded, strongly fortified by the vigilant Montcalm.

The impatient Wolfe now reconnoitered the shores from the Montmorency to Quebec, and along the craggy base of the Plains of Abraham far up toward Sillery. Everywhere military preparations for defence met his eye. He returned to the Montmorency chafing with zeal, but conscious that he had made no advance toward the capture of the walled city which he had threatened for almost a month. Fire-ships again came blazing down the river, but were again turned away harmless. He saw danger in delay, and resolved to risk more so, at the close of July, he ordered Monckton to cross over with his regiments, grenadiers and other troops, and land upon the beach at the foot of the cataract of Montmorency, where that stream, after passing for a mile over a rocky bed in continuous roaring rapids, leaps into a dark chasm, at one bound, two hundred feet below.

Murray and Townshend were now ordered to force a passage across the Montmorency below the falls at low tide, and co-operate with Monckton, on his arrival, in an attack upon the French lines. Wolfe selected the spot for the landing and attack. A signal was given, and boats from the fleet went swiftly across the St. Lawrence from Point Levi, and first landed grenadiers and Royal Americans, under cover of a fire from some of the English vessels. Monckton's regiments followed. Owing to confusion in landing, there was delay, when the grenadiers, impatient, would no longer wait for the troops across the Montmorency, who were to support them, and rushed up the acclivity to penetrate the French camp. Already their foes had kept up a sharp fire of musketry and great guns for some time; now they were concentrated, and poured such a destructive shower of lead and iron upon the assailants, that the English were repulsed with much slaughter. They fell back in confusion to the shelter of a battery and block-house on the beach. Wolfe ordered a retreat, but a terrific thunder-shower that burst upon them at that moment detained them until darkness came, when the tide came roaring up against the current of the St. Lawrence, threatening to submerge the troops on the narrow beach. Monckton, with great coolness, embarked the shattered army in boats, and most of them were saved. They had lost between four and five hundred of their companions in the contests of the day.

When news of these events reached England, conservative men shook their heads and declared that Wolfe was mad. "Mad! exclaimed the king, Wolfe mad! I wish he'd bite some of the other generals."

Chapter XLVI

Wolfe's Illness and Despondency - Preparations to Attack Quebec - Battle, and Death of Wolfe and Montcalm - Surrender of Quebec - Attempt to Recapture It - Surrender of Montreal and All Canada - Rogers' Expedition to Detroit - Interview with Pontiac - Capture of Detroit - War with the Southern Indians - War Continued abroad - Treaty of Paris - Discontent of the Indians - Conspiracy of Pontiac and Its Effects - Fate of Pontiac.

WOLFE soon heard, with joy, news of the capture of Fort Niagara and the expulsion of the French from Lake Champlain. He now listened eagerly for the drums of Amherst, for he expected that general would speedily join him. He sent Murray above Quebec to destroy the French shipping, and open communication with Amherst. But that general did not appear, for reasons already mentioned.

Chagrin because of his failure at Montmorency, fatigue, anxiety, disappointed hopes, and the extreme heat of the weather, prostrated Wolfe with fever and dysentery. For almost a month his life was in great peril. Early in September he was able to hold a council of war at his bedside, and on the 9th he wrote a desponding letter to the Earl of Holderness, in which he mentioned the critical situation of the army and of himself. "My constitution," he wrote, "is entirely ruined, without the consolation of having done any considerable service to the state, or without any prospect of it. But he had told the earl that a council of war had decided that his shattered army should attack the foe. His letter reached London at the middle of October. The result of the promised attack was awaited with intense anxiety, for the young commander's epistle had created anger and consternation in England. It was followed three days later by news of that result, and the hearts of Wolfe's countrymen throbbed quickly with emotions of joy and grief.

It was determined to land a large body of troops above Quebec, for the purpose of drawing Montcalm from his entrenchments into an open field fight, in which the English would have the advantage. Wolfe, with some companions, in a boat, reconnoitered the shores, and selected the cove that yet bears his name for the landing place. From that cove a narrow path through a ravine tangled with vines and brambles led up to the Plains of Abraham; and along that perilous way it was resolved the troops should climb stealthily in darkness, if possible. The fleet was prepared to cooperate with the army, and on the 12th of September (1759) everything was ready for the execution of the dangerous and even desperate enterprise.

In the afternoon of that day, a feint was made in the direction of Montcalm's camp by the ships and some troops, to divert the attention of the foe from the real point of attack. At nine o'clock in the evening Wolfe and his main army were embarked on flat-boats above Point Levi, and floated up the river with the flood-tide, some distance above the selected landing-place, followed by the ships. There was joy in Quebec and the French camp, for it was believed the English were retreating.

The evening was warm and star-lit. Wolfe seemed in better spirits than usual, and at the

evening mess, with a glass of wine in his hand, and in the light of a lantern, he sang impromptu that little campaigning song which has been often chanted in the tents of British soldiers since, beginning - "Why, soldiers, why, Should we be melancholy, boys? Why, soldiers why, Whose business 'tis to die!" But a cloud of presentiment that his end was near evidently shadowed the young hero's thoughts; and when, at past midnight, black clouds had gathered in the sky, and the boats were floating silently back, with muffled but unused oars, upon the ebb tide, to land the troops under cover of the darkness at the selected place, he repeated, in a low musing tone to the officers around him, that touching stanza in Gray's "Elegy in a Country Churchyard" - "The boast of heraldry, the pomp of power, And all that beauty, all that wealth e'er gave, Await, alike, the inevitable hour - The path of glory leads but to the grave."

"Now, gentlemen," said Wolfe, as he closed the verse, "I would prefer being the author of that poem to the glory of beating the French to-morrow."

In the darkness, sixteen hundred troops landed at Wolfe's Cove, and others speedily followed. The general led the way, with Monckton and Murray, and Lieutenant-Colonel Howe. They hastened up the acclivity in the face of shots from startled sentinels along the brow of the cliff and reached the Plains of Abraham at early dawn, three hundred feet above the St. Lawrence. At sunrise, about five thousand British troops were standing in battle array, on the open plain before Quebec. News of the surprising apparition had gone into the city like the wind, and thence to Montcalm at Beaufort. He supposed, from the first account received, that it was only a small party who had come to burn a few houses and retire; but when later information reached him, he marched a greater portion of his army from his camp to attack the British, saying: If it is necessary to fight them, it is necessary to crush them."

At ten o'clock the two armies stood face to face on that lofty plateau, the French on the higher ground near the city wall. Neither party had much artillery - the English only a six-pounder, which some sailors had dragged up the ravine. They were stronger than Montcalm imagined. He sent a messenger to his camp for fifteen hundred reserves, and another after a detachment that had gone up the river. The two armies were about equal in numbers then, and the impatient Montcalm began the attack without waiting for his reinforcements. Wolfe was at the head of the grenadiers who had been repulsed at the Montmorency. They burned with a desire to wipe out the stain of that event, for their beloved commander had censured them for their rashness. He ordered his soldiers to double-shot their muskets and reserve their fire until the enemy should be very near.

A short and severe battle now ensued. Terrible were the volleys of the double-shotted muskets at close quarters. The French were thrown into confusion, when they were attacked by the bayonet so terrible in the hands of English soldiers. The general was urging on the bayonet charge, when a bullet slightly wounded him in the head. Another soon wounded him in the abdomen; and a third pierced his breast with deadly effect. "Support me," said the general to an officer near him; "Do not let my brave soldiers see me drop; the day is ours - keep it." He was borne to the rear in a dying condition, when the officer, on whose shoulder he was leaning, cried

out, "They run! they run! "Who run? feebly inquired Wolfe. The enemy, sir; they give way everywhere," said the officer. The general then gave an important order for a movement to cut off the fugitives, and feebly said: Now, God be praised. I die happy! He never spoke again, and soon afterward expired. Montcalm had also been mortally wounded, and died the next morning. His body was buried in the grounds of the Ursuline Convent at Quebec. In its chapel a small mural tablet commemorates him and there I saw, a few years ago, the skull of that French commander, its base covered with a blue velvet and gold-laced military coat collar. Wolfe's remains were taken to England, and his grateful government erected a monument to his memory in Westminster Abbey. Almost seventy years afterward an English governor of Canada caused a noble granite obelisk to be reared in the city of Quebec, and dedicated To the Memory of Wolfe and Montcalm."

General Townshend succeeded Wolfe in command of the army. With unparalleled selfishness and meanness, he tried to arrogate to himself the glory of the victory. He did not even mention Wolfe's name in his narrative of the battle. But others did, and public justice was quick to award honor where honor was due, and Townshend disappeared in a peerage. Five days after the battle, Quebec was surrendered to the English. The news reached England a month afterward - three days after Wolfe's desponding letter to Holderness, as we have observed. The joy of the people was intense; then grief because of the death of the hero was deep and heartfelt. They despaired, they triumphed, they wept," wrote Horace Walpole, for Wolfe had fallen in the hour of victory! Joy, grief curiosity astonishment were painted on every countenance; the more they inquired the higher their admiration rose." Exultation stirred every heart in the colonies. Illuminations, bonfires, cannon-peals and oratory everywhere expressed the general joy, and thanksgivings were uttered by every lip.

It was the 18th of September, 1759, when the city of Quebec, its fortifications, shipping, stores and people, passed into the control of the English, and General Murray with five thousand troops occupied it. The English fleet, with prisoners, sailed for Halifax. The campaign was ended, but Canada was not conquered.

De Levi succeeded Montcalm in command of the French forces. Early in the spring of 1760, Vaudreuil, governor of Canada, sent him to recover Quebec. Murray, boastful and rash, marched out to meet him and at Sillery, three miles above the city, they met and fought one of the most sanguinary battles of the war. De Levi led nearly ten thousand men Murray was at the head of over six thousand men. The English were defeated with the loss of a fine train of artillery and a thousand soldiers, and fled back to the walled town. The French besieged the city, and the condition of the English was perilous, when, early in May, a British squadron with provisions and reinforcements, sent by the sagacious and provident Pitt, ascended the St. Lawrence. Two of the ships that arrived first at Quebec destroyed the French shipping there. De Levi supposed them to be the vanguard of a large armament, and at the middle of May he raised the siege, abandoned most of his artillery and stores, and fled with the greatest celerity toward Montreal. Murray pursued, but could not overtake the fugitives. Montreal was now the last remaining stronghold of the French on the continent; Amherst might have had possession of it before De Levi besieged

Quebec, but he spent the whole spring and summer in preparations for a regular invasion of Canada. Meanwhile Vaudreuil had collected all of his available forces at Montreal for the final struggle.

Amherst, though slow, was sure. He moved three armies against Montreal with so much precision that they arrived there almost simultaneously. With about ten thousand men he marched to Oswego, where he was joined by a thousand warriors of the Six Nations, under Sir William Johnson. He went over Lake Ontario and down the St. Lawrence, and appeared before Montreal on the 6th of September, having taken Fort Presentation at Oswegatchie (now Ogdensburg) on the way. On the same day General Murray arrived there from Quebec with four thousand troops, and on the following day Colonel Haviland appeared on the St. Lawrence, opposite Montreal, with three thousand soldiers. He had marched from Crown Point, and had driven the French from a Isle-aux-Noix. Within the space of thirty hours, over seventeen thousand English troops had gathered around the doomed city. Vaudreuil saw that resistance would be foolish and vain, and he surrendered. On the 8th day of September, 1760, all Canada passed under the dominion of Great Britain, with no stipulations for civil liberty. The pleasure of the king was the law of the land. That king - George the Second - died suddenly a few days after the glorious news of the conquest of Canada reached London, when he was seventy-seven years of age, and was growing blind and deaf. He left England the foremost nation of the world in military fame and moral grandeur.

General Gage was made military governor of Montreal, and General Murray was sent to garrison Quebec with four thousand men. Joy spread over the English American colonies, for peace in the future seemed to be secured. The people everywhere assembled to utter public thanksgiving to Almighty God for the great deliverance. But there was something yet to be done to make the conquest complete. The flag of France yet waved over the fort at Detroit, and other places in the West. Amherst could not allow the French lilies, emblazoned on that flag, to be seen anywhere in the conquered domain. A few days after the surrender of Montreal, he sent Major Rogers, with two hundred Rangers, to plant the British standard at Detroit and elsewhere. They went by the way of Frontenac, and along the northern shores of Lake Ontario around to Niagara. At the latter place they furnished themselves with a costume suitable for the wilderness, and voyaged over Lake Erie in the chilly days of October and November. At the mouth of a river on its southern shore, they met a deputation of Ottawa chiefs, who told them to remain there until Pontiac, their emperor, should arrive, for he desired to see them with his own eyes.

Pontiac soon came. He was a fine specimen of a North American Indian, and was ruler over a magnificent domain in Ohio and Michigan. His people (the Ottawas) revered him, and the tribes over whom he reigned admired him for his wisdom and bravery. He met Rogers with a princely air, and demanded why he had entered his dominions without his leave. Rogers explained that the English had conquered Canada, and that he came only to drive out the French, their common enemy, and then gave the emperor a belt of peace. Pontiac returned it, saying: "I stand in the path until morning." Turning on his heel, he left Rogers in doubt concerning the chief's intentions. His men kept watch for treachery all night. In the morning, Pontiac sent them some food. He soon

followed, and gave Rogers assurances of his friendship. He had been the ally of the French, but was too shrewd to adhere to a waning cause. He was willing to court the favor of the English; so he and Rogers sat upon a log and smoked the calumet. He sent word to the tribes south and west of Lake Erie that the strangers had his permission to cross his dominions. Rogers marched on, and on the 29th of December, 1760, he unfurled the British flag at Detroit. The garrison were made prisoners, but the French settlers were allowed to remain on the condition of taking the oath of allegiance to the British crown.

When Canada was falling prostrate at the feet of British power, the storm of war lowered darkly along the Carolina frontiers. There had been strife with the Indians there for years. The Cherokees, the treaty friends of the English, strove hard to maintain peace. They were the hardiest and most enlightened of the savages in that region. These mountaineers, occupying the hill country of Georgia, exerted a powerful influence over the surrounding tribes. But their patience was exhausted by wrongs which they and their friends had suffered at the hands of frontier Virginia Rangers, and the treachery of the royal governor of South Carolina, and in the spring of 1760, they flew to arms with the tribes of Tennessee, Alabama and Georgia as allies. In the space of a few weeks the western frontiers of the Carolinas were swept with the fiery besom of desolation. French emissaries had worked powerfully upon the Indian mind, and military stores had been sent to the Cherokees from Louisiana. The smitten and menaced people called loudly for help. Amherst heeded their supplications, and early in April, he detached Colonel Montgomery (afterward Lord Eglinton) from the army of Stanwix, with six hundred Highlanders and as many Royal Americans, to strike the Cherokees. He was accompanied by Colonel Grant, who had been assailed by the garrison of Fort Du Quesne a few months before. In the western part of South Carolina, beyond the Saluda, they were joined by seven hundred Carolina Rangers, among whom was Moultrie, who afterward figured in the American War for Independence.

On the first of June the English were ready to apply the scourge. They penetrated the beautiful Valley of the Keowee, on the western borders of Anderson District, in which well-built houses and cultivated fields gave tokens of a semi-civilization. That valley they plundered, and desolated it with fire, driving the families to the wooded hills, where they looked down upon their possessions utterly ruined. Onward the English marched over the hills and the headwaters of the Savannah to the Valley of the Little Tennessee. Down that valley they marched, compelled to fight almost every inch of their way in the heart of the Southern Alleghany Mountains. The whole country was aroused. The patriotism of the Cherokees gave intensity to their anger. The English were in serious peril, and Montgomery wisely retraced his steps. This movement left the English garrison at Fort Loudon, on the Tennessee, at the mercy of the savages, who murdered a part of them after they had surrendered, and scattered the remainder, as prisoners of war, among the tribes. Montgomery hastened to Charleston, and regardless of the prayers of the people, who feared the ire of the exasperated Cherokees, he embarked for Halifax.

The Cherokees were not subdued, but were more fiercely inflamed against the English. They prepared for the war-path the next year, when Colonel Grant appeared with a stronger force, and compelled them to stand on the defensive. He burned their villages, desolated their fields, and

killed many of their warriors. Finally, the nation, dispirited, humbly sued for peace in June, 1761, and a treaty to that effect was made.

Although the war had ceased in America, the French and English continued it upon the ocean and among the West India islands, with almost unbroken success by the latter. It was ended by a treaty of peace negotiated in 1762, and signed at Paris on the 10th of February, 1763. By its terms France ceded to Great Britain all her claimed territory in America eastward of the Mississippi River, north of the latitude of the Iberville River, a little below Baton Rouge. New Orleans, and the whole of Louisiana, was ceded by France to Spain, at the same time and so her entire possessions in North America, for which she had labored and fought for more than a century, were relinquished. Spain, with whom the English had been at war for a year previously, ceded East and West Florida to Great Britain, at the same time. Now the English held undisputed possession (excepting by the Indians) of the whole continent from the shores of the Gulf of Mexico to the Frozen Sea, and by claimed prescriptive right, from ocean to ocean. The domain wrested from the French had been procured at a cost to Great Britain and her American colonies of five hundred and sixty million dollars.

The storm in the south had scarcely ceased when another, more portentous, was seen gathering in the northwest. All over the land from the Shenandoah Valley to Lake Superior, from Western New York and the line of the Alleghany Mountains stretching into the Carolinas, to the Mississippi River, a deep-rooted jealousy of the English appeared among the Indians after the conquest of Canada. They regarded the English as a nation of amazing power, who were ready to rob them of their lands and destroy their race. The treatment of the natives by the English was so cold and unfriendly when compared with the French, that the savages could feel no real friendship for the British, and it was only fear or policy that caused the Indians to make treaties with them. The chiefs were treated with contempt by the British officers, and so their pride was wounded; they treated the people as children or slaves, and so lost their respect. Traders cheated them and aroused their anger. In every way they were made to feel, by contrast with the conduct of the French, the meanness and wickedness of the English. The jealousy of the savages was crystallized into implacable hatred, and in 1761, they began to form confederacies and plotted conspiracies for the destruction of their English masters.

When, after the treaty of Paris in 1763, the tribes were informed that France had ceded the country to Great Britain, without asking their leave, there was wide-spread indignation among them. The arrogance of Amherst in his official intercourse with them fanned the flame, and a vast confederacy was formed for the purpose of attacking all of the English forts on the frontiers on the same day, to destroy their garrisons and to desolate their settlements, westward of the Alleghanies.

At the head of this conspiracy was the great Ottawa chief Pontiac, then about fifty years of age. He was conspicuous for courage, resolution, energy, and magnetic attraction and vehement ambition, and ruled many tribes with almost despotic power. He had fought on the side of the French in the war just ended, and was their friend until his interview with Major Rogers. He

trimmed his sails so as to catch the favoring breeze of the power he held to be the most potential, but his pride was soon deeply wounded by the arrogance and neglect of the English. He saw his race divided, weak, and powerless before a great nation. He saw the English rapidly spreading their settlements over the hunting-grounds of the Indians, and driving them steadily toward the setting sun. In his horoscope of the future, he saw the last of his race, naked and famishing, driven into the Pacific Ocean, of which he had vague ideas. Ambition and patriotism urged him to lead a conspiracy for the salvation of his country and his race. He did so, with marvelous skill and energy.

Late in 1762, Pontiac sent ambassadors to the tribes around the lakes, and all over the country southward far toward the Gulf of Mexico. Each bore the wampum war-belt and a hatchet painted red 'in token of hostilities. Each delivered the stirring words of Pontiac, calling them to the defence of their country and their lives and everywhere his words were approved. He called a general council at a spot near Detroit, designated by him, and there the tribes were assembled in April, 1763 - the Ottawas, Miamis, Wyandotts, Chippewas, Pottawatomies, Mississaugas, Shawnoees, Foxes, Winnebagoes and Senecas - the latter the most warlike of the Six Nations. Pontiac was there with his squaws and children, and the meadow in which the council was held presented a gay and animated scene. The idle young warriors gathered in groups to feast, smoke, gamble, and tell stories; many of them bedizened with beads, feathers, hawks' bills, and other tokens of foppery. Here, too," says Parkman, "were young damsels radiant with bears' oil, ruddy with vermilion, and versed in all the arts of forest coquetry, shriveled hags, with limbs of wire, and the voices of screech-owls and troops of naked children, with small, black, mischievous eyes, roaming along the outskirts of the woods."

The council was convened on the 27th of April. All were seated on the grass in a wide circle, row within row, a grave and silent assembly. When pipes had been lighted and passed from hand to hand, Pontiac arose, plumed and painted, in full war-costume, and with loud voice and impassioned manner, addressed the multitude. He recounted the wrongs of the red race, and spoke of the danger to be apprehended from the sovereignty of the English. He held out a long and broad belt of wampum, which, he said, he had received from the king of the French, and that the fleets and armies of that monarch would soon come back to reconquer Canada, when the Indians would once more fight by their side. He appealed to the superstition of his hearers by reciting an Indian legend, and in various ways he excited them with a burning desire for immediate action.

Treachery was to be the first movement of Pontiac and his followers in the execution of the sanguinary scheme. He was to begin the tragedy at Detroit. Under the pretext of holding a friendly council with Major Gladwin, the commander of the fort, he entered it in May, with about three hundred warriors, each carrying a knife, tomahawk and short gun, concealed under his blanket. When Pontiac should arise and show the green side of a belt, the massacre of the garrison was to begin. A friendly Indian had warned Gladwin of the danger the day before, and it was averted by the appointment of another conference. The gates were shut upon Pontiac after he and his warriors had retired, and he began a siege of the fort that continued more than a year.

By similar acts of treachery, or by sudden and unexpected assaults, every post west of Oswego, excepting Niagara, Fort Pitt and Detroit, fell into the hands of the dusky confederates within a fortnight afterward, for the work was performed at different points almost simultaneously.

At Michilimackinac, Indians came to the fort at the close of May, as if to trade. Every day they engaged in the exciting pastime of ball-playing on the plain near the fort. On the 2nd of June their squaws came with them, entered the fort, and stayed there. The commander and a lieutenant, unsuspecting of any danger, stood just outside the gate, watching the game. At length the ball was sent near the gate, and two or three Indians pursuing it, went behind the officers, seized them, and carried them off to the woods. The other Indians rushed into the fort, seized hatchets which the squaws carried under their blankets, and murdered a part of the garrison, making prisoners of the remainder.

Captain Dalyell, aide-de-camp to General Amherst was sent in a vessel with reinforcements and supplies for the garrison at Detroit. They ran up the river in the night at the close of July, and succeeded in getting both into the fort. Dalyell at once proposed to make a sally from the fort and attack the besiegers, who lay about a mile up the river. Gladwin thought it would be imprudent. Dalyell persisted, and with two hundred and forty chosen men, he marched in the darkness at three o'clock in the morning of the 31st of July, to surprise Pontiac. The chief was on the alert, and at a small stream at the northern verge of the city of Detroit, the English, furiously assailed, were forced to make a precipitate retreat, leaving twenty of their comrades killed and forty-two wounded, on the borders of the brook, which, to this day, bears the name of Bloody Run. Dalyell was slain while trying to carry off the wounded, and his scalp was an Indian's trophy.

This victory encouraged the Indians, and they swarmed around Detroit and Fort Pitt. For the relief of the latter, Colonel Bouquet was sent with a force of regulars from Pennsylvania. Early in August he approached the fort, when the besieging savages attacked him. He had two desperate fights with them, in which he lost about one-fourth of his command and all of his horses, but he drove the assailants away and entered the fort with the remainder. Detroit was relieved the next summer by a force under Colonel Bradstreet. The power of the Indian Confederacy was now broken, and chiefs of the hostile tribes sued for pardon and peace. The haughty Pontiac would not yield. He tried to rally the confederate tribes, but in vain. He went to the Illinois country where no Englishman had been, and where the French flag yet waved. Among the tribes there he exerted his eloquence to induce them to make war on the English. He sent an ambassador to New Orleans to ask the French to aid him. His efforts were vain. The cause that lay next to his heart was ruined. Afterward we find him holding a friendly conference with Sir William Johnson at Oswego; then he is seen at St. Louis trying to arouse the French people there to drive the English out of the Illinois country, which they had seized. At last, in 1769, this haughty Indian prince - this Catawba prisoner adopted by the Ottawas - who had swayed almost unbounded power over thousands of square miles of territory, was slain near Cahokia. A strolling Indian was bribed by an English trader to murder him. That savage, for the gift of a barrel of rum stole softly behind Pontiac in the forest and buried his hatchet in his brain.

Book: Our Country: Volume 3

Volume: Vol. 3
Date: 1905

Overview of Our Country: Volume 3

A history of the United States from the discovery of America to the present time (1905). Volume 3 of 8 covers the affirmation of the right to tax the Colonies and the "Boston Tea-party" through the Declaration of Independence and Revolutionary War.

Our Country. By Benson J. Lossing, LL.D. A history of the United States from discovery of America to the present time. Volume 3 of an 8 volume series.

Chapter XLVII

Accession of George the Third - His Unfortunate Choice of Advisor - Designs Against the American Charters - Writs of Assistance Denounced by Otis - His Influence and His Misfortunes - Preparations for Conflict - Pitt and the Cabinet - Honors Conferred on Pitt's Wife - Bute Cricatured and Satirized - Grenville, Prime Minister - Right to Tax the Colonies Affirmed - Opposition in Massachusetts - Townsend's Schemes - Grenville Proposes a Stamp Tax - John Huske - Samuel Adams - Address of the Town of Boston - Otis's Pamphlet in England.

ON a bright morning late in October, 1760, the air cool and bracing, young Prince George, grandson of the reigning sovereign of England, was riding near Kew palace with his tutor and favorite companion, the Earl of Bute, when a messenger came in haste with the startling news that the king was dead. That "temperate, methodical old man," rose that morning at six o'clock, as usual, and after drinking a cup of chocolate went into a small closet. His German valet, who always kept near his person, presently heard a noise in the closet as of one falling, and going into the apartment found his master lying upon the floor dead. The ventricle of his heart had bursted, causing instantaneous death. "Full of years and glory," wrote Horace Walpole, "he died without a pang, and without a reverse. He left his family firmly established on a long-disputed throne, and was taken away in the moment that approaching extinction of sight and hearing made loss of life the only blessing that remained desirable."

Prince George remained at Kew during the day and night after the king's death. He was his grandfather's successor to the throne, and was so proclaimed. William Pitt, then at the head of the ministry, immediately repaired to Kew to console and consult with the new monarch. On the following day the king went to St. James palace, where Pitt again waited upon him and presented a sketch of an address to be made by the monarch at a meeting of the Privy Council. The minister was politely informed that a speech was already prepared, and that every preliminary was arranged. Pitt perceived, what many had suspected, that the Earl of Bute, who was the special favorite of the young king's mother, was to be a leading spirit in the administration. The pride of the great commoner was touched, and he left the royal presence with clouded brows. A year later

he retired from public life.

The young king, who was to occupy the British throne for fifty years - the period in English history the most interesting to Americans - was a son of the dead Frederick Prince of Wales. His mother was the beautiful Princess Augusta of Saxe-Gotha. He was born in London in 1738, and was regarded with special favor by the people of England, because he was a native prince. His tutor and confidential adviser, the Earl of Bute, was a gay Scottish nobleman of handsome person, pleasing address, possessed of moderate mental endowments, and was narrow in his political views. The Princess Augusta seemed fond of him, and scandalous things were suggested concerning their intimacy. Such was the man - a sort of needy adventurer at the English court, at first - without valid claims to the character of a statesman, whom the young monarch unfortunately chose for his counsellor and guide, instead of the wise and sagacious Pitt, who had done so much to glorify England during the reign just closed. Like Rehoboam, George "forsook the counsel which the old men gave him, and took counsel with the young men that were brought up with him, that stood before him."

This was a mistake that led to lasting disasters to the realm. The unwise policy advised by Bute, concerning the English-American colonies, engendered much of the ill-feeling toward the mother country that led to a revolutionary war and the dismemberment of the British empire. Discontents rapidly appeared in England, when it was seen that the great Pitt was discarded, and that the young king was to be ruled by his unpopular mother and the Favorite. Murmurs of discontent soon became audible and some body had the boldness to fasten upon the front of the Royal Exchange in London, this placard in large letters: "No petticoat government - no Scotch minister - no Lord George Sackville!"

Bute's idea concerning the American colonies was that they should be brought into absolute subjection to the British Parliament, by force if necessary, and to do this, he advised the employment of measures for reforming the colonial charters. Acting upon the advice of Bute, the king sent secret agents over the sea to travel in the colonies; make the acquaintance of leading men collect information about the character and temper of the people, and bring together facts and conclusions that would enable ministers to judge what regulations and alterations might be safely made. The agents came, they made superficial observations, and returned to England with erroneous conclusions which led to trouble. They entirely mistook the character and temper of the Americans, and their reports were fallacious. The colonists saw through their thin disguise as travelers for their own pleasure, and became more watchful than ever. They knew that the Board of Trade had proposed to annul the colonial charters, and to make the people submit to royal government and taxation and they looked with distrust upon all parliamentary legislation bearing upon the colonies.

A crisis soon came. The officers of customs asked for writs of assistance - warrants to empower them to call upon the people and all officers of government in America to assist them in the collection of the revenue, and to enter the stores and houses of the citizens at pleasure, in pursuit of their vocation. These writs were granted, and the people seeing the great peril to which

their liberties were thereby exposed, resolved to openly resist the measure. It was contrary to the cherished theory of English liberties, that "every man's house is his castle," when the meanest deputy of a deputy's deputy" might enter his dwelling at will. There was also a scheme on foot for establishing the ritual of the Church of England or the state mode of worship in the colonies, and this rekindled the smoldering fires of Puritan zeal in defence of the right of conscience. In these propositions the kind and the aristocracy of Great Britain were the exponents of the feudalism which still moulded the policy of rulers in Europe, but which was entirely incompatible with the more advanced and enlightened ideas of human liberty which then prevailed in America.

The writs of assistance were first issued in Massachusetts. Their legality was questioned, and the matter was brought before a court held in the old Town Hall in Boston, in February, 1761. There were calm men there, and there were fiery men there. The calm advocate of the crown (Mr. Gridley) argued that as Parliament was the supreme legislature for the whole British realm, and had authorized the writs, no subject had a right to complain. The calm Oxenbridge Thacher, an eminent lawyer, answered his arguments with keen legal reasoning, showing that the rule in English courts was, in this case, not applicable to America. The fiery James Otis, one of Gridley's pupils, in a speech full of telling logic, expressed with eloquence and impassioned manner, also replied to the attorney-general. He denounced the writs as the worst instruments of arbitrary power the most destructive of English liberty and the fundamental principles of law." No act of Parliament," he said, can establish such a writ even though made in the very language of the petition, it would be a nullity. An act of Parliament against the constitution is void." Referring to the arbitrary power of the writ, he said A man's house is his castle and whilst he is quiet, he is as well guarded as a prince in his castle. This writ, if it should be declared legal, would totally annihilate this privilege. Custom-house officers may enter our houses when they please; we are commanded to permit their entry. Their menial servants may enter, may break locks, bars, and everything in their way; and whether they break through malice or revenge, no man, no court may inquire. "I am determined," he said, to sacrifice estate, ease, health, applause, and even life to the sacred calls of my country, in opposition to a kind of power, the exercise of which cost one king his head and another his throne."

These words of Otis went forth with amazing power. They stirred the hearts of the people through all the provinces. The speech and event constitute the opening scene of resistance in America to British oppression. On that day the trumpet of the Revolution was sounded the seeds of patriots and heroes were then and there sown and when the orator exclaimed, "To my dying day I will oppose, with all the power and faculties God has given me, all such instruments of slavery on one hand and villainy on the other, as this writ of assistance is," the independence of the colonies," John Adams afterward said, was proclaimed." But absolute independence was not then desired. Even Otis deprecated the idea. The colonists were proud of their political connection with Great Britain. They asked only for justice and equality, and the privilege of local self-government as British subjects. The topic of American representation in Parliament, which assumed large proportions about two years afterward, was not then discussed.

When Otis left the Town Hall that day, he was greeted by loud huzzas from the populace, who

threw up their hats in token of their delight and from the day of that remarkable event in our history, that unflinching patriot, then six-and-thirty years of age, led the van of the phalanx of revolutionists in Massachusetts for several years. His eloquence and presence were magnetic. He was the incarnation of courage and independence. He had resigned the office of advocate-general of the colony that he might, with a good conscience, wield the sword of opposition. The royalists feared and hated him. His election to a seat in the Massachusetts Assembly in the spring of 1761, alarmed them. "Out of this," wrote the tory Timothy Ruggles, a faction will arise that will shake this province to its foundations." The Governor (Bernard), fearing the influence of his tongue, exhorted the new legislature not to heed declamations tending to promote a suspicion of the civil rights of the people being in danger. Such harangues might well suit in the reign of Charles and James, but in the time of the Georges they are groundless and unjust," he said. At that very moment the perfidious governor was secretly promoting the scheme of the Board of Trade for taking away the colonial charters.

The public career of Mr. Otis was ended before the tempest of the Revolution which he had helped to engender burst upon the colonies. In 1769, his bright intellect was clouded by a concussion of the brain, produced by a blow from a bludgeon in the hands of a custom-house officer whom he had offended. Ever afterward he was afflicted by periods of lunacy. At such times, thoughtless or heartless men and boys would make themselves merry in the streets at his expense. It was a sad sight to see the great orator and scholar so shattered and exposed. His ready use of Latin was remarkably illustrated one day. He was passing a crockery store, when a young man who was familiar with that language, standing in a door of the upper story, sprinkled some water upon him from a watering-pot he was using, saying: *Pluit tantum, nescio quantum. Scis ne tu?* "It rains so much. I know not how much. Do you know?" Otis immediately picked up a large stone, and hurling it through the window of the crockery-store, it smashing everything in its way, exclaimed: *Frigi tot nescio quot. Scis ne tu?* "I have broken so many. I know not how many. Do you know?"

After the memorable argument in the Town Hall in Boston, the triumphs of the popular will in America began. Few writs of assistance were issued, and these were ineffectual. The Americans prepared for the impending conflict with the British ministry, animated by a prophecy of success because their warfare would be just. They measured the strength of that ministry by true standards, and found them generally weak. Bute, in 1762, became Premier, with George Grenville, who prided himself on his knowledge of the science of finance, as his chancellor of the exchequer. Pitt, who had become disgusted with the ignorance and assumptions of Bute, had left public employment the previous year and retired to his country seat at Hays, in Kent. There, though tortured by gout, he watched the drift of public affairs with intense interest, and equally intense anxiety, for he trembled at the thought of the possible fate of his country, whose destinies were held by such incompetent hands.

When Pitt resigned the seals of office into the hands of the king in the autumn of 1761, the public discontent was unmistakable. Bute, in a reply to a letter from Lord Melcombe congratulating the former on being delivered of a most impracticable colleague (Mr. Pitt), said:

My situation, at all times perilous, is become much more so for I am no stranger to the language held in this great city - Our darling's resignation is owing to Lord Bute, and he must answer for all the consequences. The king, too, felt unpleasant forebodings concerning the future; and when the great statesman laid the seals before him, his majesty expressed his deep concern at the loss of so able a minister. The king showered kind words so profusely that Pitt, acknowledging the royal condescension, burst into tears. The king offered to confer a title of honor upon the retiring statesman, but Pitt was "too proud to receive any mark of the king's countenance and favor," he wrote to Bute, and declined it. He intimated, however, that he should be happy could he see those dearer to himself "comprehended in that monument of royal approbation and goodness" with which his majesty should condescend to distinguish him. The king acted upon this hint, and conferred upon Pitt's wife the honorary title of Baroness of Chatham, with a pension for Lady Chatham, her husband and their eldest son, of fifteen thousand dollars a year. With these marks of royal approbation, Pitt remained in retirement, maintaining his popularity and appearing in Parliament only when great questions came up, until 1766, when he was elevated to the peerage with the title of Viscount Pitt and Earl of Chatham. His acceptance of the title damaged his popularity. Chesterfield said: Pitt has gone to the hospital for incurable statesmen"-the House of Lords.

When Bute became prime minister, the opposition press attacked him without mercy, and innumerable caricatures appeared: some of the latter were coarse and indecent. Intoxicated by power, the minister lavished offices upon his countrymen in profusion, as did James the First. This called out many caricatures. One of these represents a northern witch on an enormous broomstick conveying Scotchmen through the air to the land of promotion. Another entitled "The Royal Dupe," represents the Princess of Wales seated on a sofa, lulling the young king to sleep in her lap, while Lord Bute is stealing his sceptre, and another is picking his pockets. Caricatures and satires concerning Bute's private relations with the princess were highly libellous and sometimes obscene. In the spring of 1763, his administration, which was founded on prerogative and power, was ended. He suddenly resigned, for causes never clearly understood, and was succeeded by George Grenville, Pitt's brother-in-law.

The new minister was an honest statesman, rigid in his morals, an indefatigable worker and possessed of great political knowledge but, according to Burke, his mind could not extend beyond the circle of official routine, and was incapable of estimating the result of untried measures. He found an empty treasury and the national debt increased by the expenses of the war then just ended, nearly seven hundred million dollars. Increased taxation was necessary. That burden upon the English people was then very great, and, viewing the temper of the public mind then, he dared not increase its weight so he looked to the Americans for relief and formed schemes for drawing a revenue from them. He did not doubt the right of Parliament to tax them, and he knew they were able to pay. At about the same time there was a warm debate upon the subject of an act for imposing an excise on cider, and which worked in a partial manner in England. It was odious to a large portion of the people, and especially to the country members of the House of Commons, and Pitt, who was in that House, denounced it as intolerable." Grenville defended it, and turning toward Pitt, said: I admit that the impost is odious, but where can you lay another tax? Let him

tell me where - only tell me where? Pitt, who was not much given to joking, hummed in the words of a popular song: "Gentle Shepherd, tell me where?" The House burst into laughter, and Grenville was ever afterward called the Gentle Shepherd. At the same time Pitt, with the most contemptuous look and manner, rose from his seat, as Grenville stood to reply, and bowing to the chairman walked slowly out of the House.

The subject of the right to tax the Americans, they not being represented in Parliament, had been debated in the House of Commons in March (1763) for the first time, when it was determined in the affirmative by a unanimous vote. When the news of that debate and vote reached Massachusetts, the Assembly of that colony, then in session, immediately resolved "That the sole right of giving and granting the money of the people of this province is vested in them, as the legal representatives and that the imposition of taxes and duties by the Parliament of Great Britain upon a people who are not represented in the House of Commons is absolutely irreconcilable with their rights. That no man can justly take the property of another without his consent; upon which principle the right of representation in the same body which exercises the power of making laws for levying taxes, one of the main pillars of the British Constitution, is evidently founded." These ideas were speedily formulated into the maxim - Taxation without representation is tyranny and upon that principle the Americans thereafter rested in opposing the taxation schemes of the mother country.

Charles Townshend, who had been Secretary of War, was made First Lord of Trade two months before Grenville became Premier. He was a thorough aristocrat and stickler for the royal prerogative, and was disposed to act with more rigor in restraining popular liberty in America than any of his predecessors. He advocated the substitution of royal authority for the colonial charters, and a new territorial arrangement of the provinces. The conclusion of peace with France, then very near, was to be the time when these vigorous measures against the Americans were to be put into operation; and as preliminary thereto, Townshend proposed making crown officers in the colonies independent of the people for their salaries, and maintaining a standing army there at the expense of the inhabitants for their own subjugation. He also proposed a stamp tax, which Bute had suggested to Parliament on the recommendation of his secretary Charles Jenkinson; and when, soon afterward, Jenkinson became Secretary of the Treasury, he proposed the measure to Grenville. The latter, at about the same time, with short-sightedness equal to Townshend's, introduced a bill for enforcing the navigation laws, which empowered every officer and seaman of the British navy to act as custom-house officers and informers, and so subjecting to search and seizure every American vessel on sea or in port. These measures for enslaving and plundering the colonists were proposed, and partially put into operation, at the moment when peace was established and the loyal colonies were rejoicing because of the honor and dominion which the war just ended had won for the British crown. Otis, at a town-meeting in Boston, expressed the feelings of the Americans, when he said: "We in America have abundant reason to rejoice. The heathen are driven out and the Canadians conquered. The British dominion now extends from sea to sea, and from the great rivers to the ends of the earth. Liberty and knowledge, civil and religious, will be co-extended, improved and preserved to the latest posterity. No constitution of government has appeared in the world so admirably adapted to

these great purposes as that of Great Britain. Every British subject in America is, of common right, by act of Parliament, and by the laws of God and nature, entitled to all the essential privileges of Britons. By particular charters particular privileges are justly granted, in consideration of undertaking to begin so glorious an empire as British America. Some weak and wicked minds have endeavored to infuse jealousies with regard to the colonies; the true interests of Great Britain and her plantations are mutual, and what God in his providence has united let no man dare attempt to pull asunder." These words rebuked the Lords of Trade, who were continually assailing the royal ear with stories about the aspirations of the American colonies for absolute independence and they were also a significant demand upon Charles Townshend to keep his hands off the American charters.

In the spring of 1764, Grenville read, in the House of Commons, a series of resolutions declaring the intention of the government to raise a tax in America by a duty on stamped paper. A stamp duty had been proposed in 1732, during Walpole's administration, but that sagacious minister said: I will leave the taxation of America to some of my successors, who have more courage than I have." Sir William Keith, governor of Pennsylvania, proposed such a tax in 1739. Franklin thought it just, when in the convention at Albany in 1754. But when it was proposed to Pitt in 1759, he said: I will never burn my fingers with an American stamp act." Early in 1764, Mr. Huske, a native of Portsmouth, New Hampshire, then residing in England, and holding a seat in Parliament, desirous of showing his excessive loyalty, arose in his place, alluded to Franklin's opinion in the Albany convention, and delighted the House of Commons with the assurance that the Americans were able to pay a liberal tax. He recommended that one should be levied that would amount annually to two and a half million dollars. Encouraged by these precedents and this assurance, Grenville, a few weeks afterward (March 9, 1764), presented his Stamp Act scheme, asking for a million dollars. On his own motion the consideration of it was postponed, and it slept for almost a year. For the part which he played in the matter, John Huske incurred the hot resentment of his countrymen, and he was hung in effigy on Liberty Tree in Boston, with the following inscription on his breast: Question. What, Brother Huske? Why this is bad! Answer. Ah, indeed but I'm a wicked lad; My mother always thought me wild. "The gallows is thy portion, child," She often said behold, 'tis true, And now the dog must have his due; For idle gewgaws, wretched pelf, I sold my country, d---d myself; And for my great, unequalled crime, The d---l takes H---e before his time. But if some brethren I could name, Who shared the crime should share the shame, This glorious tree, though big and tall, Indeed would never hold 'em all." The agents of the colonies in England remonstrated with Grenville concerning the proposed stamp tax, when he told them that if they could devise a better scheme for raising a revenue, he would be satisfied. The revenue must be raised, and he knew of no better method than the one proposed. In the House of Commons he made similar remarks, and stated that the consideration of the subject had been postponed, because there were some doubts about the right of Parliament to levy such a tax. He asserted the right, and called upon the Opposition to deny it if they thought it fitting. No one spoke but Mr. Beckford, who said: As we are strong, I hope we shall be merciful." As the right was not denied, the matter resolved itself into a question of method.

The subject excited great feeling in the colonies. Public and private discussions ran high.

Great questions that lie at the foundations of civil and natural rights were pondered thoughtfully. The people became divided in opinion, and the party names, afterward so familiar, of Whigs, Patriots, and Sons of Liberty on one side, and Loyalists and Tories on the other, now first came into vogue. Men and women, in every social condition, were found on each side in the division, and all professed loyalty to the crown and adherence to the British Constitution. Thoughtful men saw in the measure prophecies of great changes in America. If the colonist is taxed without his consent, he will, perhaps, seek a change," said Holt's New York Gazette, in May, 1764. It is a menace of the rights of man a challenge to a conflict for inalienable rights," said a writer in the Virginia Gazette. The ways of Heaven are inscrutable. This step of the mother country, though intended to secure dependence, may produce fatal resentment and be subversive of that end," wrote Richard Henry Lee of Virginia, who, twelve years afterward, offered in the Continental Congress the resolution that the colonies were free and independent States." The agent of Connecticut (Mr. Dyer), then in England, wrote: If the colonies do not now unite, they may bid farewell to liberty, burn their charters, and make the best of thralldom." In Massachusetts, the voice of that stern Puritan and conscientious Christian gentleman, Samuel Adams, who was then a little more than forty years of age, was lifted up, with words of logic and defiance, against the measure and he wrote the address of the citizens of Boston to the Massachusetts legislature, saying:

"There is no room for delay. Those unexpected proceedings may be preparatory to more extensive taxation for if our trade may be taxed, why not our lands and everything we possess If taxes are laid upon us in any shape, without our having a legal representation where they are laid, are we not reduced from the character of free subjects to the miserable state of tributary slaves? This annihilates our charter right to govern and tax ourselves. We claim British rights, not by charter only we are born to them. Use your endeavors that the weight of the other North American colonies may be added to that of this province, that by united application all may happily obtain redress."

So the Bostonians denied the right of Parliament to tax the colonies, and looked to the power of union for a redress of grievances. The patriots in other colonies were in accord with those of Massachusetts, and there was an universal expression of the sentiment: If we are taxed without our consent - if we are not represented in the body that taxes us, and we submit, we are slaves." The resolution to resist took deep root in the hearts of multitudes of men and women in the colonies; and when the subject of a stamp tax was again presented to Parliament, there was very little difference of opinion in America concerning its unrighteousness. The words of Otis had again gone forth to electrify the American people, and put leading men in England into a thoughtful mood. With wonderful power and clearness of language he enunciated great principles, declared the loyalty of the colonies, and defined natural rights. The following sentences from the extraordinary pamphlet that contains them will give an idea of its character:

"There can be no prescription old enough to supersede the law of nature and the grant of God Almighty, who has given all men the right to be free. If every prince since Nimrod had been a tyrant, it would not prove a right to tyrannize. The administrators of legislative authority, when

they verge towards tyranny, are to be resisted if they prove incorrigible, they are to be deposed. . .
. Nor do the political and civil rights of the British colonists rest on a charter from the crown.
Old Magna Charta was not the beginning of all things nor did it rise on the borders of chaos out
of the unformed mass. A time may come when Parliament shall declare every American charter
void but the natural, inherent, and inseparable rights of the colonists as men and as citizens would
remain, and, whatever became of charters, can never be abolished till the general conflagration. . .
. The world is at the eve of the highest scene of earthly power and grandeur that has ever been
displayed to the view of mankind. Who will win the prize is with God. But human nature must
and will be rescued from the general slavery that has so long triumphed over the species."

Thus spake the prophet. Lord Mansfield rebuked those in England who spoke of his
utterances with contempt. They answered, "The man is mad." What then answered the great
jurist. "One madman often makes many. Masaniello was mad; nobody doubted it yet, for all that,
he over turned the government of Naples."

Chapter XLVIII

Correspondence Between the Colonial Assemblies - Petitions and Remonstrances - Boldness of the New York Assembly - Franklin Sent to England - He is Consulted by Leading Men - The King Recommends a Stamp Tax - A Stamp Act in Parliament - Speeches of Townshend and Barre - Stamp Act Passed - Franklin's Letter to Townshend - The Act and Barre's Speech in America - Patrick Henry and His Resolutions - Stamp Distributors Scorned and Badly Treated - The Stamp Act Congress - Operations of the Act - Non-Importation Agreements.

THE Boston resolves and Otis's pamphlet, entitled "Rights of the British Colonies Asserted and Proved" stirred the American people most profoundly, and created a burning zeal for freedom. A committee of correspondence, appointed by the Massachusetts Assembly, had sent a circular letter to the assemblies of other colonies on the subject of resistance to taxation. A like committee in Rhode island sent a letter to the Pennsylvania Assembly, in which it was urged that if all of the colonies would unite in an expression of views, and present them to Parliament through their agents, the end sought for might be obtained. The Pennsylvania Assembly, delighted with the suggestion, took action accordingly. So also did those of several other provinces and petitions and remonstrances against the proposed stamp tax were soon on their way to England, bearing wise thoughts and bold assertions. They were a series of able state papers sent from Massachusetts, Connecticut, New York, Pennsylvania, Virginia, and South Carolina. That from New York was the boldest of all. An exemption from ungranted and involuntary taxation, said that Assembly, must be the grand principle of every free state. Without such a right vested in themselves, exclusive of all others, there can be no liberty, no happiness, no security, nor even the idea of property. Life itself would be intolerable. We proceed with propriety and boldness to inform the Commons of Great Britain, who, to their infinite honor, in all ages asserted the liberties of mankind, that the people of this colony nobly disdain the thought of claiming that exemption as a privilege. They found it on a basis more honorable, solid and stable they challenge it, and glory in it, as a right."

Late in October (1764) the Pennsylvania Assembly chose Dr. Franklin (then fifty-eight years of age) agent of that province in England. He was then involved, as a leader of the popular party against the Proprietary government of Pennsylvania, in a bitter political dispute, and his appointment was vehemently opposed by his antagonists. It was made in spite of their remonstrances and protests, and he sailed on a mission the result of which powerfully affected the destinies of nations. The agents of some of the other colonies appearing lukewarm on the subject of a stamp tax, their powers were transferred to Franklin, and he became a sort of national representative of the British colonial empire in America. All bad confidence in his integrity, ability, statesmanship and knowledge of the character, temper and views of the American people, and much was expected from the influence of his well-known name in England. "His appointment," afterward wrote Dr. Smith, provost of the College of Philadelphia, "appears to have been a measure provided by the councils of Heaven."

Soon after Franklin's arrival in England, he was waited upon by Grenville and other politicians,

and consulted about the stamp tax. Pitt, in retirement at Hayes, sent for the philosopher, and also consulted him on the subject. Franklin told everybody that it was an unwise measure that the Americans would never submit to be taxed without their consent and that such an act, if attempted to be enforced, would endanger the unity of the empire. But the wise counsels of Franklin, and the voices from the colonists in America protesting against being sheared by The Gentle Shepherd, were of no avail. Grenville was determined to have a revenue from America. Unwilling to incur the whole odium of the measure, he adroitly placed it upon the general grounds of whig policy, and so committed the party to the scheme.

On the assembling of Parliament after the Christmas holidays (January 10, 1765), the king, in his speech, presented the American question as one of "obedience to the laws and respect for the legislative assembly of the kingdom." The stamp tax was to be the test. He seemed to be insensible to the danger to his realm of the storm then gathering in America. He recommended the carrying out of Grenville's scheme, and assured the Parliament that he should use every endeavor to enforce obedience in the colonies. So assured, Grenville, on the 7th of February, introduced his famous motion for a stamp act, composed of fifty-five resolutions. It provided that every skin or piece of vellum, or parchment, or sheet or piece of paper, used for legal purposes, such as bills, bonds, notes, leases, policies of insurance, marriage licenses, and a great many other documents, in order to be held valid in courts of law, was to be stamped, and sold by public officers appointed for the purpose, at prices which levied a stated tax on every such document. The bill made all offenses against its provisions cognizable in the courts of admiralty. To the odiousness of the tax itself was added the provision for its collection by arbitrary power under the decrees of British judges, without any trial by jury.

When the Stamp Act, framed in proper order by a commissioner, came up for debate, Charles Townshend, the most eloquent man in the House in the absence of Pitt, made a speech in defense of it, which was concluded in the following words: "And now, these Americans, children planted by our care, nourished up by our indulgence until they have grown to a degree of strength and opulence, and protected by our armies, will they grudge to contribute their mite to relieve us from the heavy weight of that burden which we lie under?"

Colonel Barre, who had shared with Wolfe the dangers and fatigues of the campaign against Quebec, and who, having lived in America, knew the people well, instantly sprang to his feet, and with eyes flashing with indignation, and with outstretched arms, delivered an unpremeditated phillippic of extraordinary power, in which most wholesome truths were uttered. He exclaimed with scorn: They planted by your care No, your oppressions planted them in America. They fled from your tyranny to a then uncultivated and inhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable, and among others to the cruelties of a savage foe the most subtle, and I will take upon me to say the most formidable, of any people on the face of God's earth yet, actuated by principles of true English liberty, they met all hardships with pleasure compared with those they suffered in their own country from the hands of those who should have been their friends. They nourished up by your indulgence! They grew by your neglect of them. As soon as you began to care about them, that care was exercised in

sending persons to rule over them in one department and another, who were, perhaps, the deputies of deputies of some member of this House, sent to spy out their liberties, to misrepresent their actions, and to prey upon them - men whose behavior on many occasions has caused the blood of those Sons of liberty to recoil within them - men promoted to the highest seats of justice some who, to my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of justice in their own. They protected by your arms They have nobly taken up arms in your defense; have exerted a valor amid their constant and laborious industry, for the defense of a country whose frontier was drenched in blood, while its interior parts yielded all its little savings to your emoluments. And believe me - remember I this day told you so - that the same spirit of freedom, which actuated that people at first, Will accompany them still; but prudence forbids me to explain myself further. God knows that I do not at this time speak from motives of party heat what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience the respectable body of this House may be, I claim to know more of America than most of you, having seen and been conversant in that country. The people, I believe, are as truly loyal as any subjects the king has; but a people jealous of their liberties, and who will vindicate them if ever they should be violated. But the subject is too delicate. I will say no more."

The House remained in silent amazement for a few moments after this impassioned utterance of truths. The members were generally too ignorant of America and its people to comprehend Barry's speech. The intelligent Horace Walpole confessed that he knew almost nothing about the colonists. The members of the House knew that Great Britain was strong and believed the colonies were weak and without being "merciful," as Beckford had suggested, they passed the obnoxious bill on the 27th of February by a vote of two hundred and fifty against fifty. In the Lords it received very little opposition, and on the 22nd of March, the king made it a law by signing it. A few days afterward the monarch was crazy. It was the first of four attacks of the dreadful malady of insanity which afflicted him during his long life, and finally deprived him of the power to rule.

So was produced the principal wedge which cleaved asunder the British empire. The infatuated ministry openly declared that it was intended to establish the power of Great Britain to tax the colonies." On the night of the passage of the act, Dr. Franklin wrote to Charles Thompson, afterward the Secretary of the Continental Congress: "The sun of liberty is set the Americans must light the lamps of industry and economy."

News of the passage of the Stamp Act, and a report of Barry's speech by Ingersoll, the half tory agent of Connecticut, reached the colonists at the same time. The former excited the hot indignation of the people the latter was applauded, printed, and sent broadcast over the land. Barry's title of Sons of Liberty, given to the patriots, was eagerly adopted, and the name soon became familiar on the lips of Americans. Everywhere the act was denounced. The people in villages and cities gathered in excited groups and boldly expressed their indignation. The pulpit thundered condemnation and defiance in the name of a righteous God; at public gatherings the orators denounced it the newspapers teemed with seditious essays, and the colonial assemblies

rang with rebellious utterances. Among the foremost of those who boldly denounced the act in almost treasonable language was Patrick Henry, then about twenty-nine years of age. He had lately been elected a member of the Virginia House of Burgesses, who were in session at that time in the old Capitol at Williamsburg. When the news was published to that body by the Speaker, a scene of wild excitement ensued. Henry calmly tore a blank leaf from an old copy of Coke upon Littleton, on which he wrote five resolutions and submitted them to the House. The first declared that the original settlers brought with them and transmitted to their posterity all the rights enjoyed by the people of Great Britain. The second affirmed that these rights had been secured by two royal charters granted by King James. The third asserted that taxation of the people by themselves, or by persons chosen by themselves, was the distinguishing characteristic of British freedom, and without which the ancient constitution could not exist. The fourth maintained that the people of Virginia had always enjoyed the right of being governed by their own Assembly in the article of taxes, and that this right had been constantly recognized by the king and people of Great Britain. The fifth resolution, in which was summed up the essentials of the preceding four, declared That the General Assembly of this colony have the sole right and power to levy taxes and impositions upon the inhabitants of this colony; and that every attempt to vest such power in any other person or persons whatsoever, other than the General Assembly aforesaid, has a manifest tendency to destroy British as well as American freedom."

These resolutions, so spontaneous and so bold, filled the members with astonishment. Had a thunderbolt fallen among them, they would not have been more amazed. The boldest were astounded timid ones were alarmed, and the few royalists in the House were startled and indignant. Some, whose hearts and judgments Mere with Henry, and who afterward appeared in the forefront of revolution, hesitated, and even opposed the fifth resolution as being too radical and incendiary. The resolutions were seconded by George Johnson of Fairfax, and a violent debate ensued. Threats were uttered and the royalists abused Mr. Henry without stint. He defended the resolutions, the fifth one particularly, with vigorous logic delivered in eloquent words. With pathos and denunciatory invective, he excited the sympathy, the fears and the anger of that Assembly, in a most remarkable degree. He played upon their passions as a skillful musician would touch the keys of his instrument. They were borne upon the tide of his eloquence, which was now calm, now turbulent, passive and yielding, until, in his clear bell-tones, he exclaimed, Caesar had his Brutus, Charles the First his Cromwell, and George the Third when Mr. Robinson, the Speaker, springing to his feet and striking his desk violently with his gavel, interrupted him by crying out - "Treason Treason!" This word was shouted back from all parts of the House by the royalists, and the Assembly was in the greatest confusion. Henry never faltered, but rising to a loftier altitude and fixing his flashing eyes on the Speaker, whom he knew to be a defaulter at that moment, he finished his sentence saying - "may profit by their example; if that be treason, make the most of it!"

When Henry sat down, Peyton Randolph, the king's attorney, and others arose and denounced the fifth resolution as disloyal and dangerous to the public welfare. Again Henry took the floor, and his eloquence and logic, like a rushing avalanche, swept away the sophistries of his opponents. The resolutions were carried the fifth by a majority of only one. That evening Mr.

Henry left Williamsburg for his home. Some of those who voted for the fifth resolution under excitement became alarmed after reflection and the next morning, in the absence of Henry, the House reconsidered and rejected it. So the vitality of the resolutions as a revolutionary agent was destroyed. Manuscript copies of them had been sent to Philadelphia and the east. News of the rejection of the fifth immediately followed. Ardent patriots somewhere, anxious to have the political voice of Virginia sounding throughout the land the sentiments of Patrick Henry, caused the four resolutions which were actually adopted to be rewritten in slightly changed form, and two more to be added, which gave out trumpet-tones of revolution in the following manner:

"35. Resolved, That his Majesty's liege people, the inhabitants of this colony, are not bound to yield obedience to any law or ordinance whatsoever, designed to impose any taxation whatsoever upon them other than the laws and ordinances of the General Assembly aforesaid.

"36. Resolved, That any person who shall, by speaking or writing, maintain that any person or persons other than the General Assembly of this colony have any right or power to lay any taxation whatsoever on the people here, shall be deemed an enemy to this his Majesty's colony."

These resolutions, so full of bold, revolutionary force, were first published in Boston as the actual resolves of the Virginia legislature on the 29th of May, 1765. They flew upon the wings of the press and the letters of committees of correspondence all over the provinces, and gave the first decisive impulse toward united resistance. Within a fortnight after they were published, Massachusetts, on the recommendation of Otis, sent out an invitation to all the colonies to meet her by delegates in a general Congress in New York the following autumn. In the beautiful month of June, the Virginia resolves and the Massachusetts circular reached all the colonies, and everywhere they met a hearty response. The Sons of Liberty were very active: and yet there were many wise and patriotic men, knowing that Great Britain had made provision for enforcing the Stamp Act by quartering troops on the colonists, if necessary, prepared not only to submit, but to profit by the measures. Richard Henry Lee of Virginia, whose patriotism no man ever doubted, perceiving that the office would be very lucrative, applied for the appointment of stamp-distributor; and even Dr. Franklin, considering the colonies too weak in numbers then to resist the arms of Great Britain, advised Ingersoll, the agent for Connecticut then in England, to accept the same office, and added: "Go home and tell your countrymen to get children as fast as they can," so intimating that by increase in population the Americans might secure their liberties. It was a cunning scheme of Grenville to appoint Americans to the office of stamp-distributors. He thought they would be more acceptable to their countrymen than foreigners. He was mistaken. They were regarded as accomplices in the plot against liberty. If the ruin of your country is decreed, are you free from blame for taking part in the plunder?" indignantly exclaimed Daggett, of New Haven and he spurned Jared Ingersoll as a public enemy.

The Stamp Act was to go into effect in the colonies on the first day of November, 1765. Ingersoll arrived at Boston at the beginning of August, bearing commissions for stamp-distributors, and on the 8th of that month their names were published. They immediately became objects of public resentment and scorn. There was a general determination not to allow

them to exercise the functions of their office. Manifestations of hostility to them instantly appeared. Andrew Oliver, secretary of the province of Massachusetts, who had been appointed stamp-master for Boston, was the first to feel resentment. A large elm tree, standing at the edge of the town, had been a shelter for the Sons of Liberty at their out-of-town meetings during the summer. It was called "Liberty Tree," and the ground under it, "Liberty Hall." At dawn on the morning of the 14th of August, an effigy of Oliver, with emblems of Bute and Grenville, was seen hanging upon that tree. Crowds went to view it. Hutchinson, chief justice of the province, ordered the sheriff to take it down. "We will remove it ourselves at evening," quickly said the populace, and the sheriff kept his hands off the effigy.

At twilight a great multitude gathered around Liberty Tree. The effigy was taken down, laid on a bier, and was borne by the populace through the old State House directly under the Council Chamber, shouting Liberty, Property, and no Stamps. That multitude, at first orderly, now became a riotous mob. They tore down a building which Oliver was erecting for a stamp office, and made a bonfire of it. They shouted, "Death to the man who offers a piece of stamped paper to sell and rushing toward Oliver's house, they there beheaded the effigy, and would doubtless have killed him if they could have caught him. He had escaped by a back way. They broke into his house, and in brutal wantonness destroyed his furniture, trees, fences and garden and after saluting the governor with three cheers, they dispersed. Believing his life to be in danger, Oliver resigned his office the following morning, and the town was quieted. The cowardly Bernard, after ordering a proclamation for the discovery and arrest of the rioters, fled to the castle on an island in Boston harbor. "The prisons would not hold them long," said the Rev. Jonathan Mahew of the West Church, whose voice had been heard in favor of the people more than a dozen years before. "We have sixty thousand fighting men in this colony alone," he said. Twelve days afterward, at night, another mob burned all the records of the admiralty court, ravaged the house of the comptroller of the customs, and splitting open the doors of Chief-Justice Hutchinson, whom they regarded as a secret public enemy, they broke his furniture, scattered his plate and the contents of his valuable library, and left his house a wreck. He and his family had barely time to escape. The better class of citizens frowned upon these proceedings, and the officers of the crown, terror-stricken, were very quiet. The mob spirit was manifested in several colonies, for the people were much exasperated against those who had accepted the office of stamp-distributors. In Providence, Rhode Island, after destroying the house and furniture of an obnoxious citizen, a mob compelled the stamp-officer to resign. At New Haven, in Connecticut, Ingersoll was denounced as a traitor; and the fact that the initials of his name were those of Judas Iscariot was publicly pointed out, and he was compelled to promise that he would not sell stamps or stamped paper. He was finally forced to resign by a multitude who threatened him with personal violence. Cadwallader Colden, a venerable Scotchman, then eighty years of age, was acting-governor of New York. He was a liberal-minded man, but duty to his sovereign and his own political convictions compelled him to oppose the popular movements. James McEvers was appointed stamp-distributor for New York. The Sons of Liberty demanded his resignation. The governor protected him. When, late in October, stamps arrived, McEvers, alarmed, refused to receive them, and they were taken to the fort at the foot of Broadway for safety. The garrison was strong, and the governor had strengthened the works. This covert menace exasperated the

people. Although armed British ships were riding in the harbor, and the guns of the fort were pointed toward the town, the Sons of Liberty were not afraid. They appeared in large numbers before the fort, and demanded the stamps. A refusal was answered by defiant shouts. An orderly procession soon became a roaring mob. Half an hour after the refusal, the governor was hung in effigy on the spot where Leisler, the democrat, was executed seventy-five years before. Then the mob went back to the fort, dragged Colden's fine coach to the open space in front of it, and tearing down the wooden railing that surrounded the Bowling Green, piled it upon the vehicle, and made a bonfire of the whole. Then they rushed out of town to the beautiful dwelling-place of Major James, of the artillery (at the present intersection of Worth street and West Broadway), where they destroyed his fine library, works of art and furniture, and desolated his beautiful garden, leaving his seat, called Ranelagh, a ruin. After parading the streets with the Stamp Act printed on large sheets and raised upon poles, with the words, "England's Folly and America's Ruin," the populace dispersed to their homes.

In New Jersey, Coxe, the stamp-officer, fearing violence, resigned. At Annapolis, in Maryland, the excited populace pulled down a house that Zachariah Hood, a stamp-officer, was repairing for the purpose, they thought, of selling stamps in it, and the governor dared not interfere. General alarm prevailed among the officers of the crown. They saw that the Americans were thoroughly aroused and very strong. In other colonies not here named, there was equal firmness, but less violence, in preventing the sale of stamps and when the first of November arrived, the law, so far as its enforcement was concerned, was a nullity.

The invitation of Massachusetts for the colonies to meet in a representative convention in New York was promptly responded to favorably, and the famous Stamp Act Congress," so called, assembled at New York on the 7th of October. Twenty-seven delegates were present, representing nine colonies, namely, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and South Carolina. Timothy Ruggles of Massachusetts, a rank tory at heart, was chosen to preside, and John Cotton was appointed secretary. Communications were received from the assemblies of New Hampshire, Virginia, North Carolina and Georgia, saying they would agree to whatever might be done by the Congress. That body continued in session fourteen days, and the whole subject of the rights and grievances of the colonies was fully discussed. John Cruger of New York, was deputed to write a Declaration of Rights. Robert R. Livingston of New York, prepared a Petition to the King, and James Otis of Massachusetts, wrote a Memorial to both Houses of Parliament. These were adopted, and have ever been regarded as able state papers. They embodied the principles that governed the men of the revolution that broke out ten years afterward. The proceedings were signed by all but the President and Robert Ogden of New Jersey, both of whom thus early manifested their defection from a cause which they afterward openly opposed. Ruggles was censured for his conduct by a vote of the Massachusetts Assembly, and was reprimanded, in his place, by the Speaker. He afterward became a bitter Tory, and took up arms for the king. In Mrs. Mercy Warren's drama called *The Group*, Ruggles figures as Brigadier Hate-all. Ogden was also publicly censured for his conduct was burned in effigy, and at the next meeting of the New Jersey Assembly was dismissed from the Speaker's chair, which honorable post he held at the time

of the Congress. These men had insisted in that body that resistance to the act was treason, and they, in turn, were denounced as traitors to the rights of man.

On the first of November, 1765, the Stamp Act became a law in America. It had been ably discussed by the brightest intellects in the land, and generally denounced, sometimes with calmness, sometimes with turbulence. It was manifest to all that its enforcement was an impossibility yet its existence was a perplexity. No legal instrument of writing was thereafter valid without a stamp, by a law of the British realm. But on that day there remained not one person commissioned to sell a stamp, for they had all resigned. The royal governors had taken an oath that they would see that the law was executed, but they were powerless. The people were their masters, and were simply holding their own power in abeyance.

The first of November was Friday. It was a "black Friday" in America. The morning was ushered by the tolling of bells. A funeral solemnity overspread the land. Minute-guns were fired as if a funeral procession was passing. Flags were hoisted at half-mast as if there had been a national bereavement. There were orations and sermons appropriate to the occasion. The press spoke out boldly. The press is the test of truth the bulwark of public safety; the guardian of freedom, and the people ought; not to sacrifice it," said Benjamin Mecom, of New Haven, in his Connecticut Gazette, printed that morning, and filled with patriotic appeals. This was the spirit of most of the newspapers. Such, also, was the spirit of most of the Congregational pulpits. Patriots everywhere encouraged each other and a yearning for union was universally felt. Nothing will now save us but acting together," wrote the sturdy Gadsden of South Carolina. The province that endeavors to act separately must fall with the rest, and be branded besides with everlasting infamy."

As none but stamped paper was legal, and as the people had determined not to use it, all business was suspended. The courts were closed, marriages ceased, vessels lay idle in the harbors, and the social and commercial operations in America were paralyzed. Few dared to think of positive rebellion. The sword of British power was ready to leap from its scabbard in wrath and a general gloom overspread society. Yet the Americans did not despair nor even despond. They held in their hands a power which might compel the British Parliament to repeal the obnoxious Act. The commerce between Great Britain and the colonies had become very important, and any measure that might interrupt its course would be keenly felt by a large and powerful class in England, whose influence was felt in, Parliament. The expediency of striking a deadly blow at that trade occurred to some New York merchants, and on the 31st of October - the day before the obnoxious Act went into operation - a meeting was held in that city; and an agreement entered into not to import from England certain enumerated articles after the first of January next ensuing. The merchants of Philadelphia and Boston readily entered into a similar agreement. So also did retail merchants agree not to buy or sell goods shipped from England after the first of January. In this way was begun that system of nonimportation agreements which hurled back upon England, with great force, the commercial miseries she had inflicted upon the colonies.

The patriotic people co-operated with the merchants. Domestic manufactures were commenced in almost every family. Forty or fifty young ladies, calling themselves "Daughters of Liberty," met at the house of Rev. Dr. Morehead, in Boston, with their spinning-wheels, and spun two-hundred and thirty-two skeins of yarn during a day and presented them to the pastor. There were upwards of one hundred spinners in Mr. Morehead's society. "Within a month," wrote a gentleman from Newport, Rhode Island, some time afterward, four hundred and eighty-seven yards of cloth and thirty-six pairs of stockings have been spun and knit in the family of James Nixon, of this town." Other families were mentioned in which several hundred yards of cloth were made. Another from Newport said: "A lady of this town, though in the bloom of youth, and possessed of virtues and accomplishments, engaging, and sufficient to excite the most pleasing expectations of happiness in the married state, has declared that she should rather be an old maid than that the operations of the Stamp, Act should commence in these colonies." The wealthiest vied with the middling classes in economy, and wore clothing of their own manufacture. That wool might not be scarce, the use of sheep flesh for food was discouraged. One source of British prosperity was thus dried up. When firm but respectful appeals went to the ears of the British ministry from America, the merchants and manufacturers of England seconded them, and their potential voices were heeded.

Chapter XLIX

Pitt Attempts to Form a New Cabinet - Duke of Cumberland's Ministry - American Affairs in Parliament - Pitt's Great Speech - Repeal of the Stamp Act - The Declaratory Act - Pitt Caricatured - Joyful Proceedings in England and America - Pitt Made a Peer and Becomes Unpopular - Pitt's Cabinet - British Troops in New York - The Liberty-Pole - Taxation Measures Adopted by Parliament - Indignation of the Americans - Hopes of the French - They Send an Emissary to America - Preparations for Resistance.

IN the early summer of 1765, Grenville found his administration embarrassed by conflicting political interests, and the king was dissatisfied with what his minister failed to accomplish. The monarch, influenced by men of greater minds than his own, had resolved on a change. The public were loudly clamoring for the restoration of Pitt to the premiership. The king was not unwilling, and in June he summoned that statesman to an audience. Pitt was shy; he would not commit himself until he knew what lines of policy were to be pursued. The king yielded much. Among other things he agreed to a repeal of the English cider tax and a change in the American stamp tax, and then Pitt consented to form a new ministry. He bent for his brother-in-law, Lord Temple, to whom he offered the seals of the treasury. Temple declined. He was influenced by Grenville, and Pitt was thwarted. Then the Duke of Cumberland attempted to form a ministry. He well knew the value of Pitt, and the importance of having him a leading spirit in the cabinet. To accomplish this end, he visited the great commoner in person, at Hayes, where Pitt was laid up with the gout, but he failed in his mission, and made up an incongruous cabinet. This visit to Hayes drew forth a caricature that was inspired by the ministers out of office. The Duke of Cumberland is seen as a courier riding in hot haste to consult the gouty foot of the statesman, which is seen projecting from the door of a country inn, and swathed in flannels. On a sign-board over the door is an inflated bladder inscribed "Popularity," and under it the initials of Pitt - W. P.

In the new cabinet, the Marquis of Rockingham, a friend of the Americans, took the place of Grenville. General Conway, another friend, was appointed Secretary of State with the management of the House of Commons, assisted by the Duke of Grafton. This office concerned the Americans more than any other, for its incumbent dealt directly with them. These, with other members of the cabinet, formed such a motley group of men of conflicting political views, that its early dissolution seemed inevitable. Lord Chesterfield wrote to his son: "It will either require repairs or a keystone next winter and that keystone will and must necessarily be Mr. Pitt." Such was the tendency and such was the expectation all the autumn - that memorable autumn when the tempest of opposition to the stamp tax raged in America. At the same time Mr. Pitt's health gradually improved. At the close of November, he wrote to his wife from Bath: I have been airing in the coach to-day for the second time, nearly three hours, and come untired, wanting nothing but dinner, and the sight of my love and of my children. I can stand with the help of crutches, and hope soon to discard one of them. Who knows, in time, what may become of his companion? My left hand holds a fork at dinner with some gentleness, and my right, as you see, a pen." The statesman's health continued to improve, and when Parliament assembled after the Christmas holidays, he was in his place, and indulged a feeling of confidence in Rockingham.

Meanwhile public sentiment had been deeply stirred in England by events in America, while strange apathy marked the conduct of the king and Parliament. In his speech, when the latter assembled at the middle of December, and when the conduct of the Americans and their petitions and remonstrances were made known, the monarch barely alluded to unpleasant occurrences in the colonies that might demand the attention of the legislature. That body seemed quite as indifferent to the news from beyond the sea as the king, and almost immediately adjourned. But when they reassembled in January, 1766, the ministry were fully alive to the necessity of prompt and vigorous action. The king, after alluding to the disturbances in the colonies, assured the legislature that no time had been lost in issuing orders to his governors in America, and to the commander of his military forces there, for the exertion of all the powers of government in suppressing riots and tumults, and in the effectual support of lawful authority." The rest he left to the wisdom of Parliament.

The debate on American affairs opened with a discussion of the speech of the king, which, by Grenville and others, was considered altogether too lenient toward the rebellious Americans. Pitt, who was in his place in the House, with his legs swathed in flannels, arose, and leaning upon his crutches, made one of the most remarkable speeches ever heard in the House of Commons. After a brief review of his own career as premier, he animadverted upon the tardiness of the ministry in laying an account of the disturbances in America before Parliament, and declared that, in his opinion, the government of Great Britain had no right to tax the colonists. "They are subjects of this kingdom," he said, equally entitled with yourselves to all the natural rights of mankind and the peculiar privileges of Englishmen; equally bound by its laws, and equally participating in the constitution of this free country. The Americans are the sons, not the bastards of England. Taxation is no part of the governing or legislative powers. Taxes are the voluntary gift or grant of the Commons alone.

When, therefore, in this House, we give and grant, we give and grant what is our own. But in an American tax, what do we do? We, your majesty's Commons for Great Britain, give and grant to your majesty, what? Our own property? No; we give and grant to your majesty the property of your majesty's Commons of America. It is an absurdity in terms There is," he continued, an idea that the colonies are virtually represented in this House. I would fain know by whom an American is represented here. Is he represented here by any knight of the shire, in any county of this kingdom? Would to God that respectable representation was augmented to a greater number Or will you tell him that he is represented by any representation of a borough - a borough which, perhaps, its own representative never saw?" Then, with a prophetic glance at future parliamentary reform, he said: This is what is called the rotten part of the constitution. It cannot continue a century; if it does not drop, it must be amputated."

When Pitt sat down, the House, awed into silence by his brilliant declamation, remained so for a few minutes, when General Conway, of the cabinet, arose and declared that his sentiments were consonant with those of the orator. Grenville took the floor and defended his measure as right in itself. He complained of the delay of ministers in giving notice of the disturbances in America. "They began," he said, "in July, and now we are in the middle of January. Lately they were only

'occurrences,' they are now grown to 'disturbances,' to 'tumults,' and to 'riots.' I doubt they border on open rebellion; and if the doctrines of this day be confirmed, that name will be lost in revolution." Then fixing his eyes sharply on Pitt, he exclaimed with emphasis: The seditious spirit of the colonies owes its birth in this House. Gentlemen are careless of the consequences of what they say, provided it answers the purpose of opposition."

This thrust from his brother-in-law brought Pitt and others to their feet. There was a cry, Mr. Pitt Mr. Pitt when all but the great orator sat down. He then fell upon Grenville, and told him that since he had challenged him to the field, he would fight him on every foot of it. He tells us that America is obstinate - America is in open rebellion," said Pitt. I rejoice that America has resisted. Three millions of people so dead to all the feelings of liberty as to voluntarily submit to be slaves, would have been fit instruments to make slaves of the rest." Alluding to the alleged strength of Great Britain and the weakness of America, he said: It is true that in a good cause, on a good ground, the force of this country could crush America to atoms; but on this ground, on this Stamp Act, many here will think it a crying injustice, and I am one who will lift up my hands against it. In such a cause your success would be hazardous. America, if she fall, would fall like the strong man she would embrace the pillars of the state, and pull down the constitution along with her."

Pitt then proposed an absolute, total and immediate repeal of the Stamp Act, at the same time declaring the absolute sovereignty of Great Britain over the colonies. His proposition was warmly seconded, and Edmund Burke, then thirty-six years of age and who was sitting in Parliament for the first time, made two remarkable speeches in favor of repeal. They were so logical and brilliant in expression that he immediately took a front rank among the orators of the House of Commons. A repeal bill was introduced, and on the 18th of March it was passed by the House by a large majority. It was accompanied by Pitt's declaratory act, so called, which affirmed the right of Parliament to bind the colonies in all cases whatsoever" - an act intended by the great statesman to soothe the feelings of some who might, by their votes, defeat the repeal bill. In the House of Lords it was stoutly opposed as a relinquishment of the sovereign power of the government. Lord Camden was favorable to repeal, but he was opposed to the declaratory act. Planting himself firmly on the maxim that taxation without representation is tyranny, I will maintain it to the last," he said.

The position is founded in the law of nature. It is more it is, itself an eternal law of nature." On the day of its enactment (March 18), the repeal act became a law by receiving the reluctantly-given signature of the king.

The repeal of the Stamp Act produced great joy in England and America. In London the event was celebrated by bonfires and illuminations. The merchants had sweet dreams of reviving trade with the Americans. To Pitt was ascribed all the honor of the measure, and he was idolized. When he left the lobby of the House of Commons, the populace gathered around him with the most extravagant demonstrations of joy. The aristocracy, on the other hand, were offended and alarmed. "The king is made to bow to subjects," they said. British power is set at naught the foundation of the British empire is sapped." demagogue seeking popularity. Pitt was lampooned

and caricatured as a One of the pictures entitled The Colossus, represents Pitt raised on very lofty stilts, his gouty leg resting on the Royal Exchange in London, which is surrounded by bubbles inscribed "War," "Peace," etc. This stilt is called Popularity." The other, called Seditious," he stretches over the sea toward New York, seen in the distance, and fishing for popularity in the Atlantic Ocean. He rests on a long staff entitled Pension." Above Pitt's head hangs the broad hat of the common-wealth; and in the air, on one side, is seen Lord Temple occupied in blowing bubbles which support the "great Commoner's fame. This picture, and the lines below which accompanied it, show the spirit of that day:

"Tell to me if you are witty, Whose wooden leg is in de city, En bien drole, 'tis de great pity. Doodle doo."

"De broad-brim hat he thrust his nob in, De while St. Stephen's throng are throbbing. One crutch in America is bobbing. Doodle doo."

"But who be yonder odd man there, sir! Building de castle in de air, sir? Oh 'tis de Temple one may swear, sir! Doodle doo."

"Stamp act, le diable! dat's de jot, sir, Dat stamp't it in de stilt-man's nob, sir, To be America's nabob, sir. Doodle doo."

"De English dream vid leetle vit, sir; For de French dey make de Pit, sir, 'Tis a pit for dem who now are hit, sir. Doodle, noodle, doo."

Equal joy was manifested in America, when news of the repeal came over the Atlantic. Pitt, the King, and the Parliament shared in the honors - of congratulatory cannon-peals, oratory, bonfires, illuminations, and great meetings of citizens. In Boston, the Sons of Liberty gathered under the Liberty-Tree and adopted the most laudatory resolutions concerning the immediate participants in the measures that brought about the repeal. A day was set apart for celebrating the event. The dawn was ushered in by the roar of artillery and the ringing of bells. John Hancock, a leading patriot and wealthy merchant of Boston, opened a pipe of wine in front of his fine mansion on Beacon street and at the suggestion of a "fair Boston nymph," the liberal citizen raised funds and ransomed and set at liberty every prisoner for debt in the jail of the New England metropolis, that they might participate in the general joy. All the great houses were illuminated, and many feasts were given. The local government dined at the Province House, where many loyal toasts were drunk. Past animosities were forgotten, and the 16th of May, 1766, was a happy day in Boston.

In New York there were equal demonstrations of joy. Pitt, the King, and Parliament were praised and honored. The news of the repeal reached that city on the 6th of May. Bells rang out a merry peal. Cannons shook the city, and placards were scattered over the town calling the people to assemble the next day to celebrate the joyous event. It was a beautiful May day, and everybody was in the open air. A long procession of citizens was formed at the Bowling Green

and marched to The Fields" (the site of the City Hall and Post-office), where a royal salute of twenty-one guns was fired. The Sons of Liberty had a great feast, whereat twenty-eight loyal and constitutional toasts were drank." The city was illuminated at evening, and bonfires blazed on every corner. Again, on the king's birthday (June 4), there was a celebration under the auspices of Governor Moore. That magistrate, the council, military officers and the clergy dined at the King's Arms," on the west side of Broadway, opposite the Bowling Green, where General Gage had his headquarters. There were great rejoicing among the people in The Fields, where an ox was roasted whole twenty-five barrels of beer and a hogshead of rum were opened for the populace; twenty-five pieces of cannon were ranged in a row and gave a royal salute, and in the evening twenty-five tar barrels, hoisted upon poles, were burned, and gorgeous fire-works were exhibited at Bowling Green.

The Sons of Liberty also feasted together, and under the sanction of the governor they erected a tall mast in The Fields in front of Warren street. which they called a Liberty-Pole. Upon it they placed the inscription: 79 His Most Gracious Majesty George the Third Mr. Pitt, and Liberty. At a meeting of citizens a fortnight later, a petition was numerously signed, praying the Assembly to erect a statue of Mr. Pitt. The Assembly complied; and on the same day that body resolved to set up an equestrian statue of the king. The former, made of marble, was placed at the intersection of Wall and Smith (now William) streets, in New York, and the latter, made of lead and gilded, was erected on a pedestal in the middle of the Bowling Green. These were set up in the year 1770. Within six years afterward, the statue of the king was pulled down and destroyed by republicans, and that of Pitt was mutilated by royalists soon afterward. In Philadelphia, Charleston, and other places, also, there were great demonstrations of joy and loyalty. That loyalty, so manifestly sincere, was developed by a single act of justice, and even that was qualified. If the British ministry had been wise, they might have easily conciliated the Americans and ushered in an era of peace and prosperity on both sides of the Atlantic. But they were not wise.

In the midst of the rejoicing, there were wise, thoughtful and patriotic men who shook their heads ominously, and whose voices seemed to many like the croaking of the raven. While the bells were ringing, cannons thundering and bonfires were blazing in Charleston, South Carolina, and the legislature were voting to erect the fine statue of Pitt yet standing in the southern city, Christopher Gadsden collected some of his political friends under a great live-oak tree, and warned them not to be deceived by the show of justice, for the fangs of the dragon of oppression, by Pitt's declaratory act, had been left untouched. Similar warning was given in other colonies; and very soon there was a reaction in the public mind. The liberal press of England denounced the act, and Pitt's plea of expediency could not save him from very severe censure by the Americans when they gravely considered the matter. It was perceived, by sagacious observers, that the repeal bill was only a truce in the war upon the liberty of the Americans. They watched every movement of the government party with suspicion. Within a few months, there came from the serpent's egg - the declaratory act - a brood of obnoxious measures which kindled the fiery indignation of the colonists.

When, in the summer of 1766, the popular Rockingham ministry was dissolved, and the king

called Pitt to create a new ministry out of such material as he pleased, the liberal party in England watched the movement with some anxiety, for they knew how obstinately the monarch clung to the royal prerogative. When the king offered Pitt a peerage with the title of Viscount Pitt and Earl of Chatham, and he accepted the honor, his popularity fell suddenly to zero, and it never again went up to summer heat. There was a prevailing opinion that Bute and the Princess of Wales were still a power behind the throne, and fears were entertained that Pitt in his old age, eager for honors and emoluments, would be the puppet of the despised Scotch nobleman and the king's mother. In making up his cabinet, Pitt seems to have failed in sagacity. It was composed of such discordant materials that neither party knew what confidence to repose in it. It was largely composed of friends of the king, but the colleagues whom he assorted at the same boards," wrote Burke, stared at each other and were obliged to ask, Sir, your name? Sir, you have the advantage of me Mr. Such-a-one, I beg a thousand pardons. I venture to say that it did so happen that persons had a single office divided between them who had never spoken teach other in their lives until they found themselves, they knew not how, pigging together, heads and points, in the same truckle-bed." It was an administration utterly unsafe to touch and unsure to stand upon. Pitt's shattered health would not permit him to control the cabinet. Frequent fits of gout confined him at his country-seat much of the time, when his opposers and political enemies, whom, to please the king, he had clothed with power, devised and put into operation schemes for taxing the Americans, directly contrary to his well-known principles of action. It was during his administration of two years and four months that seen of the most obnoxious acts of Parliament concerning the Americans became laws, under the fostering care of the ministry. Troops had already been sent to America, in accordance with the provisions of a military act passed when news of the stamp-act disturbances in the colonies reached Parliament. A large portion of the House of Lords, the whole bench of bishops and many of the Commons, who did not doubt the right of the government to tax the colonies, urged the ministry to use coercive measures against them. A certain number of bishops are entitled to a seat in the House of Lords, with the same political powers of the peers, and the two classes compose the "Lords spiritual and Lords temporal" of the kingdom.

Troops were sent to New York with power, under the law, to break into houses in search of deserters. The royal governor demanded of the Assembly an appropriation for the subsistence of these avowed instruments of oppression. The people were indignant. The Sons of Liberty were aroused to action, and they resolved to oppose the measure to the utmost of their ability. Angry feelings were excited between the troops and the citizens. The former, insolent and overbearing, became objects of intense dislike; and when, three months after the Liberty-Pole was erected with so much harmony and loyalty, the soldiers, to show their power, cut it down, the indignation of the people almost drove them into an armed rebellion. They set up the pole again the next evening, in defiance of the soldiery, with whom they had a fracas, when some blood was shed. A month later the troops again prostrated the pole, and again the people re-erected it, and from its top unfurled the British banner which they loved so well. They bound the pole with iron to resist the axes of the mercenaries, and set a guard to watch it. The soldiers came with loaded muskets, fired some random shots into a house where the Sons of Liberty were assembled, and tried to drive the people from the fields. Fearful retaliation would have followed this act had not the

governor, alarmed by the popular indignation, ordered the troops to refrain from further aggressive acts. That was in the spring of 1767. This defense of the Liberty-Pole in New York was applauded throughout the colonies, and was a manifestation of the spirit of the people everywhere.

Charles Townshend, chancellor of the exchequer, was a ruling spirit in the cabinet in the absence of Pitt. He and Grenville coalesced in devising new schemes for taxing the Americans. The latter proposed direct taxation to a considerable amount. In June (1767), a bill, proposed by Townshend, for levying duties on tea, glass, paper, painters' colors, and other articles imported by the colonists, was adopted by Parliament. In July, another bill was passed for the establishment of a board of revenue commissioners in the colonies, with their seat at Boston, to be independent of colonial legislation also for creating resident commissioners of customs to enforce the revenue laws. Another was adopted a few days later, forbidding the Assembly of New York to perform any legislative act whatever, until they should comply with the requirements of the mutiny act in regard to the subsistence of the troops.

These taxation schemes were properly regarded as direct blows against the liberties of the Americans, and they excited almost as violent opposition as did the Stamp Act. The colonial assemblies boldly protested against them. The Assembly of New York disregarded the disabling act, while the royal governors, with their numerous retainers, as blind as their masters, elated by the prospect of being independent of the colonial assemblies, eagerly promoted the schemes of the ministry and so fostered opposition among the people. A warm discussion in Parliament, concerning the rebellious acts of the colonies, revealed the fact to the world that the Americans were on the eve of open rebellion. In the course of the debate they were charged with a design to revolt and set up an independent government. They were called rebels, and traitors." Even the cautious Lord Mansfield drew a picture of the folly and wickedness of the American incendiaries," and the fatal effects upon England which the deplorable event of the separation of the colonists from the mother country might produce.

The prospect of disruption delighted the French ministry. Ever since the conquest of Canada, by which the French had been shorn by the English of a vast domain in America, the pride of that nation had been humbled at the feet of British power. There was a deep-seated determination to strike a deadly retaliatory blow when opportunity should offer. From the time of the treaty of Paris in 1763, the French government, seeing disaffection in the colonies, cherished the hope that it would grow into an open rupture which would lead to the withdrawal of those colonies from the government of Great Britain. That dismemberment of the empire was looked forward to by the French as the consummation of their wishes, and they resolved to help the Americans whenever they should enter upon a struggle, with arms, for their independence. That struggle now seemed to be near, and the chief French minister, Choiseul, resolved to send an emissary to America to spy out the real intentions of the colonists, if possible. That emissary was the Baron De Kalb, a colonel from the Franco-German province of Alsace, who was afterward a general in the American army of the Revolution, and fell a martyr, near Camden, in South Carolina. He was instructed to ascertain the wants of the Americans in respect to engineers and artillery officers,

and munitions of war and stores the strength of their purpose to withdraw from Great Britain their resources in troops and fortifications the plan of their projected revolution, and the character of their leaders, civil and military. The French minister did not comprehend the real loyalty of the Americans, nor their power of endurance and patience under provocation. The baron performed the service, but his report did not warrant Choiseul in hoping for an immediate rupture. From that time it was the cherished policy of the French government to foster the quarrel, and to give aid to the Americans whenever they should strike a blow for freedom. They did so, as we shall observe hereafter, for the sole purpose of injuring Great Britain and restricting her power.

Meanwhile the colonists were preparing for resistance to the taxation schemes. The common danger had thoroughly united them, and a feeling of nationality was budding in their hearts. The committees of correspondence kept each colony fully acquainted with the sentiments and acts of the others. The assemblies and people took the broad view expressed by James Otis, that "taxes on trade, if designed to raise a revenue, were just as much a violation of their rights as any other tax." The colonial newspapers, then about thirty in number, were becoming tribunes of the people, and in them the principles of liberty and the rights of the colonists were ably discussed in short essays. Among the most effective of these were a dozen Letters of a Farmer of Pennsylvania to the Inhabitants of the British Colonies," which were published in a Philadelphia newspaper in the summer and autumn of 1767. In a style of great simplicity, vigor and animation, their author (John Dickinson, an eminent lawyer of Philadelphia) portrayed the unconstitutionality of the conduct of Great Britain, the imminent peril to liberty in America which existed, and the fatal consequences of a supine acquiescence in ministerial measures - more fatal as precedents than by the immediate calamities they were calculated to produce. Votes of thanks were given to Dickinson at public meetings; and in May, 1768, an association in Philadelphia, called the Society of Fort St. David, presented an address to him "in a box of heart of oak," with suitable inscriptions. On the top was represented the Phoenician cap of liberty on a spear, resting on a cipher of the letters J. D. Underneath the cipher, in a semi-circular label, were the words "Pro Patria." Around the whole, the following: Theif of the Governor and Society of Fort St. David to the author of THE FARMER'S LETTERS, in grateful testimony to the very eminent service thereby rendered to this country, 1768." On the inside of the lid was the following inscription: The Liberties of the British colonies in America asserted with Attic eloquence and Roman spirit, by John Dickinson, barrister-at-law."

The immediate and subsequent effects of these letters were wonderful. The colonial assemblies noticed them, and upon the broad grounds of right and justice laid down in these essays, they denounced the acts of Parliament. Non-importation associations which had been dissolved on the repeal of the Stamp Act were reorganized, and that powerful machinery almost destroyed the commerce with England. Dr. Franklin caused the Letters to be republished in London, with a preface written by himself, in 1768. They were also translated into French and published in Paris.

Chapter L

The Americans Resolve to Resist - Violence Deprecated - Views of Leaders - Folly of the Ministry - The Massachusetts Circular - Acts of Crown Officers - The Issue - Hillsborough's Instructions - Temper of the Other Colonies - A Prophecy - A Warlike Menace - Seizure of the "Liberty" - Exciting Scenes at Boston - Firmness of the Citizens - Action on Rescinding by the Assembly - A Theological Controversy.

At the beginning of 1768, the Americans, educated by a long series of moral and political contests with the government of Great Britain, and assured by recent experience and observation of their own sound and potent physical and moral strength derived from numbers and the justice of their acts, stood in an attitude of firm resolve not to submit to the new schemes of the ministry for their enslavement. They were determined to maintain home rule inviolate in their political affairs, yet they were willing to bear with patience the pressure upon their industrial enterprise of old acts of Parliament then unrepealed. They were still eminently loyal, and were proud of the honor of being British subjects in its broad sense of nationality. But to the eye of a superficial observer the Americans, at that time, were in a state of open revolt. Their representative assemblies, uttering the voices of the people, were defying the power of Great Britain which threatened to impose unjust and unconstitutional laws upon them, and to enforce them with ball and bayonet. The nonimportation agreements, working disastrously against British commerce, were again in full force and the spirit of resistance was rife among the people.

But the leaders of American opinion, deprecating the spasmodic violence seen in opposition to the Stamp Act, counseled moderation, and condemned any but legal, just, and dignified measures. They saw that a crisis was at hand, when statesmanship of the highest order would be needed in the popular representative assemblies, and wise and judicious men were wanted as popular leaders of the people. When, in Boston, a placard appeared, calling on the Sons of Liberty to "rise and fight for their rights," and declaring that they would be joined by legions, James Otis, in a town-meeting, denounced that spirit. "Were the burdens of the people ever so heavy," he said, "or their grievances ever so great, no possible circumstances, though ever so oppressive, could be supposed sufficient to justify private tumults and disorders, either to their consciences before God or legally before men that their forefathers, in the beginning of the reign of Charles I, for fifteen years together, were continually offering up prayers to their God, and petitions to their king, for redress of grievances, before they would betake themselves to any forcible measures and to insult and tear each other in pieces was to act like madmen." John Dickinson wrote: "Our cause is a cause of the highest dignity; it is nothing less than to maintain the liberty with which Heaven itself has made us free. I hope it will not be disgraced in any colony by a single rash step. We have constitutional methods of seeking redress, and they are the best methods." Like sentiments were expressed by other patriotic leaders; and their advice to stand in an attitude of defence and not of aggression - to make the king and his ministers the real revolutionists if revolution should occur - was heartily endorsed by the people. It was a new, a benign, and a thoroughly American method of resisting the oppressions of an imperial government - a method having its foundations on law, enlightened public opinion, and social order.

Had the king and his ministers been wise, and simply respected the natural and chartered rights of the colonists, the climax of revolution toward which events were rapidly tending might have been indefinitely postponed. But they were not wise. The pride of power would not brook resistance or even opposition to its wishes and its will. The three estates of the realm - King, Lords, and Commons - esteeming themselves collectively the absolute masters of America, resolved to teach the colonists that implicit obedience was their birthright and their natural and legal tribute to that master. Leaning upon the acknowledged power of Great Britain to execute the will of the King and Parliament in America, that government resolved to effect a thorough revolution in the colonial governments by military force; to establish a vast consolidated empire under absolute royal rule, and to lay the foundations of a great American revenue. When the suggestion was made to Charles Townshend that the troops might be safely withdrawn from America, and by so lessening the expenses might lessen the need of a revenue and causes for discontent, the imperious minister replied: I will hear nothing on that subject; the moment a resolution shall be taken to withdraw the army, I will resign my office and have no more to do in public affairs. I insist it is absolutely necessary to keep up a large army there and here. An American army and consequently an American revenue are essential."

At that time Massachusetts, and particularly Boston, was regarded as the focus of sedition, and consequently had become the objects of the suspicion and wrath of the ministry. That Massachusetts was the "head center of opposition to ministerial and parliamentary injustice, cannot be truthfully denied. At the opening of the Assembly of that province at the beginning of 1768, the several obnoxious acts then recently passed were read and referred to a committee on the state of the province. That committee submitted a Letter addressed to the agent of the colony in England, but intended for the ministry. It set forth the rights of the Americans their equality with British subjects as free citizens, and their right; to local self-government. It expressed loyalty, and disclaimed a desire for independence; opposed the late acts as unconstitutional remonstrated against the maintaining of a standing army in America as expensive, useless, altogether inadequate to compel obedience, and as dangerous to liberty. It objected to the establishment here of commissioners of the customs; expressed alarm because of the attempt to annihilate the legislative authority of New York, and indicated the intention of Massachusetts to defend its rights. After much debate the Letter was adopted with other epistles to distinguished men in England; also a petition to the king couched in beautiful and touching language, in which a brief history of the settlements of the colonies was recounted the story of their investment of rights by the revolution of 1688 was told, and the principles of the sacred right of being taxed only by representatives of their own free election were laid down. All of these documents were the production of the teeming brain and facile pen of Samuel Adams, one of the soundest, purest, most inflexible and incorruptible men of his time; poor in purse, but rich in principle; of whom Governor Hutchinson said, He is of such an obstinate and inflexible disposition that he could never be conciliated by any office or gift whatever."

In February, a Circular Letter, also written by Samuel Adams, was sent to the several colonial assemblies, informing them of the contents of the Letter to the agent of the province, and the petition to the king, and inviting them to join the people of Massachusetts in maintaining the

liberties of America."

This Circular was fearlessly laid before Governor Bernard, for the patriot had nothing to conceal. It excited his fears and indignation. He wrote a letter to the Earl of Hillsborough, the Secretary of State for the colonies, in which he grossly misrepresented the temper and sentiments of the Circular, and declared that the Americans were aiming at independence. The board of commissioners of the revenue at Boston, who had lately been appointed, wrote in like manner, declaring their belief that their persons were not safe that the seeming moderation of the Americans was illusory; that the colonists were uniting to throw off the yoke of dependence; complaining that at the town-meetings in the province the lowest mechanics discussed the most important points of government with the utmost freedom," and said: "We have every reason to expect that we shall find it impracticable to enforce the execution of the revenue laws until the hand of government is properly strengthened. At present there is not a ship-of-war in the province, nor a company of soldiers nearer than New York." Massachusetts said to the ministry: "Touch not our local government, and relieve us of taxation without representation," and asked her sister colonies to join in the just demand. The crown officers said to the ministry: "Send us a fleet and army that we may destroy the local governments and tax the people without their consent." This was now the issue. To this complexion it had come at last; and the crown officers, wishing to have troops sent over, that the work might be speedily accomplished, wrote alarming letters home about concerted insurrections and of danger to the commissioners of customs. They pretended that the anniversary of the repeal of the Stamp Act was the day fixed for unlawful proceedings; and they tried to excite the people to some violent act to justify their accusations, by causing the effigies of two revenue officers to be seen hanging on Liberty-Tree on that morning. The Sons of Liberty" quietly took them down, and celebrated the day in a temperate manner. Not even a bonfire was lighted in the streets at night; and only a few men, women and children gathered with harmless demonstrations of joy. The false Bernard wrote that there was great disposition to disorder that "hundreds paraded the streets with yells and outcries that were quite terrible."

When, at the middle of April, the Circular and the misrepresentations of Bernard and other crown officers reached Hillsborough, he sent instructions to the governor to call upon the General Assembly of Massachusetts to rescind their resolutions, the substance of which was embodied in their Circular, and in case of refusal to dissolve them. Meanwhile responses to the Circular had come to Boston from the other assemblies, expressing cordial approbation of its sentiments. Individuals also sent approving letters, and patriots issued appeals to the people through the medium of newspapers and pamphlets. Courage, Americans! wrote William Livingston (it is supposed, an eminent Presbyterian lawyer in New York), in the American Whig, No. V. "Liberty, religion, and science are on the wing to these shores. The finger of God points out a mighty empire to your sons. The savages of the wilderness were never expelled to make room for idolaters and slaves. The land we possess is the gift of Heaven to our fathers, and Divine Providence seems to have decreed it to our latest posterity. So legible is this munificent and celestial deed in past events, that we need not be discouraged by the bickering between us and the parent country. The angry cloud will soon be dispersed, and America advance to felicity and

glory with redoubled activity and vigor. The day dawns in which the foundations of this mighty empire is to be laid by the establishment of a regular American constitution. All that has hitherto been done seems to be little beside the collection of materials for the construction of this glorious fabric. 'Tis time to put them together. The transfer of the European part of the great family is so swift, and our growth so vast, that before seven years roll over our heads the first stone must be laid. Peace or war, famine or plenty, poverty or affluence - in a word, no circumstance, whether prosperous or adverse, can happen to our parent - nay, no conduct of hers, whether wise or imprudent - no possible temper on her part, will put a stop to this building." So ran the prophecy in 1768. At the end of seven years its fulfillment began in earnest.

With his instructions to Bernard, Hillsborough sent a letter to the other royal governors, describing the Massachusetts Circular as of a most dangerous and factious tendency," and directing them to use their influence to induce their respective assemblies to treat it "with the contempt it deserved." The governors were also instructed, in case the assemblies gave any countenance to the seditious paper," to immediately dissolve them. By these means the Secretary hoped to induce the other assemblies to oppose the bold measure proposed by Massachusetts, and so isolate that province. The result did not justify his hopes. By this attempt to control their action, the assemblies were irritated, and their zeal in the cause in which Massachusetts was leading was increased. Meanwhile orders had been given to General Gage at New York to hold a regiment in readiness there to send to Boston, for the assistance of the crown officers in executing the laws. The admiralty was also directed to send a frigate and four smaller vessels-of-war to Boston harbor for the same purpose, and directions were given for the repairing and occupancy of Castle William on an island in that harbor. This measure was regarded by the Americans as a virtual declaration of war, yet they resolved to keep the sword of resistance in the scabbard as long as possible.

The commissioners of customs and the master of a sloop-of-war which, at their request, had come to Boston from Halifax, now assumed the utmost insolence of manner and speech toward the people. New England men were impressed into the British naval service, and in June, the sloop 'Liberty', belonging to John Hancock, whom the crown officers cordially hated because of his opposition to them, was seized under peculiar circumstances. She had come into the harbor with a cargo of Madeira wine. Just at sunset, the "tide-waiter" in the employ of the commissioners went on board, and took his seat in the cabin, as usual, to drink punch with the master until the sailors should land the cargo of dutiable goods. Hancock had resolved to resist the obnoxious revenue laws and at about nine o'clock in the evening, his captain and others in his employ entered the cabin, confined the tide-waiter, and proceeded to land the wine without entering it at the custom-house or observing any other formula. So great were the exertions of the master of the Liberty that night, that he died from their effects before morning.

The sloop was now seized by the officers of the customs for a violation of the revenue laws. A crowd of citizens quickly gathered at the wharf and as the proceedings went on, a part of them, of the lower order, became a mob under the lead of Malcom, a bold smuggler. The collector (Harrison) and the controller (Hallowell) were there to enforce the law. The former thought the

sloop might remain at Hancock's wharf with the broad arrow upon her (a mark designating her legal position) but the latter had determined to have her moored under the guns of the war-vessel (Romney, of sixty guns), and had sent for her boats to come ashore. An exciting scene now occurred, which Mr. Bancroft has described as follows:

"'You had better let the vessel be at the wharf said Malcom. I shall not,' said Hallowell, and gave directions to cut the fasts. Stop, at least, till the owner comes,' said the people who crowded round. No, damn you,' cried Hallowell, cast her off.' I'll split out the brains of any man that offers to receive a fast or stop the vessel,' said the master of the Romney, 'and he shouted to the marines to fire. What rascal is that who dares to tell the marines to fire?' cried a Bostoneer and turning to Harrison, the collector, a well-meaning man, who disapproved the violent manner of the seizure, he added: The owner is sent for you had better let her lie at the wharf till he comes down. "No, she shall go," insisted the controller; "show me the man who dares oppose it." "Kill the damned scoundrel," cried the master. "We will throw the people from the Romney overboard," said Malcom, stung with anger. 'By God she shall go,' repeated the master, and he more than once called to the marines, 'Why don't you fire?' and bade them fire. So they cut her moorings, and with ropes in the barges the sloop was towed away to the Romney."

This act excited the hot indignation of the people. A mob, led by Malcom, followed the custom-house officers, pelted them with stones and other missiles, and broke the windows of their offices. The mob seized a pleasure-boat belonging to the collector, and after dragging it through the town, burned it on the Common. Then they quietly dispersed. The commissioners were unhurt, but greatly alarmed. They applied to the governor for protection, but he, as much frightened as they, told them he was powerless. They finally fled to the Romney, and thence to Castle William, nearly three miles southeast of the city, where a company of British artillery were stationed. They were in no real danger in the city, but they were playing a deep game to deceive the ministry.

The Sons of Liberty now called a meeting of the citizens at Faneuil Hall, in a large building erected by Peter Faneuil in 1742 for the use of the town. They assembled in great numbers on the 13th of June, 1768. Citizens and yeomen from the surrounding country commingled there, all animated by a spirit of patriotic defiance. James Otis was appointed chairman. A committee of twenty-one citizens were requested to convey to the governor an address adopted by the assemblage, asking him to order the Romney to leave the harbor, and to restrain further violent proceedings on the part of the crown officers. At that meeting the people plainly told the crown that its oppressions must cease. So was Faneuil Hall consecrated as The Cradle of Liberty.

In eleven chaises the committee went in procession to the governors house in the country. Bernard received them courteously, and the next day he sent a reply to the address, in which he promised to stop impressments, and said: "I shall think myself most highly honored if I can be, in the lowest degree, an instrument in preserving a perfect conciliation between you and the parent state." At that very time, the dissimulating governor was using his utmost endeavors to get troops into Boston, either from New York or England, and had written to his superiors that the

events of the 10th of June constituted an insurrection rather than a riot." The crown officers all reported that a general spirit of insurrection was prevailing throughout the province," hoping to induce the ministry to use vigorous measures immediately for subjugating the Americans. Meanwhile the town of Boston declared in words written by John Adams, a rising young lawyer, that every person who shall solicit or promote the importation of troops at this time is an enemy to the town and province, and a disturber of the peace and good order of both."

While the excitement was at its height, the instructions of Hillsborough concerning the rescinding of the Massachusetts resolutions arrived. The Assembly were in session. On the 21st of June the governor delivered his message in accordance with those instructions. The House was composed of one hundred and nine members - much the largest legislative body in America. The message was received with calmness, and discussed with moderation but firmness. James Otis and Samuel Adams were the chief speakers. The latter was grave in demeanor and philosophical in his utterance. The former was fiery, and more declamatory. The friends of the King and Parliament declared that his harangue was "the most violent, insolent, abusive and treasonable declaration that perhaps ever was delivered." "When Lord Hillsborough knows," said Otis, "that we will not rescind our acts, he should apply to Parliament to rescind theirs. Let Britons rescind their measures, or they are lost forever.

For more than an hour Otis harangued the Assembly with words similar to these in meaning and intensity of expression. Even the "Sons of Liberty trembled lest he should tread upon the domain of treason. The House refused to rescind, passed resolutions denunciatory of this attempt to arrest free discussion and expressions of opinion, and then sent a letter to the governor informing him of their action. If the votes of this House," they said, "are to be controlled by direction of a minister, we have left us but a vain semblance of liberty. We have now only to inform you that this House have voted not to rescind, and that, in a division on the question, there were ninety-two yeas and seventeen nays. The seventeen "rescindings", became objects of public contempt. The governor was irritated by the "insolent letter," and proceeded to dissolve the Assembly but before the act was accomplished that body had prepared a list of serious accusations against him, and a petition to the king praying for his removal. Massachusetts felt strong in the assurances of sympathy and support received from the other colonies.

We have hinted that the Church and State in England worked in concert for the enslavement of the Americans. So early as 1748, Dr. Secker, Archbishop of Canterbury, had proposed the establishment of Episcopacy in America, and overtures were made to several eminent Puritan divines to accept the mitre, but they all declined it. It was known that among other reforms in the colonies, proposed by the ministry at the beginning of the reign of George the Third, was the curtailment or destruction of the Puritan, or Dissenting influence in the provinces, and to make the ritual of the Anglican Church the State mode of worship. This movement was made as secretly as possible, but it could not be wholly concealed. Rev. George Whitefield said to Dr. Langdon, a Puritan divine at Portsmouth, New Hampshire, "I can't, in conscience, leave this town without acquainting you with a secret. My heart bleeds for America. O poor New England! There is a deep-laid plot against both your civil and religious liberties, and they will be lost. Your golden

days are at an end. You have nothing but trouble before you. My information comes from the best authority in Great Britain. I was allowed to speak of the affair in general, but enjoined not to mention particulars. Your liberties will be lost."

Remembering the aspect of Episcopacy or rather of the Anglican Church in the early colonial days, the Americans had ever looked upon that Church as a partner of the State in its acts of oppression, and they feared its power. They well knew that if Parliament could create dioceses and appoint bishops, they would establish tithes and crush out dissent as a heresy. For years controversy on the subject was very warm and sometimes acrimonious this country. The Anglican Church had many adherents in nearly all the colonies, and they naturally desired its ascendancy. Essays by able writers appeared in pamphlets and sometimes in newspapers for and against Episcopacy. Among those of its opponents, none held a more trenchant pen than William Livingston, just mentioned. Dr. Ewer, Lord Bishop of Llandaff, had preached a sermon before the Society for the Propagation of the Gospel in Foreign Parts, in which he recommended the scheme for establishing Episcopacy in America, and heaped abuse upon the colonists, who were mostly Dissenters. Upon the adventurers themselves," he said, "what reproach could be cast heavier than they deserved? Who, with their native soil abandoned their native manners and religion, and ere long were found in many parts living without remembrance or knowledge of God, without any divine worship, in dissolute wickedness and the most brutal profligacy of manners. Instead of civilizing and converting barbarous infidels, as they undertook to do, they became, themselves, infidels and barbarians." With this view of the state of religion in the colonies, the prelate concluded that the only remedy for the great evil was to be found in a church establishment. His recommendations were laid hold of with a firm grasp by churchmen in this country, and urged with zeal. Dr. Chandler of Elizabethtown, in New Jersey, published "An Appeal to the Public in behalf of the Church of England" - an able and moderate performance. Men of less note followed, and echoed the sentiments of the worthy rector.

The Dissenters were aroused. They perceived in the Bishop's sermon the spirit of the old persecuting Church, and visions of Laud and the Star Chamber troubled them. They felt that their liberties were in danger, without a doubt. The unjust reproaches of the prelate were severely commented upon, and his erroneous assertions were met with truth. Dr. Chauncey of Boston first entered the lists against him and his abettors; and early in 1768, Mr. Livingston issued, in pamphlet form, his famous Letter to the prelate, in which, with sarcastic indignation of tone, he refuted the charges of that dignitary so completely that they were not repeated. The pamphlet was republished in London, and excited much attention in England. It was highly commended by all Dissenters in America; and in the summer of 1768, when Massachusetts was in a blaze of indignation because of the instructions of Hillsborough and the duplicity of Bernard, the consociated churches of the colony of Connecticut assembled in convention at Coventry, with Noah Wells as their scribe or secretary, passed a vote of thanks to Mr. Livingston "for vindicating the New England churches and plantations against the injurious reflections and unjust aspersions cast upon them in the Bishop of Llandaff's sermon." This compliment was travestied by one of the champions of the church in a poem of fifty lines, which was published in Hugh Gaines' New York Mercury. It was entitled "A Reviving Cordial for a Fainting Hero." The following is its

conclusion: "March on, brave will, and rear our Babel, On Language so unanswerable; Give Church and State a hearty thump, And knock down Truth with Falsehoods plump; So flat shall fall their church's fair stones, Felled by another Praise-God-Bare-Bones. Signed with consent of all the Tribe, By No--h W--s our fasting scribe, The Scribe and Pharisee in meeting To William Li---n send greeting."

This theological controversy ceased when the vital question of absolute resistance or submission to the encroachments of both Church and State upon the liberties of the Americans was brought to a final issue. In the War for Independence which followed the ten years of discussion, appeal and remonstrance, many adherents to the republican cause were found among the members of the Anglican Church. The intimate relations of that Church with the State, however, caused many of its communion, especially of the clergy, to take the side of the crown.

Chapter LI

A Royal Order - Its Effect upon the People and the Assemblies - Views of Patriots and Legislatures - The Colonies an Unit - Hopes of the French - Numbers "Forty-five" and "Ninety-two" - John Wilkes - Propositions for Punishing the Leaders in Boston - Perfidy of the Governor - Indignation of the People - Non-Importation League - Committee Before the Governor - Convention in Boston - The People Aroused - Troubles in North Carolina - The Regulators.

THE royal order sent by Hillsborough late in April, 1768, requiring the American assemblies to treat the Circular Letter of the Massachusetts Legislature with contempt, as "an unwarrantable combination and flagitious attempt to disturb the public peace," and threatening them with dissolution in case they should refuse compliance, created a tempest of indignation all over the land. That order was properly regarded as a direct attempt to abridge or absolutely control free discussion in the colonies, and so deprive them of their best guaranty for the preservation of their liberties. They resented the king's action in the matter in respectful and decorous words that were full of the spirit of a people determined to be free; and that order was more potential in crystallizing the colonies into a permanent union than any event in their past history. They felt that in union only would consist their strength in the great conflict that now appeared inevitable, and which thinking men believed near at hand. Franklin in England, writing to his son concerning a proffered colonial office, said: I apprehend a breach between the two countries. Samuel Langdon of Portsmouth, New Hampshire, who had been a chaplain in the provincial army at the capture of Louis burg, wrote to Ezra Stiles, then a clergyman at Newport and afterward President of tale College It is best for the Americans to let the king know the utmost of their resolutions, and the danger of a violent rending of the colonies from the mother country." Stephen Hopkins, then sixty years of age, and a Son of Liberty of truest metal, wrote from his home in Rhode Island to a friend in Boston: Persevere in the good work. We will abide with you to the end; the God of wisdom and of justice is with us. Roger Sherman, the thoughtful shoe-maker, on the judicial bench of Connecticut, and afterward, with Hopkins, a signer of the Declaration of Independence, wrote: No assembly on the continent will ever concede that Parliament has a right to tax the colonies and in another letter he said The right of unfettered discussion is inalienable, and we must maintain it." William Williams, a citizen of the same State and afterward a signer of the great Declaration, wrote from Lebanon to a friend: We cannot believe that they [the British government] will draw the sword in their own colonies but if they do, our blood is more at their service than our liberties." John Morin Scott, an ardent Son of Liberty in New York, and brave fellow-soldier of William Livingston, in the battle with the pen against the Church and State of Great Britain, wrote to a member of the Massachusetts Legislature: You are right, and that is sufficient for me. We will fight the tory faction here, and the British regulars too, if necessary." When Chandler, the good rector of Elizabethtown and champion of the Church of England, wrote, "The colonies will soon experience worse things than in the late Stamp Act, or I am no prophet," the patriots of New Jersey smiled at the covert threat, and Richard Stockton, then a conservative member of the governor's council, but afterward a signer of the Declaration of Independence, wrote to William Livingston, saying: We must maintain the natural and chartered

rights of the colonists, but by peaceful and lawful means."

The colonial assemblies everywhere took decided action, and exhibited remarkable unanimity of sentiment. New Hampshire was warmly responsive to the sentiments of Langdon's letter. The Assembly of Rhode Island highly approved of the action of Massachusetts. In Connecticut, New York, and New Jersey, the same spirit was manifested. The New York Assembly adopted the Massachusetts Circular, and declared, by resolutions, the undoubted right of the people, through their representatives, to correspond and consult with any of the neighboring colonies on subjects of public importance. They chose a committee of correspondence and the inhabitants of the city of New York, in a public letter addressed to their representatives in the Assembly, denounced the royal order as the most daring insult that was ever offered to any free legislative body." That Assembly, which had yielded a little to the requirements of the mutiny act, now had more backbone of patriotism, and stood up manfully in support of the people's rights. The Sons of Liberty in New York were very active at the same time, and in the newspapers, hand-bills and pamphlets, they offered their sentiments with great boldness. A hand-bill, which was widely posted about the city on a dark night, bore these words: - " Let these truths be indelibly impressed on our minds, that we cannot be free without being secure in our property that we cannot be secure in our property if, without our consent, others may, as by right, take it away that taxes, imposed by Parliament do thus take it away that duties laid for the sole purpose of raising money are taxes, that attempts to lay such, should be instantly and firmly opposed."

The Legislature of Pennsylvania treated the royal order with decorous scorn; and a large public meeting in Philadelphia urged a cordial union of all the colonies in resistance to oppression. The Delaware Assembly boldly asserted the right of intercolonial correspondence, and declared their intention to co-operate with the other colonies. When the arrogant Governor Sharpe of Maryland laid the obnoxious royal order before the Assembly of that province, that body assured his excellency that they could not be prevailed on to take no notice of or treat with the least degree of contempt, a Letter so expressive of duty and loyalty to the sovereign, and so replete with just principles of liberty and added, We shall not be intimidated by a few sounding expressions for doing what we think is right." They then sent their thanks to the Massachusetts Assembly. North Carolina rejected the order, and offered a respectful remonstrance and at the same time the Massachusetts Circular was heartily approved. Virginia had already spoken out boldly in applause of the Circular, and the Assembly sent a letter of their own to all the colonial assemblies inviting their concurrence with Massachusetts. A committee of the South Carolina Legislature, composed of leading men of the colony like Gadsden, Laurens, Pinckney, Rutledge and Lynch, reported resolutions (which were adopted) declaring the Circulars of Massachusetts and Virginia to be replete with duty and loyalty to his Majesty, respect for Parliament, attachment to Great Britain, care for the preservation of the rights of British subjects, and founded upon undeniable constitutional principles. Twenty-six members voted for these resolutions. The offended royal governor immediately dissolved the Assembly, and the "Twenty-six" became as popular as the ninety-two of the Massachusetts Assembly who voted not to rescind their Circular. The citizens of Charleston burnt the seventeen Massachusetts rescinders in effigy, and illumined the streets of the city by almost three hundred torches carried in procession. By their light they garlanded with

flowers and evergreens an effigy of the Goddess of Liberty, which they had crowned with laurel and palmetto leaves. Georgia responded with equal but less demonstrative patriotism. In the face of the warnings of the royal governor, that their action tended to independence and would bring ruin on America, they approved the Massachusetts Circular, and rejected the royal order. Their dissolution followed.

All of the assemblies instantly sent reports of their action to that of Massachusetts and when the Letter from North Carolina, dated November 10, 1768, reached Boston, the Evening Post of that city remarked: "It completes the answers to our Circular Letter. The colonies, no longer disconnected, form one body a common sensation possesses the whole the circulation is complete, and the vital fluid returns from whence it was sent out." It was so. At the beginning of 1769, there was a perfect union of the thirteen colonies in a determination to maintain their liberties at any cost; while English statesmen, infatuated by the possession of power, were adopting measures for the abridgment, if not the utter destruction, of their liberties.

It is instructive, in this connection, to consider the feelings and ideas of the French cabinet at that time, concerning the Americans - a cabinet composed of changing materials which, as we have observed, played an important part in the struggle of the colonists for their independence. We have already noticed the hopes of Choiseul, the French minister, that an open rupture between the American colonies and Great Britain would speedily occur, and inflict a severe blow upon the strength of the latter. He was then supporting the decaying French empire with wisdom and energy. Ten years before, he had become the favorite and chief minister of the profligate Louis the Fifteenth through the influence of Madame Pompadour, who really ruled that monarch. Choiseul had been created a duke, and was regarded as the foremost living statesman of France. He was watching the course of political events in England and her American colonies with intense interest and in the attitude of the latter toward the former in the summer of 1768, he saw a reason for expecting an almost immediate outbreak of rebellion in America. This expectation was confirmed by a long conversation with an intelligent American, who gave him a clear insight of the resolution of the colonies to resist oppression, and their temper. He immediately wrote to the Count du Chatelet, then the French ambassador in London, that facts and not theories must control the actions of France, and saying:

My project, which is but a dream perhaps, is to consider the possibility of a commercial treaty, both of importation and exportation, the obvious advantages of which might attract the attention of the Americans. Will it not be possible to show them, at the moment of a rupture, an interest sufficiently powerful to detach them at once from their chief government I According to the predictions of some sensible men who have had opportunities to study the character of the Americans, and to comprehend their progress every day in the spirit of independence, this separation of the American colonies from their parent government must come sooner or later. The plan I propose will accelerate its consummation. It is the true interest of the colonies to forever secure their whole liberty, and establish their direct commerce with France and with the world. The main business will be to engage their neutrality. That will necessarily secure a treaty of alliance with France and Spain. They may not have confidence in the strength of our navy; they

may suspect our fidelity to our engagements; they may fear the English ships-of-war; they may indulge a hope of success against the Spaniards and ourselves. I perceive all these difficulties, and do not hide their extent but I perceive, also, the controlling interest of the Americans in profiting by the chance of a rupture to establish their independence. This cannot be done without risks; but he that halts at difficulties will never attempt anything. We firmly believe and hope that this government will so conduct itself as to widen the breach, not to close it up. It is true that some persons of sagacity think it not only possible but easy to reconcile the interests of the colonies and the parent country, but I can see many obstacles lying in the way. I meet too many persons who think as I do. The course pursued thus far by the British government seems to me to be completely opposed to what it ought to be to effect a reconciliation."

Choiseul had to wait full seven years for the gratification of his wish which was father to his thoughts, and then, through the operations of a faction, he had been dismissed from office.

There was a curious feature in the political circles of England and America at this time. It consisted, in Great Britain, in the use of the number Forty-five, and in America of that number and Ninety-two combined, having a similar significance. John Wilkes, an ardent politician and fearless political writer in London, published a serial work called *The North Briton*. In number Forty-five of that work, he made a very severe attack on the government. That was in 1763. He was prosecuted by the crown lawyer for libel and confined in the Tower, but was acquitted and received five thousand dollars as damages from the undersecretary, Wood. As Wilkes was regarded as the advocate of the people, this prosecution of their champion, by the government, was considered a malicious proceeding, and a blow at the freedom of speech and the press by the aristocracy. Violent political excitement ensued, and Forty-five, the number of *The North Briton* that contained the attack, became the war-cry of the democratic party in Great Britain and the colonies. After ninety-two members of the Massachusetts Legislature voted against rescinding their resolutions embodied in their famous Circular, Ninety-two became a political catchword here, and its application was curious. Frothingham says:

"When the Americans in London heard of the action of the Massachusetts Assembly, their favorite toast became: "May the unrescinding Ninety-two be forever united in idea with the glorious Forty-five." These talismanic numbers were combined in endless variety in the colonies. Ninety-two patriots at the festival would drink forty-five toasts. The representatives would have forty-five or ninety-two votes. The ball would have ninety-two jigs and forty-five minuets. The Daughters of Liberty would, at a quilting party, find their garment of forty-five pieces of calico of one color and ninety-two of another. Ninety-two Sons of Liberty would raise a flag-staff forty-five feet high. At a dedication of a Liberty Tree in Charleston, forty-five lights hung on its branches, forty-five of the company bore torches in the procession, and they joined in the march in honor to the Massachusetts Ninety-two. At the festival, forty-five candles lighted the table, and ninety-two glasses were used in drinking the toasts; and the president gave as a sentiment: May the ensuing members of the Assembly be unanimous, and never recede from the resolutions of the Massachusetts Ninety-two."

When news of these events in Massachusetts in the summer of 1768 reached England, and was soon followed by rumors that nonimportation leagues were again forming, anger, deep solicitude and dismay prevailed. The exasperated ministry determined to punish the disobedient colony most severely. Lord Mansfield thought the members of the Assembly who, by their votes, had invited the union of the colonies in the assertion of their rights, ought to be summoned to England to answer for their conduct. The king, on the opening of Parliament, charged the Bostonians with a subversion of the constitution, and eagerness for independence of Great Britain. Both Houses denounced the proceedings of citizens and legislature of Massachusetts, and proposed to transport Otis, Hancock, the Adamses and other leaders to England for trial and punishment under an unrepealed act of Henry the Eighth. Exaggeration followed exaggeration as vessel after vessel reached England from America, and the friends of the colonists abroad were dumb, for awhile, for they had no available excuse to offer for the conduct of Massachusetts as misrepresented. Their silence gave a tacit sanction to the hot temper of the government and the harsh measures proposed by the ministry and the mercantile and manufacturing interests were greatly disturbed by apprehensions of an absolute cessation of trade between them and the Americans. The colonial merchants were then owing British merchants twenty million dollars. Will this amount and the trade of the Americans be lost together? was the absorbing question of the hour in commercial circles.

Unfortunately the British ministry were so satisfied with the supposed eminent ability of the Earl of Hillsborough to manage colonial affairs, that the whole American business was left to his discretion and control. Governor Bernard was his chief source of information concerning the temper and conduct of the Americans. That officer was false to them and false to his master, giving the latter untruthful accounts of events in our country. He perceived the dangers that were gathering around the royal governments everywhere, and he exaggerated every movement, hoping to induce the ministry to send troops and war-ships to Boston to overawe the people and make his own seat more secure. He sought to keep the people there quiet until such forces might arrive, by mischievous duplicity. The council was assured that if the people would cease the discussion of the question of parliamentary power over the colonies, he would support their petition praying for relief from the recently enacted revenue laws. They consented, and Bernard showed a letter which he had written to Hillsborough in favor of the petition. Public excitement cooled, and the loyal Americans had hopes of repose. But in a secret letter, of the same date, the perfidious governor gave to his master every possible form of argument in favor of not relaxing, in the least degree, the stringency and enforcement of the revenue laws. Hillsborough, equally false, encouraged the duplicity, and wrote a deceptive reply to be shown to the council. He actually used the name of his king as an abettor of the falsehood.

Already orders had been given by the Secretary to General Gage to be in readiness to furnish troops whenever Bernard should make a requisition for them. When that officer heard of the disturbance in the New England capital, he sent word to the governor that the troops were in readiness. Bernard was anxious to send for them, but he could not make a requisition without the consent of his council. That body declared that the civil power did not need the support of troops, nor was it for his majesty's service or the peace of the province that any should be

required.

When the duplicity, the desires, and the acts of Bernard became known, the citizens of Boston could restrain their indignation with difficulty. Satisfied that the troops would come sooner or later, they resolved to put the engine of non-importation, which had worked so powerfully before, into vigorous operation. In August [1768] nearly all the merchants of Boston subscribed such a league, to go into operation on the first of January following, hoping, through the influence of the British merchants, to restrain the hand of the government uplifted to smite the Americans. The Sons of Liberty were active everywhere, and watched every movement of the crowd officers. They soon discovered a British military officer in their city, evidently making preparations for barracks for troops. They gave the alarm. A town-meeting was called at Faneuil Hall, when James Otis, Samuel Adams, John Hancock and John Adams were appointed a committee to wait on the governor to ascertain whether the visit of the military officer was for such a purpose, and to request him to call a special session of the legislature. Bernard told them that troops were about to be quartered in Boston, and he refused to call the Assembly until he might hear from home. The governor was evidently alarmed, for he knew the great popularity of the men who stood before him. All Boston stood behind them, but its whole population was not more than sixteen thousand souls. His tone was more pacific than usual. Judging them by his own standard of morality, he had actually stooped to make some of these men his friends by bribes. He sent a commission to John Hancock, as a member of his council. That patriot tore the paper into shreds in presence of the people. He offered the lucrative office of advocate-general in the court of admiralty to John Adams, who instantly rejected it. He cautiously approached the sturdy Puritan, Samuel Adams, with honeyed words and an offer of place, but received such a rebuke that the words I have already quoted were afterward wrung from Hutchinson - "He is of such an obstinate and inflexible disposition that he could never be conciliated by any office or gift whatsoever."

The governor's refusal to call the Assembly impelled the town-meeting to recommend a convention of delegates from all the towns in the province to be held in Boston, under the plausible pretext that the prevailing apprehension of war with France required a general consultation. Apprehending war with the mother country was the real cause for the movement. The convention assembled on the 22nd of September, 1768, when more than a hundred delegates represented every town and district in the province but one. Thomas Cushing, Speaker of the Assembly, presided. They petitioned the governor to summon a general court. He answered by denouncing the convention as a treasonable body. They disclaimed all pretension to political authority, professed the utmost loyalty to the king, and said they had met in that "dark and distressing time to consult and advise as to the best manner of preserving peace and good order." The governor, in daily expectation of troops from Halifax, which, on his requisition, Gage had ordered to Boston, assumed a haughty tone, warned them to desist from further proceedings, and admonished them to disperse without delay. The Convention, unmoved by his words, remained in session four days, took moderate action, and stood firm in their purpose. They adopted a petition to the king, an address to the people setting forth the alarming state of the country, and advised abstinence from all violence, and submission to legal authority.

The people were now thoroughly alive to a sense of their dangers and duties. The great political questions of the hour occupied their minds. The pulpit became a sort of political forum. Patriotism and Christianity were regarded as twin sisters. Order everywhere prevailed. Excitement had given way to Reason. The other colonies were watching Massachusetts intently. Virginia sent her salutatory greetings. The good Governor Botetourt, in pursuance of his prescribed duty, had dissolved her Assembly. They reorganized in a private house, and then adopted a non-importation agreement presented by George Washington. Other colonies sent cheering words, especially after troops had landed in Boston in the early autumnal days and at nearly every public gathering in the several colonies, the stirring Massachusetts Song of Liberty was sung. That song was so powerful in moulding the popular mind in favor of union and resistance, that I give it below, entire, with the music, as it appeared when first printed in a Boston newspaper:

THE MASSACHUSETTS SONG OF LIBERTY.

"Come swallow your bumpers, ye Tories, and roar. That the Sons of fair Freedom are hamper'd once more; But know that no Cut-throats our spirits can tame, Nor a host of Oppressors shall smother the flame. "In Freedom we're born, and, like Sons of the brave, Will never surrender, But swear to defend her, And scorn to survive, if unable to save.

"Our grandsires, bless'd heroes, we'll give them tear, Nor sully their honors by stooping to fear; Through deaths and through dangers their Trophies they won, We dare be their Rivals, nor will be outdone. "In Freedom we're born, &c.

"Let tyrants and minions presume to despise, Encroach on our RIGHTS, and make FREEDOM their prize; The fruits of their rapine they never shall keep, Though vengeance may nod, yet how short is her sleep. "In Freedom we're born, &c.

"The tree which proud Haman for Mordecai rear'd Stands recorded, that virtue endanger'd is spared; That rogues, whom no bounds and no laws can restrain, Must be stripp'd of their honors and humbled again. "In Freedom we're born, &c.

"Our wives and our babes, still protected, shall know Those who dare to be free shall forever be so; On these arms and these hearts they may safely rely For in freedom we'll live, or like Heroes we'll die. In Freedom we're born, &c.

"Ye insolent Tyrants! who wish to enthrall; Ye Minions, ye Placemen, Pimps, Pensioners, all; How short is your triumph, how feeble your trust, Your honor must wither and nod to the dust. "In Freedom we're born, &c.

"When oppress'd and reproach'd, our King we implore, Still firmly persuaded our RIGHTS he'll restore; When our hearts beat to arms to defend a just right, Our monarch rules there, and forbids us to fight. "In Freedom we're born, &c.

"Not the glitter of arms nor the dread of a fray
Could make us submit to their chains for a day;
Withheld by affection, on Britons we call,
Prevent the fierce conflict which threatens your fall.
"In Freedom we're born, &c.

"All ages shall speak with amaze and applause
Of the prudence we show in support of our
cause: Assured of our safety, a BRUNSWICK still reigns,
Whose free loyal subjects are strangers
to chains. "In Freedom we're born, &c.

"Then join hand in hand, brave AMERICANS all,
To be free is to live, to be slaves is to fall
Has the land such a dastard as scorns not a LORD,
Who dreads not a fetter much more than a
sword "In Freedom we're born, &c.

While the people of Massachusetts were preparing to fight for their liberties, if necessary, those of North Carolina, far away from the seaboard, were in open insurrection because of the cruelty of oppressors. Before the Stamp Act excitement convulsed the northern provinces, rebellion had germinated there; and when Governor Tryon, who was sent to rule North Carolina in 1765, attempted to suppress free speech on the great question, he found that he had an obstinate people to deal with. Tryon was proud, haughty, fond of show, extravagant, extortionate, treacherous, and naturally tyrannical when in power, but cowardly when confronted by equal moral or physical forces. He tried to compel the people to take the stamps, but they compelled the stamp-officer at Wilmington to go to the marketplace and publicly resign his commission. This tacit defiance of his authority by resolute men alarmed the governor, and he tried to conciliate the militia at a general muster in Hanover, by treating them to a barbecued ox - an ox roasted whole - and a few barrels of beer. The insulted people cast the ox into the river, poured the liquor on the ground, and mocked Tryon.

Soon after that, the rapacity of public officers in the province, from the governor down, drove the people to the verge of rebellion. They met in small assemblies at first and petitioned for relief. Their prayers were answered by fresh extortions. Finally, they resolved to form a league for mutual protection, and to take all the power in certain inland counties into their own hands. Herman Husband, a strong-minded and resolute Quaker, drew up a written complaint and sent it by a few bold men to the General Assembly at Hillsborough, in October, 1766, who requested the clerk to read it aloud. It asserted that the "Sons of Liberty would withstand the Lords in Parliament," and set forth that great evils existed in the province. A general convention of delegates was recommended to consider public affairs, and two were afterward held. At the one held in April, 1767, on the banks of the Eno, not far from Hillsborough, it was resolved that the people in the more inland counties should regulate public affairs there, and by resolutions they almost declared themselves independent of all external authority. From that time they were called Regulators, and were a prominent and powerful body. The pride of Tryon induced him to covet a palace "fit for the residence of a royal governor." The blandishments and liberal hospitality of the governor's beautiful wife won the goodwill of the representatives of the General Assembly, and they voted seventy-five thousand dollars of the public money to build a palace at Newbern. That sum was equal to half a million dollars now. The taxes were thereby heavily increased, and the

already overburdened people were very indignant. With the increase of taxation the rapacity of public officers seemed to increase, and the industry of the province was subjected to a most onerous tribute To feed the vultures. Among the most rapacious of these was Edmund Fanning, a lawyer of ability, whom the people soon learned to detest because of his extortionate fees for legal services, but who was a favorite of the governor. The chief justice, Martin Howard, was Fanning's accomplice, and prostituted his sacred office to the base purpose of private gain.

The Regulators, goaded by oppression, met in council and resolved not to pay any but lawful taxes and just dues, but with such a judge they were almost powerless. Fanning resolved to punish their leaders, and so overawe the people. He induced the governor to issue a proclamation full of fair promises, inviting the Regulators to meet the crown officers in friendly convention to settle all differences. They were betrayed. Those plain farmers trusted the fair promises, and relaxing their vigilance were preparing to meet the governor, when the sheriff at the instigation of Fanning, appeared with thirty horsemen and arrested Husbands and some other leading Regulators, and cast them into the Hillsborough jail. This treachery aroused the whole country, and a large body of the people, led by Ninian Bell Hamilton, a brave old Scotchman seventy years of age, marched upon Hillsborough with shotguns, pikes, scythes and bludgeons, to rescue the prisoners.

Fanning was alarmed. He released the prisoners and hastened to appease the angry multitude who were assembled on the banks of the Eno, opposite Hillsborough. With a bottle of rum in one hand and a bottle of wine in the other, he went down to the brink of the stream, and urging Hamilton not to march his host into the town, asked him to send a hole over that he might cross, give the people refreshments, and have a friendly talk. Hamilton would not trust the wolf in sheep's clothing. "You're nane too gude to wade, and wade ye shall if ye come over," shouted Hamilton. Fanning did wade the stream, but his words and his liquor were alike rejected. Then Tryon's secretary rode across the river, and assured the people that all their grievances should be redressed, when they marched away. They drew up a respectful petition to the governor, who, in imitation of his royal master, spurned it with disdain. He ordered the deputies who bore the petition to return to their homes, warn the people to desist from holding meetings, disband their association, and be content to pay taxes. We shall meet these Regulators and their oppressors again presently.

Chapter LII

Governor Bernard's Interference - Doings of a Popular Assembly in Boston - Landing of Troops There - Firmness of the Council and Selectmen - Public Feeling Outraged - Triumph of the Citizens - Action of the British Parliament - Advent of Lord North - Non-Importation Agreements and the Young Women - Action of the Massachusetts Assembly - Departure of Governor Bernard - Hesitation in Parliament - A Circular to the Colonies - Excitement in England - Fruits of Taxation - Political Excitement in New York.

GOVERNOR BERNARD had assured the Massachusetts Convention of his displeasure, and his intention to enforce the laws. He said to them, in a proclamation, when they assembled It is my duty to interpose this instant, before it is too late (for he declared the gathering unlawful). I do, therefore, earnestly admonish you that instantly, and before you do any business, you break up this assembly, and separate yourselves. I speak to you now as a friend to the province and a well-wisher to the individuals of it. But if you should pay no regard to this admonition, I must, as governor, assert the prerogative of the crown in a more public manner; for, assure yourselves (I speak from instruction), the king is determined to maintain his entire sovereignty over this province, and whoever shall persist in usurping any of the rights of it will repent of his rashness." So spoke the governor bravely, when he knew that a fleet and army were near to support him. But the Convention, as we have observed, did not heed the admonition. They stayed in session six days until they had accomplished their intended business, and they had just adjourned, when the white sails of eight vessels-of-war appeared at the entrance to Boston Harbor, bearing two regiments of British soldiers, which General Gage had ordered from Halifax, commanded by Colonels Dalrymple and Carr. Gage had sent his engineer, Montrossor, to assist the troops, if necessary. That officer bore an order, in accordance with the wishes of Governor Bernard, to land the troops in the settled parts of Boston. Accordingly, on Saturday morning, the 1st day of October (1768), the ships moved up to the city, anchored with springs on their cables, and in spite of the solemn remonstrances of the people, the troops were landed on the Long Wharf under cover of the guns of the war-vessels. The cowardly governor had gone into the country to avoid the expected storm of popular indignation, leaving the military to bear the brunt of the odium and its effects.

Bernard had tried to induce his council to sanction an order for quartering the troops in the town. They refused, and he took upon himself the whole responsibility of the act. The selectmen, regarding the order as illegal, refused to provide quarters for the soldiers. Dalrymple blustered and threatened, but they were firm. He had prepared for wicked work by providing each of his soldiers with sixteen rounds of ammunition. This fact he made known, and hoping to overawe the inhabitants, he marched his whole force through the town, with fixed bayonets, colors flying, drum' beating, and a train of artillery following, with all the parade of a triumphant army entering a conquered city. The unarmed inhabitants looked on with sorrow but not with fear. They knew that a single act of violence on the part of the troops would cause twenty thousand men, from the hundred towns of Massachusetts, to spring up for their defence like the harvest of dragons' teeth; and that war once begun, a vast host would come from the other provinces like trailing clouds full

of wrath and potency.

Dalrymple appeared before the selectmen, with one or two other officers, and haughtily demanded both food and shelter for his troops. You will find both at the castle," said the guardians of the town, with the assurance that the law was upholding them. "And you will not furnish quarters for my soldiers asked the colonel. We will not responded the selectmen. Then Dalrymple turned away in wrath, and encamped one regiment in tents on the Common, while the other was compelled to bivouac as best they might in the chilly air of an October night. The compassion of the inhabitants was excited for the poor soldiers, whom they could not blame, and at nine o'clock the Sons of Liberty generously opened Faneuil Hall, and allowed the warriors to slumber there. The next day was the Sabbath. The unwise Dalrymple again paraded his troops through the streets when the people were engaged in public worship, disturbing them with the noise of the fife and drum. His soldiers challenged the citizens in the streets and in various ways he tried to impress them with a sense of utter subjugation. These things only deepened their convictions of duty, and inflamed their resentment. Every strong feeling of the New Englander was violated. His Sabbath was desecrated, his worship was disturbed, and his liberty was infringed. Natural hatred of the troops, deep and abiding, was soon engendered, and the terms rebel and tyrant were freely bandied between them. The governor and the colonel used every means in their power to induce the council and the selectmen to provide for the troops. Planting themselves firmly on the law, these citizens were unmoved by entreaties or threats. Then the governor and sheriff tried to get possession of a dilapidated building belonging to the province in which to shelter the troops, but the occupants, supported by the law, successfully resisted. The governor now summoned all the acting magistrates to meet him, when he renewed the demand for quarters. Not till the barracks are filled," was the response. The military officers could not put the soldiers into quarters, for the act might cause them to be cashiered on conviction before two justices of the peace, the best of whom," wrote Gage, the keeper of a paltry tavern." When the weather became so cold that tent-life could not be endured, the commanding officer was compelled to hire houses at exorbitant rates for shelter, and to furnish food for the troops at the expense of the crown. So, in this bloodless warfare with British regulars, the citizens of Boston, armed with chartered rights and statute law, were completely victorious. There was nothing for the troops to do, as the people were orderly and law-abiding. The soldiers being housed, the main guard was stationed opposite the State House, with cannon pointing toward the legislative hall. The people smiled at this covert threat, and Gage was convinced that more mischief had arisen from the follies and greed of the crown officers than from anything else; but he recommended the building of barracks and a fortification on Fort Hill, while Bernard, satisfied that the troops could not overturn the authority of the government, nor repress republicanism, again advised a forfeiture of the charter of the province. The commissioners of customs who had fled to Castle William on the Ronney now returned, and were more haughty than ever under the protection of armed men. They caused the arrest of Hancock and Malcom on false charges, claiming penalties for violations of acts of Parliament amounting to, in Hancock's case, almost half a million dollars. Hancock employed John Adams as his counsel, and a painful drudgery I had of his case," said that advocate. Not a charge was established.

Soon after these events the British Parliament assembled, and the king, in his speech which he read from the throne, spoke of Boston as being in a state of disobedience to all law and government," proceeding to measures subversive of the constitution, and attended by circumstances that might manifest a disposition to throw off its dependence on Great Britain." He promised, with the support of Parliament, to defeat the mischievous designs of those turbulent and seditious persons" who had, under false pretenses, too successfully deluded numbers of his subjects in America. In both Houses of Parliament great indignation, because of the conduct of the Bostonians, was expressed. The Lords, in their' address to the king, said We shall be ever ready to hear and redress any grievances of your majesty's American subjects; but we should betray the trust reposed in us, if we did not withstand every attempt to infringe or weaken our just rights, and we shall always consider it as one of our most important duties to maintain - tire and inviolate the supreme authority of the legislature of Great Britain over every part of the British Empire." In the Commons, Henry Stanley indulged in bitter denunciations of the Americans. He condemned, in unmeasured terms, the non- importation leagues, as unwarrantable combinations among American tradesmen to cut off the commerce between the colonies and the mother country." I contend, therefore," he said, that men so unsusceptible of all middle terms of accommodation call loudly for our correction. What, sir, will become of this insolent town of Boston when we deprive the inhabitants of the power of sending out their rum and molasses to the coast of Africa For they must be treated like aliens, as they have treated us upon this occasion. The difficulties in governing Massachusetts are insurmountable, unless its charter and laws shall be so changed as to give to the king the appointment of the council, and the sheriffs the sole power of returning juries."

In the Upper House, Lord Barrington called the Americans traitors, and worse than traitors, against the crown - traitors against the legislation of this country. The use of troops," he said, was to bring rioters to justice." Even Camden, who opposed Pitt's declaratory act, now acquiesced in the harsh measures against Boston that were proposed, and was severely chastised by the tongue of Edmund Burke for his inconsistency. My astonishment at the folly of his opinions is lost in indignation at the baseness of his conduct," said the gifted Irishman.

To gratify the prejudices of the king, Shelburne had been driven from the ministry, and Chatham, offended because of this act, had resigned. Lord North now commenced that long leadership of the ministry which continued until near the close of our struggle for independence. He took the initiative as the friend and champion of the king, by replying sharply to Alderman Beckford, who said: "Let the nation return to its good old nature and its old good humor; it were best to repeal the late acts and conciliate the colonies by moderation and kindness." To these wise words, North replied in falsification of history, "There has been no proof of any real return of friendship on the part of the Americans they will give you no credit for affection no credit for an attention to their commercial interests. If America is to be the judge, you must tax in no instance! You may regulate in no instance. Punishment will not be extended beyond the really guilty; and, if rewards shall be found necessary, rewards will be given. But what we do, we will do firmly. We shall go through our plan, now that we have brought it so near success. I am against repealing the last act of Parliament, securing to us a revenue out of America I will never think of repealing it,

until I see America prostrate at my feet."

The words of the King, Lords and Commons made a deep impression on the minds of the patriots of Massachusetts, and throughout the other provinces. Their liberties were more dangerously menaced than ever, and the instruments for their enslavement were seated in the New England capital and intrenched behind cannon. But the Sons of Liberty were more determined than ever to stand firmly by their rights, and at the same time to maintain a perfect adherence to the law. By this determination they conquered. Their worst enemies in Great Britain could not justly accuse them of treason for any act they had committed. They had a perfect right to cease trading with anybody. They had violated no law; and all the threats of the madmen in the government, and the presence of troops, could not alter their opinions. Their petitions, though rejected by the king with scorn, lost none of their vitality and the official assurance that the monarch would not listen to "wicked men" who denied the supremacy of Parliament, did not move the patriots a single line from the path which they had prescribed for themselves. They felt that Colonel Barry prophetically read their hearts, when, in opposition to a resolution of Lord North, offered in March, 1769, to reject a respectful petition from New York, he said: "I predicted all that would happen on the passage of the Stamp Act and I now warn ministers that, if they persist in their wretched course of oppression, the whole continent of North America will rise in arms, and these colonies perhaps be lost to England forever."

When the non-importation agreements were renewed, the young women heartily seconded the action of their fathers and brothers, by engaging in domestic manufactures. The Irish flax-wheel performed an important part in the feminine opposition to British oppression in the spinning of linen thread for summer fabrics and the hum of the big Dutch wool-wheel was heard in many families converting the fleecy rolls from the hand-cards into yarn. In Boston, a party of fifty young women, calling themselves "Daughters of Liberty", met at the house of the venerated pastor of the Scotch Presbyterian Church there, the Rev. John Moorehead, where they amused themselves with spinning two hundred and thirty-two skeins of linen yarn, some very fine, which were given to the worthy white-haired minister. Several of the young women were members of his congregation. Many persons came in to see the novel sight and admire the fair spinners. They were regaled with refreshing fruit, cakes, coffee and comfits, after which anthems and liberty-songs were sung by many fine voices of the Sons and Daughters of Liberty. There were, at that time, more than one hundred spinners in Mr. Moorehead's society. In other colonies like zeal and industry were shown by the young women, and also by whole families. "Within eighteen months past," wrote a correspondent of the New York Mercury, from Newport, Rhode Island, four hundred and eighty-seven yards of cloth and thirty-six pairs of stockings have been spun and knit in the family of James Nixon of this town. Another family, within four years past, hath manufactured nine hundred and eighty yards of woollen cloth, besides two coverlids and two bed ticks and all the stocking yarn for the family. We are credibly informed that many families in this colony within the year past have each manufactured upward of seven hundred yards of cloth of different kinds."

When the Massachusetts Assembly met at the close of May, 1769, they simply organized, and

then resolved that it was incompatible with their dignity and freedom to deliberate while confronted by an armed force; and that the presence of a military and naval armament was a breach of privilege. They refused to enter upon the business of furnishing supplies of any kind, or discussing any topic excepting that of a redress of their grievances. They petitioned the governor to remove the troops from the town, but their reasonable request was met by a haughty refusal. Not only this, but the governor adjourned the Assembly to Cambridge, and informed them that he was going to England to lay a statement of the affairs of the colony before the king. The House instantly adopted a petition to his majesty, asking for the withdrawal of Bernard from the colony forever; and they also adopted a resolution declaring that the establishment of a standing army in the colony in time of peace, was not only an invasion of natural rights, but a violation of the British Constitution, highly dangerous to the people, and unprecedented. Perceiving the Assembly to be incorrigible, the governor dissolved them and sailed for England, leaving the province in the care of the Lieutenant-Governor, Thomas Hutchinson. Proofs of Bernard's duplicity, greed, petty malice, mischievous exaggeration, falsehoods, and continual plottings for the destruction of the Massachusetts free government, so well known here, had been sent to England by one of his political friends, and caused his immediate recall. He never recrossed the Atlantic, and died in 1779.

Meanwhile the merchants of New York, Philadelphia, Annapolis and other places had renewed their non-importation leagues with vigor and Washington, at Mount Vernon, assisted by his neighbor, George Mason, had matured the plan for such an association which, as we have observed, he laid before the Virginia House of Burgesses when they reassembled after they had been dissolved by Governor Botetourt. That patriot afterward wrote to his correspondent in London, from whom he ordered goods: "You will perceive, in looking over the several invoices, that some of the goods there required are upon condition that the act of Parliament imposing a duty on tea, paper, &c., for the purpose of raising a revenue in America, is totally repealed and I beg the favor of you to be governed strictly thereby, as it will not be in my power to receive any articles contrary to our nonimportation agreement, which I have subscribed, and shall religiously adhere to, and should if it were, as I could wish it to be, ten times as strict." Mason wrote to Washington: Our all is at stake; and the little conveniences and comforts of life, when set in competition with our liberty, ought to be rejected, not with reluctance, but with pleasure."

In view of the movements in America, the British Parliament hesitated. They perceived that the colonies were forming a more formidable combination against British commerce and manufactures than any before and some of the more sensible men in Parliament urged the repeal of the tea act, and so end the controversy. So favorable an opportunity," they said, may never recur." But Lord North replied We will not consent to discuss the question because of the combinations in America. To do so would furnish a fresh instance of haste, impatience, levity, and fickleness. I see nothing uncommercial in making the Americans pay a duty on tea."

North was only the echo of the monarch, who swayed this minister with perfect control. The king had made it an inflexible rule never to redress a grievance unless such redress was prayed for in a spirit of obedience and humility. He was also determined to assert the right of Parliament to

tax the colonies, and insisted that one tax must always be laid to keep up that right. So the king and his pliant minister clung to the duty on tea. Hillsborough, under the direction of North, sent a Circular to all the colonies, in which a promise was given that no more taxes for revenue should be laid upon them, and that the duties upon paper, painters' colors and glass should be taken off by a repeal of the law levying them. It was believed that this concession would satisfy the Americans, forgetting that a principle broader and deeper and more vital than any statute law was at the bottom of the discontent in the colonies. British statesmen and publicists of the aristocratic party demurred at this concession. Dr. Johnson, then a pensioner of the government and afterward author of the tract entitled *Taxation no Tyranny*, growled out his dissatisfaction in the coarse expression: "The Americans are a race of convicts, and ought to be thankful for anything we allow them short of hanging." And the short-sighted Hillsborough, exaggerating the sentiments of the monarch, said: We can grant nothing to the Americans except what they may ask with halters around their necks."

The Circular sent to the colonies was wrung from the reluctant ministry by fear of a revolt at home. The capital of the kingdom was then fearfully shaken by a violent political excitement that filled thoughtful minds with dread. John Wilkes, the irrepressible political writer already mentioned, had suddenly returned from exile, and was elected a representative in Parliament by the voters of Middlesex. The king desired to keep him out of Parliament, and the pliant House of Commons refused to give him a seat. The people were aroused by great indignation because of this interference with their rights. Wilkes was chosen to be a magistrate of London, by a large majority and again the voters of Middlesex elected him to represent them in Parliament. Again the Commons kept him from his seat by voting the returns null and void, without the shadow of a fact to warrant the action. A third and fourth time he was elected by overwhelming majorities, and each time, the Commons, under the influence of the king, and in violation of the seminal principle of representative government, denied him a seat in the House, and gave it to his opponent at the hustings. Their plea was that Wilkes was an outlaw.

This deadly blow, as the people regarded it, at one of the dearest rights of the British subject, moved the public mind of the kingdom most power fully, and added thousands of intelligent men to the list of friends of the Americans, the vital principle of whose resistance to the government was the sacred right of representation as an equivalent for taxation. Mobs appeared in London and various parts of the kingdom, vehemently protesting by great violence against the outrage upon popular liberty. In these demonstrations many lives were lost. The houses of crown-officers were attacked, and even the palace of Whitehall the residence of the king was seriously menaced by a vast concourse of people, shouting, *Wilke and Liberty*." The populace were restrained from violence, and possible from the murder of the king, by the interference of the Royal Guards. To this political agitation was added that which was caused by the distress, real and prospective, of the merchants and manufacturers of England, created by the non-importation leagues in operation in America. These causes combined pressed the English people, at that time, to the verge of revolution. They were taught by current events to regard their king as a foe to popular liberty, and a willing usurper of the rights of the people and attachment to the crown was greatly weakened.

Hillsborough's Circular had not the least effect upon the Americans except to stimulate them to more determined resistance. The repeal of some of the obnoxious acts would be a partial relief from taxation but so long as the duty on tea was retained, the principle involved remained the same. While a tax for revenue in the smallest degree was imposed upon the Americans, their real grievance was not redressed, and they stood firm in their attitude of resistance. They worked the engine of non-importation with great vigor. The exports from England to America which, in 1768, had amounted to almost \$12,000,000 (of which amount tea represented \$660,000), in 1769 amounted to only a little over \$8,000,000, the tea being only \$220,000. Pownall, the immediate predecessor of Bernard as governor of Massachusetts, showed, in a speech in Parliament, that the total produce of the new taxes for the first year had been less than \$80,000, and that the expenses of the new custom-house arrangements had reduced the net profits of the crown revenue in the colonies to \$1,475, while the extraordinary military expenses in America amounted, for the same time, to \$850,000. Yet the stubborn king and his pliant minister insisted upon retaining the duty on tea, to save the royal prerogative, and keeping up an expensive military establishment to enforce its collection. Samuel Adams was doubtless right when he publicly declared, on the arrival of the repeal of the Stamp Act: "The conduct of England is permitted and ordained by the unsearchable wisdom of the Almighty for hastening the independence of these colonies."

The die was now cast. The Americans almost despaired of having their grievances redressed by the oppressor. Opposition to taxation without representation was the prevailing rule in all the colonies. In Boston the people endured the presence of soldiers, with whom almost daily irritating collisions took place. In New York, late in 1769, there was much political excitement growing out of an indirect method of cheating the people into a compliance with the provisions of the mutiny act proposed by a desperate tory coalition. It was the issuing of bills of credit, on the security of the province, to the amount of \$700,000, to be loaned to the people, the interest to be applied to defraying the expenses of the colonial government. It was none other than a proposition for a monster bank, without checks, for the purpose of applying the profits to defraying the expenses of keeping troops in the province. It was also a game for political power which menaced the liberties of the people. When an act for this purpose was before the Assembly, the leaders of the popular party raised a cry of alarm. Early on Sunday morning, the 16th of December, 1769, a hand-bill was found widely distributed over the city of New York, addressed, in large letters, "To the Betrayed Inhabitants of the City and Colony of New York," and was signed, "A Son of Liberty." It denounced the money scheme as a deception covering wickedness declared that evidently the proposition to grant supplies to tie troops unqualifiedly was an acknowledgment of the right to exact such subsidies, and a virtual approval of all the revenue acts and that the scheme was intended to divide and distract the colonies. It directed the attention of the Assembly to the patriotic attitude of the other colonies, and exhorted them to imitate their example. It hinted at a corrupt coalition between the acting-governor (Colden) and the head of a powerful family (De Lancey), and called upon the Assembly to repudiate the act concocted by this combination. It closed with a summons of the inhabitants to a meeting in The Fields the next day, to express their views and to instruct their representatives in the Assembly to oppose the measure and in case they should refuse, to send notice thereof to every Assembly in America, and to publish their names to the world.

Not less than fourteen hundred people assembled around the Liberty Pole, on Monday, where they were harangued by John Lamb, an active Son of Liberty and afterward an efficient artillery officer in the Continental Army. He was then thirty-four years of age; a prosperous merchant, a fluent speaker, and vigorous writer. He swayed the multitude on that occasion by his eloquence and logic and by unanimous vote they condemned the action of the Assembly in passing obnoxious bills. Their sentiments were embodied in a communication to that House, which was borne by a committee of seven leading Sons of Liberty, namely: Isaac Sears, Caspar Wistar, Alexander McDougall, Jacob Van Zandt, Samuel Broome, Erasmus Williams, and James Varick.

The leaven of toryism then permeated the New York Assembly. When the obnoxious hand-bill was read by the Speaker, Mr. De Lancey moved that the sense of the House should be taken whether the said paper was not an infamous and scandalous libel." When the vote was taken, twenty of the pliant Assembly voted that it was so, and only one member voted No. That member was Philip Schuyler. He boldly faced the rising storm, and by his solitary vote rebuked, in a most emphatic manner, the cowardice of those of his compeers who had stood shoulder to shoulder with him in former trials. The Assembly then set about ferreting out the author of the hand-bill. They authorized the lieutenant-governor to offer a reward of \$50 for the discovery of the offender. Lamb was cited before the House, but was soon discharged. The printer of the hand-bill, when discovered, was brought to the bar, when the frightened man gave the name of Alexander McDougall as the author. He was the son of a Scotchman from the Hebrides, a sailor, an ardent Son of Liberty, and afterward a major-general in the Continental Army. He was taken before the House, where he would make no acknowledgment and refused to give bail. He was indicted for libel and cast into prison, where he remained fourteen weeks until arraigned for trial, when he pleaded not guilty, and gave bail. On that occasion he spoke with vast propriety," William Smith wrote to Schuyler, "and awed and astonished many who wish him ill, and added, I believe, to the number of his friends." Several months afterward he was again brought before the House, when he was defended by George Clinton, an active member of that body, who became the first governor of the State of New York. To the question whether he was the author of the hand-bill signed "A Son of Liberty," McDougall replied, That as the Grand Jury and the Assembly had declared the paper a libel, he could not answer; that as he was under prosecution in the Supreme Court, he conceived it would be an infraction of justice to punish twice for one offence but that he would not deny the authority of the House to punish for a breach of privilege when no cognizance was taken of it, in another court." His answer was declared to be a contempt, and he was again imprisoned. In February, 1771, he was released and was never afterward molested. I rejoice," said McDougall, when ordered to prison, "that I am the first to suffer for liberty since the commencement of our glorious struggle."

McDougall was regarded as a martyr. "The imprisoned sailor," says John C. Hamilton, in his biography of his father, General Alexander Hamilton, "was deemed the true type of imprisoned commerce. To soften the rigors of his confinement, to evince the detestation of its authors, and in his person to plead the public wrongs, became a duty of patriotism. On the anniversary of the repeal of the Stamp Act, his health was drunk with honors, and the meeting, in procession, visited him in prison. Ladies of distinction daily thronged there. Popular songs were written, and sung

under his prison bars, and emblematic swords were worn. His name was upon every lip. The character of each individual conspicuous in the great controversy became a subject of comment and the applause which followed the name of Schuyler, gave a new value to the popularity his firmness had acquired."

McDougall was emphatically a "man of the people." He thoroughly sympathized with those classes in society - the working men and women - who are generally weak in social and political influence where, as then in New York, an aristocratic class bears rule, because of their inability to make their voices heard by those in authority. Without any of the spirit of a demagogue, he was a popular leader, because the people saw that his whole soul was enlisted in his efforts in their behalf and like every really earnest man, the utterances of his convictions carried with them great weight. He was a true type of what is generally known as the "common people" - the great mass of citizens who carry on the chief industries of a country - its agriculture, commerce, manufactures and arts.

Chapter LIII

American Affairs in Europe - The British Ministry - The Parliament and the Americans - James Otis Disabled - Troops in Boston - Interference with Popular Rights Resented - Disturbance in New York - Violation of Non-Importation Agreements and Its Consequences - Affray with Rope-Makers - Boston Massacre - After-Action of the People - Funeral of the Victims - Effects of the Massacre - A Triumph - Unwise Action of the British Ministry - Feelings of the Americans - Importations Renewed.

AT the beginning of 1770, the quarrel between Great Britain and her American colonies was a chief topic for discussion and speculation in European court-circles. The French were watching the course of events with intense interest. Du Chatelet, in London, was keeping Choiseul well-informed of every political movement bearing upon American affairs and the sentiment of wise men on the continent, as well as the middle-classes of Great Britain, was rapidly drifting in favor of the really persecuted colonists. The British cabinet had not been in perfect unity for some time on the American question, and had just been recast. The Duke of Grafton, at whom Junius was then hurling his keenest shafts, had retired from the premiership, and Lord North had become prime minister of England, with a good working majority in Parliament. The Opposition in Parliament were bold, bitter, and defiant. Sir George Saville, in debate, charged the House of Commons with an invasion of the rights of the people when a ministerial member said "In times of less licentiousness, members have been sent to the Tower for words of less offence." Saville instantly replied: "The mean consideration of my own safety shall never be put in the balance against my duty to my constituents. I will own no superior but the laws; nor bend the knee to any but to Him who made me." Lord North well knew the strength of the popular will behind these brave words, and bore the reproach quietly. By adroit management he stilled the rising tempest of indignation that was agitating the majority. In the House of Lords, Chatham, whose voice had been silent a long time, spoke warmly in favor of being just toward the Americans. "Let us save the constitution, dangerously invaded at home," he said, "and let us extend its benefits to the remotest corners of the empire. Let slavery exist nowhere among us for whether it be in America, or in Ireland, or here at home, you will find it a disease which spreads by contact, and soon reaches from the extremity to the heart." These words from both houses of Parliament went over the sea as pledges of hope for the Americans, for lately they had received only frowns from the national legislature. The colonists were irritated but calm, because they were conscious of their innate strength and the righteousness of their cause. Their just anger was controlled by wise judgment and marvellous sagacity. The bond of their union was growing stronger every hour because of common danger.

Boston was then the focus of rebellious thought and action in America. Samuel Adams and his compatriots were longing for independence, and boldly prophesying the birth of a new nation in America; but his brave and fiery coadjutor, James Otis, had lately been disabled by the violence of a crown-officer, to which allusion has already been made. Mr. Robinson, one of the commissioners of customs, had misrepresented Otis in England. The latter made a severe attack upon Robinson in a Boston newspaper. For this the commissioner attempted to pull Otis's nose in

a coffee-house. A fracas ensued, when Otis was so severely beaten that he never fairly recovered. His brain was disturbed by a blow on the head from a heavy cane. His great usefulness at that crisis was hopelessly impaired. John Adams, in his diary for January, 1770, gives a melancholy account of the patriot's mental condition: Otis," he wrote, is in confusion yet he loses himself; he rambles and wanders like a ship without a helm attempted to tell a story which took up almost all the evening; the story may, at any time, be told in three minutes with all the graces it is capable of but he took an hour. I fear he is not in his perfect mind. The nervous, the concise and pithy were his character till lately; now the verbose, the roundabout, and rambling and long-winded. . . . In one word, Otis will spoil the club. He talks so much and takes up so much of our time, and fills it with trash, obscenity, profaneness, nonsense and distraction, that we have none left for rational amusements and inquiries. He mentioned his wife; said she was a good wife, too good for him; but she was a tory [she had married her daughter to a British officer], a high tory; she gave him such curtain-lectures, etc. In short, I never saw such an object of admiration, reverence, contempt, and compassion, all at once, as this. I fear, I tremble, I mourn, for the man and his country; many others mourn over him, with tears in their eyes." Poor Otis He lived, disabled, until the great Revolution (in the earlier stages of which he had borne the most conspicuous part) was almost ended in the independence of his country. Late in May, 1782, while he was standing in the door of a friend at Andover during a thunder-shower, he was instantly killed by a stroke of lightning - a method of dying for which he had often expressed an earnest desire.

The troops in Boston were a source of constant irritation. "They must be removed to the Castle," said the good citizens. They shall remain," said the crown-officers and Hutchinson, in obedience to an order from Hillsborough, prorogued the Massachusetts Assembly till the middle of March, while some of them were on their way from a distance to hold a session in Boston. This arbitrary act inflamed the indignation of the people, and stirred the ire of all the colonies. It was immediately followed by violations of the nonimportation agreement by a few covetous Boston merchants, who coalesced with the crown-officers. Among them were Hutchinson's sons, who were his agents. They secretly sold tea. A meeting of patriotic merchants was held, and in a body they went to the lieutenant-governor's house to treat with his sons, who had violated the agreement. He treated them as incipient insurgents, and would not allow them to enter. He sent the sheriff into an adjourned meeting of merchants to order them to disperse. The troops were furnished with ball-cartridges, and Colonel Dalrymple was ready to shed blood in defense of the royal prerogative. The meeting sent a respectful letter to the governor, written by John Hancock, telling him plainly that their assemblage was lawful, and they should not disperse. Hutchinson, made wiser by past experience with an exasperated people, submitted to circumstances, and was quiet.

Meanwhile the insolence and aggressive acts of the soldiery in New York had aroused the people there to resistance. Although it was winter, the Sons of Liberty frequently gathered around the Liberty-Pole, which had stood defiantly since it was iron-bound in 1767. At midnight in January (1770), some armed men went stealthily from the barracks with chisels and axes, cut down the pole, sawed it in pieces, and piled the fragments in front of Montague's, the rendezvous of the Sons of Liberty. The perpetrators of the act were discovered at dawn. The bell of St.

George's Chapel, in Beekman street, was rung as if there were a great conflagration, and at an early hour on the 17th of January, full three thousand people stood around the stump of the consecrated pole. By resolutions they declared their rights, and contempt of the soldiers as enemies to the Constitution. The soldiers posted an insulting placard about the town. For about three days the most intense excitement prevailed. In affrays with the citizens, the soldiers were generally defeated, and on one occasion several of them were disarmed. Quiet was restored at length. The people erected another Liberty-Pole upon private ground purchased for the purpose upon Broadway, near the present Warren street and not long afterward the soldiers departed for Boston, where bloodshed had occurred.

In spite of the threatening attitude of the citizens, four or five Boston merchants continued to import and sell tea, the specially proscribed article. The women of Boston protested against this violation of a sacred pledge. The mistresses of three hundred families subscribed their names to a league, binding themselves not to drink any tea until the revenue act was repealed. Three days afterward the maidens of Boston were gathered in convention in the home of an opulent merchant, and there signed their names to the following pledge: We, the daughters of those patriots who have and do now appear for the public interest, and in that principally regard their posterity - as such, do with pleasure engage with them in denying ourselves the drinking of foreign tea, in hopes to frustrate a plan which tends to deprive a whole community of all that is valuable in life."

The recusant merchants were unmoved, and Theophilus Lillie announced his intention to import and sell tea in spite of public opinion. That opinion soon appeared embodied in a little mob, composed chiefly of half-grown boys, who set up a wooden post in front of Lillie's store, with a rudely carved head upon it, and a hand pointing to the merchant's door as a place to be avoided. Lillie was exasperated, but dared not interfere. A neighboring merchant of his stripe, named Richardson, a rough, stout man, having more courage, tried to get a farmer, who was passing in his cart, to knock down the post with his hub. The man was a patriot and refused, when Richardson rushed out and attempted to pull it down with his own hands. He was pelted with dirt and stones. In violent anger, he came out of Lillie's house, into which he had been driven by the mob, with a shotgun, and discharged its contents, without aim, into the little mob. A lad named Samuel Gore was slightly wounded, and another, named Christopher Snyder, was killed. He was the son of a poor German widow. The mob seized Richardson and an associate and hurried them to Faneuil Hall, where the citizens speedily assembled to the number of two or three hundred. Richardson was tried and found guilty of murder, but Lieutenant-Governor Hutchinson refused to sign the death-warrant. After he had lain in prison two years, the king pardoned the offender. The murder of Snyder produced a profound sensation in the public mind throughout the colonies, as a prophecy of coming war. In Boston his funeral was made the occasion of a solemn pageant. His coffin was covered with inscription. One of these was: "Innocence itself is not safe." It was borne to Liberty Tree, where a very large concourse of citizens of every class assembled, and followed the remains to the grave. In that procession nearly five hundred children took part. The pall was carried by six of the victim's school-mates. Relatives and friends and almost fifteen hundred citizens followed. The bells of the city and of the

neighboring towns tolled while the procession was moving; and in the newspapers, and by the lips of grave speakers in the pulpit and on the rostrum, little Christopher Snyder was spoken of as the first martyr to the cause of liberty in America. Dalrymple and his vicious Twenty-ninth regiment were impatient in the presence of such a popular demonstration. He wanted to be set at murderous work among the Bostonians, whom he thoroughly hated, but was restrained by the civil magistrates.

This event was a forerunner of a more serious one a few days after ward. John Gray had an extensive rope-walk in Boston, where a number of patriotic men were employed. They often bandied coarse taunts with the soldiers as they passed by. On Friday, the 2nd of March (1770), a soldier who applied for work at the rope-walk was rudely ordered away. He challenged the men to a boxing-match, when he was severely beaten. Full of wrath he hastened to the barracks, and soon returned with several companions, when they beat the rope-makers and chased them through the streets. The citizens naturally espoused the cause of the rope-makers, and many of them assembled in the afternoon with a determination to avenge the wrongs of the workmen. Mr. Gray and the military authorities interfered, and prevented any further disturbance then. But vengeance only slumbered. It was resolved, by some of the more excitable of the inhabitants, to renew the contest and at the barracks the soldiers inflamed each other's passions, and prepared bludgeons. They warned their particular friends in the city not to be abroad on Monday night, for there would be serious trouble.

Fresh wet snow had fallen, and on Monday evening, the 5th of March, frost had covered the streets of Boston with a coat of ice. The moon was in its first quarter and shed a pale light over the town, when, at twilight, both citizens and soldiers began to assemble in the streets. By seven o'clock full seven hundred persons, armed with clubs and other weapons, were on King (now State) street, and, provoked by the insolence and brutality of the lawless soldiery, shouted Let us drive out these rascals! They have no business here! Drive them out! At the same time parties of soldiers (whom Dalrymple had doubtless released from the barracks for the purpose of provoking the people to commit some act of violence, and so give an excuse for letting loose the dogs of war) were going about the streets boasting of their valor, insulting citizens with coarse words, and striking many of them with sticks and sheathed swords. Meanwhile the populace in the street were increasing in numbers every moment, and at about nine o'clock in the evening, they attacked some soldiers in Dock Square, and shouted: "Town-born, turn out Down with the bloody-backs!" They tore up the stalls of a market, and used the timber for bludgeons. The soldiers scattered and ran about the streets, knocking people down and raising the fearful cry of Fire! At the barracks on Brattle street, a subaltern at the gate cried out, as the populace gathered there, Turn out! I will stand by you. Knock them down! kill them! run your bayonets through them! The soldiers rushed out, and, leveling their muskets, threatened to make a lane paved with dead men through the crowd. Just then an officer was crossing the street, when a barber's boy cried out: There goes a mean fellow, who will not pay my master for shaving him." A sentinel standing near the corner of the Custom-house ran out and knocked the boy down with his musket.

The cry of fire and the riotous behavior of the soldiers caused an alarm- bell to be rung. The

whole city was aroused. Many men came out with canes and clubs for self-defense, to learn the occasion of the uproar. Many of the more excitable citizens formed a mob. Some of the leading citizens present tried to persuade them to disperse, and had in a degree gained their respectful attention, when a tall man, covered with a long scarlet cloak and wearing a white wig, suddenly appeared among them, and began a violent harangue against the government officers and the troops. He concluded his inflammatory speech by boldly shouting: "To the main-guard! to the main-guard! There is the nest! It is believed that the orator in the scarlet cloak was Samuel Adams.

The populace immediately echoed the shout - "To the main-guard!" - with fearful vehemence, and separating into three ranks, took different routes toward the quarters of the main-guard. While one division was passing the Custom-house, the barber's boy cried out: There's the scoundrel who knocked me down! A score of voices shouted, "Let us knock him down! Down with the bloody-backs Kill him! kill him!" The crowd instantly began pelting him with snow-balls and bits of ice, and pressed toward him. He raised his musket and pulled the trigger. Fortunately for him it missed fired, when the crowd tried to seize him. He ran up the Custom-house steps, but, unable to enter the building, he called to the indian-guard for help. Captain Preston, the officer of the day, sent eight men, with unloaded muskets but with ball- cartridges in their cartouch boxes, to help their beleaguered comrade. At that moment the stout Boston bookseller, Henry Knox (who married the daughter of General Gage's secretary and was a major-general of artillery in the army of the Revolution), holding Preston by the coat, begged him to call the soldiers back. If they fire," said Knox, "your life must answer for the consequences." Preston nervously answered: I know what I am about," and followed his men.

When this detachment approached, they, too, were pelted with snowballs and ice; and Crispus Attucks, a brawny Indian from Nantucket, at the head of some sailors, like himself (who had led the mob in the attack on the soldiers in Dock Square), gave a loud war-hoop and shouted, "Let us fall upon the nest! the main-guard! the main-guard!" The soldiers instantly loaded their guns. Then some of the multitude pressed on them with clubs, struck their muskets and cried out, You are cowardly rascals for bringing arms against naked men." Attuck shouted: "You dare not fire!" and called upon the mob behind him: "Come on! Don't be afraid! They daren't fire! Knock them down! Kill 'em!" Captain Preston came up at that moment and tried to appease the multitude. Attucks aimed a blow at his head with a club, which Preston parried with his arm. It fell upon the musket of one of the soldiers and knocked it to the ground. Attucks seized the bayonet, and a struggle between the Indian and the soldier for the possession of the gun ensued. Voices behind Preston cried out, "Why don't you fire! why don't you fire?" The struggling soldier hearing the word fire, just as he gained possession of his musket, drew up his piece and shot Attucks dead. Five other soldiers fired at short intervals, without being restrained by Preston. Three of the populace were killed, five were severely wounded (two of them mortally), and three were slightly hurt. Of the eleven, only one (Attucks) had actually taken part in the disturbance. The crowd dispersed; and when citizens came to pick up the dead, the infuriated soldiers would have shot them, if the captain had not restrained them.

News of the tragedy spread over the town in a few minutes. It was now near midnight. There was a light in every house, for few besides children had retired on that fearful night in Boston. The alarm-bells were rung. Drums beat to arms. A cry went through the streets - "The soldiers are murdering the people! To arms! to arms! Turn out with your guns!" Preston also ordered his drums to beat to arms. Colonel Dalrymple, with the lieutenant-governor, were soon on the spot and promised the orderly citizens, who had taken the place of the dispersed mob, that justice should be vindicated in the morning. Order was restored, and before the dawn the streets of Boston were quiet. Meanwhile Preston had been arrested and put into prison and the next morning the eight soldiers were committed - ill charged with the crime of murder.

Such is the sad story of the famous "Boston Massacre," gleaned from the conflicting evidence of witnesses at the trial of Preston and his men, and of contemporary writers. The 5th of March was celebrated as a solemn anniversary in the history of the colonies, until after the Declaration of Independence became a national holiday. The killing of citizens was undoubtedly a massacre, for the outrageous conduct of the soldiers created the mob. Their offensive acts on that night were undoubtedly approved by Dalrymple, their commander. It was his duty to keep them in the barracks at a time of popular excitement only, not an insurrection. He must have foreseen the result of their doings, and hoped for an excuse to "begin work in Boston," as he had said before. Such is the verdict of history after a lapse of more than a century.

The event produced a profound impression everywhere. The cause of Boston became the cause of the continent. The story, embellished in its course from lip to lip, became a tale of horrors that stirred the blood of patriots everywhere. It was a crisis in the history of the colonies. Some were disposed to consider the events on that night as forming the principal cause of the Revolution which soon afterward broke out. John Adams said long years afterward: "On that night the foundation of American independence was laid;" and Daniel Webster, when speaking of the event, said:

"From that moment we may date the severance of the British empire." The "foundation for the independence of America" was laid long before, when the early colonists began to yearn for the privileges of local self-government and the severance of the British empire was decreed when Andros was driven from New England.

On the morning after the massacre, the Sons of Liberty gathered in great numbers in Faneuil Hall. The lieutenant-governor convened his council, and that afternoon a town-meeting was held in the South Meeting-house (yet standing), then the largest building in the city. The people there resolved that nothing could be expected to restore peace and prevent carnage, but an immediate removal of the troops." A committee of fifteen, with Samuel Adams as their chairman, were sent the next morning, with that resolution, to Hutchinson and Dalrymple. The people," said Royal Tyler, one of the committee, are determined to remove the troops out of the town by force, if they will not go voluntarily. They are not such people as formerly pulled down your house, that conduct these measures, but men of estate - men of religion. The people 'will come in to us from all the neighboring towns we shall have ten thousand men at our backs, and your troops will

probably be destroyed by the people, be it called rebellion or what it may." Hutchinson replied: An attack on the king's troops would be high-treason, and every man concerned in it would forfeit his life and estate." The committee renewed the demand for the removal of the troops. The officials would only promise to send one regiment away. This unsatisfactory answer the committee reported to an adjourned town-meeting that afternoon, when it was immediately resolved that it was the unanimous opinion of the meeting that the reply made to the vote of the inhabitants, presented to his honor this morning, is by no means satisfactory, and that nothing else will satisfy them but a total and immediate removal of all the troops." Samuel Adams, John Hancock, William Molineux, William Phillips, Joseph Warren, Joshua Henshaw and Samuel Pemberton were appointed to carry this resolution to the civil and military authorities. Adams presented the resolutions. Again the lieutenant-governor and the colonel temporized. Hutchinson said he had no power to remove the troops. Adams proved that he had, by the provisions of the charter. Still the crown-officers hesitated. Adams resolved that there should be no more trifling with the will of the people. Stretching forth his hand toward Hutchinson, and in a voice not loud but clear, he said: "If you have power to remove one regiment, you have power to remove both. It is at your peril if you do not. The meeting is composed of three thousand people. They are become very impatient. A thousand men are already arrived from the neighborhood, and the country is in general motion. Night is approaching; an immediate answer is expected."

This was the voice of the province - of the continent - and the crown-officers knew it. Fear of the angry people and dread of the frowns of the ministry agitated them with conflicting emotions. Hutchinson grew pale his knees trembled, and Adams afterward said, "I enjoyed the sight." The lieutenant-governor's council had unanimously recommended the removal of the troops the people demanded it, and after conferring together in a whisper, Hutchinson and Dalrymple agreed to send the troops to Castle William. The committee returned to the meeting with the good news, and the Old South Meeting-house rang with acclamations of joy. The humbled troops were speedily sent out of the town. It was a signal triumph for the people and the rights of man. These troops had been sent to overawe the people; the people had overawed the troops. The inhabitants kept a strict guard over the prisoners and a vigilant oversight of the troops while they remained, many of the most respectable citizens appearing as common soldiers" in this duty.

The funeral of the victims of the massacre occurred on the 8th of March. It was made an occasion of a great popular demonstration. Four hearses that bore the bodies of Crispus Attucks, Samuel Maverick, Samuel Gray and James Caldwell, who were murdered on the 5th, met at the spot, in King street, where the tragedy was enacted. Thence they moved to the Middle Burial-ground, followed by an immense concourse of people of all classes and conditions, on foot; and then by a long line of carriages of the gentry of the town," who occupied them. The bodies were placed in one vault. The newspapers of the country were shrouded in broad black lines. The Boston Gazette, printed on Monday, the 12th of March, was heavily striped with black lines, and contained pictures of four coffins, bearing the initials of the slain and the skull and cross-bones. Long afterward John Adams wrote: Not the battle of Lexington or Bunker Hill, not the surrender of Burgoyne or Cornwallis, were more important events in American history than the battle of King street, on the 5th of March, 1770. The death of four or five persons, the most

obscure and inconsiderable that could have been found upon the continent, has never yet been forgiven in any part of America."

Late in the autumn of the same year, when public excitement had subsided, Captain Preston and his soldiers were tried for murder before a court in Boston. Josiah Quincy, Jr., and John Adams were counsel for the prisoners). They were known as ardent patriots, yet their acceptance of the task of defending these prisoners offended many of their compatriots, and severely tried the strength of their popularity. They entered upon their duties as counselors with humane motives, and they discharged them with fidelity to their clients, the law, and the testimony. Robert Treat Paine, afterward a signer of the Declaration of Independence, was the counsel for the crown. Preston and six of the soldiers were declared not guilty by a Boston jury. The other two - the soldier who killed Attucks, and another who shot Maverick - were convicted of manslaughter only, and for that offence they were each branded in the hand with a hot iron, in open court, and discharged.

This trial was another triumph for the Americans. The advocates in Parliament for the revival of the long-slumbering statute of Henry the Eighth, providing for the trial in England of persons accused of crimes in the colonies, gave as a reason for such revival, that American juries could not be trusted in the case of a crown-officer being on trial. This verdict of a Boston jury, under the circumstances, set that slander at rest forever, and amazed the judges of the English courts. The jury had simply triumphed over prejudice and strong emotion, and given a verdict in accordance with the dictates of conscience and perceptions of truth.

On the evening when the Boston massacre occurred, Lord North asked leave of the British House of Commons to bring in a bill for repealing the duties on certain articles mentioned in Hillsborough's circular, but retaining a duty of three per cent on tea. This was a small tax - a very small burden - a mere pepper-corn rent," avowedly to save the national honor. The proposition found very little favor from either party. The friends of the Americans demanded a repeal of the whole revenue act, the friends of the crown regarded a partial repeal as utterly useless, for they began to comprehend the deep-seated principle on which the Americans had planted themselves. Lord North, in his heart, wished to have a full repeal, and thereby insure a full reconciliation but the stubborn king would not relinquish an iota of his prerogative on compulsion, and the duty on tea was retained by the votes of a small majority in Parliament. The bill received the royal assent on the 17th of April. The monarch had already received intelligence of the massacre. When it was revealed to Parliament, it created a very great sensation. Had that body received the news sooner, the duty on tea would not have been retained.

When intelligence of this act reached America, the colonists saw that the contest was not quite over. In the three per cent duty on tea lay the kernel of future oppressions - materials for chains of slavery. But the people, late in 1770, began to relax their loyalty to the non-importation leagues. The merchants of New York proposed to import everything but tea. Send us your Liberty-Pole, as you can have no further use for it," wrote the Philadelphians. The letter of the New York merchants was burnt by the students at Princeton, with James Madison at their head.

In Boston it was torn in pieces, and in other colonies it was read with indignation. But Philadelphia and Boston merchants soon acquiesced and before the close of 1770 the colonists were importing everything from Great Britain excepting tea. The associations had exerted salutary influence on society in America. Many extravagant customs had been abolished; personal expenses had been curtailed, and some manufactures had been encouraged. Home-made articles were fashionable. The graduating class at Cambridge took their degrees in home-spun clothes in 1770.

The spinning-wheel, which had been introduced into the colonies by the Scotch-Irish early in the last century, played an important part in the politics of the time. It had been introduced into England from India in the reign of Henry the Eighth, and it was such an improvement upon the ancient distaff in the process of spinning, that, according to a legend that prevailed in Great Britain and Ireland, it was a special gift from heaven. This gift the patriotic women of America used most effectually in helping their fathers, brothers, husbands and sons in successful resistance to oppression. How much the hearts, heads and busy fingers of the women of the Revolution contributed to the achievement of the great result may never be known. The service was very great.

Chapter LIV

Settlements Beyond the Mountains - Lawlessness in North Carolina - Governor Tryon and the Regulators - A Battle on the Allamance - Cruelty of the Governor - Crown-Officers in America Made Independent of the Assemblies - Obnoxious Letters of Crown-Officers - Their History - Spirit of Liberty Everywhere - Virginia Firm and New York Wavering - Affair of the Gaspe - East India Company and the Ministry - Tea-Ships Sent to America - Proceedings Against Them in Seaport Towns.

DURING the next two years after the Boston massacre the colonists were not disturbed by any obnoxious legislation by Parliament. At that period a spirit of adventure caused many persons to climb over the mountains west of the British-American colonies to explore the valleys of the Ohio, Cumberland, and Tennessee rivers, and to penetrate the dark forests in the more southern portions of the Mississippi Valley. Washington then made himself thoroughly acquainted with the region of West Virginia on the borders of the Ohio River. Daniel Boone and companions from the Clinch and Holston rivers were traversing the wilds of Kentucky, and preparing the way for settlements there and James Robertson and others were exploring the borders of the sinuous Cumberland, and planting a permanent settlement on the bluffs at Nashville. So these pioneers were revolutionizing that vast and rich country into which an industrious population soon flowed, pitched their tents, and made permanent habitations.

Robertson had come from the discontented regions of North Carolina, where the Regulators were resisting oppression with all their might. For more than two years anarchy prevailed there. Sheriffs dared not exercise their official functions. Judges were driven from the bench, and general lawlessness prevailed. Governor Tryon met this state of things as a passionate and unwise ruler would. Instead of being just, and protecting the flock over which he had been set from rapacious wolves, he coalesced with the wolves and used the strong arm of military power to crush rising and righteous rebellion. Bad men had attached themselves to the Regulators and brought discredit upon their course, but a wise ruler would have discriminated between the good and bad of his opposition.

A rumor reached the governor that a band of armed Regulators were at Cross Creek (now Fayetteville) ready to march upon New Berne to release Herman Husband, who had been temporarily imprisoned. Tryon fortified his palace and called out the militia of the several adjoining counties. Husband was released and his partisans retired. But the governor went ahead and made a virtual declaration of war against the Regulators. His council authorized him to march into the rebellious district with sufficient troops to restore law and order. With three hundred militia and a small train of artillery, he left New Berne late in April (1771), and early in May encamped on the Eno, where he was joined by reinforcements. General Hugh Waddell had been directed to collect the forces from the western counties and at Salisbury, where he rendezvoused his troops, he waited for powder then on its way from Charleston. Its convoy was intercepted in Cabarras county by some Regulators with blackened faces, and routed, and the powder fell into the hands of the assailants. Waddell crossed the Yadkin to join Tryon, where he

received a message from the Regulators telling him to halt or retreat. He found many of his troops wavering; and so he turned about, and re-crossed the Yadkin, hotly pursued by a band of insurgents. They captured many of his men, but the general escaped to Salisbury.

When Tryon heard of these disasters, he pressed forward toward the Allamance Creek, to confront the Regulators, whom, he heard, were gathering in force on the Salisbury road. When he approached, they sent to him a proposition for an accommodation, with a demand for an answer within four hours. He promised a reply by noon the next day. That night he treacherously moved forward, crossed the Allamance at dawn, and moving stealthily along the Salisbury road, formed a line of battle within half a mile of the camp of the Regulators, before he was discovered. The insurgents seized their arms, and the belligerents confronted each other with deadly weapons. A parley ensued. An ambassador of the Regulators, named Thompson, who was sent to Tryon, was detained as a prisoner. He resented the perfidy, and in bold words told Tryon some unpleasant truths. The governor, in hot anger, snatched a gun from the hands of a militiaman and shot Thompson dead. He instantly perceived his folly, and sent out a flag of truce. The Regulators saw Thompson fall, and they fired on the flag. At that moment the Rev. Dr. Caldwell, a staunch patriot, fearing bloodshed, rode along the lines and begged the Regulators to disperse. Tryon, on the contrary, full of wrath, gave the fatal word Fire. The militia hesitated. The governor, crazed with rage, rose in his stirrups and shouted Fire! Fire on them or on me! A volley of musketry and discharge of cannon followed this order. The fire was returned. For a few minutes there was a hot fight. Some young Regulators rushed forward and seized the governor's cannon, but did not know how to use them. There was no acknowledged leader of the insurgents excepting Herman Husbands, who, when the firing began, declared that his peace-principles as a Quaker would not allow him to fight, and he rode away. He was not seen again in that region until the close of the War of the Revolution. In that conflict nine of the militia and more than twenty of the Regulators were killed, and many were wounded on both sides. It was the first battle in the war for independence. It was a sort of civil war, for it was fought on the soil of North Carolina between citizens of North Carolina. The Regulators were defeated, and the people in all that region - conscientious people - were compelled to take an oath of allegiance, which restrained their patriotic action when the War of the Revolution was earnestly begun.

The victor exercised savage cruelty toward his prisoners, showing a petty spite which was disgraceful to a soldier and a man. He condemned a young carpenter named Few, who had suffered much from the bad conduct of Fanning (even the loss of a maiden to whom he was affianced), to be hung on the night after the battle, and caused the property of his mother, at Hillsborough, to be destroyed. Other prisoners were marched through the country, as in a triumphal procession, and the conqueror marked his path by conflagrations and destruction of growing crops. At Hillsborough six more of the prisoners were hanged, as a terror to the inhabitants. Among them was Captain Messer, who had been sentenced to be hung with Few. His wife hurried to Tryon, with their little son ten years of age, and pleaded for her husband's life. The governor spurned her rudely, and Messer was led out to be executed. The boy broke away from his mother, who lay weeping on the ground, and going to the governor said: "Sir, hang me, and let my father live." "Who told you to say that - asked Tryon, "Nobody" replied the lad. "Why

do you ask that," said the governor. Because if you hang my father," said the boy, my mother will die and the little children will perish." Tryon's heart was touched. Messer was offered his liberty if he would bring Husbands back. He consented, and his wife and children were kept as hostages. Messer returned in the course of a few days, and reported that he overtook Husbands in Virginia, but could not bring him back. The exasperated governor hung Messer at Hills-borough, with the other prisoners.

The movements of the Regulators was a powerful beginning of that system of resistance which marked the people of North Carolina in the impending struggle. It lacked the lofty moral aspect of the movements in New England. The North Carolinians were resisting actual oppression, in the form of heavy taxation and extortion; the New Englanders were moved by an abstract principle of justice and right. The three percent a pound duty on tea had no effect on the material prosperity of Massachusetts; but it represented oppression and injustice, and they resisted its collection.

In 1772, Parliament, by a special act for strengthening the powers of the royal governors in America, excited the indignation of the colonists. It provided for the payment of the salaries of the governors and judges independent of the colonial assemblies. Hutchins, who had been appointed governor of Massachusetts in 1771, was delighted, and in a triumphant tone he assured the Assembly that henceforth not they, but the crown, would pay his salary. They knew the significance of the act, and denounced it as a violation of their charter. Other assemblies took umbrage likewise, for it was regarded as a bribe for the faithfulness of the royal governors to the crown in a warfare upon colonial rights. The subject was taken into consideration at a town-meeting in Boston. A large committee was appointed to draw up and publish a statement of all the rights and grievances of the colonies. This was done in an address prepared by Samuel Adams and Joseph Warren, in which the scheme for establishing Episcopacy in America was also condemned. It was the boldest and most complete exposition of the rights and grievances of the colonies yet put forth, and it was followed by the organization of committees of correspondence in every town. Dr. Franklin, who had been appointed agent for Massachusetts in England, 1771, published it there, with a preface written by himself. It produced a deep impression on both sides of the Atlantic.

When the Massachusetts legislature assembled at the beginning of 1773, Hutchinson denounced the address as seditious and treasonable." This stirred the indignation of the people, and very soon afterward an event occurred which produced great exasperation in Massachusetts. Letters of Hutchinson, Lieutenant-Governor Oliver and others, written to Mr. Whateley, one of the under-secretaries of the government, then dead, had been put into the hands of Dr. Franklin by Dr. Hugh Williamson of Philadelphia, who had procured them by stratagem from the office of Mr. Whateley's brother. In these letters, the popular leaders of Massachusetts were vilified the liberal clauses of the Massachusetts charter were condemned; the punishment of the Bostonians by restraints upon their commercial privileges was recommended, and an "abridgment of what are called English liberties in America, by coercive measures, was strongly urged. Dr. Franklin saw in these letters evidences of a conspiracy against his country by vipers in her bosom, and he sent them, with an official letter, to Thomas Cushing, the Speaker of the Massachusetts Assembly, in

which he said: "As to the writers, when I find them bartering away the liberties of their native country for posts, negotiating for salaries and pensions extorted from the people, conscious of the odium there might be attended with calling for troops to protect and secure them when I see them exciting jealousies in the crown, and provoking it to wrath against so great a part of its most faithful subjects creating enmities between the different countries of what the empire consists; occasioning great expense to the old country for suppressing or preventing imaginary rebellion in the new, and to the new country for the payment of needless gratifications to useless officers and enemies, I cannot but doubt their sincerity even in the political principles they profess, and deem them mere time-servers, seeking their own private emoluments through any quantity of public mischief; betrayers of the interest not of their native country alone, but of the government they pretend to serve, and of the whole English empire."

These letters were circulated privately for awhile, when they were laid before the Massachusetts Assembly and published to the world. The tempest of indignation that followed these revelations was fearful to Hutchinson and his friends. A committee was appointed to wait upon the governor and demand from him an explicit denial or acknowledgment of their authenticity. They are mine," he said, but they were quite confidential." That qualification was not considered extenuating, and the Assembly adopted a petition to the king for the removal of Hutchinson and his lieutenant as public slanderers and enemies of the colony, and, as such, not to be tolerated. The petition was sent to Franklin, with instructions to present it in person, if possible. He could not do it, for the king disliked him. So he sent it to Lord Dartmouth, who had succeeded Hillsborough as secretary for the colonies. His lordship sent it to the king, who laid it before the Privy Council.

Meanwhile the exposure had produced much excitement in England. Mr. Whateley accused Lord Temple, Pitt's brother-in-law (who had once obtained permission to examine Secretary Whateley's papers), of abstracting them and putting them into Franklin's hands. A duel, in which Temple was wounded, was the consequence. When Franklin heard of this, he publicly avowed his share in the matter, and exonerated Mr. Temple. "I am told by some," Franklin wrote to Mr. Cushing, "that it was imprudent in me to avow the obtaining and sending those letters, for that administration will resent it. I have not much apprehension of this; but, if it happens, I must take the consequences."

While Massachusetts was in a ferment because of Hutchinson's acts, the spirit of liberty was conspicuously manifest in other colonies. On the receipt of the Massachusetts Address, setting forth the rights and grievances of the colonies, the Virginia Assembly expressed their concurrence and sympathy, and appointed a committee of correspondence as representatives of their body 'when not in session, and of the people. They were about to adopt other resolutions equally unsubmissive, in their spirit, to royal authority, when Lord Dunmore, the successor of the dead Lord Botetourt, as governor of Virginia, dissolved them. The committee of correspondence met the next day, and dispatched a Circular Letter, containing their resolutions, to the other colonial assemblies. That of Massachusetts responded by the appointment of a similar committee, of fifteen, and instructing them to urge the colonies to take similar action. Several of them did so,

and the first sound link of a political confederacy was thus formed.

In New York, meanwhile, the loyalist party had gradually obtained the ascendancy in the Assembly. Their influence was felt among the people. As we have observed, non-importation agreements were disregarded. A general committee of one hundred, and a vigilance committee of fifty, had been appointed, and disaffection had appeared in these. The true Sons of Liberty in Hampden Hall found it difficult, for some time, to keep alive the demonstrative zeal of the patriots. They were assisted, however, by Governor Tryon, who came from North Carolina to rule New York. His petty tyranny soon aroused the slumbering patriotism of the people, and when occasion demanded they were as fiery and firm as the New Englanders in defending their rights.

In the summer of 1772, an occurrence in Narraganset Bay made a great stir in the colonies and in Great Britain. The commissioners of customs, at Boston, sent an armed British schooner into the Bay, to enforce the revenue laws and prevent illicit traffic. It was the *Gasps* commanded by Lieutenant Dudingston. He loved to play the petty tyrant, and obstructed legitimate commerce by vexatious arrests of vessels on their course, without showing his commission. The chief-justice of Rhode Island (Hopkins) decided that no man coming into the colony had a right to exercise authority by force of arms, without first showing his commission; whereupon Governor Wanton sent the high-sheriff on board the *Gaspe* with a message to her commander asking him to produce his commission without delay. Dudingston did not comply. The demand was repeated in a second letter, with the same result. The lieutenant forwarded Wanton's letters to Admiral Montagu, at Boston, of whom John Adams wrote in his diary: "His brutal, hoggish manners are a disgrace to the royal navy and to the king's service." He wrote a coarse, blustering letter to the governor, saying: "I shall report your two insolent letters to his majesty's secretaries of state, and have them to determine what right you have to demand sight of all orders I shall give to all officers of my squadron and I would advise you not to send the sheriff on board the king's ship again on such ridiculous errands. The lieutenant, sir, has done his duty. I shall give the king's officers directions, that they send every man taken in molesting them, to me. As sure as the people of Newport attempt to rescue any vessel, and any of them are taken, I will hang them as pirates." To this insulting letter Governor Wanton replied with spirit. He expressed his gratification that his letters had been sent to the secretaries, and his surprise at the admiral's impolite words. He informed him that he should send that officer's letter to the same gentlemen, and leave it for the king and his minister to determine on which side the charge of insolence properly belonged. "As to your advice," he said, "not to send a sheriff on board any of your squadron, please to know, that I will send the sheriff of this colony at any time and to every place within the body of it, as I shall think fit." Before ministers had time to settle the question, the affair had assumed a more hostile aspect.

Dudingston became more insolent and annoying. He ordered even well-known packet-ships to lower their colors in token of respect when passing the *Gasps* and often fired upon those which failed to do so. At about noon on the 9th of June (1772), the packet *Hannah* was passing up the Bay before a stiff breeze, and did not bow to the haughty marine *Gesler*. The *Gasps* gave chase.

The tide was ebbing, but the bar of Namquit Point was covered. The Hannah misled her pursuer, by a more westerly way, when the schooner ran upon the sands and was hopelessly grounded. This fact was told by the captain of the Hannah to John Brown, a leading merchant of Providence, who thought it a good opportunity to rid themselves of the nuisance. He organized an expedition to destroy the schooner that night. Eight of the largest boats in the harbor, - with four oarsmen each, - their row-locks muffled, were collected early in the evening, and the whole expedition was placed in charge of Captain Whipple, one of Brown's most trusted shipmasters.

Sixty-four well-armed men left Providence in the boats, between ten and eleven o'clock in the evening, and reached the Gasps. They were hailed by sentinel, but did not answer. Dudingston appeared on deck, waved his hand for the boats to keep away, and fired a pistol among them. The shot was returned from a musket. The lieutenant was wounded and carried below. Then the vessel was boarded without much opposition. Dudingston's wound was dressed by an American medical student, and he was taken ashore. The crew were ordered to gather up their private property, and go ashore also. This done, the vessel was set on fire, and at early dawn she was blown up by her ignited magazine.

This highhanded act was condemned by the local authorities in public. Governor Wanton offered a reward of five hundred dollars for the discovery of the perpetrators. The British government offered five thousand dollars for the leader, and twenty-five hundred dollars to the man who should discover and reveal the names of the others. A royal commission of investigation was appointed, and the admiral gave all the assistance in his power, but not one of the party turned state's-evidence, though tempted by large rewards to do so. Nor did any of the citizens of Providence, who knew many of the actors well, reveal the secret (and the names of none of them were spoken of as actors) until after the war with Great Britain was actually begun. Then it was revealed that Whipple was the leader. The fact caused a very laconic correspondence. Sir James Wallace was blockading Narraganset Bay with a single war-vessel in 1775, and Whipple was in command of a little provincial naval force to drive him away. Wallace wrote to that commander:

"You, Abraham Whipple, on the 10th of June, 1772, burned his majesty's vessel, the Gaspe, and I will hang you at the yard-arm. JAMES WALLACE"

He was answered: "SIR, - Always catch a man before you hang him. ABRAHAM WHIPPLE."

At the beginning of 1773, the East India Company found itself greatly embarrassed by the American non-importation agreements concerning tea. That Company had seventeen million pounds of tea in store unsold. They could not pay dividends nor debts. Bankruptcies were the consequence, and these produced so great a shock to credit that a panic prevailed. The Company implored the ministry to take off the duty on tea. The ministry refused, for the royal prerogative forbade it. Leave was granted to the Company to send tea to America on their own account, without paying an export duty, and so enable the colonists to buy it cheaper from England than from any other market. The king and Lord North, losing sight of the principle involved, foolishly

thought this measure would quiet the Americans, for," North said, men will always go to the cheapest markets." So another opportunity for reconciliation was lost. In May, Parliament passed an act in accordance with the king's desires, for so favoring the East India Company - a vast monopoly sitting heavily on the commercial enterprise of England - while respectful petitions and remonstrances from his loyal subjects in America, touching the highest interests of the nation, were treated with scorn. The king, in answer to such papers, announced that he considered his authority to make laws in Parliament of sufficient force and validity to bind his subjects in America in all cases whatsoever, as essential to the dignity of the crown, and a right appertaining to the state, which it was his duty to preserve entire and inviolate and he expressed his displeasure because, in their petitions and remonstrances, that right was brought into question.

The East India Company, hoping, yet doubting, accepted the proposed arrangement. In August they received a proper license, and filled ships with cargoes of tea for American ports. Agents were appointed at all the sea-ports to receive the tea, and relief for the embarrassed company seemed to be nigh. They were warned by Franklin and other Americans that they would suffer loss by the operation, for their countrymen would not accept the new arrangement. But Lord North quieted the fears of the Company by saying: "It is no purpose making objections, for the king will have it so. He means to try the question with the Americans."

The colonists accepted the issue. They met the commercial question with one of deeper significance than that of the dearness or cheapness of a commodity. Is there a duty for revenue imposed on tea? was the true question. It was answered in the affirmative, and it was resolved that tea, whatever its price, should not be landed in America until that duty was taken off. The committees of correspondence soon produced unity of sentiment on that point throughout the colonies. Public meetings were held. Mutual support was pledged; the agents or consignees were requested to resign, and when the tea-ships arrived, they were not allowed in some places to discharge their cargoes. The spirit of the Stamp-act days was aroused.

The earliest public meeting to consider the reception that should be given to the tea-ships on their arrival, was held in the city of New York, on the 15th of October, 1773. Intimations had reached the city on the 11th, that a tea-ship had been ordered to that port; and at the meeting held at the coffee-house, in Wall street, grateful thanks were voted to the patriotic American merchants and ship-masters in London who had refused to receive tea as freight from the East India Company. On the following day (October 16) a large meeting was held in the State-house yard, in Philadelphia, for the same purpose. When word reached the city that a tea-ship had been ordered to that port, the newspapers denounced the whole scheme as a ministerial trick to ensnare and enslave the Americans. The people were much excited, and the meeting in the State-house yard was a "monster" gathering for that day. Eight spirited resolutions were adopted, the most vital of which was one that declared "That the resolution lately entered into by the East India Company, to send out their tea to America subject to the payment of duties on its being landed here, is an open attempt to enforce the ministerial plan, and a violent attack upon the liberties of America." They also resolved that it was the duty of every American to oppose the attempt to force the tea and taxes upon them. The consignees of the proscribed herb, in Philadelphia, were,

by another resolution, requested, from a regard to their character and the good order of the city and province, immediately to resign." Already a self-constituted "committee for tarring and feathering" had issued a manifest to the pilots on the Delaware, telling them to do their duty in case they should meet the tea-ship Polly, Captain Ayres. They were to warn him not to go to Philadelphia, and to promise him, in case he persisted in doing so, that he would have "a halter around his neck, ten gallons of liquid tar scattered over his pate, with the feathers of a dozen wild geese laid over that to enliven his appearance." The same committee threatened the consignees; and when, on Christmas day, the news reached Philadelphia that the long-expected Polly was below," several gentlemen proceeded to meet her. She was intercepted a few miles below the city. When her captain was told about public sentiment in Philadelphia, he left his ship and accompanied the gentlemen to the city. The next day an immense public meeting was held at the State-house, to consider what was best to be done in that alarming crisis." It was resolved that the tea should not be landed, nor the tea-ship be allowed to enter the port, or be registered at the Custom-house. It was also resolved that the tea should be sent back, and that the vessel should make her way out of the river and bay as soon as possible.

News that a similar spirit had been manifested in Charleston, New York and Boston, drew hearty thanks from the meeting in Philadelphia. The Captain (Ayres) of the Polly pledged himself to conform to the wishes of the people, and so the latter triumphed. A contemporary writer said: "The foundations of American liberty are more deeply laid than ever."

When the tea-ship Haney, Captain Lockyier, arrived at Sandy Hook, below New York, her master wisely heeded the advice of the pilot, and went to the city without his vessel. Already a notice had appeared in Holt's journal of that city, for the "Mohawks" to be in readiness when a tea-ship should arrive; and the captain found public sentiment so strong against receiving the tea that he resolved to return to England with his cargo. While he was in the city, a circumstance occurred which justified him in making his decision. A merchant vessel arrived with eighteen chests of tea hidden away in her cargo. The wide-awake Sons of Liberty, suspecting smuggling, searched the vessel, and on finding the tea, cast the whole of it into the waters of the harbor. The captain was advised to leave New York as quickly as possible. As he and Lockyier put off in a boat for their respective vessels, at Whitehall (foot of Broad street), a multitude who had gathered there shouted a farewell; and while cannon-peals from the Fields shook the city, the people hoisted a British flag on the Liberty Pole in token of triumph.

At Boston, yet the focus of resistance to British oppression, the greatest demonstrations concerning the tea-ships occurred. When the people heard of the sailing of these ships, they resolved to resist the landing of their cargoes at all hazards. The subject was discussed at the clubs and coffeehouses, with great warmth. The consignees were two of Governor Hutchinson's sons and his nephew, Richard Clarke, the father-in-law of John Singleton Copley, the artist. Their near relationship to the detested governor made them more obnoxious in the eyes of the Sons of Liberty. They were invited to appear before a meeting of citizens to be held under Liberty- Tree, on the 3rd of November, where about five hundred citizens assembled, some of them leaders of popular opinion. A flag floated over the consecrated tree. The consignees did not appear, and a

committee was appointed to wait upon them. They repelled the committee with discourtesy, and refused to agree, as was demanded of them, to return the tea to London in the same ships in which it should arrive. When the committee reported to the meeting, there was a cry - "Out with our enemies! Out with them!"

The excited people were persuaded to disperse, and two days afterward a regular town-meeting was held. The next day another committee called upon the consignees with a request that they should resign. Their answer was: "It is out of our power to comply with the request of the town." On receiving this reply, the meeting broke up without the utterance of a single word; and that night a crowd gathered in front of Clarke's house, when a pistol-ball was fired among them from a window of the dwelling. Nobody was hurt, and the affair ended in the smashing of Clarke's windows.

The silence of the town-meeting, on its dissolution, was ominous. The consignees felt it to be so. It plainly indicated that talking was over, and henceforth there would be action. They saw that they were now to be dealt with by the able committee of correspondence and the populace, and they were alarmed. The governor called a meeting of his council to consult about measures for preserving the public peace. The consignees, thoroughly frightened, petitioned leave to resign their appointments into the hands of the governor and council, but their prayer was refused. Believing themselves to be in personal peril, they fled from the city and took refuge in Castle William.

Chapter LV

The "Boston Tea-Party" - Its Effects at Home and Abroad - Wrath of the Royalists - The Boston Port Bill - Opposition of Burke and Others - Charles James Fox - Ignorance Concerning Americans - Other Measures for Punishing the Bostonians Adopted - Apprehensions of the Ministry - The Petition for the Removal of Hutchinson - Franklin Before the Privy Council - Bad Manners of the Lords - Franklin is Dismissed from Office.

ON Monday morning, the 29th of November, 1773, a handbill was posted all over Boston, containing the following words:

"Friends! Brethren Countrymen! - That worst of plagues, the detested tea, shipped for this port by the East India Company, is now arrived in the harbor; the hour of destruction, or manly opposition to the machinations of tyranny, stares you in the face. Every friend to his country, to himself and to posterity, is now called upon to meet at Faneuil Hall, at nine o'clock THIS DAY (at which time the bells will ring), to make united and successful resistance to this last, worst, and most destructive measure of administration."

The ship Dartmouth, from London, with a cargo of tea, had anchored off the castle the day before. By invitation of the Boston Committee of Correspondence those of Roxbury, Cambridge, Dorchester and Brookline assembled in the room of the selectmen, while crowds of citizens were pouring into Faneuil Hall, and resolved, by unanimous vote, to use their joint influence to prevent the landing of the tea. It was also resolved to invite all the town-committees in the province to co-operate with them. The crowd soon became so great that the Hall could not contain them, and the meeting was adjourned to the Old South Meeting-house. There the people resolved that the tea should not be landed; that no duty should be paid; and that it should be sent back in the same bottom. They also voted that Francis Rotch, the owner of the vessel, should be directed not to enter the tea, at his peril, and that the captain of the Dartmouth should also be warned not to suffer the tea to be landed. Orders were given for the ship to be moored at Griffin's Wharf, and twenty citizens were appointed again to watch her.

A letter came to the meeting from the consignees, offering to store the tea until they could write to England and receive instructions. Not a pound of it shall be landed," said the meeting. They also resolved that two other tea-ships, then hourly expected, should, on their arrival, be moored alongside the Dartmouth, in charge of the same volunteer guard. The meeting quietly adjourned, and the movements of the people were governed by the Committee of Correspondence. They appointed a number of post-riders to carry news to the other towns, in case there should be an attempt to land the tea by force.

On the 14th of December, another meeting was held in the Old South, when it was resolved to order Mr. Rotch to immediately apply for a clearance for his ship and send her to sea, for his cargo had all been landed excepting the chests of tea. In the meantime, the governor had taken measures to prevent her sailing out of the harbor before the tea should be landed; and he wrote to

the ministry, advising the prosecution of some of the leaders of the Sons of Liberty in Boston, for high crimes and misdemeanors. He ordered Admiral Montagu to place two armed ships at the entrance to Boston harbor, to prevent the egress of vessels and he directed Colonel Leslie, who was in command of the Castle, not to allow any vessel to pass out from the range of his great guns, without a permit signed by himself.

The excitement of the people was now at fever heat. The issues of every future hour were looked for with great anxiety. The air was full of rumors - some true, some false - and on the 16th of December (1773), the day to which the meeting was adjourned, the largest assembly then ever seen in Boston were gathered in the Old South Meeting-house, and its vicinity. Samuel P. Savage, of Weston, presided. Full two thousand men from the neighboring towns were there. Seven thousand men soon filled the great fane and overflowed into the street. It was reported that the Custom-house officers had refused to give Mr. Rotch a clearance for his vessel before the tea - the whole cargo - should be landed. "No vessel can pass the Castle without my permission, and I will not give it," thought the governor, as he rode out to his country-seat at Milton; and he believed he had secured a victory. Not so thought the people. When the great assembly heard of the refusal of the Custom-house officers to grant a clearance, they said to Mr. Rotch: "Go to the governor; protest against their action, and ask him for a permit for your vessel to sail." He hastened to the governor in the country, and the meeting adjourned until three o'clock. When they reassembled the merchant had not returned, and the question was put to the meeting. In case the governor shall refuse his permission, will you abide by your former resolutions with respect to not suffering the tea to be landed?" Earnest men spoke to the question. Among the most earnest was young Josiah Quincy, a rising lawyer, with a feeble frame that was wasting with consumption, a firm will, patriotism of purest mold, and a burning zeal. He harangued the crowd with prophetic words eloquently spoken. Like a seer he perceived that a great crisis was at hand, where actions, and not words, would be required. It is not," he said, "the spirit that reposes within these walls that must stand us in stead. The exertions of this day will call forth events which will make a very different spirit necessary for our salvation. Whoever supposes that shouts and hosannas will terminate the trials of this day, entertains a childish fancy. He must be grossly ignorant of the importance and value of the prize for which we contend; we must be equally ignorant of the power of those who have combined against us we must be blind to that malice, inveteracy and insatiable revenge which actuate our enemies, public and private, abroad and in our bosoms, to hope that we shall end this controversy without the sharpest conflicts - to flatter ourselves that popular resolves, popular harangues, popular acclamations, and popular vapor will vanquish our foes. Let us consider the issue. Let us look to the end. Let us weigh and consider, before we advance to those measures which must bring on the most trying and terrible struggle this country ever saw."

When Mr. Quincy ceased speaking, it was sunset and the church was lighted by candles. The question was put, and the thousands answered in the affirmative. There was a call for Mr. Rotch, but he had not returned. He came soon afterward, and reported that the governor peremptorily refused him permission to send his vessel to sea before the tea should be landed. A murmur ran through the vast assemblage, but the rising excitement was hushed into silence when Samuel

Adams arose, and in a clear voice said: "This meeting can do no more to save the country." At that moment a person with painted face and dressed like an Indian gave a warwhoop in the gallery, which was responded to in kind from the door of the meeting-house. Another voice in the gallery shouted: "Boston harbor a teapot to-night! Hurrah for Griffin's Wharf!" The meeting instantly adjourned and the people rushed for the street, and pushed toward Griffin's Wharf following a number of men disguised as Indians. The populace cheered. Guards were posted to keep order. Among them was John Hancock. The disguised men and others then went on board the tea-ships moored at Griffin's Wharf and in the course of three hours they emptied three hundred and forty-two chests of tea into the water of the harbor. The operation was performed in the presence of a multitude who were silent spectators of the scene. It was done at an early hour in the evening - a bright, cold, moonlit evening - and of the sixty men who went on board the tea-ships, only a part of them were disguised as "Mohawks." It was not a mob that destroyed the tea, but sober citizens. It was not a mob that were spectators of the scene, but a well-behaved audience looking upon a serious and most significant pantomime. It was the work of patriotic men, encouraged by patriotic citizens, who were determined not to be trifled with any longer. When the work was done - when Boston harbor had been made a vast "teapot" - the streets of the town became as quiet as a Sabbath evening. "All things," wrote John Adams to James Warren, "were conducted with great order, decency, and perfect submission to government." Early the next morning the Committee of Correspondence appointed Samuel Adams chairman of a sub-committee to draw up a statement of what had been done with the tea, and then they sent Paul Revere as express to carry the document to the Sons of Liberty in New York and Philadelphia. Of the immediate actors on board the tea-ships on that eventful night, the names of fifty-nine are known. The last survivor of the band was David Kinnison, who died in Chicago in 1851, at the age of one hundred and fifteen years.

The audacity and firmness of the Bostonians were applauded throughout the colonies. Even in Canada and the British West Indies there were but feeble voices of censure. But among the crown-officers in America and the ministerial party in Great Britain there was fierce wrath. Hutchinson threatened, but so softly, because of his fears, that it barely sufficed to shield him from the frowns of the ministers. The friends of the Americans in Parliament were silent for a moment, because they could not justify the destruction of private property but the assurance sent to the East India Company, that the town of Boston would pay for every pound of tea destroyed on that occasion, loosened their tongues, and they made good use of the freedom for the benefit of the Americans. The whole dispute still rested upon the original foundation - the denial of the right of Great Britain to tax the colonies without their consent. It was this fact, more than the destruction of the property, that excited the ire of the king and his ministers, and made the House of Lords like a seething caldron of impotent rage." The honesty of the Americans was overlooked, and the ministry saw nothing in the proceedings at Boston but open rebellion.

The news of the Boston Tea-party reached England in January (1774), but it was not officially announced until early in March. The king had waited for overwhelming evidence of the wickedness of the Americans which he found in letters from Governor Hutchinson and Admiral Montagu, the consignees of the tea, the letters of other royal governors in whose respective

colonies there had been serious threats, and a large number of inflammatory handbills. All of these were sent by the king to Parliament with a message, in which he asked that body to devise means for the immediate suppression of tumultuous proceedings in the colonies. The House of Commons proposed an address of thanks to the king, and assurance that he should be sustained in efforts to maintain order in America. This address excited angry debates. The House became as hot as Faneuil Hall or the Old South Meeting-house in Boston," said Burke. "There is open rebellion in America, and it must be punished," cried the Ministerial party. Repeal your unjust laws and deal righteously with the Americans, and there will be peace and loyalty there," retorted the Opposition. After a long and stormy debate, the address was adopted by an overwhelming majority.

This vote strengthened Lord North, and stimulated the passions of the monarch. Urged by his sovereign, North submitted a bill, at the middle of March, for the severe punishment of Boston. It provided for the removal of the Custom-house, courts of justice and government offices of all kinds from Boston to Salem, and forbade every kind of shipping business in the harbor of Boston. It also provided that when the rebellious town should fully and humbly submit to royal authority, the king should have the power to open the port and restore the government business. North justified the harsh measure by asserting that Boston was the ringleader in every riot, and set always the example which others followed." He believed severe punishment of this rebellious town would strike terror throughout the colonies, and so bring the Americans into subjection to the crown. Many of his supporters in the House used very violent language, calling the Bostonians "mobocrats," and vile incendiaries men who were never actuated by reason, but chose tarring and feathering as an argument." One member denounced them as utterly unworthy of civilized forbearance."They ought to have their town knocked about their ears," he said; "and ought to be destroyed." He concluded his unstinted abuse by quoting the factious cry of the old Roman orators against their African enemies - "Delenda est Carthago" - Carthage must be destroyed. Others more just, like Rose Fuller, proposed only a fine, which Barre and other staunch friends of the Americans thought just, as it would affect a single town, and voted for it. For this apparent defection, the portraits of Barry and Conway were removed from Faneuil Hall for a short time.

Edmund Burke took a broader, loftier view of the subject, in a speech of remarkable power. It was the first of that series of splendid orations in Parliament, which made his name immortal. He denounced the whole scheme as unjust, because there was no discrimination. "You wish to condemn the accused without a hearing," he said, "to punish indiscriminately the innocent with the guilty. You will thus irrevocably alienate the hearts of the colonists from the mother country. Before the adoption of so violent a measure, the principal merchants of the kingdom should at least be consulted. The bill is unjust since it bears upon the city of Boston, while it is notorious that all America is in flames that the cities of Philadelphia, of New York, and all the maritime towns of the continent, have exhibited the same disobedience. You are contending for a matter which the Bostonians will not give up quietly. They cannot, by such means, be made to bow to the authority of ministers; on the contrary, you will find their obstinacy confirmed and their fury exasperated. The acts of resistance in their city have not been confined to the populace alone, but

men of the first rank and opulent fortune in the place have openly countenanced them. One city in proscription and the rest in rebellion can never be a remedial measure for general disturbances. Have you considered whether you have troops and ships sufficient to reduce the people of the whole American continent to your devotion? It was the duty of your governor, and not of men without arms, to suppress the tumults. If this officer has not demanded the proper assistance from the military commanders, why punish the innocent for the fault - and the negligence of the officers of the crown? The resistance is general in all parts of America you must, therefore, let it govern itself by its own internal policy, or make it subservient to all your laws by an exertion of all the forces of the kingdom. These partial counsels are well suited to irritate, not subjugate." Other members followed Burke in agreement with his views, but none were so clear and logical in ideas and expression as he. Charles James Fox, who had been dismissed from the Treasury to please the king, made his first speech in Parliament on that occasion, and it was a strange beginning of his brilliant career in the House of Commons. He objected to the power which the bill vested in the crown to reopen the port of Boston when it should be closed!

The persuasions and warnings of the Opposition fell upon prejudiced and dull ears, and the famous Boston Port Bill was passed by an almost unanimous vote. The exultant king signed it on the 31st of March, 1774, and it became a law. It was the fatal knife of vivisection that severed the American people from their unnatural mother. The wound was made not healable from the searing given it by the unrighteous acts which followed.

The ignorance of the British people concerning the Americans, at that time, was most notable, and it was largely displayed in the House of Commons. Great numbers of the common people believed that the Americans were nearly all Negroes; and there were members of the House of Commons who stoutly maintained that they were chiefly Indians. Did not the painters and caricaturists represent America as an Indian girl? Were not the print-shop windows of the town then rich with the famous caricature of Lord Mansfield, the compiler of some of the obnoxious acts, holding down America - an Indian maiden - while Lord North was pouring tea down her throat? The political ideas of the Americans were so strangely at variance with the accepted theories in England that a large proportion of the members of both Houses of Parliament could not comprehend them, in their simplicity. In British society, principles were so much overlaid by theories derived from the false premises of Church and State and conventional-customs, that they were not easily recognized in their naked beauty as presented in American ethics and jurisprudence.

The vote on the Port Bill stimulated Lord North to work the engine of oppression with greater vigor, and it was followed by other punitive acts of Parliament prepared by the skillful hand of Mansfield, the lord-chancellor.

The Port Bill was followed by another "for better regulating the government of Massachusetts Bay." It provided for the appointment of the governor's council and the judges of the supreme court by the crown; for the selection of jurors by the sheriffs instead of the selectmen, the nomination of all other executive, military, and judicial officers by the governor without

consulting his council, and for prohibiting town-meetings except for elections. It was really a bill for the subversion of the charter of Massachusetts - an act for the inauguration of a radical revolution - a declaration of war upon the rights of the people of that province. What can Americans believe," said Burke, who lifted up his voice most earnestly against the injustice, but that England wishes to despoil America of all liberty, of all franchise, and by the reduction of the charters to reduce them to a state of the most abject slavery." Others warned ministers to pause and Pownall prophesied in the ears of the House of Commons that these harsh measures would drive the Americans to the calling of a General Congress, and perhaps a resort to arms. In the House of Lords, Sheffield denounced the measure with vehemence, and eleven peers signed a protest but logic and warnings were in vain; the bill passed both Houses by very large majorities. North now gave a third turn to his engine of oppression conceived by the king, and introduced a bill intended to screen crown-officers from punishment. It provided for trial in England of all persons charged in the colonies with murders committed in support of government. It was intended as a guaranty of comparative safety to those who might shoot or bayonet rebels in the name of the king. "This," said Colonel Barr, in debate, is, indeed, the most extraordinary resolution ever heard in the Parliament of England. It offers new encouragement to military insolence already so insupportable. . . . By this law Americans are deprived of a right which belongs to every human creature - that of demanding justice before a tribunal of impartial judges. Even Captain Preston, who, in their own city of Boston, had shed the blood of citizens, found among them a fair trial and equitable judges. Another member (Alderman Sawbridge), declared that it was ridiculous and cruel - meant to enslave the Americans; and expressed a hope that they would not allow one of the bills to be executed that they would reject them all. If they do not," he said, they are the most abject slaves upon earth, and nothing the ministers can do is base enough for them." This bill also passed both Houses by large majorities, and became a law by receiving the signature of the king on the 20th of May.

Satisfied that these measures would have to be enforced by the military arm, the king caused a fourth bill to be introduced providing for the quartering of troops in America. Rose Fuller, who was a moderate supporter of the ministry, tried to break the severity of the new laws by a proposition to repeal the act imposing the duty on tea. His resolution was negated by a large majority. When the result was announced, he arose and uttered with solemnity these remarkable words: "I will now take my leave of the whole plan; you will commence your ruin from this day! I am sorry to say that not only the House has fallen into this error, but the people approve of the measure. The people, I am sorry to say, have been misled. But a short time will prove the evil tendency of this bill. If ever there was a nation rushing headlong to ruin, it is this." The bill took the course of the others and became a law.

These measures gave the ministers just apprehensions of open rebellion in America. The loyalty of the French in Canada, who were nearly all Roman Catholics, was not assured. It was a matter of vital importance to the government that their loyalty should be secured. So the King and Parliament, for state purposes, performed an inconsistent act. A bill was passed by the latter and confirmed by the former, which sanctioned the free exercise of the religion of the Church of Rome, and confirmed to the clergy of that church their accustomed dues and rights." That King

and Parliament, who would not acknowledge the legal existence of a Roman Catholic in Ireland, now, by the Quebec Act, so called, acknowledged the legal existence of a whole Roman Catholic state within the realm of England. Why? Because from the River St. Lawrence the government might more easily send instruments to enslave the English-American colonies than from any other point.

We have observed that the petition from Massachusetts to the king, praying for the removal of the governor and lieutenant-governor of that province, was laid before the Privy Council by the monarch; also that Franklin had taken the whole responsibility of the act of sending to Boston the offensive letters of Hutchinson, Oliver, and others. His candid public avowal - "I alone am the person who obtained and transmitted to Boston the letters in question," without explanation, raised a storm of indignation against him from almost every quarter, and led the government into acts of petty malice unworthy of a great nation. Franklin was then, and had been for some time, postmaster-general of the American colonies - an office of distinction and profit to the holder. This office and his reputation were now imperiled by his manly act.

On Saturday, the 8th of January, 1774, Franklin received a notice from the Secretary of the Privy Council, that the Lords of the Committee for Plantation Affairs, would meet at the Cockpit, on Tuesday following, to take into consideration the petition from Massachusetts, and requested his attendance. Franklin immediately consulted Mr. Bolla, a lawyer of some distinction, who, in America, had married a daughter of Governor Shirley, and had been agent in England for the province of Massachusetts. In 1769, Mr. Bolla procured from a member of Parliament a large number of letters written by Governor Bernard and others calumniating the people of Boston, and, as in duty bound, he sent them to the Massachusetts Assembly. This proper act had been denounced by Lord North, in Parliament, and Mr. Bolla felt a sympathy for Franklin, and agreed to accompany him to the meeting. Less than twenty-four hours before that meeting, Franklin received a notice that Mr. Mauduit, agent for the crown-officers in Boston, had obtained leave to be heard by counsel in their behalf at that meeting. Mr. Bolla was then induced to appear as Franklin's counsel but when he arose to speak in favor of the petition, some of the Lords objected to him as legally disqualified to act, and he was set aside. Then Franklin presented the resolutions of the Massachusetts Assembly, which had been sent with the petition. These were read; but when the letters which had caused the petition and resolution were brought up, Wedderburne, the solicitor-general, appeared as counsel for the governor, and interposed many objections to their reception. Franklin, being without counsel, asked and obtained leave for a postponement of the case, that he might procure for the Assembly the services of a competent lawyer.

On the 29th of January, Franklin was again before the Privy Council. He was accompanied by Mr. Dunning, a former solicitor-general, as counselor. Intimations had been given that Wedderburne would, on this occasion, chastise Franklin most severely for the part he took in exposing the letters which had induced the petition, and "an immense crowd," Franklin wrote, were present to enjoy the scene. No less than thirty-five peers were there. When Dunning had finished his plea in favor of the petition, Wedderburne arose. After giving an outline sketch of the

political history of the colonies, which was marked by ignorance or misrepresentation, the solicitor-general fell upon Franklin with severe, unjust, and often coarse invective. He accused him of obtaining the letters clandestinely; and even after the solicitor admitted that they were genuine, he made insinuations that they might be forgeries, asserting that they were sent to widen the breach between the colonists and the government. "Amidst tranquil events," said the solicitor, here is a man who, with the utmost insensibility of remorse, stands up and avows himself the author of all. I can compare him only to Zanga, in Dr. Young's "Revenge" - Know, then, 'twas I, I forged the letter - I disposed the picture - I hated - I dispersed, and I destroy.' I ask, my lords, whether the revengeful temper attributed to the bloody African is not surpassed by the coolness and apathy of the wily American?" "The favorite part of his discourse," Franklin wrote to Cushing, was levelled at your agent, who stood there, the butt of his invective ribaldry for near an hour, not a single lord adverting to the impropriety and indecency of treating a public messenger in so ignominious a manner, who was present only as the person delivering your petition, with the consideration of which no part of his conduct had any concern. If he had done a wrong in obtaining and transmitting the letters, that was not the tribunal where he was to be accused and tried. The cause was already before the chancellor. Not one of their lordships checked and recalled the orator to the business before them, but, on the contrary, a very few excepted, they seemed to enjoy highly the entertainment, and frequently burst into loud laughter. This part of his speech was thought so good that they have since printed it in order to defame me everywhere, and particularly to destroy my reputation on your side of the water; but the grosser parts of the abuse are omitted, appearing, I suppose, in their eyes, too foul to be seen on paper; so that the speech, compared' to what it was, is now perfectly decent." At the end of this tirade of abuse, the petition was dismissed as groundless, scandalous, and vexatious."

Franklin endured the coarse abuse of Wedderburne, and ill-manners of the lords, with the calmness of a philosopher. Not an emotion was manifested in his face. He was sustained by a consciousness of his own integrity and the justice of the cause to which he was a martyr. He felt that in this abuse of himself as public envoy presenting a respectful petition, the British government were offering a gross insult to a great and loyal colony; and not to that colony alone, but to British American colonies from the St. Lawrence to the St. Mary's. He felt a conviction in that hour of trial that not only his own honor, but the wisdom and patriotism of the people he represented would be fully vindicated by the calm judgment of mankind. "I have never been so sensible of the power of a good conscience," he said to Dr. Priestley, who breakfasted with him the next morning, "for if I had not considered the thing for which I have been so much insulted as one of the best actions of my life, and what I certainly would do again in the same circumstances, I could not have suspected it." The course of the patriot and his accuser were widely different in the future. Franklin went forward in assisting and achieving the freedom and independence of his country, and will be forever venerated, as Washington wrote, for benevolence, to be admired for his talents, to be esteemed for patriotism, to be beloved for philanthropy." Wedderburne went through life neither respected nor beloved, a grasping place-seeker and corrupt courtier, un-honored and unsung" at last and when, thirty years after the scene here described, this man, having held various high offices in the government and received honors, died Earl of Roslyn, the king upon whom he had fawned said, He has not left a greater knave behind him in my

dominions."

Franklin, though apparently unmoved before the Privy Council, felt deeply the indignity cast upon him; and, it is said, when he returned to his lodgings, No. 7 Craven street, that night, he took off the suit of clothes he had worn on the occasion, and declared that he would never wear it again until he should sign the degradation of England by a dismemberment of the empire, and the independence of America. He kept his word; and almost ten years afterward, when, as American commissioner, he signed a definitive treaty of peace between the United States and Great Britain on the basis of absolute independence for his country, he wore the same suit of clothes for the first time after his vow was uttered.

The government, predetermined to fill the post-offices in America with friends of the crown, so as to watch and obstruct the communications between the political leaders in the several colonies, hastened to make the hue-and-cry that Wedderburne had raised against Franklin, at the instigation of the king, an excuse for dismissing him from the office of deputy postmaster-general. He received a written notice of his dismissal on the day after his last appearance before the Privy Council. How safe the correspondence of your Assembly committees along the continent will be through the hands of such officers," he wrote to Mr. Cushing, "may now be worth consideration, especially as the post-office act of parliament allows a postmaster to open letters, if warranted to do so by the order of a secretary of state, and every provincial secretary may be deemed a secretary of state in his own province."

Chapter LVI

General Gage Appointed Governor - Hutchinson and His Friends - The Sons of Liberty Active - Gage in Boston - Doings of a Town-Meeting - Action of the Virginia Assembly - A General Congress Advocated - Governor Gage and the Assembly - Port of Boston Closed - Suffering and Patriotism - Bold Proceedings of the People - Preparations for a General Congress - Doings in New York - Minute-Men - Gage and the People - Dreadful Rumors from Boston - Bold Measures of a Convention.

THE Boston Port Bill reached Massachusetts early in May, 1774. It was preceded a few days by a commission sent to New York, for General Gage as governor of Massachusetts to succeed Hutchinson, who was recalled. The latter was mortified and alarmed. His recall seemed to be a pointed rebuke at that juncture, and he justly feared the resentment of the people whom he had misrepresented and misruled. He left Boston before Gage arrived, and remained in seclusion at his country-house at Milton until an opportunity offered for him to take refuge in Castle William. Hutchinson had many political as well as personal friends in Massachusetts. It must be remembered that the patriotic zeal which animated the Sons of Liberty was not universally felt, even in Boston. Those leaders were radicals, and were compelled to meet cold-hearted and hard-hearted conservatism at every turn.

Hutchinson had many political sympathizers; and when he was about to depart for England, whither he fled from the frowns of his countrymen, more than a hundred merchants in Boston, and a number of lawyers, magistrates and men of property there and in the neighborhood, signed an address to him, in which they expressed their entire approbation of his public acts, and affectionate wishes for his personal happiness. These "addressers became objects of intense dislike. Many of them, yielding to popular clamor, retracted. Those who would not retract, felt compelled to leave the colony, and became the first of the host of Loyal Refugees who peopled British provinces after the war that ensued.

It was the 10th of May when the Port Bill reached Boston. It was already in the hands of the Sons of Liberty in New York, carried thither by another ship from London. These patriots had waged a steady warfare with the conservative and aristocratic elements in society there, bearing the obloquy of many in the easy walks of life, but sustained and honored by those in the paths of toil the bone and sinew of a state," Scott, Sears, Lamb and McDougall - these were the trusted leaders. They perceived not only the infamy of the Boston Port Bill, but the danger to their own liberties foreshadowed by it. They called a meeting of their associates at Hampden Hall, and there resolved that the only safeguard for the freedom of the American colonies was in a General Congress of deputies - a hint, as we have seen, thrown out by Pownall in debate, to insure unity of action. They resolved to stand by Boston in its hour of distress; and by a letter dated the 14th of May, they entreated the patriots there to stand firm in support of their opposition measures. Their resolutions and the letter were sent by express to Boston by John Ludlow, who rode swiftly with them, on a black horse, toward the New England capital. He told their import as he coursed through Connecticut and Rhode Island. Near Providence on the edge of a wood that was just

receiving its summer foliage, by a cool spring, he met Paul Revere riding express on a large gray horse, bearing to New York and Philadelphia assurances of the faith and firmness of the Bostonians, and to invoke sympathy and cooperation. Revere also carried a large number of printed copies of the act, made somber by heavy black lines, and garnished with the picture of a crown, a skull and cross-bones, undoubtedly engraved by Revere himself. These he scattered through the villages on his way, where they were carried about the streets with the cry of "Barbarous, cruel, bloody, and inhuman murder! Revere and Ludlow took a hasty lunch together at the spring, and then pressed forward on their holy mission. New York had first suggested a General Congress. The suggestion was echoed back with approval from every colony. So originated the famous First Continental Congress in 1774.

Ludlow found Boston quiet but firm. Gage had arrived from New York by sea, attended only by his staff, though he had taken the precaution to order additional regiments to Massachusetts. He had remained a few days at the Castle, in conference with Hutchinson and he had landed at the Long Wharf on the 17th of May, without any military display. There he was courteously received as their governor by a large crowd of citizens, and was escorted to the State-House by a militia company under John Hancock, where a loyal address was presented to him, and where he read his commission. After that he was entertained at a public dinner in Faneuil Hall. He believed that an era of reconciliation through submission was at hand. That night an effigy of Hutchinson was burned in front of Hancock's house, and the new governor was somewhat disturbed by grave doubts.

Meanwhile a town-meeting had been called for the next day after the arrival of the act, and the advent at the Castle of the crown-officer who was to enforce it. The Boston Committee of Correspondence had invited the committees of nine towns in the vicinity to a conference on the critical state of public affairs." They had come with alacrity, and with hundreds of the yeomanry had joined the citizens of Boston in that town-meeting over which Samuel Adams had presided. That meeting, largely composed of those who would be most injured by the closing of the port, had resolve to stand firmly by their rights, whatever might befall them. They had addressed a Circular Letter to all the colonies, proposing a more stringent non-importation league than any before; confessing that "singly they must find their trial too severe," and imploring the sympathy and support of the other provinces, each of whose being, as a free people, depended upon the issue. "We think the archives of Constantinople [synonymous with despotic rule] might be searched in vain for a parallel," they said. To reason upon such an act would be idleness. You will doubtless judge every British American colony deeply concerned in it, and contemplate and determine upon it accordingly." This was the Circular Letter which Paul Revere was bearing to New York and Philadelphia, whose Sons of Liberty forwarded it to the more southern colonies.

The responses to the appeal from Boston and a letter from New York proposing a General Congress were marvelous for unanimity of sentiment. The action of the Virginia House of Burgesses was a fair type of the general indication of public sentiment. When the circulars and the Port Bill reached that body, all other business was at once suspended, that the documents might be discussed. They adopted strong resolutions of condolence with the citizens of Boston,

and appointed the first day of June, when the Port Bill was to go into operation, as a fast. The royal governor (Lord Dunmore) was officially offended, and the next day he dissolved the Assembly. The delegates, eighty- nine in number, reassembled in the Apollo room at the Raleigh tavern in Williamsburgh, organized themselves into a voluntary convention and prepared an address to their constituents, in which they declared that an attack upon one colony was an attack upon all. They also recommended a General Congress as suggested by New York, and adopted other measures of resistance to oppression. They recommended a meeting of the burgesses in convention at Williamsburgh on the first of August, and then adjourned. Twenty-five of the delegates remained to participate in the services of the fast-day.

There was a very full attendance of the burgesses at the Apollo-room on the day appointed. They adopted a stringent agreement concerning non-exportation as well as non-importation, and recommended the cultivating of crops for manufacturing purposes, and improvements in the breed of sheep. On the 5th, they appointed seven delegates to represent Virginia in the General Congress to meet at Philadelphia early in September, as had been proposed by Massachusetts. They then adjourned, each pledging himself to do all in his power to effect results contemplated in their proceedings. The Apollo-room, in the Raleigh tavern, was ever afterward regarded as the Virginia "cradle of liberty."

In the meantime the other colonies were all aglow with enthusiasm, and full of sympathy for suffering Boston. From the forum, the pulpit, and legislatures, as well as through the newspapers all over the land, the Port Bill was denounced, and a General Congress was advocated. At the head of some of the newspapers reappeared the device used during the stamp-act excitement - a disjointed snake, with the words JOIN or DIE. The cause of Boston was the cause of all the colonies.

At near the close of May, the Massachusetts legislature chose the councillors for the governor for the ensuing year, as usual. Governor Gage used his prerogative, and rejected thirteen of them. The remainder were not much more satisfactory; for they, too, were stirred by the spirit of liberty around them. The Assembly asked the governor to appoint a day for fasting; but he refused, because, he wrote to Dartmouth, "the request was only to give an opportunity for sedition to flow from the pulpit." Perceiving that the inhabitants of Massachusetts had lost one tyrant only to be supplied with another, Samuel Adams was about to offer a proposition for a General Congress, when the governor prorogued the Assembly, to meet after ten days at Salem. In anticipation of this act, the Assembly appointed Samuel Adams and James Warren a committee to act for them during the interim, as the exigencies of the case might require. When the Assembly met at Salem, these active patriots were ready with a plan for a General Congress; for non-importation; for providing munitions of war and funds, and for arousing the other colonies to immediate action.

The port of Boston was closed at meridian on the 1st of June. At that hour, muffled church-bells in Philadelphia and other places tolled a funeral knell. The day had been appointed as a fast in many regions, and the churches were crowded with worshipers, who devoutly implored Heaven's mercies for the inhabitants of Boston, and strength and liberty for themselves. The law

was rigorously enforced. Not a vessel of any kind was allowed to be used in the harbor. Not a pound of hay, nor a sheep or calf, could be brought in a boat from the islands, nor a stick of lumber, or package of merchandise, could be taken by water from wharf to wharf. Not a parcel of goods could be ferried across to Charlestown and business of every kind was immediately paralyzed. A cordon of vessel-of-war inclosed the town, and several regiments that soon arrived made Boston an immense garrison. Orders came to Gage from England, to order his soldiers to shoot any citizens who should not be docile, and he was assured, for his comfort, that, by the provisions of a recent law, all trials of officers and troops for homicide in America would be removed to Great Britain. Gage had orders to arrest, when he should deem it prudent to do so, Samuel Adams, John Hancock and Dr. Joseph Warren, and send them to England to be tried for treason. Adams knew this and with the halter almost about his neck, he said of his beloved and stricken Boston: "She suffers with dignity; and rather than submit to the humiliating terms of an edict, barbarous beyond precedent under the most absolute monarchy, she will put the malice of tyranny to the severest test. An empire is rising in America and Britain, by her multiplied oppressions, is accelerating that independency which she dreads. We have a post to maintain, to desert which would entail upon us the curses of posterity."

The utter prostration of all business in Boston soon produced widespread suffering. All classes felt the scourge of the unnatural oppressor. With faith that deliverance would come, they bore the severe chastisement with wonderful equanimity. Soldiers to enslave them, appeared at every turn and cannon to overawe them soon menaced their lives and property from every eminence on the peninsula; yet no rash act incited by anger or suffering, marred the dignity of their fortitude. The sympathy of the people everywhere was warmly excited. The Press and the Pulpit suggested the sending of relief to the smitten inhabitants, and very soon money, grain, flour and live-stock were on their way toward Boston, accompanied by letters of condolence. This food for the suffering poor seemed like relief sent to a beleaguered garrison, on whose existence a great cause depended. Hold on and hold out to the last; as you are placed in the front rank, if you fail all will be over," said a letter accompanying a substantial gift. Don't pay for an ounce of the damned tea," wrote Christopher Gadsden of Charleston, when, at the middle of June, he shipped the first contribution of rice from the Carolina planters. Georgians sent sixty barrels of rice; and from the more northerly colonies went grain and sheep and beeves, with money. The city of London, in its corporate capacity, sent three-quarters of a million dollars for the relief of the poor of Boston. The people of Marblehead and Salem offered the free use of their wharves and stores to the Boston merchants, for they scorned to profit by the mid fortunes of their neighbors.

When the Massachusetts Assembly met at Salem on the 7th of June, there was a very full attendance. Samuel Adams cautiously sounded the opinions of the members, and ascertained that a large majority were republicans. Then he presented the plan for future action, which he and James Warren had perfected. The few loyalists in that body were amazed at the audacity of tile propositions, and one of them, feigning sickness, got leave of absence. He hastened to the governor (then living near Salem) and acquainted him with the seditious proceedings of the legislature. Gage immediately sent a proclamation by his secretary, Thomas Flucker, commanding the Assembly to dissolve. The governor was outgeneraled. When the secretary came, the door of

the Assembly was locked, and the key was in Samuel Adams' pocket. Flucker was not permitted to enter the room, so he read the proclamation on the stairs, near the door, but to dull ears within, for the patriots would not listen to it. They proceeded to adopt a "Solemn League and Covenant" concerning non-importations; and agreeing with New York in the proposition for a General Congress, they appointed James Bowdoin, Samuel Adams, John Adams, Thomas Cushing and Robert Treat Paine to represent Massachusetts in the proposed General Congress. Pursuant to a request of the New York Committee of Correspondence, the Assembly fixed the time and place for the meeting of the Congress. They named Philadelphia as the place, and the beginning of September next ensuing as the time; and in a circular which they sent to the other colonies, the time and place were mentioned. After carrying out the other measures proposed in the plan of Adams and Warren, the Assembly adjourned indefinitely. So ended the last session of the Assembly of Massachusetts under a royal governor.

On the same day an immense town-meeting, presided over by John Adams, was held in Faneuil Hall. The inhabitants by vote refused to make any provision for paying the East India Company for its tea destroyed, because they were surrounded by bayonets and ships-of-war. They ratified the acts of the Assembly, and assumed an absolutely defiant attitude.

The proceedings of the Assembly, and of the people, greatly irritated Gage. He had troops at his back, but had resolved not to use them excepting in an extremity. He issued flaming proclamations from time to time, which excited the ridicule of the patriots. One of these was burlesqued in the Massachusetts Spy, a newspaper published in the midst of British bayonets, which was commenced as follows: "Tom Gage's Proclamation, Or blustering Denunciation, (Replete with Defamation,) Threatening Devastation And speedy Jugulation Of the New English Nation, Who shall his pious ways sheen" It closes with "Thus graciously the war I wage, As witnesseth my hand"-TOM GAGE, By command of Mother Carey, Thomas Flucker Secretary."

The proposition for a General Congress to be held in September, in Philadelphia, contained in the Massachusetts Circular, received universal assent, and before the close of the summer of 1774, twelve of the thirteen British American colonies had chosen delegates to attend it. Rhode Island has the honor of first speaking out publicly on the subject after New York suggested it. A General Congress was proposed at a town-meeting held in Providence on the 17th of May. Four days afterward (21st) a committee of a town-meeting held in Philadelphia recommended such a measure; and on the 23rd, a town-meeting in the city of New York did the same. We have seen that the meeting of the burgesses of Virginia at the Raleigh tavern warmly recommended the measure, on the 27th of May; and on the 31st, a Baltimore county-meeting took action in favor of a General Congress. On the 6th of June, a town-meeting at Norwich, Connecticut, approved of a General Congress; and on the 11th, a county-meeting at Newark, New Jersey, did the same. The action of the Massachusetts Assembly at Salem and the town-meeting at Faneuil Hall, which urged the measure, did so on the 17th of June. On the 29th, a county-meeting at New Castle, Delaware, approved the measure and on the 6th of July, the Committee of Correspondence at Portsmouth, New Hampshire, expressed their approbation. A general province-meeting was held on the 6th, 7th and 8th of July, at Charleston, and they urged the necessity of such a Congress;

and a district-meeting at Wilmington, North Carolina, held on the 21st of July, heartily responded affirmatively to the Massachusetts Circular. Only Georgia remained silent.

The state of political society in New York, at this juncture, was peculiar. The professed republicans were divided by political distractions and social differences, and were designated by the respective titles of Patricians and Tribunes. The former were composed of the merchants and gentry, and the latter were mostly the mechanics. The former, who were conservative, joined with the loyalists in attempts to check the influence of the radical democrats of Hampden Hall. With these conservatives were found most of the leading merchants, who, as a class, were (as usual) averse to popular commotions which disturbed trade. They were not ready to enter into nonimportation agreements again hastily; and the letter which the Hampden Hall patriots sent by Ludlow, to Boston, alarmed them and the conservative republicans. A meeting was called at a public-house, "to consult on the measures to be pursued in consequence of the late extraordinary advices received from England." At that meeting a Committee of Fifty were nominated as representatives of public sentiment in New York." A few of the radicals were placed upon the committee; and at another meeting held on the 19th of May, the nomination was ratified and one more added to the committee, making the number Fifty-one. Concerning this movement, Governor Morris wrote to a friend:

"The heads of the nobility grow dangerous to the gentry, and how to keep them down is the question. While they correspond with the other colonies, call and dismiss popular assemblies, make resolves to bind the consciences of the rest of mankind, bully poor printers, and exert with full force all their tribunitial powers, it is impossible to curb them. But art sometimes goes further than force, and, therefore, to trick them handsomely, a Committee of Patricians was to be nominated, and into their hands was to be committed the majority of the people, and the highest trust was to be reposed in them by a mandate that they should take care quod republica, non capiat injuriam. The Tribunes, through the want of good legerdemain in the senatorial order, perceived the finesse, and yesterday I was present at a grand division of the city, and there I beheld my fellow-citizens very accurately counting their chickens, not only before they were hatched, but before one-half of the eggs were laid. In short, they fairly contended about the future form of our government - whether it should be founded on aristocratic or democratic principles."

The grand Committee of Fifty-one publicly repudiated the strong letter sent to Boston by the radicals on the 14th of May. They received Paul Revere courteously, but did not agree with the proposal of the Bostonians to revive non-importation or non-intercourse agreements. They sent a letter to Boston (supposed to have been written by John Jay) expressing their dissent, but heartily approving of a General Congress; and in another letter on the 7th of June, they requested the Massachusetts Committee of Correspondence to name a time and place for the holding of a General Congress. The people of the other colonies approved non-intercourse, and New York, as represented by the Grand Committee, stood alone in opposition to a stringent non-importation league. The loyalists rejoiced, and a writer in Rivington's Royal Gazette exultingly exclaimed: "And so, my good masters, I find it no joke, For York has stepped forward and thrown off the

yoke Of Congress, Committees, and even King Sears, Who shows you good nature by showing his ears."

But the "Committee of Vigilance," appointed by the Hampden Hall patriots, were not awed by the acts of the Grand Committee. They called a mass-meeting of citizens in The Fields on the 19th of June, when, by resolutions, the lukewarmness of the Committee of Fifty-one was denounced; sympathy with, and a determination to support the Bostonians were expressed, and the appointment of delegates to the General Congress, instructed to advocate non-intercourse with Great Britain, was urged. Nothing further was done to excite public attention until many days afterward, when the Committee of Fifty-one met on the evening of the 4th of July, and on motion of Alexander McDougall, five deputies to the General Congress were nominated. These were Philip Livingston, John Alsop, Isaac Low, James Duane, and John Jay. McDougall proposed to submit the nominations (which were approved) to the Tribunes, or Committee of Mechanics, for their concurrence. The proposition was rejected. McDougall was offended, and the next day a handbill, doubtless prepared by him, appeared throughout the city, inviting the people to a meeting in The Fields at six o'clock in the evening of the 6th. An immense gathering was there, for they were called "to hear matters of the utmost importance to their reputation and security as freemen." It was ever afterwards known as The Great Meeting in ice Fields. McDougall was called to the chair, and a series of strong resolutions, among others one in favor of a stringent non-intercourse league, were adopted.

On that occasion, a notable event occurred. In the crowd was a delicate boy, girl-like in personal grace and stature, about seventeen years of age, who was a student in King's (now Columbia) College, and known as the "Young West Indian." This boy had been often seen walking alone under the shadows of great trees on Dey Street, sometimes musing, and sometimes talking, in low tones, to himself. Some of the residents in that neighborhood had, occasionally, engaged him in conversation, and had been impressed with his wisdom and sagacity. When they saw him in the crowd they urged him to address the meeting, but he modestly refused. After listening to several speakers, and finding that important considerations had been overlooked by them, he summoned courage to present himself before the people. It was then almost sunset. The great multitude were hushed into silence at the appearance of the slender boy. Overawed by that multitude, he hesitated and faltered," says a recent writer but as he proceeded, almost unconsciously, to utter his accustomed reflections, his mind warmed with the theme - his energies were recovered. After a discussion, clear, cogent and novel, of the great principles involved in the controversy, he depicted in the glowing colors of adult youth the long-continued and long-endured oppressions of the mother-country. Insisting upon the duty of resistance, he pointed to the means and certainty of success, and described the waves of rebellion sparkling with fire, and washing back on the shores of England the wrecks of her power, of her wealth, and her glory. The breathless silence ceased when he closed, and a whispered murmur It is a collegian it is a collegian - was lost in loud expressions of wonder and applause at the extraordinary eloquence of the young stranger."

The orator was Alexander Hamilton, a native of the Island of Nevis, in the West Indies, who

then first entered upon that extraordinary, useful and brilliant career in public life, for thirty years afterward, which placed him in the front rank among the statesmen of our country.

The Committee of Fifty-one were alarmed by the great demonstration in The Fields. They submitted the nominations of deputies to the Tribunes, but neutralized the effect of their concession by declaring that the resolutions passed by the great meeting were seditious. This offended several of the staunch republicans of the committee, and eleven of them instantly withdrew. It was not long before that aristocratic body disappeared as an organization, and the Hampden Hall Sons of Liberty became the tribunes of the people. The city of New York elected the nominees. Neighboring counties chose four others, and the delegation from the province of New York were nine in number.

While the leading patriots were preparing for the Grand Council of deputies, the people, everywhere, were preparing for impending war. They armed themselves, and practiced military tactics almost every day. Men of all stations in life might be found in the ranks for discipline. Deacons of churches were often captains, having more than half of the young men of the congregations with whom they worshipped as their followers. There was seldom any military organization besides a company, but they were ready to fall into regiments and brigades when called for. Boys imitated their elders, and trained with sticks. Blacksmiths were kept busy all of the summer and autumn of 1774, forging swords, guns and bayonets, and other men were compounding gunpowder, and making bullets of lead. When the Congress at Philadelphia had closed late in the autumn, the Provincial Congress of Massachusetts voted to enroll twelve thousand of these patriots under the general title of Minutemen - volunteers who would be ready at a minute's warning to take the field with arms in their hands. Rhode Island and Connecticut were invited to do likewise. They did so; and when the time came for armed resistance nearly all New England was disciplined, in a degree, for the struggle. The example was contagious. Other colonies followed, and in Virginia the Minute-men were of special service to the patriot cause at a critical juncture. As the summer of 1774 wore away, Gage found himself greatly perplexed by his peculiar situation. Early in August he received official copies of the several acts of Parliament, which completely subverted the Charter of Massachusetts. Gage was made a ruler irresponsible to the people. He proceeded to form a council of thirty-six members, by a mandamus - a positive command to serve - and most of those so appointed accepted the honor. They soon felt the pelting's of the pitiless storm of popular indignation so keenly, that twenty of them resigned, and the remainder sought protection under the troops in Boston. These "Mandamus Councillors," as they were called, were treated with scorn everywhere, and sometimes with personal indignities, mild in form but severe in effect, as in the case of a respected citizen of Plymouth. On the Sunday after he accepted the appointment, as soon as he took his seat in the house of worship, his neighbors and friends all put on their hats and walked out of the house. As they passed his pew, he hid his face by leaning his head over his cane. This public disapproval by those whom he loved, he could not bear, and immediately resigned.

Gage was puzzled more by the forbearance of the people, than by their defiance. Nobody committed any overt acts of treason or sedition that might justify him in using power for

administering punishment, and yet the air was full of the spirit of insurrection. He was helpless in a vortex of irritating words and acts that were ominous of evil. There were inflammatory handbills, newspapers, and tongues all around him exciting the people to rebel, but nobody stepped over the confines of law. Several times he was on the point of executing his discretionary orders to arrest Hancock and other leaders, but un-offended law bade him be cautious. Squibs, epigrams, sonnets, parables and dialogues of remarkable pith filled the Whig journals, not only in Boston, but elsewhere, in which logic and argument were contained in a nut-shell, as in the following example from a New York newspaper:

"THE QUARREL WITH AMERICA FAIRLY STATED. Rudely forced to drink tea, Massachusetts in anger Spills the tea on John Bull - John falls on to bang her; Massachusetts, enraged, calls her neighbors to aid And give Master John a severe bastinado. Now, good men of the law, pray who is in fault, The one who begins or resists the assault?"

Gage saw ominous menaces on every side; and late in the summer he re-established the seat of government in Boston, and prepared to cast up fortifications across the Neck." His orders for this purpose exasperated the patriots. They saw, in these warlike measures, prophecies of their absolute enslavement. The Boston carpenters, though suffering through compulsory idleness, would not work on the fortifications at any price, and the popular voice applauded their patriotism. At about the same time, Gage, taking counsel of his fears, sent out some troops to seize gunpowder belonging to the province, at Charlestown and Cambridge. The indignation of the people rose to fever-heat because of this act, and a large number of them gathered at Cambridge with the intention of attacking the British troops in Boston, but were persuaded to remain quiet. This was followed, a few days afterward, by a rumor that went over the land, even to the Connecticut River and beyond, that war had begun in Boston; that the British ships there were bombarding the town, and that British troops were murdering the patriotic inhabitants. The tale of horror created a fearful excitement and a cry for vengeance. The Minute-men everywhere, though not organized, seized their arms, and marched in squads for Boston. Within thirty-six hours the whole country, for almost two hundred miles from the New England capital, had heard the dreadful tidings. Young men and old men seized their firelocks, and matrons and maidens buckled on their well-filled knapsacks and sent them away with the blessings of patriotic hearts. The roads were soon swarming with armed men, most of them on foot; but many men on horseback - a strange cavalcade - queer-looking men and queer-looking horses of all colors, ages and condition - some of the latter saddled and bridled, and some without either bit or stirrup. The host were intent upon the salvation of their brethren, and the destruction of the enemy; and they halted not until satisfied that the story was untrue, when the angry tide slowly ebbed. It is believed that the rumor was started by some of the leading patriots, to produce an uprising of the people that should overawe General Gage and his troops. Full thirty thousand men, it was estimated, had started for Boston. It was a lesson for Gage, but he did not heed it.

On the 6th of September (1774), a convention of delegates representing the towns in the county to which Boston belonged, resolved that the late acts of Parliament were not entitled to obedience; recommended that collectors of taxes and other officers holding public money should

retain the funds in their hands until the privileges of the charter should be restored declaring that those who had accepted seats in the council should resign or be considered public enemies; recommended the people to seize and keep as hostages any crown-officers who might fall in their way after any patriot should be arrested for a political offence; and adopted an address to General Gage, in which they complained of the fortifications begun by the soldiers in Boston Neck as an act of hostility. They had resolved that they would not commence war, but act on the defensive only so long as just reason required; and they told Gage frankly that they would not submit to any of the late acts of Parliament concerning the Americans.

These were bold words uttered by brave men. Gage denounced the convention as treasonable, and he declared that he should adopt such measures as he pleased to protect his troops, and that the cannon which he had placed in battery on the Neck should be used for that purpose. He had already broken up the eight military companies in the town composed of citizens, and dismissed John Hancock from the command of a corps known as "The Governor's Independent Cadets." That body, indignant because of this treatment of their beloved commander, had sent a committee to the governor at Salem, to surrender their flag into his hands, and acquaint him that they had disbanded themselves. Gage, who never had a conciliatory word for irritated citizens, gave vent to his angry feelings and berated the committee roundly, whereupon the bold Massachusetts Spy published the following as a sample of gubernatorial eloquence, as lately exhibited to the company of cadets:

"Your Colonel, H-n-k, by neglect Has been deficient in respect As he my sovereign toe ne'er kissed, 'Twas proper he should be dismissed; I never was and never will, - By mortal man be treated ill. I never was nor ever can, Be treated ill by mortal man. O had I but have known before That temper of your factious corps, It should have been my greatest pleasure To have prevented that bold measure. To meet with such severe disgrace - My standard flung into my face - Disband yourselves! so cussed stout O had I, had I, turned you out!"

Chapter LVII

Meeting of the General Congress - The Opening Scenes - The Congress Opened with Religious Services - Personal Sketches of the Members - Hospitalities of Philadelphians - Differences of Opinion in the Congress - A Traitor Therein - Belligerent Feelings - Repressed - Appeal from Boston - The Most Important Resolutions - State-Papers Framed and Adopted - "American Associations" Formed - Secession of South Carolinians - Other State-Papers Agreed to - A Second Congress Recommended - Public Sentiment - Doings of the Congress - A Foolish Order from the King.

THE great crisis in the history of the colonies was now at hand, which thoughtful and patriotic men in America had long expected; which the French and other enemies of Great Britain on the continent of Europe had ardently wished for, and which the stubborn king of England, his ministers, and their aristocratic supporters in Church and State had hastened on by their perverseness and folly. That crisis was the planting of the seed of an independent nation in America. It was solemnly performed, when, on the 5th of September, 1774, delegates from twelve British-American provinces met in the hall of the Carpenters' Association, in Philadelphia, and were organized into what they termed themselves, a Continental Congress, having for their object the consideration of the political state of the colonies also the devising of measures for obtaining relief from oppression, and to unite in efforts to secure forever for themselves and their posterity the free enjoyment of natural and chartered rights and liberties, in a perfect union with Great Britain. Very few of them had aspirations yet for political independence.

On Monday, the 5th of September, there were present in the Carpenter's Hall (yet standing) forty-four delegates. These were John Sullivan and Nathaniel Folsom, from New Hampshire; Thomas Cushing, Samuel Adams, John Adams and Robert Treat Paine, from Massachusetts, Stephen Hopkins and Samuel Ward, from Rhode Island, Eliphalet Dyer, Roger Sherman and Silas Deane, from Connecticut, James Duane, John Jay, Philip Livingston, Isaac Low and William Floyd, from New York; James Kinsey, William Livingston, John Hart, Stephen Crane and Richard Smith, from New Jersey; Joseph Galloway, Samuel Rhoies, Thomas Mifflin, Charles Humphreys, John Morton and Edward Biddle, from Pennsylvania; Caesar Rodney, Thomas McKean and George Read, from Delaware Robert Goldsborough, William Paca and Samuel Chase, from Maryland, Peyton Randolph, George Washington, Patrick Henry, Richard Bland, Benjamin Harrison and Edmund Pendleton, from Virginia, and Henry Middleton, John Rutledge, Christopher Gadsden, Thomas Lynch and Edward Rutledge, from South Carolina. Others came soon afterward - John Alsop and Henry Wisner, from New York; George Ross and John Dickinson, from Pennsylvania; Thomas Johnson and Matthew Tighlman, from Maryland, Richard Henry Lee, from Virginia, William Hooper, Joseph Hewes and Richard Caswell, from North Carolina - making the whole number fifty-four. They chose Peyton Randolph to be their President. He was an eminent lawyer, who had been educated at William and Mary College; was the king's Attorney-General for Virginia sixteen years before had taken a decided stand against the ministry at the beginning of resistance; had recently been Speaker of the Virginia Assembly, and was a popular citizen. He was then fifty-one years of age. They chose for their Secretary,

Charles Thomson, a native of Ireland, who, in early life, had emigrated to Delaware, but was then a citizen of Philadelphia, of character and fortune. Dr. Franklin was his friend, and he was a good classical scholar. He had lived a bachelor until that week, when he was about forty-five years of age. Just as he was alighting from his chaise, with his bride - an heiress of much property - a messenger came to him from the Congress, saying: "They want you at Carpenters Hall to keep the minutes of their proceedings, as you are very expert at that business." Thomson complied with their request, and very soon took his seat as Secretary of the Continental Congress and he remained sole Secretary of that body during its entire existence of almost fifteen years. John Adams wrote in his diary, that Charles Thomson was "the Samuel Adams of Philadelphia; the life of the cause of liberty."

Each colony had appointed representatives without any rule as to numbers. The grave question immediately presented itself, How shall we vote? It was suggested that the larger provinces like Virginia should have more votes than the smaller ones like Rhode Island, and that representation should be regulated by population and wealth. It was also suggested that a small province, as well as a large one, had its all involved in the issue, and it was proposed to vote by colonies. The question was one of so much importance that it was left over for discussion the following day, when the Congress adjourned.

When the members assembled the next morning, and the Secretary had called the roll and read the minutes, there was a pause. Members from various and distant provinces were personal strangers. Some had been instructed what to do, and others had been left free to act according to their own judgments, and the circumstances. No one seemed willing to take the first step in business. No one seemed to have determined what measure first to propose. The silence was becoming painful, when a grave-looking man, apparently about forty years of age, with unpowdered hair, a thin face, not very powerful in person, and dressed in a plain dark suit of minister's gray, arose. Then," said Mr. (afterward Bishop) White, who was present, I felt a regret that a seeming country parson should so far have mistaken his talents and the theatre for their display." His voice was musical, and as he continued to speak, he became more animated, and his words more eloquent. With alternate vigor and pathos he drew a picture of the wrongs which the colonies had suffered by acts of the Parliament. He said that all the governments in America were dissolved; that the colonies were in a state of nature. He believed that the Congress then in session was the beginning of a long series of congresses; and speaking to the undecided question about voting, he declared his great concern, for their decision would form a precedent, He favored representation according to population; and in reference to the objection that such representation would confer an undue weight of influence upon some of the larger provinces, he said, with words that prophesied of a nation British oppression has effaced the boundaries of the several colonies; the distinctions between Virginians, Pennsylvanians and New Englanders are no more. I am not a Virginian, but an American." His speech drew the earnest attention of the whole House; and when he sat down the question went from lip to lip, "Who is he?" A few who knew the speaker replied, It is Patrick Henry of Virginia."

There was now no hesitation. The bold-spirited man, who electrified the continent with his

burning words in Stamp-act times, was now there to lead in a revolt. He had uttered the sentiment of union and nationality that warmed the hearts of all present, when he exclaimed: "I am not a Virginian, but an American." It was the text of every patriotic discourse thereafter; and from that hour the Congress went forward with courage and vigor in the work assigned them. They determined that the voting should be done by colonies, each colony having one vote, because they had no means for ascertaining the importance of each in population, wealth, and trade. It is estimated that the aggregate population at that time, including five hundred thousand blacks and excluding Indians, was about two million six hundred thousand.

The Congress adopted various rules; and it was proposed that the sessions should be opened every morning with prayer. Objection was made by Jay and Rutledge, the younger members, because there was such a adversity of theological opinions in that body. "I am no bigot," said Samuel Adams. "I can hear a prayer from a man of piety and virtue, who, at the same time, is a friend to his country." Then he moved that the Rev. Jacob Duche, an eloquent Episcopal minister, be desired to open the Congress with prayer to-morrow morning." This nomination by a straight Puritan of the Congregational school - a man past middle life - removed all objections. The motion was agreed to. The next morning Mr. Duche, after reading the Psalm for the day (the 35th), made an extemporaneous prayer, so pertinent, affectionate, sublime, and devout," wrote John Adams, that it filled every bosom present." That Psalm seemed peculiarly appropriate for an express had just arrived from Israel Putnam of Connecticut with the dreadful rumor of a bombardment of Boston, and the murder of the inhabitants by the soldiery. The bells of Philadelphia were muffled and tolled in token of sorrow; but another messenger soon came with a contradiction of the report.

There were many friends of the crown in Philadelphia, and it was resolved to hold the sessions of the Congress with closed doors. The members gave their word of honor to keep the proceedings secret; but there was a royalist spy in the midst playing the hypocrite - Joseph Galloway, a Pennsylvania delegate - who gave the pledge and broke it that very night He and Duche afterward became active loyalists - the only persons of all that assemblage on the morning of the seventh of September who swerved from the cause. The people had sent the best men to the Great Council, and were not disappointed. "There is in the Congress," John Adams wrote to his wife, a collection of the greatest men upon this continent in point of abilities, virtues, and fortunes and Charles Thomson gave it as his opinion that no subsequent Congress during the war could compare with the first in point of talent and purity. Mr. Adams, in his diary, has left interesting personal notices of a few of the members. He writes that William Livingston, of New Jersey, was a plain man, tall, black, wears his hair; nothing elegant or genteel about him. They say he is no public speaker, but sensible, learned, and a ready writer." He wrote of John Rutledge: "His appearance is not very promising; no keenness in his eyes, no depth in his countenance." Edward Rutledge (the youngest man in the assemblage), he wrote "is young, sprightly, but not deep. He has the most indistinct, inarticulate way of speaking; speaks through his nose a wretched speaker in conversation. He seems good-natured though conceited." Randolph," he wrote, is a large, well-looking man. Lee is a tall, spare man Bland is a learned, bookish man." "Caesar Rodney," he wrote, "is the oddest-looking man in the world - he is tall, thin, and slender

as a reedpole; his face is not bigger than a big apple yet there is sense and fire, spirit, wit, and humor in his countenance." He wrote of Johnson of Maryland, as one with "a clear, cool head, an extensive knowledge of trade as well as of law . . . not a shining orator. Galloway, Duane, and Johnson, he remarks, are sensible and learned, but cold speakers. Lee, Henry, and Hooper are the orators. Paca is a deliberator too Chase speaks warmly; Mifflin is a sprightly and spirited speaker. Dyer and Sherman speak often and long, but very heavily and clumsily." Jay (son-in-law of William Livingston) was young and slender, and enthusiastic in his nature. Stephen Hopkins, the oldest member, was sixty-seven years of age; his hair was white, his form was somewhat bent, and his limbs shook with palsy. Duane is described as "a sly-looking man, a little squint-eyed," and Hooper had a "broad face and open countenance." Washington, then forty-two years of age, modest and retiring, was the most conspicuous figure among them; tall, strongly-built, with a ruddy face, the picture of high health and manly strength.

Every possible facility was given to the members of the Congress for the prosecution of their labors. The Carpenters' Association, themselves warm patriots, gave the free use of their hall and their library above and the directors of the Library Company of Philadelphia requested their librarian to furnish the members with any books which they might wish to use during their sitting. They were also the recipients of unbounded hospitality from the leading citizens of Philadelphia, among whom they were continually entertained at tables sumptuously provided. John Adams related in his diary, that he dined with Mr. Miers, a young Quaker lawyer, and remarks: "This plain Friend, and his plain though pretty wife, with her Thees and Thous, had provided us the most costly entertainment - ducks, hams, chickens, beef, pig, tarts, creams, custards, jellies, fools, trifles, floating islands, beer, porter, punch, wine, etc. Again, after dining at Mr. Powell's: A most sinful feast again! Everything which could delight the eye, or allure the taste - curds and creams, jellies, sweatmeats of various sorts, twenty sorts of tarts, fools, trifles, floating islands, whipped syllabubs, etc., etc. Parmesan cheese, punch, wine, porter, beer, etc."

There were great differences of opinion among the members of the Congress as to the real state of the case, and the proper duties to be performed. This was foreshadowed by remarks of Henry and Jay, at the beginning. The former declared that an entirely new government must be founded. Jay said all government had not come to an end, and that they had not assembled to frame an American constitution, but to correct the faults of the old one. But in one important matter there was, from the first, much unity of feeling, namely, that the whole continent ought to support the people of Massachusetts in resistance to the unconstitutional change in their charter. At the opening of their business, they appointed a committee to state the rights of the colonists in general, the several instances in which those rights had been violated or infringed, and the means most proper to be pursued for obtaining a restoration of them. They also appointed a committee to examine and report the several statutes which affected the trade and manufactures of the colonies. The reports of these committees furnished the materials for work, and at about the middle of September, the Congress was a theater of warm but always friendly discussion. The debates took a wide range, and were very interesting and instructive. The foundations of their rights were discussed - the law of nature, the British constitution, and the force of prescribed allegiance. Then their work took a practical turn; and on the 22nd of September, the Congress,

by unanimous vote, requested "the merchants and others in the several colonies not to send to Great Britain any order for goods, and to direct the execution of all orders already sent to be delayed or suspended, until the sense of the Congress on the means to be taken for the preservation of the liberties of America was made public."

How to avoid the appearance of revolution in their acts, was a perplexing question. There was a great diversity of opinion. Some were very radical, many were conservative, and some, true patriots at heart, were very timid. Some proposed to recognize the full force of the navigation acts; also the authority of Parliament to regulate the trade of the colonies, grounding that power not on the consent of the Americans, but upon compact, acquiescence, necessity, and protection." Others were disposed to deny the authority of Parliament altogether. A compromise was offered that pleased nobody; and Joseph Galloway, then in secret communication with royal governors, proposed, in plausible terms, a scheme suggested many years before, for a Continental Union, with a president-general appointed by the king, and a grand council chosen every three years by the several assemblies, the British Parliament having power to revise their acts, and they in turn having the privilege of opposing a veto on British statutes relating to the colonies. The mover made an ostentatious display of patriotism, boasting of his readiness to spend blood and fortune in defense of the liberties of his country. At first some timid ones were disposed to fall in with his insidious scheme for defeating the great ends for which the Congress were assembled. He was defeated; but while all were determined to maintain their liberty, not one gave a decided voice in favor of independence.

Meanwhile news came from Boston from time to time of the petty tyranny of Gage and his troops, endured by the patriotic citizens, and the marvelous fortitude of the afflicted, who declared they would abandon their homes, fortune, everything, before they or their children would submit to be slaves. These tales of sorrow wrought hot anger in the bosoms of some of the members and Christopher Gadsden, who had preached resistance and independence for ten years, and who, when reminded that war with Great Britain would destroy the seaport towns, exclaimed: Our towns are built of wood and brick; if they are burned down, we can rebuild them; but liberty once lost is gone forever." Gadsden proposed, in his righteous wrath, to make immediate war upon the oppressor. Nay, nay, said the Congress we must exhaust every means for obtaining redress peacefully, before we appeal to the arbitrament of the sword.

There was much irritation of feeling that demanded self-restraint. Washington, who had said in the Virginia Convention, "I will raise a thousand men, subsist them at my own expense, and march with them at their head for the relief of Boston," expressed his indignation freely, yet he was willing to wait a little longer - to try peaceful measures for a short season more. He was resolved to fight, when war or submission should be the alternative offered. His mind was freely expressed in a letter to Captain Mackenzie of the British army, which he wrote from his lodgings in Philadelphia in October, in reply to one from that officer, who had been Washington's companion in arms. Permit me," he said, with the freedom of a friend (for you know I always esteemed you), to express my sorrow that fortune should place you in a service that must fix curses to the latest posterity upon the contrivers, and, if success (which, by the way, is impossible) accompanies it,

execrations upon all those who have been instrumental in the execution." After further expressing his views of the situation, and the determination of the colonies to defend their just rights, Washington remarked: "Give me leave to add as my opinion, that more blood will be spilled on this occasion, if the ministry are determined to push matters to extremity, than history has ever furnished instances of in the annals of North America."

On the 8th of October - the day before Washington's letter was written - the Great Council at Philadelphia, after a very short but spicy debate, resolved:

That this Congress approve the opposition of the inhabitants of Massachusetts Bay to the execution of the late acts of Parliament, and if the same shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition."

This was the whole business performed by the Congress on that remarkable day, according to the minutes of Secretary Thomson. It was enough. It was the most momentous act of that body during the whole session. From that hour the crystallization of the British-American colonies into an independent nation, went rapidly on. That resolution was like the luminous writing on the wall, warning Belshazzar of impending danger. Wise seers interpreted it as a prophecy of the dismemberment of the British empire. But the British monarch, too blind to perceive the ominous light, and too deaf to hear the prophecy, in his anger because of that resolve, proclaimed his subjects in America to be rebels.

That resolution was elicited by a letter from the Boston Committee of Correspondence, written on the 29th of September, in which was a recital of the wrongs endured by the citizens of that town, and asking the advice of the Congress whether they should abandon their homes and leave Boston, or suffer a little longer, for it was believed that when the place should be inclosed with the fortifications then a-building, the inhabitants would be held as hostages for the whole country. The resolution was the quick and glorious answer. It startled the timid in the Congress. Galloway the spy and Duane the arch-conservative, asked leave to enter upon the minutes their protest against the measure. Their request was denied, when they exchanged certificates privately, that they had opposed it as treasonable. Two days afterward the resolution was strengthened by another, which declared that any person who should accept or act under any commission or authority derived from the act of Parliament for changing the form of the government and violating the charter of Massachusetts "ought to be held in detestation and abhorrence by all good men, and considered as the wicked tool of that despotism which is preparing to destroy those rights which God, nature, and compact have given to America." On the same day, the Congress sent a letter to General Gage, telling him of the just complaints of the citizens of Boston made to them, and their suspicions that a plan was formed for the overthrow of the liberties of America; warning him that the oppression to which they were subjected might involve the colonies in the horrors of a civil war, and asking him, in order to quiet the public mind, to discontinue the erection of fortifications in and around Boston. On the 14th of October (1774), the Congress adopted a Declaration of Colonial Rights, reported by a committee composed of two deputies from each colony, in which the several obnoxious acts of Parliament,

including the Quebec Act, were declared to be infringements and violations of their rights, and that the repeal of them was necessary in order to restore harmony between America and Great Britain. This was followed on the 20th by the adoption of The American Association - a non-importation, non-consumption, and non-exportation agreement" applied to Great Britain, Ireland, the West Indies, and Madeira, by which the inhabitants of all the colonies were bound to act in concert and good faith, or incur the displeasure of the faithful ones. The agreement, which was embodied in fourteen articles, and was to go into effect on the first of December next ensuing, covered broad ground. In the second article the Congress, in the name of their constituents, struck a blow at the slave-trade, saying: "We will neither import, nor purchase any slave imported, after the first day of December next after which time we will wholly discontinue the slave-trade, and will neither be concerned in it ourselves, nor will we hire our vessels, nor sell our commodities or manufactures to those who are concerned in it." By the fourth article, it was agreed that after the first of September the next year, in case their grievances were not redressed, not to export any merchandise or commodity" to the countries above-named. Committees were to be appointed in every county, city, and town to enforce compliance with the terms of the Association and it was resolved that they would have no trade, commerce, dealings or intercourse, whatsoever, with any colony or province, in North America, which shall not accede thereto," or which should thereafter violate the Association, but would hold them as unworthy of the rights of freemen, and as inimical to the liberties of their country."

The several articles of the Association were adopted unanimously, excepting the one concerning exportations. Three of the five delegates from South Carolina refused to vote for that resolution or sign the Association, because, they said, the agreement to stop exports to Great Britain was an unequal arrangement. New England, they said, exported a large portion of their staple, fish, to Portugal and Spain, and would be very little affected; while South Carolina sent rice to Great Britain to the amount of a million and a half dollars annually, and would be ruined. When that resolution was carried, the three South Carolinians seceded from the Congress. Gadsden and another, in the spirit of Henry, declared by their act that they were not South Carolinians but Americans, and did not count the cost of patriotism. They stood by the other colonies, voted for the general good, and trusted to the virtue and generosity of their constituents. This secession caused a delay of several days in the business of the Congress. It was important to have the vote on the Association unanimous. The seceders were finally brought back, and induced to sign the Association, by allowing the unconditional export of rice, so that no burden of sacrifice might fall upon their province.

An eloquent Address to the People of Great Britain, written by John Jay, and a memorial to The Inhabitants of the several British-American colonies, from the pen of William Livingston, were adopted on the 21st of October; and on the 26th - the last day of the session - a Petition to the King, drawn by John Dickinson, in which the final decision of the colonies was given in conciliatory terms, and an elaborate Address to the Inhabitants of the Province of Quebec, also written by Mr. Dickinson, were agreed to. A few days before, the Congress had recommended the holding of another at Philadelphia on the 10th of May following, if the grievances were not redressed in the meantime and all the American colonies were invited to participate, by delegation,

in its deliberations. Letters addressed to other colonies not represented in the Congress were approved, and on the afternoon of the 26th of October, 1774, the First Continental Congress ended. All of the members and a few other gentlemen spent that evening together socially at the City Tavern, in Philadelphia. The next day they began to disperse to their homes. Almost every man was impressed with a belief that war was inevitable. Most of them were bold, but few of them were so lionhearted as Samuel Adams, who publicly said: I would advise persisting in our struggle for liberty, though it were revealed from Heaven that nine hundred and ninety-nine men were to perish, and only one of a thousand to survive and retain his liberty. One such freeman must possess more virtue, and enjoy more happiness, than a thousand slaves; and let him propagate his like, and transmit to them what he hath so nobly preserved."

The first Continental Congress was in actual session only thirty-one days of the eight weeks of the term. The remainder of the time was occupied in preparatory business. There was much talking (as in all deliberative bodies), for there were diversities of opinion, and every one was free to express his own. Of what they said we know very little, for the sessions were held in secret, and there were no professional newspaper reporters in those days. What they did we all know. The records of their acts were soon published to the world, and produced a profound impression upon the minds of thoughtful men. The state-papers put forth by them were models of their kind, and commanded the admiration of the leading statesmen of Europe. The British monarch and counselors were highly offended, and early in January, 1775, Lord Dartmouth, Secretary of State for the colonies issued the following Circular to all the royal governors in America - a bull without horns," which did not frighten the patriots. Here is the letter:

"Certain persons, styling themselves delegates of his Majesty's colonies in America, having presumed, without his Majesty's authority or consent, to assemble together at Philadelphia, in the months of September and October last; and having thought fit, among other unwarrantable proceedings, to resolve that it will be necessary that another Congress should be held in this place, on the 10th of May next, unless redress for certain pretended grievances be obtained before that time, and to recommend that all the colonies in North America should choose delegates to attend such Congress, I am commanded by the King to signify to you his Majesty's pleasure, that you do use your utmost endeavors to prevent such appointment of deputies within the colony under your government; and that you do exhort all persons to desist from such unwarrantable proceedings, which cannot but be highly displeasing to the King."

No doubt the amiable Dartmouth signed that foolish letter with reluctance and regret, for he well knew that its only effect would be to produce fresh irritations in the colonies, and make reconciliation and peace less possible.

Chapter LVIII

Destruction of Tea at Annapolis - Provincial Congress of Massachusetts Formed - Preparations for Civil Government and War - The Country and Events West of the Alleghany Mountains - Cresap and Logan - Vengeance of Logan - His Prophetic Speech - War with the Indians - Battle at Point Pleasant - Treaty with the Indians - Patriotism of the Soldiers - Gage's Letter to the Ministry - Stubbornness of the King - America's Ultimatum - Dr. Franklin and His "Hints" - His Private Diplomacy with Lord Howe and Mrs. Howe.

WHILE the Continental Congress was laying the broad foundations for a republic in the West, its constituents were gathering the materials for the building of the superstructure. They manifested their determination to resist oppression on all occasions. They would not yield a jot. Their maxims and their motives were not generated by sudden provocations, and liable to sudden dissolution. They were the offspring of eternal principles, and were everlasting in their vitality. This fact was manifested at Annapolis, in Maryland, long after the excitement occasioned by the destruction of tea in Boston harbor had subsided. No tea-ship had ever entered the port of Annapolis but the people there, in the spring of 1774, had expressed their warm sympathy with the views and acts of the Sons of Liberty in Boston. Quiet had prevailed in that ancient town for some time, when, at the middle of October, 1774, at the very time when the Continental Congress was considering The American Associations that would make non-importation universal in the colonies, a violation of the old agreement excited a tempest of indignation. On Saturday morning, the 15th of October, the ship Peggy Stewart, from London, owned by Anthony Stewart of Annapolis, sailed into that port, having among her cargo seventeen packages of tea. This fact soon became known, and the citizens were summoned to a mass-meeting. It was ascertained that the consignee had imported the tea, and that Mr. Stewart, the owner of the vessel, had paid the duty. The people, at that meeting, resolved that the tea should not be landed. They adjourned to the following Wednesday, and invited the inhabitants of the surrounding country to meet with them. Meanwhile Stewart had issued a handbill explaining the transaction disclaiming all intention of violating the non-importation agreement, and expressing his regret that any tea had been put on board his ship. The people would not listen to his excuses, for they believed them to be only the whining of a detected culprit. They were more disposed to punish than to forgive, and resolved that the ship and its cargo should be burned on Wednesday. Sober citizens were alarmed, for they feared the meeting, with such work on hand, might be changed into an unrestrained mob. Charles Carroll of Carrollton advised Mr. Stewart, for the security of his own personal safety, and that of the town, to burn his vessel with his own hands before the next gathering of the people. Stewart consented to do so and going on board his ship, with a few friends, he caused her to be run aground near Windmill Point and set on fire, in the presence of a multitude of people. He went ashore in a skiff, when he was cheered by the satisfied populace, who instantly dispersed. This was the last attempt to import tea during the colonial rule.

I have said that there was a general impression, after the close of the Continental Congress, that war was inevitable. Before they met, many patriots thought so. Samuel Adams proclaimed it as his belief, all through the summer of 1774. Major Joseph Hawley, one of the boldest of the

patriots of Massachusetts, was one of those who snuffed the battle from afar." He submitted to the delegation in Congress from Massachusetts, a paper entitled Broken Hints," which was full of wise thoughts. It began with these remarkable words: We must fight, if we cannot otherwise rid ourselves of British taxation, all revenues, of the constitution or form of government enacted for us by the British Parliament." He continued: "There is not heart enough yet for battle. Constant, and a sort of negative resistance of government, will increase the heat and blow the fire. There is not military skill enough. That is improving, and must be encouraged and improved, but will daily increase. Fight we must, finally, unless Britain retreats." When John Adams read these words to Patrick Henry, that patriot said, with emphasis, I am of that man's mind."

Britain did not intend to retreat. Her pride had been wounded by the successful defiance of her daughter, and she would neither forget nor forgive. Gage was instructed to do his duty fearlessly and with vigor. He did so, but not judiciously. He had not the rare art of conciliating enemies. His suavity was all for his friends.

Gage had summoned the Assembly of Massachusetts to meet at Salem on the 5th of October to legislate under the new act of Parliament. The attitude of the Continental Congress made the patriots bolder than ever, and their town-meetings were so seditious in aspect, that the governor countermanded his order for the session of the Assembly. But most of the members, denying his right to countermand, met there on the appointed day, ninety in number, waited two days for the governor, who did not appear, and then organized themselves into a Provincial Congress, with John Hancock as President, and Benjamin Lincoln, Secretary. They adjourned to Concord, where, on the 11th, two hundred and sixty members took their seats. Then they adjourned to Cambridge, whence they sent a message to the governor, telling him that for want of a legal Assembly they had organized a Convention. They complained of the recent acts of Parliament which suspended the functions of their charter, expressed their loyalty to the king, and protested against the fortifying of the Neck. Gage replied, as he had done before, that it was only for defense; and he pointed to the sounds of the fife and drum, the military drills, the manufacture of arms, and warlike preparations all over the province, for his justification. He concluded by denouncing the Convention as an illegal body, and warning them to desist from further action.

Gage's denunciations increased the zeal of the patriots. The Convention appointed a Committee of Safety, to whom they delegated large powers, among others to call out the militia of the province. Another committee was appointed to procure ammunition and military stores, and for that purpose they appropriated sixty thousand dollars. Henry Gardner was appointed Receiver-General, into whose hands the constables and tax collectors were directed to pay all public moneys that might be gathered by them. Provision was also made for arming the people of the province; and Jeremiah Preble, Artemas Ward, and Seth Pomeroy, all veterans of wars with the French and Indians, were chosen general officers of the militia. Only Ward and Pomeroy consented to serve, and they entered immediately upon the duty of organizing the militia. Mills were erected for manufacturing gunpowder; establishments were set up for the making of arms, and encouragement was given to the production of saltpeter. Ammunition and military stores were collected at Woburn, Concord, near Salem, and at other places; and late in November, as we

have observed, the Provincial Congress authorized the enrollment of twelve thousand Minute-men. That Provincial Congress assumed legislative and executive powers, and received the allegiance of the people generally. Gage found himself at the close of 1774 unsupported excepting by his troops, a few government officials in Boston, and passive loyalists who were under the protection of his regiments. All outside of Boston wore the aspect of rebellion. Made afraid of his own weapons - fearing the people might turn the muzzles of the cannon which he had planted upon Fort Hill upon himself and his troops, he ordered a party of sailors to be sent in the night from a man-of-war in the harbor to spike all the guns in battery there. That was a confession of weakness that made the patriots strong.

While the colonists were preparing to measure strength in arms with Great Britain, there had been a speck of war with the Indians on the frontiers of Virginia. By the provisions of the Quebec Act, all of the country north and west of the Ohio River, was included in that province. The limits of Virginia were bounded by the great mountain ranges, and west of these there was no government to restrain the actions of Christians or Pagans. Restless men wandered over the mountains into the valleys beyond, planted cabins there, and were as free as the air they breathed. The Indians were just as free to exercise their savage thirst for blood, and they frequently indulged in the pastime of murdering white people. Among those who suffered there, in 1773, were Daniel Boone and others who accompanied him.

The rapacious Lord Dunmore, then governor of Virginia, who was gathering riches by fees for granting land to settlers, and in acquiring large tracts for himself, had set his affections on the rich country north of the Ohio, which had been granted to Quebec. He disregarded the Quebec Act and his instructions under it, and continued to grant lands to settlers, in the Scioto Valley. He did more. Pittsburgh and the surrounding country, forming a part of the county of Westmoreland, Pennsylvania, was rapidly filling up with settlers from Virginia and Maryland. Dunmore coveted the gains to be derived from the fees on land-warrants there, and he suddenly asserted the jurisdiction of Virginia over all the western country. Dr. Connolly, a Pennsylvanian, who was acquainted with all that region, and was well known, was made his deputy, with his headquarters at Pittsburgh. Serious disputes with Pennsylvania followed, but Dunmore persisted. Connolly proclaimed his authority as Magistrate of West Augusta," and ordered a muster of the militia. The Virginia and Maryland settlers there, sided with the governor, and the authority of Connolly was acknowledged.

Early in 1774, the Indians committed many murders and depredations along the Ohio borders, and it was ascertained that the tribes were exchanging belts in seeming preparation for war. At that time Michael Cresap, a settler from Maryland, was near the present Wheeling, engaged in planting a colony. He had had some encounters with the Indians, but was disposed to treat them kindly. Late in April he received a message from Dr. Connolly that an Indian war was inevitable, when Cresap called a council of the settlers. Regarding Connolly's message as a warrant for making war on private account, they declared it against the Indians on the 26th of April. On the following day two canoes, filled with the painted savages, appeared, when they were attacked and pursued far down the river. When the pursuers returned, they proposed an assault upon the

settlement of Logan, a Mingo chief, who had been reared near the banks of the Susquehanna, in Pennsylvania, spoke English well, and was a friend of the white people. Cresap prevented the expedition; but other traders, not so discreet, soon raised a furious tempest of resentment against their white brethren. Opposite Logan's settlement (thirty miles above Wheeling) was the cabin of a trader who sold rum to the savages. On one occasion some unarmed Indians, with their women, passed over the river, and all became drunk at the trader's house, when they were all murdered in cold blood by some white people who had been concealed near. Among the slain were the mother, brother, and sister of Logan, the latter the wife of John Gibson, a trader. The spirit of revenge was aroused in great intensity in the bosom of the Mingo chief; and nearly all the ensuing summer he was out upon the war-path gathering a fearful harvest of scalps from the heads of white people as trophies of his valor and vengeance. As Cresap was a leader of the white people on the Ohio, Logan held him responsible for the massacre, though, at that time, the trader was with his family in Maryland. To him Logan sent a note, late in summer, written by William Robinson with ink made of gunpowder, as follows:

"Captain Cresap, - What did you kill my people on Yellow Creek for? The white people killed my kin at Conestoga, a great while ago, and I thought nothing of that. But you killed my kin again on Yellow Creek, and took my cousin prisoner. Then I thought I must kill too; and I have been three times to war since. But the Indians are not angry - only myself."

After the war that ensued was over, Logan, then at old Chillicothe, on Pickaway Plains, refused to attend a council to which Lord Dunmore invited him. That invitation was sent by Colonel John Gibson. Logan took the messenger into the woods, where, seated upon a moss-covered root of an immense sycamore, he recited the story of his wrongs. He would not hold council personally with a white man but he sent the following remarkable speech in the mouth of Colonel Gibson, which the latter wrote down and delivered to Dunmore:

"I appeal to any white man to say if ever he entered Logan's cabin hungry and he gave him no meat if ever he came cold and naked and he clothed him not. During the course of the last long and bloody war, Logan remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed as they passed and said: Logan is the friend of the white man. I had even thought to have lived with you, but for the injuries of one man. Colonel Cresap, the last spring, in cold blood, and unprovoked, murdered all the relations of Logan, not even sparing my women and children. This called on me for revenge. I have sought it. I have killed many. I have fully glutted my vengeance. For my country, I rejoice at the beams of peace. But do not harbor a thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to save his life. Who is there to mourn for Logan I Not one!"

The blood shed along the frontiers of Virginia, during that summer, caused Dunmore to fit out an expedition against the Indians beyond the mountains. He summoned the militia of the southwest to the field, and then he hastened to Pittsburgh. At about the same time, he renewed a treaty of peace with the Six Nations. The settlers flew to arms with alacrity, and, led by Colonel Andrew Lewis, they hastened over the rugged and pathless mountains toward a place of

appointed rendezvous on the Ohio, with a promise of being reinforced by another division under the governor himself, who was to descend the river from Pittsburgh. Lewis, with about eleven hundred men, encamped on Point Pleasant, near the junction of the Great Kanawha and Ohio rivers, on the 6th of October, where, in expectation of the governor's speedy arrival, he did not cast up any intrenchments. But neither Dunmore nor a messenger from him appeared. He had gone down the Ohio before Lewis's arrival, with about twelve hundred followers, without waiting for the latter at the appointed place of rendezvous, and pushed on to the Shawnee towns, which he found deserted. At the mouth of the Hockhocking he built a block-house, which he named Fort Gower.

Meanwhile the Shawnees - the fiercest of the Western tribes - had deserted their settlements (as Dunmore found) and were moving stealthily, with some Mingo and Delawares, through the forests, to attack the camp of Lewis. So secretly had they approached, that the march was not suspected until they were discovered at early dawn on the morning of the 10th of October (1774), within a short distance of the camp of the Virginians, and preparing for battle. Within an hour, they and the white people were engaged in a fierce struggle for the mastery - Cornstalk, their leader, encouraging them by his bravery and fortitude, and frequently uttering the words: Be strong. The great struggle lasted from sunrise till noon and from that hour, a desultory fire was kept up until sunset. Neither party could claim a victory. Lewis, however, held the field, and the savages fled across the Ohio under cover of the darkness that night. The Virginians lost full half of their commissioned officers, and almost one hundred and thirty men, killed and wounded. The Indians lost about two hundred and thirty warriors. Among the officers under Lewis were several who afterward appeared conspicuous in our history, and whom we shall meet again - Shelby, Campbell, Robertson, etc.

On the day after the battle, Colonel Lewis received an order from Dunmore to hasten to join him at a point in the Scioto Valley, eighty miles distant. The governor did not then know how Lewis had been smitten by the savages. The latter did not hesitate to obey the order. Leaving a small garrison at Point Pleasant, the Virginians pushed across the Ohio, traversed the pathless wilderness in the midst of perils and hardships, and on the 24th of October encamped on Pickaway Plains not far from old Chillicothe, now the borough of Westfall. Dunmore was encamped on the banks of Sippo Creek, about seven miles southwest from the present Circleville, and there he held a council with the Indian chiefs, who, acknowledging their weakness, sued for peace. At that conference, Cornstalk was the principal speaker for the savages; Logan, as we have seen, refusing to attend. A satisfactory treaty of peace was concluded, and then the Virginians returned to their homes, from which they had been absent about three months, having won great advantages for their colony and for civilization.

When these Virginians left home, all the delegates to the Continental Congress had been chosen. No tidings from the East had reached the little army during their absence, and they were ignorant of the state of public affairs on the sea-board. They were patriots, and were jealous of their honor as such. That honor might be impeached by military service under a royal governor of Dunmore's stamp. So, at Fort Gower, on the 5th of November, they, as a body, expressed their

sentiments freely. They spoke of the grievances of the colonies their zeal for the honor as well as the liberties of Americans; and their loyalty to the king and the government to whom they owed allegiance so long as they ruled justly. They said As attachment to the real interests and just rights of America outweigh every other consideration, we resolve that we will exert every power within us for the defense of American liberty, when regularly called forth by the unanimous voice of our countrymen." Their proceedings offended Dunmore, and the governor and the citizen-soldiery both returned home dissatisfied.

The elections for member's of Parliament in the autumn of 1774, satisfied the ministry that they were strong in the affections of the people. The king was jubilant because of the result, and the government was not in a frame of mind to receive with complacency the state-papers put forth by the Continental Congress, especially the petition to the king. In September Gage had written to Dartmouth a truthful statement of the condition of affairs in the colonies, and especially in Massachusetts. It was a letter that gave that minister great concern. Gage declared that the act of Parliament for regulating the government of Massachusetts could not be carried into effect until the New England colonies were subdued by military conquest; that Massachusetts had warm friends and abettors in all the other colonies; that the people of the Carolinas were as crazy as those in Boston that all over New England the rural population were actually preparing for war by military exercises and by the gathering of arms and ammunition, and that the civil officers of the crown could find no protection in Boston. The governor suggested that it might be well to discard the colonies - cut them loose from the empire, and leave them to suffer anarchy, and so bring about repentance; having grown rich by their connection with Great Britain, they would speedily become poor in their helplessness. Thoroughly wearied, Gage also suggested, in a private letter to Dartmouth, that it might be well to suspend the operations of the obnoxious acts for a season. When these statements and propositions were laid before the king, he said, with emphasis and bitter scorn, "The New England governments are now in a state of rebellion. Blows must decide whether they are to be subject to this country, or to be independent." This was King George's ultimatum, to which he obstinately adhered; and Lord North, to whom the words of the monarch were addressed, acted accordingly in the Parliament which assembled at about that time. Joseph Warren, in a letter addressed to Josiah Quincy, Jr. (who had gone to England to seek restoration of health by a sea voyage and to watch the drift of public opinion there concerning American affairs), gave the ultimatum of the Americans in these words:

It is the united voice of America to preserve their freedom, or lose their lives in defense of it. Their resolutions are not the effects of inconsiderate rashness, but the sound result of sober inquiry and deliberation. The true spirit of liberty was never so universally diffused through all ranks and orders of people in any country on the face of the earth, as it now is through all North America. If the late acts of Parliament are not to be repealed, the wisest step for both countries is to separate, and not to spend their blood and treasure in destroying each other. It is barely possible that Great Britain may depopulate North America; she never can conquer the inhabitants."

Such was the attitude of the king and his American subjects when the new Parliament

assembled on the 30th of November, 1774, the old one having been dissolved in September. At that time Dr. Franklin, who had been disgraced early in the year, so far as the ribald tongue of a dishonest solicitor-general, and an ill-mannered Privy Council could disgrace him, had become an object of deep concern by men of all parties. The king hated him for his sturdy republicanism and inflexible political honesty. Hutchinson, then in England, hated him for Franklin's exposure of his perfidy, and he pursued him relentlessly and, at one time, there were intimations that if the agent remained in England, it would be at the peril of his life. On the other hand, the friends of the government regarded him as a bulwark of political wisdom, and a match in the field of diplomacy for the whole British ministry. It was believed by all that he was the depositary of the secret intentions of the colonists, toward Great Britain, in the measures they had adopted. He was solicited to promulgate the extent of the demands of the Americans and so urgent were the calls for this knowledge, that without waiting for the reception of a record of the proceedings of the Continental Congress, he prepared a paper entitled Hints for Conversation upon the subject of Terms that may probably produce a Durable Union between Britain and the Colonies, in seventeen propositions. The upshot of the whole was that the colonies should be reinstated in the position which they held in relation to the imperial government before the obnoxious acts then complained of became laws, by a repeal - by a destruction of the whole brood of offensive enactments in reference to America, hatched since the accession of George the Third. In a word, he proposed that English subjects in America should enjoy all the essential rights and privileges claimed as the birthright of English subjects in England. This paper found its way to the ministry, and possibly to the king; and had the prime minister been allowed to follow the bent of his inclination and of his clear judgment, it might have been the basis of a compromise that would have preserved the unity of the British realm. Franklin had expressed, in these Hints, the sentiments of his countrymen.

The sage was a sphinx to the ministry. They were anxious to fathom the secrets which they believed were hidden in him, concerning the extent to which the Americans would consent to modify the Hints, but his consummate diplomatic skill foiled their curiosity. Beneath a perfect freedom and frankness of manner of expression, there was always, to English minds, a riddle they could not solve. It was thought that in the amenities of social intercourse he might inadvertently drop a clue, or make confessions under the melting influence of adroitly applied compliments; and the charms of an accomplished woman, a sister-in-law of Earl Howe (the commander of the British fleet on the American coast in less than two years afterward), were employed to open the heart and mind of the impenetrable statesman. She was a lover of science; brilliant in conversation; winning in deportment, and a skillful player of chess, a game which Dr. Franklin was fond of. The story runs thus, as told by the statesman himself:

"At the Royal Society, one evening, a gentleman told Franklin that Mrs. Howe, a lady who possessed many admirable qualities, wished to play chess with him, as she fancied she could beat him. He accepted the challenge, and on the day after Parliament met he was introduced to her, was charmed by her mind and manners, played a few games, and accepted an invitation to repeat the visit and the amusement. At the second visit, after playing a long time, they fell into conversation, partly about a mathematical problem, and partly about the new Parliament, when

she said: "And what is to be done with this dispute between Great Britain and the colonies!" I hope we are not to have a civil war." "They should kiss and be friends," said Franklin what can they do better Quarreling can be of service to neither, but is ruin to both." She replied - "I have often said that I wished government would employ you to settle the dispute for them; I am sure nobody could do it so well. Do not you think the thing is practicable?" Franklin answered - "Undoubtedly, madame, if the parties are disposed to reconciliation for the two countries have really no clashing interests to differ about. It is rather a matter of punctilio, which two or three reasonable people might settle in half an hour. I thank you for the good opinion you are pleased to express of me; but the ministers will never think of employing me in that good work; they choose rather to abuse me." "Aye," said Mrs. Howe, "they have behaved shamefully to you. Indeed some of them are now ashamed of it themselves."

I looked upon this as accidental conversation," Dr. Franklin wrote; "thought no more of it, and went in the evening to the appointed meeting at Dr. Fothergill's, where I found Mr. Barclay with him" - an eminent member of the Society of Friends. They at once entered into conversation on the topic which Mrs. Howe had introduced, and evidently by preconcert with her. They commented upon the mischief likely to ensue from the quarrel, and expatiated upon the great merit of being instrumental in bringing about a reconciliation. They complimented Franklin about his ability and influence - told him that nobody understood the whole subject so well, or had a "better head for business," and that it was his duty to do all in his power to heal the dissensions between Great Britain and the colonies, They urged him to commit to writing his thoughts on the subject. Out of these interviews grew the Hints already spoken of, the name of the author of which was to be kept a profound secret.

Mrs. Howe's invitations to chess-playing continued, and were accepted. On the evening of Christmas, Franklin was at that lady's house, when she said, almost immediately after he had entered, that her brother, Lord Howe, was very anxious to make the acquaintance of Franklin that he lived very near, and that if the statesman would give her leave she would send for his lordship. "Send for him by all means," said Franklin, and Earl Howe very soon appeared. He was profuse in his personal compliments, blamed the ministry for abusing Franklin; said they were ashamed of it, and that ample satisfaction would undoubtedly be given begged him to open his mind freely as to the best means for bringing about a reconciliation; observed that Franklin might not wish to have a direct communication with the ministry on the subject, or have it known that he had any indirect communication with them till he could be well assured of their good disposition and that he (Lord Howe) being on good terms with the ministry, thought it not impossible that he might, as a bearer of communications between the two parties, be the means of effecting the desired end. At that moment Mrs. Howe offered to withdraw.

The sagacious Franklin now saw clearly, what he had already suspected namely, that the chess-playing was only a pleasant mask for a little artful diplomacy. His usual caution had not allowed him to divulge to the charming "petticoated-politician," a single secret which he wished to keep. Her titled brother-in-law was no more successful than she. When Mrs. Howe proposed to withdraw and leave Franklin alone with his lordship, the former begged her to stay, saying: I have

no secret to divulge, in a business of this nature, that I could not freely confide to your prudence." He assured Lord Howe that his lordship's manners had gained his (Franklin's) confidence, and made him perfectly easy and free in communicating himself to him, in whatever he had to divulge. After a long conversation Franklin withdrew, with a promise to meet the earl at an appointed time. Mrs. Howe was present at the next interview. The subject of American affairs was fully discussed, when the earl drew from his pocket a copy of the Hints," in Mr. Barclay's hand-writing, and asked Franklin if he knew anything about the paper. The sage saw that the secret of the authorship had been divulged, and he frankly avowed himself as the proposer. Earl Howe expressed his sorrow that Franklin claimed such large concessions from the ministry, as there was no likelihood that they would be admitted by the king and his advisers. Howe desired Franklin to draw up a plan for reconciliation less distasteful to the government spoke of the infinite service he might be to the nation, and intimated that if he (Franklin) should be instrumental in accomplishing the wishes of the government in that regard, he might expect any reward in the power of that government to bestow.

The last proposition aroused Franklin's indignation. "It was to me," he said, "what the French vulgarly call spitting in the soup." But he showed no signs of a ruffled temper, and promised to draw up for Lord Howe a new series of propositions, which he did in terms similar to those of the Hints."

All these private diplomatic operations ended in leaving Mrs. Howe and her brother no wiser than before the first game of chess was played with Dr. Franklin. He had checkmated his competitors in the art of diplomacy.

British satirists and caricaturists handled tire ministers and the king with considerable severity in 1774. In a caricature published with the Westminster Magazine in April, entitled "The White-Hall Pump," poor Britannia is thrown down upon her child America, while Lord North, who was remarkable for his short-sightedness, viewing her through his glass, is pumping upon her, and seems to enjoy her distress. A parcel of Acts and Bills Magna Carta, Coronation Oaths, & C., are scattered upon the ground. Lord Mansfield, with an act of Parliament, is seen (in the full caricature - only a part of it is here given) standing by the side of North to give him legal support, while other ministers are near.

Chapter LIX

America's Affairs in Parliament - The King and Lord North - Proceedings of the Congress, in England - Franklin a Missionary - Lord Chatham and Franklin - North and the Cabinet - Policy toward the Americans - Franklin Admitted to the House of Lords - Lord Chatham's Great Speech on American Affairs - Anger of the king - Chatham's Propositions Rejected - His Invective - He Compliments Franklin - Oppressive Measures - Gibbon - Disaffection in New York - Franklin and the Ministers.

WHEN the British Parliament assembled at the close of November, 1774, the king told them that the Americans were on the verge of rebellion. He assured them that he had given orders for the prompt execution of the laws passed by the late Parliament, and for the restoration of order and good government in the colonies. The Commoners, as usual, prepared an address to the King, when the Opposition proposed an amendment asking his majesty to lay before Parliament all letters, orders, and instructions relating to American affairs, as well as all the intelligence received from the colonies. North opposed the amendment, because it would force the government to take the first step toward reconciliation, and therefore would be inconsistent with the dignity of the crown! The address promised his majesty full support by the Commons in its dealings with the colonies. A debate, in which much bitterness was shown, ensued, when the amendment was rejected by a large majority. In the House of Lords, an address, similar in sentiment, was carried by a large majority. Nine of the peers signed a protest which concluded with these words: "Whatever may be the mischievous designs or inconsiderate temerity which lead others to this desperate course, we wish to be known as persons who have ever disapproved of measures so pernicious in their past effects and future tendencies; and who are not in haste, without inquiry and information, to commit ourselves in declarations which may precipitate our country into all the calamities of a civil war."

Lord North, no doubt sincerely wishing reconciliation, did not regard this triumph as a real victory; on the contrary, he saw interminable trouble ahead. But he had committed himself to the control of the king, and was compelled to do his majesty's bidding or resign yet he tried to induce the monarch to take some step in the direction of reconciliation. He suggested the propriety of sending a commission of inquiry to America, but the king overruled the proposition, and North acquiesced. The utter subserviency of this minister to the king, in opposition to his own conscience and sense of justice, is well illustrated by North's heartless remark afterward, in which he echoed his master's sentiments: A rebellion is not to be deprecated on the part of Great Britain the confiscations it would produce would provide for many friends of government." The ministry consoled themselves with the idea that so many colonies, with such clashing interests, could not long remain united. It will be easy," said one of them to the French minister in London, "to sow divisions among the delegates to their Congress; they will do nothing but bring ridicule upon themselves by exposing their weakness." This delusion was dispelled before the adjournment of Parliament for the Christmas holidays, by the arrival in England of a record of the proceedings of that Congress. The firmness, moderation, and unanimity of the action of the members greatly surprised the ministry, made the more sensible of them anxious, but only increased the anger of

the king, who, in hurried words, as usual, breathed threatenings and slaughter." The caricaturists had already ridiculed the blusterings of the government, by representing North, whom they nicknamed Boreas," as viewing the distant colonies through his eye-glass, showing his ignorance of the true state of affairs in America, when he uttered his foolish boast after the Congress had assembled, I promise to subdue the Americans in three months."

When the proceedings of the Continental Congress reached England, the colonial agents there, and particularly Dr. Franklin, became active in their public promulgations. The president of the Congress had sent them to the agents as a body, with a letter requesting them to lay the petition to the king into the hands of his majesty," and also to publish it. They were also requested to furnish printed copies of that and the Address of the people of Great Britain" by the Congress, to the trading cities and manufacturing towns of the United Kingdom." The Congress had passed a vote of thanks to the friends of the Americans in Parliament, and the agents were requested to convey the resolution to those gentlemen.

Franklin took the task of this seed-sowing chiefly upon himself, for he was now regarded as the representative of the whole continent. The documents were printed and scattered over the kingdom; and Franklin and others traversed the manufacturing towns in Yorkshire, Lancashire, Northumberland, and Durham, and by word of mouth imparted much information and enlightenment on the great questions at issue. The people of those districts were mostly Dissenters, who looked upon the Church of England as a portion of the state, in wielding weapons of oppression. The truths respecting human rights, uttered by Franklin, appealed to their warmest sympathies, and there was much excitement in the north of England. Petitions framed by Franklin, and numerous signed, praying for a repeal of the obnoxious acts, were sent into Parliament and immediately consigned to an inactive committee - "a committee of oblivion," as Burke called them. Ministerial agents were sent in the wake of Franklin and his friends to counteract their influence, and these sent in counter-petitions, also numerous signed, which were promptly acted upon. Petitions from the American colonies, even one from Jamaica, were treated with disdain.

The agents were not permitted to lay the petition of Congress to the king into his majesty's hands." Franklin presented it to Lord Dartmouth. His lordship laid it before the king, who promised it should be submitted to Parliament, and so the matter rested for awhile. Franklin, meanwhile, had borne a copy of the petition to Hayes, where he was courteously received by Lord Chatham. Among other pointed remarks made by Franklin to Pitt, on that occasion, none seemed to strike his lordship more forcibly than these words "The army cannot possibly answer any good purpose in Boston, but may do infinite mischief; and no accommodation can properly be proposed and entered into by the Americans, while the bayonet is at their breasts. To have an agreement binding, all force should be with drawn." Chatham was deeply impressed with the justice of the remark, and he promised Franklin that if his malady would allow, he would be in his place in the House of Lords at the reopening of Parliament, and move the immediate and unconditional withdrawal of the troops from Boston. In this measure he thought were involved the hopes of liberty for England.

The scruples of Lord North annoyed the king, and the monarch often rebuked his minister. These scruples had created much opposition to him in the Cabinet, and a clique had determined to procure his dismissal, if he should propose any more lenient measures toward the Americans. North was advised of this conspiracy. The Parliament was to reassemble on the 20th of January and at a meeting of the Cabinet on the 12th, he saw unmistakable evidence that he must yield his conscience to the king, or throw up the seals of office. A majority of the Cabinet were firm supporters of the royal prerogative, and champions for the supremacy of Parliament. North loved place and its emoluments so, quieting his Conscience, by considering the sacredness of his pledge to the king, he reinstated himself with his fellow-ministers by unbounded good nature on that occasion, and a promise to take the tremendous responsibility of a leader in measures which his judgment assured him would create a civil war. At that meeting it was decided to interdict all commerce 'with America and to declare all persons in the colonies, not actively loyal to the crown, to be rebels. By so drawing the line of separation sharply, they hoped to create a permanent antagonism among the people here; but union rather than discord was effected.

Parliament reassembled on the 20th January, 1775. The rumor had gone abroad that Chatham would appear in his place. It was vehemently asserted by the court party that he would not be there; that he had washed his hands of American affairs, and would never more appear as their advocate. This assertion disturbed Lady Chatham, who was in London. She had informed her husband of the day appointed for the assembling of Parliament, but she feared there might be some trick by which Lord Chatham would be prevented from being present at the opening, as he desired to be. In a letter to him she expressed some doubts about the propriety of her appearing at court, while the rumors of his remaining at Hayes were so rife. He wrote to her, most earnestly, saying: For God's sake, sweet life, don't disquiet yourself about the impertinent and ridiculous lie of the hour. The plot does not lie very deep. It is only a pitiful device of fear, court fear, and faction fear. If gout does not put in a veto, which I trust in Heaven it will not, I will be in the House of Lords on Friday, then and there to make a motion relative to America. Be of good cheer, noble love. Yes, I am proud - I must be proud to see Men not afraid of God, afraid of me." To Lord Stanhope he wrote: I greatly wish Dr. Franklin may be in the House.

His lordship communicated this wish to Franklin, and offered to lend him assistance in gaining admission. On the morning of the 20th, Lord Stanhope sent another message to Franklin, letting him know that if he should be in the lobby of the House at two o'clock that day, Chatham would be there and introduce him himself. Franklin was there. On mentioning to the great orator what Stanhope had said, Chatham replied: "Certainly, and I shall do it with the more pleasure, as I am sure your presence at this day's debate will be of more service to America than mine." He then took Franklin by the arm and was leading him along the passage to the door that entered near the throne, when one of the door-keepers followed and acquainted Pitt, that, by the order, none were to be carried in at that door but the eldest sons and brothers of peers. Pitt limped back with Franklin to the door near the bar, where were standing a number of gentlemen waiting for the peers who were to introduce them, and some peers waiting for friends they expected to introduce. There Chatham delivered Franklin to the doorkeepers, saying aloud: "This is Dr. Franklin, whom I would have admitted into the House;" which was accordingly done. "As it had not been publicly

known that there was any communication between his lordship and myself," Franklin wrote, this, I found, occasioned some speculation. His appearance in the House, I observed, caused a kind of bustle among the officers, who were busied in sending messengers for members - I suppose those in connection with the ministry, something of importance being expected when the great man appears, it being but seldom that his infirmities permit his attendance."

Chatham was in his place at the appointed hour. For what purpose, That question was soon answered, when, rising to his feet with a little help, he leaned upon a crutch, and, with a clear voice, proposed an address to the king, asking him to immediately dispatch to General Gage an order to remove his forces from Boston as soon as the rigors of the season would permit."I wish, my lords," said Chatham, in the presence of a crowd of anxious listeners, not to lose a day in this urgent, pressing crisis. An hour now lost may produce years of calamity. For my part, I will not desert, for a single moment, the conduct of this weighty business. Unless nailed to my bed by extremity of sickness, I will give it my unremitted attention. I will knock at the door of the sleeping and confounded ministry, and will rouse them to a sense of their impending danger. When I state the importance of the colonies to this country, and the magnitude of danger from the present plan of misadministration practiced against them, I desire not to be understood to argue for a reciprocity of indulgence between England and America. I contend not for indulgence, but justice to America; and I shall ever contend that the Americans owe obedience to us in a limited degree." Then stating the foundations upon which the supremacy of Great Britain over her colonies rested, he continued: Resistance to your acts was necessary as it was just and your vain declarations of the omnipotence of Parliament, and your imperious doctrines of the necessity of submission, will be found equally incompetent to convince or to enslave your fellow-subjects in America, who feel that tyranny, whether ambitioned by an individual part of the legislature or the bodies who compose it, is equally intolerable to British subjects." He then pictured in a pathetic manner, Gage's troops in Boston suffering in winter, insulted by the inhabitants, wasting with sickness, and pining for action; and then he wittily compared Gage to the great General Condo, who, upon being asked on one occasion why he did not take Marshal Turenne prisoner, being so very near him, replied: Upon my word, I am afraid Turenne will take me." This spirit of independence," continued Chatham, "animating the nation of America is not new among them it is, and has ever been, their confirmed persuasion. When the repeal of the Stamp-act was in agitation, a person of undoubted respect and authenticity on that subject assured me that these were the prevalent and steady principles of America - that you might destroy their towns, and cut them off from the superfluities, perhaps the conveniences of life, but that they were prepared to despise your power, and would not lament their loss while they have - what, my lords? - their woods and their liberty. . . . Oppress not these millions for the fault of forty or fifty individuals. Such severity of injustice must irritate your colonies to unappeasable rancor. What though you march from town to town, and from province to province? How shall you be able to secure the obedience of the country you leave behind you, in your progress to grasp eighteen hundred miles of continent? The spirit which now resists your taxation in America, is the same which formerly opposed wars, benevolence, and ship-money in England; the same which, by the bill of rights, vindicated the English constitution the same which established the essential maxim of your liberties, that no subject of England shall be taxed but by his own consent."

Chatham then alluded to the late Congress the wisdom of its course, and the support which its measures received from the whole people. "When your lordships look at the papers transmitted to us from America," he said, - "when you consider the decency, firmness, and wisdom, you cannot but respect their cause, and wish to make it your own. For myself I must avow, that in all my reading - and I have read Thucydides and have studied and admired the master- states of the world - for solidity of reasons, force of sagacity, and wisdom of conclusion, under a complication of difficult circumstances, no nation, or body of men, can stand in preference to the General Congress at Philadelphia. The histories of Greece and Rome give us nothing equal to it and all attempts to impose servitude upon such a mighty continental nation, must be vain - must be fatal. We shall be forced ultimately to retreat let us retreat while we can, not when we must. These violent acts must be repealed you will repeal them I pledge myself for it. I stake my reputation on it. You will in the end repeal them. Avoid, then, this humiliating necessity. With a dignity becoming your exalted situation, make the first advances to concord, peace, and happiness, for that is your true dignity. Concession comes with better grace from superior power, and establishes solid confidence in the foundations of affection and gratitude. Be the first to spare: throw down the weapons in your hands. . . . To conclude, my lords, if the ministers thus persevere in misadvising and misleading the king, I will not say that they can alienate the affection of his subjects from his crown, but I will affirm that they will make the crown not worth his wearing. I will not say that the king is betrayed, but I will pronounce that the kingdom is undone."

This great speech - this noble plea for justice - made the king very angry. He regarded Chatham's independence as ingratitude, and he openly expressed a desire for the arrival of the day when decrepitude or old age should put an end to him as a trumpet of sedition." The lords immediately censured Chatham's speech by a vote of sixty-eight to eighteen, against his proposition. Not discouraged, he immediately presented a bill which provided for the renunciation of the power of taxation, demanding an acknowledgment from the Americans of the supreme authority of Great Britain, and inviting them to contribute voluntarily a specified sum annually to be employed as interest on the national debt. It also provided for an immediate repeal of all the objectionable acts of Parliament (ten in number), passed during the administration of the reigning monarch.

Now occurred a remarkable scene. The petulant Earl of Sandwich said the proposition deserved only contempt, and ought to be immediately rejected. He could not believe it was the work of a British peer, but of some American. Turning his face toward Franklin, who stood, leaning on the bar, he said: "I fancy I have in my eye the person who drew it up, one of the bitterest and most mischievous enemies this country has ever known." The eyes of the whole House were now fixed on Franklin, when Chatham arose and said, with emphasis, "The plan is entirely my own but if I were the first minister, and had the care of settling this momentous business, I should not be ashamed of publicly calling to my assistance a person so perfectly acquainted with the whole American affairs - one whom all Europe ranks with our Boyles and Newtons, as an honor, not to the English nation only, but to human nature." Sandwich moved that the bill be "rejected now and forever," and it was done. This drew from Chatham a terrible storm

of invective. He perceived the fixed intention of the ministry to enslave the Americans at all hazards. I am not surprised," he said, "that men who hate liberty should detest those who prize it, or that those who want virtue themselves should persecute those who possess it. The whole of your political conduct has been one continual series of weakness and temerity, despotism, and the most notorious servility, incapacity, and corruption. I allow you one merit, a strict attention to your interests in that view, who can wonder that you should put a negative on any measure which must deprive you of your places, and reduce you to that insignificance for which God and nature designed you." The bill was rejected, because it was considered a greater concession to the colonies, and quite as injurious to the national honor as the proposition of Dean Tucker, a famous pamphleteer, that Parliament should by solemn enactment sever the colonies from the parent government, and disallow any application for restoration to the rights and privileges of British subjects, until, by humble petition, they should ask for pardon and reinstatement. This would not have been a severe punishment for the Americans.

So firmly supported in the House of Lords, the ministers proceeded to put the engine of coercion into full play against the Americans. On the 2nd of February, North proposed the first of a series of measures for compelling the Americans to submit. He moved in the House of Commons for an address to the king, affirming that the province of Massachusetts was in a state of rebellion that Great Britain would not relinquish an iota of her sovereign rule in the colonies and urging his majesty to take immediate and effectual measures for enforcing obedience to the laws. They contemplated a material increase of the military force in America, and to restrain the entire commerce of New England with Great Britain, Ireland, and the West Indies. Charles James Fox moved an amendment censuring the ministry, and praying for their removal. A warm debate ensued, when Fox's amendment was negatived by a vote of three hundred and four against one hundred and five. North's motion, which ended with the usual pledge of "lives and fortunes," prevailed by a majority of two hundred and ninety-six in the Commons, and in the Lords by eighty-seven to twenty-seven; nine peers protesting. Gibbon the historian, who then had a seat in the Commons, and had veered from the Opposition to the Ministerial side, wrote: "We voted an address of 'lives and fortunes,' declaring Massachusetts Bay in a state of rebellion; more troops, but, I fear, not enough to go to America, to make an army of ten thousand men at Boston; three generals, Howe, Clinton, and Burgoyne! In a few days we stop the ports of New England. I cannot write volumes, but I am more and more convinced that, with firmness, all will go well yet I sometimes doubt." Gibbon had written in favor of the Americans. Fox, in an epigram of twelve lines, alludes to his venality in these words:

King George in a fright, lest Gibbon should write
The story of Britain's disgrace, Thought no
means more sure, his pen to secure,
Than to give the historian a place."

North presented another bill - a Restraining Act - which provided for the destruction of the fisheries and other commerce of the New England colonies, exempting from its force those only who should produce evidence that they were supporters of the supremacy of Parliament. Protests from merchants and manufacturers, and also from the Friends or Quakers, in behalf of those people on Nantucket, engaged in the fishing, were presented, but without effect. The bill was

passed by an overwhelming majority, and twenty thousand inhabitants of New England, employing four hundred ships and two thousand fishing-shallops, were seriously injured by it. At this juncture news came from America of the general adhesion of the several colonies to the Continental Congress, when North presented another bill (March 8, 1775), which included all the colonies in the operation of the Restraining Act, excepting New York and North Carolina, where loyalty prevailed. In New York, conservatism was now rife, especially among the Patricians," or what is termed the upper classes in society. Loyalty to the crown, and lukewarmness in the cause for which Boston was suffering, prevailed in the New York Assembly at the beginning of 1775, then in the seventh year of its existence. To stimulate and diffuse that conservatism and loyalty to detach New York from the rest of the colonies, in political feeling, was now a prime object of the ministry and their American supporters. Severance from Great Britain was not to be thought of said these loyalists. Even John Jay, one of the most active men in the Continental Congress, declared that he held nothing in greater abhorrence, than the malignant charge of aspiring after independence." The New York Committee of Correspondence expressed their anxiety for the maintenance of union with Great Britain. And in the New York Assembly conservatism was strongly manifested, when a motion of Colonel Tenbroeck, to take into consideration the proceedings of the Continental Congress, was negatived. Again, when Philip Schuyler made a motion in that body that certain letters, which, the previous summer, had passed between the New York Committee of Correspondence and that of Connecticut on the subject of a General Congress also that a letter of a committee of the New York Assembly to Edmund Burke (the agent for the province in England) a little later, should be entered upon the Journals of the House, the clerk to furnish copies for the newspapers, his motion was negatived. A proposition of Colonel (afterward General) Woodhull to vote thanks to the New York delegates in the Continental Congress for their faithfulness; another to thank those merchants who adhered to the nonimportation agreements, and still another to appoint delegates to the next Continental Congress, were negatived by the same vote. At about the same time the majority of the Assembly, on motion of Mr. DeLancey, decided by a resolution that the king and Parliament had a right to regulate the trade of the colonies, and to levy taxes by impost duties. A most obsequious petition to the king, in which he was styled an indulgent father," was then offered. This excited the indignation of Schuyler and other republicans in the Assembly. The former attacked expressions in the paper with great vigor, and offered amendments substituting manly words for degrading ones. But the petition unamended, and a humble petition to the House of Lords, were adopted, and were sent to England, with a record of the proceedings of the Assembly. These papers caused the exemption of the province of New York from the force of the Restraining Act. They did not represent the feelings of the great mass of the people of that province, but only of the ruling classes. But the votes gave great joy to the Tories and the crown-officers everywhere, and made the ministry hope that New York would be permanently disaffected, and so cut off New England from the other provinces until the war that ensued had made considerable progress. The Tories confidently looked for failure in the rebellion through dissension. John Adams predicted twenty years before, that the grand scheme of the British government would be the promotion of dissensions among the colonies.

There was now much fluttering among the ministers. Lord North, to the astonishment of

everybody, submitted a sort of conciliatory plan that pleased nobody, yet he adroitly carried it through. Other plans, more favorable to the Americans, were offered and rejected. Franklin's "Hints" had been considered by the ministry, and propositions had been made to him which were so much short of justice that he replied, "While Parliament claims the right of altering American constitutions at pleasure, there can be no agreement, for we are rendered unsafe in English privilege." When it was suggested that an agreement was necessary for America, as it would be so easy for Britain to burn all their seaport towns," the philosopher answered bravely: My little property consists of houses in those towns; you may make bonfires of them whenever you please: the fear of losing them will never alter my resolution to resist, to the last, the claim of Parliament."

The British government, by its acts, had now virtually declared war against the English-American colonists as rebels. Abandoning all hope of reconciliation, Franklin returned to America in the spring of 1775, and entered vigorously upon the prosecution of the war that soon afterward broke out.

Chapter LX

The King and His Ministers the Real Revolutionists - The Spirit of Independence - Its Development in America - Franklin's Fable of the Eagle and the Cat - The Americans not Revolutionists - Treatment of Battles - England and Her Colonies, in 1775 - The Children of Boston - The Appointed Successor of Gage - His Generals - Franklin's Views of the Situation - Gage and the People - Hancock and Adams - Military Expedition to Concord - Skirmish at Lexington.

IN the early part of 1775, the British government had proclaimed Massachusetts to be in a state of rebellion, and provided means for suppressing that rebellion by force of arms. The fulmination of wrathful threats against that province was intended for the ears of her sister colonies, as well as for her own. They had interests in common. They were making resistance to oppression in common and they were resolved to stand united for the common defense. To call Massachusetts a rebel," was to call all the other colonies rebels." So they all felt. Joseph Hawley had said in Massachusetts, when viewing the impending crisis: We must fight Patrick Henry, in Virginia, had answered "Amen!" with vehemence; and these words from the head and heart of resistance to oppression, were echoed back from all the provinces in the early part of 1775. For ten years the people of those provinces had pleaded, remonstrated, and worked in vain endeavors to obtain justice for themselves and their posterity. They had asserted the inalienable rights of every free-born Englishman, and had been haughtily spurned as slaves. They had bravely, meekly, patiently and persistently opposed the revolution which the king and Parliament seemed determined to effect (and did effect) by overturning the colonial charters and denying to British subjects in America the freedom and privileges of British subjects in England. At length the united colonies came to the solemn conclusion - " We must fight," and prepared for the dire necessity. The war for independence that ensued was not a war of revolution on the part of the Americans. It was a war by the Americans against the arch-revolutionist King George and his ministers - a war by the Americans for the defense of their liberties and free institutions which the government of Great Britain sought to destroy.

Let us look a little behind the stirring events of the spring of 1775. You who have followed the narrative given in preceding pages in this work, cannot fail to have discovered the existence of a controlling spirit of independence - a spirit yearning for free thought and action - a spirit of resistance to unlawful restraint, everywhere manifested by the early settlers and colonists - emigrants from England, Wales, Scotland, and Ireland; from France, Switzerland, Holland, and Sweden. The sentiment uttered by Patrick Henry in old St. John's Church in Richmond in 1775 - "Give me liberty or give me death!" had been the sponsor of that faith and courage which impelled men and women to leave home and kindred, brave the storms of the Atlantic and the perils of the wilderness, and seek abiding places in the forests of America. That spirit was not born in these forests, as some suppose. It was older than the gnarled oak and lofty pines - as old as civilization - aye, as old as the race - a child of remote ages. It had been seen emerging from the mists of prehistoric times. It walked arm-in-arm with young Christianity when it went forth from the gates of Jerusalem to conquer the earth with its sublime ethics, for the Founder had said: "The Truth

shall make you free." It asserted its power at Runnymede; and it spoke out boldly in the theological and ecclesiastical reformation of the sixteenth century. It found a rare coadjutor in the new-born printing-press; and from the advent of that mighty teacher, it was rapidly diffused. It was the prevailing spirit of the century, when the greater portion of the English colonies in America were planted - a century most remarkable for its energy and development.

The immigrants hither came chiefly from among the middle-classes of society in Europe, who, with strong bones and tough muscles, brought to this virgin land an indomitable love for personal freedom. They brought the spirit of independence with them. They cherished it as a priceless jewel. From the beginning, they yearned for independent local legislation and that aspiration deepened, and widened, and grew more sturdy as time passed on, until, at about the middle of the last century, as we have seen, the colonists, many in numbers and firm in faith, defied the government of England. It was high time for them to do so; for that government, wielded by an unwise and headstrong king with corrupt and obsequious advisers, meditated bold revolutionary schemes by which the ancient constitutions of the colonies were to be destroyed, and the people deprived of rights which they had ever held most sacred. We have seen how the attempt at subversion was made openly, and in secret, and with what patient dignity the oppressed colonists pleaded for redress and justice in loyal words. We have seen how they were spurned - spit upon, as it were, by the haughty king and his ministers, until Dr. Franklin, their chief representative in England, losing all hope, folded his papers, sailed away from that country and came home to help his countrymen in the impending struggle with the brute force of Great Britain. Not long before Franklin's departure, he gave to the world that remarkable fable of the eagle and the cat, which, in the light of subsequent events, seemed prophetic. He was at Lord Spencer's one evening, with a number of English noblemen, when the conversation turned upon the subject of fables. Some one of the company observed that he thought the subject was exhausted he did not believe that any beast, bird, or fish could be worked into a new fable with any success. The whole company appeared to agree with the gentleman excepting Franklin, who was silent. The company insisted upon his expressing his opinion. I believe, my lords," said the sage, in substance, that the subject is inexhaustible, and that many new and instructive fables might be made out of such materials." He was asked if he would think of one at present. If your lordship," he said, turning to Earl Spencer, "will provide me with a pen, ink, and paper, I believe I can furnish your lordship with one in a few minutes." The paper was brought, and Franklin wrote as follows:

"Once upon a time, an eagle soaring around a farmer's barn and espying a hare, darted down upon him like a sunbeam, seized him in his claws, and remounted with him in the air. He soon found that he had a creature of more courage and strength than a hare, for which, notwithstanding the keenness of his eyesight, he had mistaken a cat. The snarling and scrambling of the prey was very inconvenient, and, what was worse, she had disengaged herself from his talons, grasped his body with her fore limbs, so as to stop his breath, and seized fast hold of his throat with her teeth. Pray, said the eagle, let go your hold and I will release you.' 'Very fine,' said the cat, I have no fancy to fall from this height, and be crushed to death. You have taken me up, and you shall stoop and let me down.' The eagle thought it necessary to stoop accordingly."

John Adams, who received the story from Franklin's lips, wrote: "The moral was so applicable to England and America [England the Eagle, and America the Cat] that the fable was allowed to be original, and was highly applauded."

The colonists now said: "We must fight." They repeated it from Maine to Georgia. They buckled on their armor and stood on the defensive determined not to give the first blow. We shall now see how their oppressors became the aggressors, and spilled the first blood that flowed in the war of that momentous revolution which King George the Third began. That revolution, as we have observed, was not the work of the people here. They did not seek to overturn anything; they sought only to preserve the precious things that existed. They had never known hereditary titles, nor prerogatives, nor any of the forms of feudalism, in America, other than as temporary exotics. They had grown to greatness in plain, unostentatious ways, chiefly as tillers of the soil and moving on a social plane of almost absolute equality. They had all been born free. They were not called upon to fight for freedom, for they already possessed it they were compelled to fight for its maintenance. Therefore, the American people in 1775 were not revolutionists. They, only, were revolutionists, who, by arbitrary methods, attempted to deprive the Americans of their rights. This aspect of the case I wish to impress upon the minds of my countrymen. I shall not dwell long upon the sanguinary features of that war. An eminent author, in a deprecatory spirit, wrote: "The Muse of History has been so much in love with Mars, that she has seldom conversed with Minerva." Acting upon that hint, I shall, in telling the story of that war, touch as lightly upon the terrible details of battles as faithfulness to the task before me will allow. With that governing thought, I have traced the course of the colonies through the several phases of their growth from feeble, scattered settlements to powerful commonwealths, endued with a pervading love of freedom, and possessing large liberties. I have endeavored to unfold the causes which gradually made them gravitate toward a common centre of nationality, in the form of a colonial Union. We will now consider their tremendous struggle during seven years for the maintenance of their liberties, and the establishment of a new and independent nation on the earth.

In February, 1775, Great Britain, as we have seen, had virtually declared war against the colonies. The time for reconciliation, moderation, and reasoning is over," General Gage wrote to Lord Dartmouth. Even the boys of Boston asserted their rights in the presence of the military governor. They had built some snow-hills on the Common, down which they slid on to a pond. The soldiers, to annoy them, frequently demolished these hills. They complained to the captain, but could not obtain redress. At length a large deputation of older boys called upon General Gage. He received them courteously, and said: "Why have so many children waited upon me?" "We have come, sir," said the tallest boy, to demand satisfaction." "What! said the general with surprise, "have your fathers been teaching you rebellion, and sent you here to exhibit it? Nobody sent us here, sir," replied the boy, while his eyes flashed, and his cheeks reddened with indignation at the imputation of being a rebel. "We have never injured nor insulted your troops," he continued, "but they have trodden down our snow-hills, and have broken the ice on our skating-ground. We complained, and they called us young rebels, and told us to help ourselves if we could. We told the captain of this, and he laughed at us. Yesterday our works were destroyed for the third time, and we will bear it no longer." The good-natured general felt touched with

admiration for the spirit of these boys, and turning to an officer near him, he said: "The very children here draw in a love of liberty with the air they breathe." To the boys he said: Be assured that if my troops trouble you again, they shall be punished."

In reply to a letter from Dartmouth, ordering him to assert, by force, the absolute authority of the king, Gage wrote that civil government was nearly at an end in Massachusetts. He advised the sending of twenty thousand troops, with whom he would undertake to enforce the new form of government, to disarm the colonists, and to arrest and send to England for trial the chief traitors in Massachusetts. Meanwhile the British government were preparing to reinforce the troops in Boston. It was determined to make the number there ten thousand. They also resolved to send another general to take the place of Gage, whom ministers considered too inefficient for the exigency. General William Howe was chosen to succeed him. His major-generals were Sir Henry Clinton and John Burgoyne. The former was a son of a provincial governor of New York the latter was ambitious to win renown that he might wipe out the stain of his ignoble birth. He boastfully said: I am confident there is not an officer or soldier in the king's service who does not think the Parliamentary right of Great Britain a cause to fight for to bleed and die for." There were many and noble soldiers who did not agree with him. For that reason Amherst declined the chief command which was offered to him, and partly for the same reason General Howe took the appointment with reluctance. Is it a proposition or an order from the king? Howe asked. It is an order." Then it is my duty to obey," he said with real reluctance, for he remembered with gratitude the vote of Massachusetts to erect a monument in memory of his brother, Lord Howe, who was killed near Ticonderoga. His reluctance was somewhat diminished when he was told that he and his brother Richard, Earl Howe (who had been appointed naval commander in America), would go as peace commissioners also, bearing the sword in one hand and the olive-branch in the other.

Franklin, not long before his departure from England, had written to friends in Massachusetts, saying, in substance, Do not begin war without the advice of the Continental Congress, unless on a sudden emergency." He said: "New England alone can hold out for ages against this country, and, if they are firm and united, in seven years will win the day." The prophecy was fulfilled in time and facts. The eyes of all Christendom," he wrote, are now upon us, and our honor as a people is become a matter of the utmost consequence. If we tamely give up our rights in this contest, a century to come will not restore us, in the opinion of the world we shall be stamped with the character of dastards, poltroons, and fools; and be despised and trampled upon, not by this haughty, insolent nation only, but by all mankind. Present inconveniences are, therefore, to be borne with fortitude, and better times expected." The French minister in London wrote to his government: "Every negotiation which shall proceed from the present administration will be without success in the colonies. Will the king of England lose America rather than change his ministry? Time must solve the problem if I am well informed, the submission of the Americans is not to be expected." The conduct of the Americans gratified the wishes of Franklin and the hopes of the French ambassador.

When news of the contemptuous reception of the petition of Congress to the king, and copies

of the Address of Parliament to his majesty, reached the Americans, there was an outburst of patriotism from the hearts of all the colonies. The spirit of the times gave fire to the tongue of Joseph Warren, when, on the anniversary of the Boston Massacre, he thrilled the fowls of a vast concourse of citizens in the Old South Meeting-house, and drew from some of the forty British officers who were present, insulting hisses. His words went deep into the hearts of the people, and Gage well knew their significance.

Before this the air was full of rebellious utterances now it seemed as if the lightning of the popular wrath was about to kindle a mighty conflagration. On both sides watchful eyes never slept, and watchful ears were always open. All through March and far into April, Boston was like a seething cauldron of intense feeling. Gage was irresolute and timid. He had about four thousand well-drilled soldiers, eager to fall upon the rebels, yet he hesitated. At length he resolved to nip rebellion in the bud. He prepared to seize John Hancock and Samuel Adams as arch-traitors, and send them to England for trial on a charge of treason. He also determined to send out troops to seize all the munitions of war which he knew the people had gathered at Concord and other places; and he fixed upon the night of the 18th of April as the time for the execution of his scheme. The plan was to be kept a profound secret until the latest moment.

In the meantime Hancock and Adams, who were in attendance at the Provincial Congress held at Concord, had received warning of their personal danger, for an intercepted letter from London had revealed it and when that Congress adjourned on the 15th of April, they tarried at Lexington, where they lodged at the house of Rev. Jonas Clarke, yet standing. At the same time the Minute-men were on the alert everywhere, and the fifteen thousand troops which the Provincial Congress had called for were in readiness to confront the oppressors of the people. Couriers were ready to ride over the country, and arouse the inhabitants, if the British should march that way; and wagons were prepared to remove the hidden stores to places of greater safety.

The capital part of the scheme was to arrest Hancock and Adams at Lexington, ten miles from Boston. For this purpose, the soldiers who were to do the work, were to leave Boston secretly in the evening, at an hour that would enable them to reach Lexington at past midnight, when the doomed patriots would be sleeping soundly. Their arrest accomplished, the troops were to move rapidly forward to Concord, six miles further, and seize or destroy the cannon and military stores which the patriots had gathered. Preparations for the expedition were made as early as the fifteenth. On that day about eight hundred grenadiers and infantry were detached from the main body and marched to a different part of the town, under the pretense of teaching them some new military movements. At night, boats from the transports which had been hauled up for repairs, were launched and moored under the sterns of the men-of-war. Dr. Warren, one of the most watchful of the patriots, sent notice to Hancock of these suspicious movements, and enabled the Committee of Safety, of which the latter was chairman, to cause some of the stores at Concord to be removed to places of safety, in time to save them from the invaders. To prevent a knowledge of his expedition spreading into the country, Gage sent out a number of his officers to post themselves on the several roads leading from Boston and to prevent suspicions, they went out of the city at different times. But they were discovered, and the design suspected, by a Son of

Liberty of Lexington, who informed Colonel Monroe, then sergeant of a militia company. That officer, suspecting a design to capture Hancock and Adams, collected a guard of eight well-armed men, who watched Mr. Clarke's house that night.

In the afternoon of the 18th (April, 1775), Gage's secret leaked out, and the patriots in Boston watched every movement of the troops with keen vision. Dr. Warren, Paul Revere and others made arrangements for a sudden emergency, to warn Hancock and Adams of danger, and to arouse the country. Their precautions were timely, for at ten o'clock that evening, eight hundred British troops marched silently to the foot of the Common, where they embarked in boats and passed over to Cambridge. They were commanded by Lieutenant-Colonel Smith, assisted by Major Pitcairn. Gage supposed his secret was inviolate, but was soon undeceived. Lord Percy, who was one of his confidants, when crossing the Common, heard one of a group of citizens say, The British will miss their mark. "What mark?" inquired Percy. "The cannon at Concord," was the reply. Percy hastened to inform Gage, who immediately issued orders to his guards not to allow any person to leave the city that night. It was too late. William Dawes had gone over the Neck to Roxbury on horseback, with a message from Warren to Hancock and Adams, and Warren and Revere were at Charlestown awaiting the development of events. Revere had engaged his friend Newman, sexton of the North Church, to give him a timely signal.

He said to his friend: If the British march By land or sea from the town to-night, Hang a lantern aloft in the belfry-arch Of the North Church tower as a signal light One, if by land, and two, if by sea: And I on the opposite shore will be Ready to ride and spread the alarm Through every Middlesex village and farm, For the country folk to be up and arm.

The moon was just rising when the British troops landed on the Cambridge side of the water. Newman had hung out two lanterns, and the watching Revere, springing into a saddle on the back of a fleet horse owned by Deacon Larkin, hurried across Charlestown Neck. At the end of the isthmus he was confronted by two British soldiers, who attempted to arrest him. Turning back toward Charlestown, he soon reached the Medford road, and escaped; and at a little past midnight he rode up to Clarke's house in Lexington, which was well guarded by Sergeant Monroe and his men. He asked, in hurried words, for Mr. Hancock. "The family have just retired," said the sergeant, "and I am directed not to allow them to be disturbed by any" Noise exclaimed Revere "you'll have noise enough before long; the Regulars are coming out! He was then allowed to knock at the door, when Mr. Clarke opened a window, and inquired - "Who is there?" Revere answered hurriedly, I want to see Mr. Hancock." I do not like to admit strangers into my house so late at night," Clarke replied. Hancock, abed but not asleep, recognizing the voice of the messenger called out: Come in, Revere we are not afraid of you." The story of impending peril was soon told, and the whole household were astir. Dawes, who went by Roxbury, soon afterward arrived. After refreshing themselves, he and Revere rode swiftly toward Concord, arousing the inhabitants by the way, as the latter had done between Medford and Lexington. They were overtaken by Dr. Samuel Prescott, who had been wooing a young woman in Lexington, and he joined them in their patriotic errand, when Revere, who was riding ahead, was suddenly surrounded by some British officers, and with Dawes was made a prisoner. Prescott

dashed over a stone-wall with his active horse, and escaped. He rode over to Concord, and at about two o'clock in the morning of the 19th gave the alarm. Revere and his fellow prisoner were closely questioned concerning Hancock and Adams, but gave evasive answers. They were threatened with pistol-balls, when Revere told his captors that men were out arousing the country in all directions. Just then a church-bell was heard then another, when one of the Lexington prisoners said: "The bells are ringing - the town is alarmed - you are dead men." The frightened officers left their prisoners, and fled toward Boston.

The alarm rapidly spread, and the Minute-men seized their arms. At two o'clock in the morning, Captain John Parker called the roll of his company on Lexington Green in front of the meeting-house, and ordered them to charge their guns with powder and ball. The air was chilly, and, as the invaders did not seem to be near, the men were directed to take shelter in the houses. Meanwhile the British troops were making their way in the soft light of a waning moon. Colonel Smith was convinced that their secret was known and there was a general uprising of the people, for church-bells were heard in various directions. He sent back to Boston for reinforcements, and ordered Major Pitcairn to push rapidly on through Lexington and seize the bridges at Concord. As the latter advanced, he secured every man seen on the way. One of these escaped, and mounting a fleet-footed horse, hurried to Lexington and gave the alarm, but not until the invaders were within less than two miles of the village green. The bells rang out an alarm. The Minute-men came and just at the earliest dawn of day Captain Parker found himself at the head of almost seventy men. After much persuasion, and the cogent argument that their lives were of the greatest importance to the colony at that time, Hancock and Adams left Mr. Clarke's house and went, finally, to a more secure retreat. Dorothy Quincy, to whom Hancock was affianced (and whom he married in September following), was visiting the family of Mr. Clarke, and she accompanied her lover and his friend in their slow flight from immediate danger.

In the gray of the early morning, Major Pitcairn and his scarlet-clad soldiers appeared, and halting not far from the line of Minute-men on Lexington Common, loaded their muskets. The patriots stood firm. They had been ordered not to fire a shot until they were assailed by the invaders. A pause ensued, when Pitcairn and other officers galloped forward, waving their swords over their heads, and followed by the shouting troops in double-quick time. "Disperse, you villains! Lay down your arms! Why don't you disperse, you rebels Disperse!" cried the major. In rushing forward the troops had become confused. As the Minutemen did not immediately obey the command to lay down their arms, Pitcairn wheeled his horse, and waving his sword, shouted: "Press forward, men! surround the rascals!" At the same moment some random shots were fired over the heads of the Americans by the British soldiers, but without effect. The Minute-men had scruples about firing, until their own blood had been spilled. Pitcairn was irritated by their obstinacy, and drawing his pistol, discharged it, at the same moment shouting fire. A volley from the front rank followed the order, with fatal effect. Some Americans fell dead or mortally wounded, and others were badly hurt. There was no longer hesitation on the part of the Minutemen. The conditions of their restraint were fulfilled. The blood of their comrades had been shed and as the shrill fife of young Jonathan Harrington set the drum a-beating, the patriots returned the fire with spirit, but not with fatal effect. The blood of American citizens stained the

green grass on Lexington Common, but no British soldier lost his life in that memorable conflict. Captain Parker, perceiving his little band in danger of being surrounded by overwhelming numbers and massacred, ordered his men to disperse. They did so; but as the British continued to fire, the Americans returned the shots with spirit, and then sought safety behind stone-walls and buildings. Four of the Minute-men were slain by the first fire, and four afterwards, and ten were wounded. Only three of the British were wounded, with Pitcairn's horse.

So ended the opening act in the great drama of the Old War for Independence. The bells that were rung on that warm April morning - the mercury marking 85 degrees in the shade at noon - tolled the knell of British domination in the old thirteen colonies. When the firing began, Samuel Adams was lingering in his tardy flight on a wooded hill near Clarke's house, and when the air was rent by the first volley on Lexington Common, he uttered these remarkable words: What a glorious morning for America is this! With the vision of an inspired seer at that moment, the sturdy patriot perceived in the future the realization of his cherished dreams of independence for his beloved country. Those words are inscribed on the Lexington Centennial Medal.

When the Minute-men at Lexington were dispersed at sunrise, the British drew up in line on the Common, fired a feu de joie, gave three cheers in token of the victory, and in high spirits marched rapidly toward Concord. They had just been joined by Colonel Smith and his party, and felt sure of the success of the expedition. But the sunset told a sad tale for the invaders.

Meanwhile the news of the skirmish was spreading with great rapidity over the province. Before noon that day, the tidings reached Worcester, thirty miles from Lexington. "An express came to the town," says Lincoln, the local historian, shouting as he passed through the streets at full speed, "To arms! to arms! the war has begun!" His white horse, bloody with spurring, and dripping with sweat, fell, exhausted, by the church. Another was instantly produced, and the tidings went on. The bell rang out the alarm the cannon were fired, and messengers were sent to every part of the town to collect the soldiery. As the news spread, the implements of husbandry were thrown by in the fields, and the citizens left their homes with no longer delay than to seize their arms. In a short time the Minutemen were paraded on the Green, under Captain Timothy Bigelow; after fervent prayer by Rev. Mr. McCarty, they took up their line of march. They were soon followed by as many of the train-bands as could be gathered under Captain Benjamin Flag.

The scene at Worcester on that occasion, was a type of a hundred others enacted within twenty-four hours after the skirmish at Lexington. It affords a vivid picture of the spirit of the people.

The serious question arose, Who fired first at Lexington, the British or the Provincials? Upon the true solution of that question depended, in a degree, the justification or condemnation of the belligerent parties, for the Americans had resolved not to be the aggressors. So late as May the next year, a London journal said It is whispered that the ministry are endeavoring to fix a certainty which party fired first at Lexington, before hostilities commenced, as the Congress declare, if it can be proved that American blood was first shed, it will go a great way toward effecting a

reconciliation on the most honorable terms." The testimony of contemporaries seems to prove, beyond a doubt, that the British fired first. Stiles, in his MS. Diary, cited by Mr. Frothingham in his History of the Siege of Boston, under date of August 19, 1775, wrote:

"Major Pitcairn, who was a good man in a bad cause, insisted upon it to the day of his death, that the colonists fired first and that he commanded not to fire, and endeavored to stop the firing after it began but then he told this with such circumstances as convince me that he was deceived, though on the spot. He does not say that he saw the colonists fire first. Had he said it, I would have believed him, being a man of integrity and honor. He expressly says he did not see who fired first; and yet he believed the peasants began. His account is this: That riding up to them, he ordered them to disperse, which they not doing instantly, he turned about to order his troops to draw out so as to surround and disarm them. As he turned, he saw a gun in a peasant hand, from behind a wall, flash in the pan, without going off; and instantly, or very soon, two or three guns went off by which he found his horse wounded, and also a man near him wounded.-These guns he did not see; but believing they could not come from his own people, doubted not, and so asserted, that they came from our people, and that thus they began the attack. The impetuosity of the king's troops was such that a promiscuous, uncommanded but general fire took place, which Pitcairn could not prevent; though he struck his staff or sword downward with all earnestness, as a signal to forbear or cease firing."

In a counter manifesto to a proclamation of General Gage, prepared a few weeks after the event, it is asserted that the British, "in a most barbarous and infamous manner, fired upon a small number of the inhabitants, and cruelly murdered eight men. The fire was returned by some of the survivors, but their number was too inconsiderable to annoy the regular troops, who proceeded on their errand to Concord. One of the many depositions taken at the time, to settle the question, Who fired first? is the following: "About five o'clock in the morning we attended the beat of our drum, and were formed on the parade. We were faced toward the regulars, then marching up to us, and some of our company were coming to the parade with their backs toward the troops and others on the parade began to disperse, when the regulars fired on the company before a gun was fired by any of our company on them." Clarke says, So far from firing first upon the king's troops, upon the most careful inquiry it appears that but very few of our people fired at all, and even they did not fire until, after being fired upon by the troops, they were wounded themselves."

On the Green, at Lexington, stands a monument, which was erected to the memory of the patriots who fell on or near that spot, which bears the following inscription:

"Sacred to the Liberty and the Rights of Mankind!!! The Freedom and Independence of America - sealed and defended with the blood of her sons - This Monument is erected by the inhabitants of Lexington, under the patronage and at the expense of the Commonwealth of Massachusetts, to the memory of their Fellow-citizens, Ensign Robert Monroe, Messrs. Jonas Parker, Samuel Hadley, Jonathan Harrington, Jr., Isaac Muzzy, Caleb Harrington, and John Brown, of Lexington, and Asahel Porter, of Woburn, who fell on this Field, the first victims of the Sword of British Tyranny and Oppression, on the morning of the ever-memorable Nineteenth of April, An. Domini

1775. The Die was cast!!! The blood of these martyrs in the Cause of God and their Country was the cement of the Union of these States, then colonies, and gave the Spring to the Spirit, Firmness, and Resolution of their Fellow-citizens. They rose as one man to revenge their Brethren's blood, and at the point of the sword to assert and defend their native Rights. They nobly dared to be Free!!! The contest was long, bloody, and affecting. Righteous Heaven approved the Solemn Appeal Victory crowned their Arms, and the Peace, Liberty, and Independence of the United States of America was their glorious reward. Built in the year 1799."

The precedence as to the time and place where blood was first shed in the Revolution is claimed for Westminister, Vermont, where, more than a month before the affair at Lexington, officers of the crown in endeavoring to subdue a mob, caused the death of one of the rioters. The event is recorded in an epitaph inscribed upon a slab of slate in the old burial-ground at Westminister, in the following words:

In Memory of WILLIAM FRENCH, son to Mr. Nathaniel French, who was Shot at Westminister, March ye 13th, 1775, by the hands of Cruel Ministerial tools of George ye 3rd, in the Court-house at 11 o'clock at Night, in the 22nd year of his Age.

Here William French his Body lies, For Murder his blood for Vengeance Cries. King George the third his Tory crew that with a brawl his head Shot threw. For Liberty and his Country's Good he Lost his Life, his Dearest Blood.

Chapter LXI

Operations at Concord - Retreat of the British - Reinforcements - A Dreadful March for Boston - Fight at West Cambridge - Panic at Charleston - Account of the Affair Published in England - New England in Arms - Uprising of the Colonies - Virginia Convention - Patrick Henry's Appeal - Wrath of Dunmore - Royal Rule Abolished - Mecklenberg Declaration of Independence - Call for Troops in Massachusetts - An Army at Cambridge.

CONCORD had been aroused. Dr. Prescott had reached the town twenty minutes after he left Revere and Dawes in the hands of their captors. He told Amos Melvin, the sentinel at the Court house, that the regulars were coming. It was then about two o'clock in the morning of the 19th of April, 1775. That scion of a heroic family, who had battled with the French and Indians in recent wars, seized the bell-rope and rung out such a vehement alarm that the villagers were all aroused from their slumbers, and soon filled the streets. The first man who appeared with a gun was William Emerson, the beloved pastor there. He was very soon surrounded by Minute men on the Green; and when the guns at Lexington were heard before sunrise, the Committee of Safety and the principal people of the town had assembled for consultation. They soon made arrangements for the reception of the invaders. Couriers had been sent to the neighboring towns to stir up the people; and the men, women and children of Concord engaged vigorously in the removal of the cannon and stores to a place of safety. "I was then a lad fourteen years old," said the venerable Major James Barrett to me 1848, when he was eighty-seven years of age. "I could of carry a musket, but I could drive oxen. Stout men and women would load carts with stores, and then boys and girls of my age would go, one on each side of the oxen, with long goads, and whip them into a trot, and we carried away the stores, and hid them under pine boughs before the British regulars appeared."

Men from Lincoln, Acton and other places hurried toward Concord, and in the gray of early morning these, with the local minute-men, were drawn up in battle array on the Common, under the general command of colonel James Barrett, a soldier of the French and Indian war. Guards were placed at the bridges which spanned Concord River, a sinuous, sluggish stream, and at the centre of the village; and some militia were sent toward Lexington to gain information about the invading regulars, of whom they had uncertain stories. At about seven o'clock the militia men came hurrying back with the startling news that the regulars were near, and in number three times that of the America then assembled. The whole force of defenders now fell back to a hill about eighty rods from the centre of the village, where Colonel Barrett formed them in two battalions. This was scarcely done when the flashing of bayonets and of scarlet uniforms in the early morning sun, not more than a quarter of a mile distant, showed the immediate presence of the enemy. A short consultation of officers was held. Some were for giving fight on the spot where they stood, while others, more wise, perceiving that it would be simple murder of the men to cause them to fight against such odds, proposed to fall back a little distance and wait until they were made stronger by the militia from the surrounding towns, who were then flocking in. They did so and took post upon rising ground beyond the North Bridge, about a mile from Concord Common.

The British entered Concord in two divisions; one by the main road and the other over the hill from which the Americans had retired. Smith and Pitcairn remained in the town, and sent six companies to secure the bridges, prevent the militia from crossing them, and to discover and destroy the secreted stores, the hiding-places of which had been revealed by Tories. A party went to the house of Colonel Barrett to destroy stores supposed to be there, but were disappointed. The inhabitants had worked so industriously for the salvation of the treasure, that very little was left for the marauders. A few gun-carriages were there and those they burned. They demanded refreshments at the hands of Mrs. Barrett, and offered to pay for it. She refused the money, saying, "We are commanded to feed our enemy, if he hunger." In the village they broke open sixty barrels of flour, one-half of which was afterward saved. They broke off the trunnions of their iron twenty-four pound cannon, burned sixteen cannon carriage wheels, a few barrels of wooden trenchers and spoons, cut down and burned the Liberty-Pole, set the Court-house on fire, and cast about five hundred pounds of balls into a mill-pond. Mrs. Moulton put out the fire at the Court-house. The articles named were all the spoils gained by the expedition which produced a seven-years-war and the dismemberment of the British empire.

Rumors of the events at Lexington, vague and uncertain, had reached the Minute-men at Concord. All Middlesex awakened. The militia were flocking in from Carlisle, Chelmsford, Weston, Littleton, and Acton and before ten o'clock the force amounted to full four hundred men - about one-half that of the regulars. They were drawn up in line by Joseph Hosmer of Concord, acting adjutant, and Major Buttrick of the same village took the immediate command. When they saw the smoke ascend from the town, the question pressed itself upon the heart and judgment of every man: "What shall we do?" There was no Continental Congress; they had no orders from the Provincial Congress the were a little army of Middlesex farmers gathered for the defense of their homes and their rights: by what authority might they attack British troops acting under lawful orders? Would it not be treason? But the troops ere trampling upon their rights, and the smoke of their burning property w rising before their eyes. They took counsel of duty, and acted promptly. In the burying-ground on a hill near by, was the following epitaph on a stone over the grave of a slave: "God wills us free; man wills u slaves: I will as God wills God's will he done." Acting in the spirit of these lines, Isaac Davis of Acton drew his sword, and, turning to the company of which he as captain, said: "I haven't a man that's afraid to go." Then Colonel Barrett gave the word "march", and the Acton company, followed by others, al under the command of Major Buttrick, pressed forward, in double file with trailed arms, to drive the British from the North Bridge. The latter began to destroy it, when Buttrick urged his men forward to save it. As they approached the river, they were fired upon by the regulars. Captain Davis and one of his company were killed, when Buttrick shouted: Fire, fellow-soldiers for God's sake fire! Immediately a full volley was given the Minute-men, which killed three of the British and wounded several. Some other shots were fired, when the invaders retreated and the Minute-men took possession of the bridge.

The war begun at Lexington that morning w s seconded at Concord at the middle of the forenoon, and at meridian the same day, British power in America began to wane, when British regulars made a hasty retreat before an inferior number of provincial militia. Colonel Smith,

hearing the firing at the bridge, sent out reinforcements. These met the retreating detachment. Seeing the increasing strength of the Minute-men, they turned about, and at noon the whole invading force retreated toward Lexington, the main column covered by strong flanking parties. It was soon perceived that the whole country was in arms. Minute-men appeared with muskets everywhere. They swarmed from the woods and fields, from farm-houses and hamlets. It appeared as if the old fable of the sowing of dragons' teeth, that resulted in a crop of full-armed men, had become history. "The Americans," wrote a British officer, seemed drop from the clouds." The blood shed at Lexington and Concord loosed the bands of conscience, and wiped out all the scruples of those who had been governed by a nice sense of the duties of a subject, and of honor and discretion. War had begun. In open highways the exasperated yeomanry attacked the retreating invaders behind stone-walls, fences, buildings, and in wooded ravines they ambushed, and assailed their foes with single shots or deadly volleys; and man after man fell dead in the British ran or was badly wounded, until great wagons were filled with the slain and the maimed. The heat was intense, and the dust in the roads was intolerable. Exhausted by want of sleep, fatigue of marching, famine and thirst, the eight hundred men - the flower of the British army in Boston - must have surrendered to the armed yeomanry of Middlesex, soon after reaching arrived. It came in the form of reinforcements Lexington, had not relief under Lord Percy, and met the fugitives within half a mile of Lexington Common.

The request sent to Gage early in the morning for reinforcements had been promptly answered by ordering Lord Percy to lead about a thousand men to the support of Smith and Pitcairn. They left Boston at nine o'clock in the morning, and marched over the Neck and through Roxbury, to the tune of Yankee Doodle, played in derision, it being used as a sort of Rogue's March" when offenders were drummed out of the ranks. A lad in Roxbury, by many pranks, attracted the attention of Percy, who asked him why he seemed so joyful. "To think," said the boy, "how you will dance to 'Chevy Chase' by-and-bye." The ear was inclined to be superstitious, and the remark of the boy worried him all day. He was a son of the Duke of Cumberland, a lineal descendant of Earl Percy, one of the heroes of the battle of Chevy Chase, who was there slain.

Rumors of the skirmish at Lexington had reached the people along the line of Percy's march, and the gathering militia hung like an angry, threatening cloud upon his flanks and rear. Between two and three o'clock he met the retreating army, when he opened fire from his cannon upon the pursuing Americans, formed a hollow square, and received in it the exhausted fugitives. Many of the soldiers fell upon the ground completely overcome with fatigue, some of them "with their tongues hanging out of their mouths, like those of dogs after a chase." Percy dare not tarry long, for the woods were swarming with Minute-men. After a brief rest and partaking of some refreshments, the united force resumed their march toward Boston, satisfied that if they did not get back before sunset, they would not get there at all, for the militia were gathering from the neighboring counties. It was a fearful march for the troops, and for the people of the country through which they passed. The Americans relentlessly pursued, while flanking parties of the British committed many hideous excesses, plundering houses, burning buildings, and ill-treating the defenseless inhabitants. All the way to West Cambridge the retreating army concealed foes. There General William Heath, whom the Provincial Congress had appointed to the command of

the militia, accompanied by Dr. Warren, concentrated a considerable body of Minute-men, and skirmished sharply with the British. A bullet carried away a curl-pin from a lock of hair on Warren's temple, as he was moving here and there infusing his own heroic spirit into the militia, as he did on Breed's Hill a few weeks later. The contest was brief. The British kept the militia at bay, and pressed on toward Boston, narrowly escaping seven hundred Essex militia under Colonel Timothy Pickering, who attempted to bar he way to Charlestown, whither the fugitives were compelled to go. The regulars finally reached that village and the shelter of the guns of their frigates, when Heath ordered the pursuit to be stayed.

Charlestown had been in a state of panic all day. Dr. Warren rode through its streets early in the forenoon, and told the people of the bloodshed at Lexington. Then came the news rom Concord, at which many of the men had seized their muskets and hastened to the country. The schools were dismissed places of business were closed and when it was known I that the retreating British would pass through the town, many of the inhabitants gathered up their valuable effects an prepared to leave. The firing at Cambridge caused most of them to rush toward the Neck to seek safety in the country, when they were driven back in despair by the approaching fugitives. Rumors reached them that the British were slaughtering women and children in their streets, and many of the horror-stricken people passed the eight in the clay-pits back of Breed's Hill Not a single person was harmed in Charlestown. Percy ordered the women and children to stay in their houses. Reinforcements were sent over rom Boston guards were stationed; the wounded were taken to the hospital, and quiet was restored. General Pigot assumed command at Charleston the next morning, and before noon the shattered army were in their quarters in Boston. During the memorable day, the British lost in killed, wounded, and missing, two hundred and seventy-three men; the Provincials lost one hundred and three.

Three days after the fight at Lexington and Concord, the Provincial Congress of Massachusetts assembled at Water own, seven miles west of Boston, and chose Dr. Joseph Warren to be their President. A committee was appointed to draw up a narrative of the massacre." They took many depositions, by which it was proven conclusively that the British fired the first shots. This narrative, with a firm and respectful Address to the Inhabitants of Great Britain, was sent to Arthur Lee, the colonial agent in England, and were published in the London Chronicle on the 30th of May, nine days before General Gage's despatches reached his government. The ministry were confounded, and affected to disbelieve the statements, but their truth was soon established. When, on the of Gage were published, London was almost as 10th of June, the despatches much excited as Boston had been. Placards, lampoons, caricatures, and doggerel verses were hawked about the streets in profusion. The retreat of the British from Concord and Lexington was properly regarded as a defeat and a flight, and ministers were reviled because "the great British army at Boston had been beaten by a flock of Yankees."

The temporizing Dartmouth now saw the mischievous results policy of the ministry, and said: "The effects of the General Gage's attempt at Concord are fatal. By that unfortunate event, the happy moment of advantage is lost." Poor Gage was held responsible for the blunders of the ministry, and was censured without stint.

The news of the events on the 19th of April read rapidly over the land, and stirred society in the colonies as it had never been stirred before. There was a spontaneous resolution to environ Boston with an army of provincials that should confine the British to the peninsula. For this purpose, New Hampshire voted two thousand men, with Folsom and Stark as chief commanders. Connecticut voted six thousand, with Spencer as chief and Putnam as second. Rhode Island voted fifteen hundred, with Greene as their leader - Nathaniel Greene, who became one of the most efficient of the military officers in the war for independence. He was a Friend, or Quaker, in religious sentiment. He was naturally very intelligent, and had learned much from books; a skilled mechanic and expert farmer. His people admired him, and made him their representative in the Rhode Island legislature. In English jurisprudence and the theory of the art of war he had learned much; and his peace principles, in accordance with the discipline of his society, did not restrain him from making resistance to injustice by force, if necessary and at times, while the storm of the Revolution was gathering, he rode far to see grand military parades to gain some practical instruction in the art of war, for his prescience observed its approach. "In 1774, in a coat and hat of the Quaker fashion, he was seen watching the exercises and manoeuvres of the British troops at Boston, where he used to buy of Henry Knox, a bookseller, treatises on the art of war."

Meanwhile most important events had occurred in Virginia. On the 20th of March a convention of representatives of that province met in St. John's Church (yet standing) in Richmond. They approved the acts of the Continental Congress, and thanked their representatives who sat in that body. They resolved to be firm in defense of their liberties, but expressed a hope of speedy reconciliation. Patrick Henry promptly rebuked their expression of that hope. He, like Samuel Adams, Hawley, and Greene saw clearly that the colonies must fight. He knew the danger that threatened the liberties of his people. The House of Burgesses could no longer be relied upon as an auxiliary of the people in their struggle, because of the continual interference of the royal government. The colony was unprepared for the impending conflict. Only a little powder and a few muskets in the old magazine at Williamsburg comprised their munitions of war. In view of this weakness in the presence of danger which he foresaw, Henry proposed the appointment of a committee to prepare a plan for the embodying, arming, and disciplining a sufficient number of men to place the colony in a posture of defence. True patriots in the convention opposed the measure as mischievous at that time. They would not believe that armed resistance would be necessary. "It will be time enough to resort to measures of despair," they said, "when every well-founded hope has vanished." They suggested that the colonies were too weak to think of resisting the arms of Britain, and deprecated any action that should provoke war. They relied upon the innate justice of Englishmen for redress and reconciliation.

Henry's feelings kindled into a flame at these timid suggestions. "What," he exclaimed, "has there been in the conduct of the British ministry for the last ten years to justify hope? Are fleets and armies necessary to a work of love and reconciliation? Have we shown ourselves so unwilling to be reconciled that force must be called in to win us back to our love? Let us not deceive ourselves, sir. These are the implements of war and subjugation; the last arguments to which kings resort. I ask, gentlemen, what means this martial array, if its purpose be not to force us to submission? Has Great Britain any enemy in this quarter of the world to call for all this

accumulation of armies and navies. No, sir; she has none. They are meant for us; they can be meant for no other. They are sent over to bind and rivet upon us the chains which the British ministry have been so long forging. And what have we to oppose them? Shall we try argument? Sir, we have been trying argument for the last ten years; have we anything new to offer? Shall we resort to entreaty and supplication? We have petitioned; we have supplicated; we have prostrated ourselves before the throne, and have implored its interposition to arrest the tyrannical hands of the ministry and Parliament. Our petitions have been slighted; our remonstrances have produced additional violence and insult our supplications have been disregarded; and we have been spurned with contempt from the foot of the throne. In vain, after these things, may we indulge the fond hope of reconciliation. There is no longer any room for hope. If we wish to be free; if we wish to preserve inviolate those inestimable privileges for which we have been so long contending; if we mean not basely to abandon the struggle in which we have been so long engaged, and which we have pledged ourselves never to abandon until the glorious object of our contest shall be obtained, we must fight! I repeat it, sir; we must fight! An appeal to arms and to the God of hosts is all that is left us.

"They tell us, sir, that we are weak - unable to cope with so formidable an enemy. But when shall we be stronger? Will it be next week or next year? Will it be when we are totally disarmed, and when a British guard shall be stationed in every house? Shall we gather strength by irresolution and inaction? Shall we acquire the means of supinely on our backs and hugging the delusive phantom of hope, until our enemies shall have bound us hand and foot? Sir, we are not weak, if we make a proper use of those means which the God of nature hath placed in our power. Three millions of people, armed in the holy cause of Liberty, and in such a country as that which we possess, are invincible by any power which our enemy can send against us. Beside, sir, we shall not fight our battles alone. There is a great God who presides over the destinies of nations, and who will raise up friends to fight our battles for us. The battle, sir, is not to the strong alone it is to the vigilant, the active, the brave. And, again, we have no election. If we were base enough to desire it, it is now too late to retire from the contest. There is no retreat but in submission and slavery! Our chains are forged. Their clanking may be heard on the plains of Boston! The war is inevitable and let it come! I repeat it, sir; let it come! It is vain, sir, to extenuate the matter. Gentlemen may cry Peace, peace; but there is no peace! The war is actually begun. The next gale that sweeps from the North will bring to our ears the clash of resounding arms! Our brethren already in the field. What is it that gentlemen wish? What would they have? Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take, but as for me," he cried, with both arms extended aloft, his brow knit, every feature marked with the resolute purpose of his soul, and with his voice swelled to its loudest note, "Give me Liberty, or give me Death!"

Henry's resolution was adopted by an almost unanimous vote, and himself Richard Henry Lee, George Washington, Thomas Jefferson and others were appointed a committee to execute their designs. In a few days they submitted a plan for the defense of the colony, which was accepted, when the convention reappointed the delegates to the first Congress to seats in the second, to convene in May, adding Thomas Jefferson "in case of the non-attendance of Peyton Randolph."

Henry's prophecy was speedily fulfilled. Almost "the next gale" that swept from the North brought to their ears the clash of resounding arms at Lexington and Concord.

These bold proceedings caused the name of Henry to be presented to the British government in a bill of attainder, with those of Randolph, Jefferson, the two Adams's, and Hancock. They excited the official wrath of Governor Dunmore, who stormed in proclamations; and to frighten the Virginians, he caused a rumor to be circulated that he intended to excite an insurrection of the slaves. He extinguished the last spark of respect for himself when, late in April, he caused marines to come secretly at night from a vessel-of-war in the York River, and carry to her the powder in the magazine at Williamsburg. The movement was discovered. At dawn, the Minute-men assembled, and were, with difficulty, restrained from seizing the governor. The people also assembled, and sent a respectful remonstrance to Dunmore, complaining of the act as specially wrong at that time, when a servile insurrection was apprehended. He replied evasively. The people demanded the immediate return of the powder. Patrick Henry was at his house in Hanover, when he heard of the act. He assembled a corps of volunteers and marched toward the capital, when the frightened governor sent a deputation with the receiver-general to meet him. Sixteen miles from Williamsburg, they had a conference with the patriot. The matter was compromised by the payment by the receiver-general of the full value of the powder. Henry sent the money to the public treasury, and returned home.

In the midst of this excitement, the governor called the House of Burgesses together, to consider a conciliatory proposition from Lord North. They rejected it and the governor now fulminated proclamations against Henry and the committees of Vigilance which were formed in every county in Virginia. He declared that if one of his officers should be molested, he would raise the royal standard, proclaim freedom to the slaves, and arm them against their masters. He surrounded his house - his "palace" as he called it, with cannon, and secretly placed powder under the floor of the magazine, with the evident intention of blowing it up, should occasion seem to call for the deed. The discovery of this 'gunpowder plot' greatly excited the people. Then came a rumor, on the 7th of June (1775), that armed marines were on their way from the York river to assist Dunmore to enforce the laws. The people flew to arms. The governor, alarmed for his personal safety, withdrew, with his family, that night to Yorktown, and the next morning took refuge on board the British man-of-war *lob*. He was the first royal governor who abdicated government at the beginning of the Revolution.

From the Fowey, Dunmore sent messages, addresses, and letters to the Burgesses in session at Williamsburg, and received communications from them in return. When all necessary bills had been passed, the House invited Dunmore to his capital, to sign them, promising him a safeguard. He declined, and demanded that they should resent the papers at his present residence, the ship-of-war. They did not go; but delegating their powers to a permanent committee, they adjourned. So ended royal rule in Virginia. Other royal governors were also compelled to abdicate; and before the close of the summer of 1775, British dominion in the English-American provinces had ceased forever, and the people were preparing for war.

News of the events of the 19th of April reached the city of New York on Sunday, the 23rd. Regarding patriotism as holy thing, the Sons of Liberty there did not refrain from doing its work on the Sabbath. They immediately proceeded to lay an embargo on vessels bound to Boston with supplies for the British troops there. In defiance of the king's collector at that port, they landed the cargo of a vessel which he had refused to admit, demanded and received the keys of the Custom-house, dismissed those employed in it, and closed it. This was done by ears and Lamb, the chief leaders of the Sons of Liberty and they boldly avowed this overt act of treason in letters to their political friends in other cities. It was soon imitated elsewhere.

As the horrid story of Lexington and Concord spread over the provinces southward, royal authority rapidly disappeared. Provincial Congresses were organized in all the colonies where they did not already exist, and so the political union of the provinces was perfected. Provision was everywhere made for war; and in May, a convention of the representatives of the towns in Mecklenburg county, North Carolina, met at Charlotte, and by their proceedings, virtually declared the inhabitants of that county independent of the British crown. Taking into consideration the fact that the crown had proclaimed the people of the colonies to be rebels, the Convention declared that all government in their county had ceased, and proceeded by a series of resolutions, passed on the 31st of May, to organize independent local government for themselves. This famous "Mecklenburg Declaration of Independence" has been the subject of much discussion, disputations, and acute historical inquiry.

In the meantime an army of patriots were gathering around Boston with a determination to confine the British troops to the peninsula, or drive them to their ships and out to sea. On the morning of the day after the massacre at Lexington and Concord, and the fight on the retreat, the Massachusetts Committee of Safety sent a circular to all the towns of the province, saying: "We conjure you, by all that is dear, by all that is sacred we beg and entreat you, as you will answer it to your country, to your consciences, and, above all, to God himself that you will hasten and arrange, by all possible means, the enlistment of men to form the army; and send them forward to headquarters at Cambridge with that expedition which the vast importance and instant urgency of the affair demands."

The call was answered by many of the people before it reached their ears. It arose spontaneously out of the depths of their own patriotic hearts. Men started from the desk, the workshop, and the field the moment when the dreadful tale was told. Many of them did not stay to change their clothing; they carried neither money nor food, intent only upon having their firelocks in order, their powderhorns well supplied, and their bulletpouches well filled. The women on their way opened wide their doors and hearts for the refreshment and encouragement of the patriotic volunteers; and very soon all New England was represented at Cambridge. Veterans of wars with the Indians and the French appeared as leaders; and before the close of April a fluctuating army of several thousand men were forming camps and piling fortifications around Boston, from Roxbury to the Mystic River, along a line of about twenty miles. So early as the afternoon of the 20th, General Artemas Ward, the senior military officer appointed by the Provincial Congress of Massachusetts, was on the ground, and assumed the chief command. That

Congress, like the Committee of Safety, worked day and night in patriotic duty. They appointed military officers; organized a bureau of supplies, and issued bills of credit for the payment of the troops to the amount of three hundred and seventy-five thousand dollars, for the redemption of which the province was pledged. They declared that no obedience was thenceforward to be rendered to General Gage, and that he ought to be "considered and guarded against as an unnatural and inveterate enemy to the country." They took legislative and executive power into their own hands, and so abolished royal government in Massachusetts; and they forwarded deputations to the Second Continental Congress that assembled early in May, suggesting the necessity for making provision for organizing an army competent to oppose the troops expected from Great Britain.

It was at about that time, when society in the colonies was in a ferment, that Dr. Franklin arrived from England, when a poet of the day gave him a welcome in the following words:

"Welcome! once more To these fair western plains - thy native shore; Here live below'd and leave the tools at home To run their length and finish out their doom; Here lend them aid to quench their brutal fires, Or fan the flame which Liberty inspires; Or fix the grand Conductor that shall guide The tempest back, and 'lectrify their pride. Rewarding Heaven will bless thy cares at last, find future glories glorify the past. Why staid apostate Wedderburn behind, The scum, the scorn, the scoundrel of mankind? Whose heart at large to ev'ry vice is known, And every devil claims him for his own Why came he not to take the large amount Of all we owe him, due on thine account?"

Chapter LXII

Perfidy of Gage - Capture of Ticonderoga and Crown Point - The Second Continental Congress - Declarations of Their Views and Intentions - Petitions and Addresses - Preparations for War - National Functions of Congress - Connecticut Troops at Harlem - Fortifications in New York Ordered - The Forces at Cambridge Made a Continental Army - British in Boston - Washington Appointed Commander-in-Chief - Continental Paper Currency - The Army at Cambridge - Gage's Proclamation - Battle of Bunker's Hill.

GAGE now saw the real peril of his situation, surrounded as he was by an army of exasperated men outside of Boston, and deadly foes within it. Instead of relaxing his rigor, he increased it for a moment in order to secure an unfair advantage. He forbade all intercourse with the country, and no one was allowed to leave the town. Their supplies of food and fuel thus cut off, famine stared the people in the face. The worst horrors of civil war were impending; and at that moment of their agony of dread, Gage offered to give safe conduct out of Boston to all who wished to go, provided they would surrender their arms, and promise not to join in an attack on his troops or works. In their extremity they accepted his proposition, and delivered their arms at Faneuil Hall. The exodus immediately began, when the Tories interfered. They begged Gage to keep the patriotic citizens as hostages. He violated his solemn pledge, and kept many of the disarmed inhabitants there, some of them separated from portions of their families, and exposed to bitter insults.

The patriots now determined on aggressive movements to weaken the British power on the continent. It was believed that the ministry entertained a scheme for separating New England from the rest of the colonies by a military occupation of the Hudson Valley and Lake Champlain, the latter the Indian door of the country opening between the Hudson and the St. Lawrence. On Lake Champlain were the two powerful fortresses of Ticonderoga and Crown Point, which might be made most efficient in executing the proposed scheme, for they would secure free intercourse with Canada. Are the Canadians friendly to us? was then a question of great importance for the patriots. In March, Samuel Adams and Dr. Warren, members of the Committee of Correspondence, sent John Brown of western Massachusetts, as a secret agent of that province, to seek an intelligent answer. He sent word that the Canadians were lukewarm, at the best, and advised the seizure of Ticonderoga and Crown Point the moment the impending conflict should be commenced and he assured them that the Green Mountain Boys, as the men of Vermont (then the New Hampshire Grants) were called, whose leader was sturdy, patriotic, honest Ethan Allen, were ready to undertake the enterprise.

When the blow was struck on the 19th of April, it was resolved to secure the lake fortresses at once. Samuel Adams and John Hancock conferred personally on the subject with the governor of Connecticut, at Hartford, when funds were appropriated from the public treasury for the expedition, and powers delegated to two citizens as a committee to superintend the expedition. An express was sent to Allen, asking him to hold his Boys" in readiness. The whole movement was done in secret, yet hints of it reached the ears of Benedict Arnold, who was about to leave for

Cambridge with a Connecticut company of which he was captain.

The committee gathered sixteen men at Salisbury and marched to Pittsfield, where they were joined by Brown and Colonel Easton, with a small force of Berkshire volunteers. Pushing on to Bennington, they were joined by Allen and his men; and on Sunday, the 7th of May, 1775, they rendezvoused at Castleton. There they were joined by Arnold. On his arrival at Cambridge he had proposed to the Provincial Congress an expedition against the forts, and received from them a commission of colonel, and authority to raise and lead not more than four hundred men against the lake fortresses. By virtue of this commission, he claimed the leadership, though he came with only one man. The militiamen chose Allen as their leader, and Arnold accompanied the expedition as a volunteer.

On the evening of the 9th of May, the expedition was at Shoreham, opposite Ticonderoga. Only a few boats could be found there. In these, eighty-three men, with Allen at their head and accompanied by Arnold, passed over. The boats were sent back for more men under Colonel Seth Warner; but as a surprise of the garrison was necessary, and the day was dawning, the intrepid leader resolved not to wait. "It is a desperate attempt," said Allen to his men, in a low voice: "I don't urge it contrary to will you that will undertake voluntarily, poise your firelocks." Every musket was poised. The men followed Allen up the bank to the sally-port, led by a lad familiar with the fort. The sentry snapped his fuzee, and ran into the fortress through a covered way, closely followed by Allen and his men. As they rushed into the parade they gave a tremendous shout, and ranged themselves in two lines against opposite walls. The aroused garrison leaped from their beds, seized their arms, and hastened to the parade, only to be made prisoners by the New Englanders.

Captain Delaplace, the commandant of the garrison, awakened by the shout, sprang from his couch, followed by his alarmed young wife, and without dressing hastened to the door of his quarters in the upper story. Allen had already ascended the outside steps leading to that door, and giving three loud raps with the hilt of his sword, shouted, "Come out instantly, or I will sacrifice the whole garrison!" As the captain opened the door, the pretty face of his frightened wife peering over his shoulders, Allen said, in a loud voice: "I order you instantly to surrender! Delaplace and Allen were old friends. The astonished captain exclaimed: "By what authority do you demand a surrender?" Allen raised his sword and thundered out: "In the name of the Great Jehovah and the Continental Congress!" The captain began to speak, when Allen pointed to his men, and ordered him to be silent and surrender immediately. Delaplace obeyed; and the strong fortress, which had cost the British government millions of pounds sterling and many lives, passed into the possession of a few undisciplined men without the loss of a drop of blood. The Continental Congress, as an organized body, were not in existence until some hours after the surrender but Allen knew they were to assemble on that day, the 10th of May, 1775. With the fort were surrendered about fifty men, more than a hundred cannon, mortars, howitzers and swivels, many small arms, and a considerable quantity of ammunition and stores. Some of the great guns were afterward used by the patriots in the siege of Boston. Colonel Warner had crossed the lake with the remainder of the volunteers, and reached the fort at the moment of the surrender. On the 12th he led a

detachment, in boats, against Crown Point, and captured that strong fortress without bloodshed.

In a large room of the State-house in Philadelphia, now known as Independence Hall, the Second Continental Congress met on Wednesday, the 10th of May, and chose Peyton Randolph of Virginia for the President, and Charles Thomson, Secretary. Again Mr. Duche was invited to become the chaplain of Congress. Representatives of all the colonies were present on that day, except from Georgia, but late in July there were delegates present from that province. They met under a dense cloud of difficulties, through which, for awhile, few rays of sunlight could pierce. They had met as the representatives of separate colonies that were in a state of virtual rebellion against a powerful government which had declared its intention to bring them into submission by force of arms. Armies and navies were already on their coasts for the purpose, and more men were on the way. War had actually begun in two of the colonies, and overt acts of treason had been committed in nearly all. As an executive body, they were legally powerless. They had no authority from any one to employ a soldier or levy or collect a tax. They had no executive head, no legislative functions, no treasury. They were assembled, as was the First Congress, simply as a great advisory committee composed of smaller committees from the several colonies. They were representatives of colonies groaning under serious grievances and petty tyrannies, and ready to fight for their rights, and yet loyal and loving subjects of the king of Great Britain. Even so radical a Son of Liberty as Dr. Warren, wrote from the Massachusetts Provincial Congress after the 19th of April, expressing a hope that the government would see the folly of its course and act justly, and saying: This I most heartily wish, as I feel a warm affection still for the parent state." The delegates were more varied in their nationalities, their theological views, and their local interests than the prismatic colors; how were they to combine and become white, powerful, life-giving sunlight? was the vital question of the hour. The unexpected kindling of war compelled them to consider measures for defence, and yet there was indecision, for many members believed reconciliation possible, and wished to keep the door open.

The Congress having resolved themselves into a committee of the whole to take into consideration the state of the colonies, reported on the 26th of May, that war had been commenced by Great Britain that they had no intention to cast off their allegiance to the crown and that they anxiously desired peace. At the same time they declared that the colonies ought to be put in a posture of defense against any attempt to coerce them into submission to parliamentary taxation. They resolved that no provisions ought to be furnished the British army or navy; that no bills of exchange drawn by British officers ought to be negotiated, and that no colonial ships ought to be employed in the transportation of British troops. They considered it useless to memorialize the Parliament but after strenuous opposition from the Massachusetts delegation, among whom the idea of independence was fast blossoming, it was resolved that another petition to the king should be drawn up and sent to his majesty. It was done. An Address to the Inhabitants of Canada; a Declaration setting forth the causes and the necessity for the colonies to take up arms an Address to the Assembly of Jamaica, to the Inhabitants of Great Britain, and to the People of Ireland, were also adopted. To the king they expressed their continued devotion to his person, and their deep regret that circumstances had in the least weakened their attachment to the crown. To the people of Great Britain, they truthfully declared that their acts were wholly

defensive; that the charge that they were seeking absolute independence was a malicious slander, and that they had never applied to a foreign power for countenance or aid in prosecuting a rebellion, as had been falsely alleged. They set forth, in very nervous sentences, that ill-treatment by the British government in the rejection of petitions, and oppressive acts of Parliament, was the cause that placed them in the attitude of resistance which they then assumed, contending that it was necessary and justifiable, and worthy of the free character of the subjects of Great Britain. They boldly said, when commenting upon the wanton exercise of arbitrary power: "Shall the descendants of Britons tamely submit to this? No, sirs! We never will, while we revere the memory of our gallant and virtuous ancestors, we never can surrender those glorious privileges for which they fought, bled, and conquered. Admit that your fleets could destroy our towns, and ravage our sea-coasts; these are inconsiderable objects, things of no moment to men whose bosoms glow with the ardor of liberty. We can retire beyond the reach of your navy, and, without any sensible diminution of the necessaries of life, enjoy a luxury which, from that period, you will want - the luxury of being free."

From this time the Continental Congress were less timid. From the beginning they had evinced a determination to sustain Massachusetts in her defense of her charter. Now they assumed comprehensive authority without any fixed limits of action. They did not wait for the result of their petition to the king, but went forward in preparations for a struggle for life. They exercised supreme executive, legislative, and sometimes judicial functions; and in the ready obedience to their mandates observed by the several colonies, they derived their authority. The supporters of the Congress throughout the land were so strong in character and intelligence, that, from the summer of 1775 until the end of the war, that body never lacked moral strength for the exercise of the functions of a national government. All subjects of a general character were submitted to the consideration of the Congress. For example: When a rumor prevailed that a British regiment had been ordered from Ireland to New York, the Committee of One Hundred, of that city, which had been appointed to supersede that of Fifty-one, asked the Congress how they should act; and when a Provincial Congress had been organized in that colony in May, 1775, that body submitted grave questions of public policy to the Continental Congress as a national and supreme tribunal, and suggested to them the propriety of issuing bills of credit in the name of the United Colonies, to furnish funds for defraying the expenses of defending the whole people. This was the first suggestion for the Congress to exercise national functions.

New York was advised to permit the troops to land, and live in barracks, but not to fortify the city. They also suggested the inviting of General Wooster to come to their borders with his Connecticut regiment to assist in defending the city against any hostile movement of the expected troops. It was done, and Wooster was encamped at Harlem, whence he sent detachments to Long Island to guard against British cruisers and foragers, and to intercept supplies of provisions sent to the troops in Boston.

At first the Continental Congress hesitated to approve the capture of the forts on Lake Champlain, but when timidity gave place to courage, they were anxious to maintain possession of them as a means for keeping the control of the Hudson Valley. For the like purpose, they directed

the Provincial Congress of New York to fortify posts at the upper end of New York Island, and on both sides of the Hudson in the Highlands. At about the same time, when President Randolph was called to the chair as Speaker of the Virginia House of Burgesses, they chose John Hancock to succeed him. Mr. Harrison of Virginia, as he conducted Hancock to the chair, said: We will show Britain how much we value her proscriptions."

The Congress were now called upon to exercise still higher national functions. It was soon perceived that the aged, good, and virtuous General Ward was not possessed of sufficient military ability to be chief commander of the motley forces which had been suddenly gathered at Cambridge. The Provincial Congress of Massachusetts apprehended the fading away of that army unless a more efficient commander might be found, and they gladly perceived a way for making a change without offence by asking the General Congress to assume the regulation and direction of that army. The war was, evidently, to become a continental one, and it was proper that a continental army should be organized. The request was made, and in a private letter written by Joseph Warren to Samuel Adams, it was intimated that the request was to be interpreted as a desire for the appointment of a generalissimo or commander-in-chief of all troops that might be raised. The request was immediately followed by the news that reinforcements for the army in Boston were arriving, and that Generals Howe, Clinton, and Burgoyne were already there. The Congress felt compelled to act promptly, for there were indications that war would be commenced at some points remote from Massachusetts, in order to distract the colonies. They did not then know that Gage had advised his government to send fifteen thousand troops to Boston, ten thousand to New York, and seven thousand Canadians and Indians to operate in the region of Lake Champlain, falsely accusing the Americans of employing savages against British troops.

Feeling that the union of the colonies was complete, notwithstanding Georgia was not yet represented in the Congress, that body, on the 7th of June, in a resolution for a general fast, had spoken, for the first time, of "the twelve United Colonies." To make the bond stronger, they now, on motion of John Adams, adopted the forces at Cambridge as a Continental Army, and proceeded to choose a commander-in-chief. At the suggestion of the New England delegation, Thomas Johnson of Maryland nominated George Washington, of Virginia, then a member of the Congress, for that important office, and he was elected by a unanimous vote. That was on the 15th of June. When, on the following morning, President Hancock officially announced to Washington his appointment, that gentleman arose in his place, and formally accepted the office. In his modest speech on that occasion, after expressing doubts of his ability to perform the duties satisfactorily, he said: As to pay, sir, I beg leave to assure the Congress that, as no pecuniary consideration could have tempted me to accept the arduous employment at the expense of my domestic ease and happiness, I do not wish to make any profit from it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire." Washington was then forty-three years of age. Four major-generals and eight brigadier-generals were appointed in the course of a few days. The former were Artemas Ward, Charles Lee, Philip Schuyler, and Israel Putnam the latter were Seth Pomeroy, Richard Montgomery, David Wooster, William Heath, Joseph Spencer, John Thomas, John Sullivan, and Nathaniel Greene.

On the 22nd of June, the Congress resolved to issue a sum not exceeding two million dollars, on bills of credit, for the defense of America," prescribed the form of the bills, and appointed a committee of five to attend to the printing of them. The plates were rudely engraved by Paul Revere, of Boston, and printed on such thick paper, that the British called the currency the paste-board money of the rebels." Each denomination had a separate and significant device and motto, which bore the stamp of the mind of Dr. Franklin, who was one of the committee. Twenty-eight gentlemen were appointed to sign them. New issues were made at various times until the close of 1779, when the aggregate amount was \$242,000,000. Then the bills had so much depreciated that one hundred dollars in specie would buy twenty-six hundred in paper currency. They very soon became worthless. In January, 1781, Captain Allan McLane paid \$600 for a pair of boots, and \$10 for a skein of thread.

At the beginning of June (1775) the army at Cambridge numbered about sixteen thousand men, all New Englanders. General Ward was the chief and John Thomas was his lieutenant. Richard Gridley, who was the engineer-in-chief at the reduction of Louisburg thirty years before, was commissioned to command an artillery corps and to be chief engineer, and was assisted by Henry Knox, a Boston bookseller, who had commanded an artillery company in that town. The British force in Boston was increasing by fresh arrivals. It numbered then about ten thousand men. Generals Howe, Clinton, and Burgoyne had arrived late in May, and heartily joined Gage in forming and executing plan for dispersing the rebels. Feeling strong with these veteran officers and soldiers around him, and the presence of several ships-of-war under Admiral Graves, the governor issued a most insulting proclamation, declaring martial law, branding those citizens in arms, and their abettors, as rebels and "parricides of the Constitution," and offering pardon to all who should forthwith return to their allegiance, excepting Samuel Adams and John Hancock, who were reserved for condign punishment as traitors. This proclamation produced intense indignation throughout the province. All the records of time," wrote Mrs. John Adams to her husband, "cannot produce a blacker page. Satan, when driven from the regions of bliss, exhibited not more malice. Surely the father of lies is superseded. Yet we think it the best proclamation he could have issued."

At about the middle of June, the British officers in Boston waked to the consciousness that rebel batteries at Dorchester Heights on the south, or on Charlestown Heights - Bunker's or Breed's Hills - on the north, might make the situation of the troops in the town not only disagreeable but perilous. They resolved to sally out and fortify these heights themselves, Dorchester on the 18th of June, and Bunker's Hill a few days later. Rumors of this intention reached the Committee of Safety, to whom the Provincial Congress had delegated all discretionary powers to regulate the movements of troops, and they proposed the immediate fortification of Bunker's Hill before their enemy should come out.

On the 16th of June, an order was issued for the regiments of Colonels Frye, Bridges and Prescott, Samuel Gridley's company of artillery, and a fatigue party of Connecticut troops, under Captain Thomas Knowlton, of Putnam's regiment, to parade in the camp at Cambridge at six o'clock in the evening, with intrenching tools. The whole were placed under the command of

Colonel William Prescott of Pepperell, who received written orders from General Ward to proceed to and fortify Bunker's Hill on the Charlestown peninsula. At nine o'clock in the evening, after a prayer by Dr. Langdon, President of Harvard College, a larger portion of these regiments, accompanied by General Putnam, marched over Charlestown Neck and along the road to Bunker's Hill. The whole force numbered about thirteen hundred men. They proceeded silently in the darkness. A council was held in the gloom, when it was decided that Breed's Hill, nearer Boston, would be the most effective point for a fortification. They accordingly proceeded to that eminence overlooking Charlestown on the edge of the water, and there, in the star-light, a thousand men began the work with pick and spade. The waning moon rose at midnight, and in its pale light they worked in such silence until dawn, that they were not discovered by the sentinels on the ships-of-war that lay in sight below them, and whose voices, crying out hourly All's well they could distinctly hear. There lay the Lively, Gage, Somerset, and Cerberus, with floating batteries, in fancied security, while the toilers piled the earth so vigorously, that a redoubt rose six feet above the earth at daybreak on Saturday, the 17th of June. Then they were discovered by the sentinel on the Lively. The captain beheld the strange apparition with wonder and alarm, and without waiting for orders from the admiral, he put springs on his cable and opened a sharp fire on the unfinished work. Other vessels opened broadsides upon that seeming creation of magic, while the Americans within the redoubt, unhurt by the shots, worked steadily on.

That cannonade at dawn on a beautiful summer morning, broke the slumber of the troops and citizens in Boston, and filled both with astonishment. Very soon roofs, balconies, and steeples were alive with gazers upon the strange scene. Gage summoned his principal officers to a council, when it was decided that the Americans must be dislodged, at all hazards. The newly-arrived generals proposed to land troops on Charlestown Neck, and taking the rebels in reverse, cut off their retreat and prevent their reinforcement. Gage decided to attack them in front and about twenty-five hundred troops, composed of infantry, grenadiers, and artillery, with twelve pieces of cannon, crossed the Charles River in boats, at a little past noon, under cover of a tremendous cannonade from the shipping and Copp's Hill, and landed toward the eastern extremity of the Charlestown peninsula, at the head of the present Chelsea Bridge. There Howe reconnoitered the American position, ordered his men to dine, and sent back to Boston for reinforcements. The men at the redoubt had toiled all the forenoon, completed their work, and at meridian exchanged the pick and spade for the accoutrements of war. Almost twelve hours had they labored, with little rest and food. They had cast up a redoubt about eight rods square, and an embankment on its left extending about a hundred yards toward the Mystic River; also a similar line on the right. The troops, wearied with work and want of food and sleep, asked for relief but their leader said "No you have cast up the redoubt, and you shall have the honor of defending it." They asked for reinforcements, which he at first declined calling for, supposing the British would not attack him. At length there were indications in the city that they were coming out, and Prescott sent to General Ward for reinforcements. That officer tardily complied with the request, and sent the New Hampshire regiments of Stark and Reed also some small field pieces. Some other detachments joined Prescott, and Dr. Joseph Warren, who had just received a commission as major-general, arrived with the cheering news that other reinforcements were coming. Putnam was there, flying from point to point to make dispositions for securing a victory, and urging Ward,

who was afraid of an attack upon Cambridge, to send on reinforcements.

When Howe was about to move at three o'clock in the afternoon, the Americans were prepared for the contest. Prescott, with Warren, and the constructors of the redoubt, were within that work, excepting the Connecticut troops, who, with the New Hampshire forces, were at a rail fence and breastworks on the west of the redoubt. The artillery companies were between the breastwork and a rail fence on the eastern side, and three companies were stationed in Charlestown at the foot of Breed's Hill.

Just as the fight was about to begin, reinforcements came for Howe and landed at the present entrance to the Navy Yard. They consisted of a regiment, some companies of light infantry and grenadiers, and a marine battalion led by Major Pitcairn of Lexington fame. The entire British force now confronting the Americans on the peninsula numbered more than three thousand.

At half-past three o'clock, Howe's great guns moved toward the redoubt, and opened fire upon the works. They were followed by the troops in two columns, commanded respectively by Generals Howe and Pigot, the infantry and grenadiers assailing the outworks. At the same time the guns on the ships and the battery on Copp's Hill hurled random shot in abundance upon the little earthwork. In the midst of the roaring thunder, the Americans were silent in the redoubt, and mostly so along the lines of intrenchments and fences, for their leader had ordered them not to fire until they could see the whites of the eyes of the approaching foe. The silence was a riddle to the English. It was soon solved. When they were within the prescribed distance, up rose the concealed host, fifteen hundred strong, at the word Fire! and poured such a tremendous and destructive storm of bullets upon the climbers of the green slope, that whole platoons and even companies were prostrated as a scythe would have mown down the long grass through which they were wading. Flags fell to the ground like the tall lilies in a mown meadow, and the shattered army was horror-struck for a moment. The bugles sounded, and they fell back to the shore, when a shout of triumph went up from the crest of Breed's Hill. Howe soon rallied his men, and repeated the attack with a similar result.

The British were greatly annoyed by shots from houses in Charlestown, and, at the request of Howe, shells were thrown into it from Copp's Hill, and set the village on fire. Very soon almost two hundred wooden buildings, dwellings, and churches were in flames, and Breed's Hill was shrouded in black smoke for awhile, until a gentle breeze that suddenly sprang up blew it away. At the same time General Clinton, who, from Copp's Hill, had seen the second recoil of the British troops, hastened across the river, and at the head of some broken battalions shared in the perils and success of a third attack, for Howe had again rallied his troops, and was pressing toward the Americans. The British had been ordered to march at quick step, and use only their bayonets. These and the artillery soon drove the defenders of the breastworks into the redoubt. Again from that flaming centre went out dreadful volleys that shattered the head of the British column. The powder of the Americans was now almost exhausted. Their fire became more feeble. The British pushed up to and over the ramparts; and after a hand-to-hand struggle in the redoubt with bayonets and clubbed muskets, the Americans were driven out. They fled toward Charlestown

Neck, where reinforcements had been arrested by a severe enfilading fire from the British vessels. The retreat of the main body was covered by the prolonged fighting of Stark, Reed, and Knowlton at the outworks, with some reinforcements. Warren was the last to leave the redoubt, and was hurrying toward Bunker's Hill, where Putnam was trying to rally the fugitives, and was shot dead by a bullet that pierced his brain. The British loss in this battle - killed, wounded, and prisoners - was ten hundred and fifty-four. Among the officers slain was Major Pitcairn. His pistols are now in the possession of descendants of General Putnam. The Americans lost in killed, wounded, and missing, four hundred and fifty.

This conflict, known as the Battle of Bunker's Hill, though fought on Breed's Hill, lasted almost two hours. It was gazed upon by anxious thousands who were on the neighboring hills and the roofs, and steeples in Boston, deeply interested spectators of a terrible scene in which dear kindred were engaged. When the redoubt was carried and the Americans retreated, the whole body of troops on the peninsula were compelled to run the gauntlet of cannon-balls from the British vessels, as they fled across Charlestown Neck. Many were slain there. The survivors encamped that night on Prospect Hill, and the British reposed on their arms on the field of battle until the next morning, when they passed over the water to Boston never again to appear on the main land of Massachusetts.

Chapter LXIII

Washington Takes Command of the Continental Army - Preparations for the Siege of Boston - Disposition of the Opposing Armies - Dealings with the Canadians - Canada to be Invaded - Exploits on Lake Champlain - Instructions to General Schuyler - The Indians and the Johnson Family - Benedict Arnold - The Canadians - Character of the Troops at Ticonderoga - Montgomery Summoned to Command Them - St. Johns Besieged and Captured - Allen Made Prisoner - Arnold's Expedition - Preparations to Besiege Quebec.

WASHINGTON did not go to his home at Mount Vernon after his appointment to the chieftainship of the Continental Army; but six days after that appointment (June 21), he left Philadelphia for the east. He was accompanied by Generals Lee and Schuyler. They were escorted to New York by Philadelphia light-horsemen. At Trenton they met a courier riding in haste to give the Congress news of the battle of Bunker's Hill. He relieved the mind of Washington of a great burden of anxiety by assuring the general that the militia behaved nobly in the battle, for of such materials the Continental Army was composed.

Washington arrived in New York on Sunday afternoon, the 25th of June, where he was received by the Provincial Congress, and addressed by their President, Philip Livingston, in a highly conservative speech for the royal governor, Tryon, had just arrived also, and public sentiment in New York was almost equally divided in favor of the two distinguished men. After returning the salutation in a few words, Washington retired to his lodgings, where he spent the whole evening with Schuyler in consultation about operations in the Northern Department, over which the latter was placed. It was then the most important field, for it had a broad frontier on unfriendly Canada, a wily and treacherous foe in the Indians within its bosom, and a demoralizing element of loyalty to the crown pervading its more influential society.

On Monday morning Washington and Lee, accompanied by Schuyler, rode to New Rochelle, where they conferred with the veteran soldier, General Wooster. There Schuyler left them, when they journeyed on toward the New England capital, receiving the warmest greetings of the people who flocked to the highways to catch a glimpse of the eminent Virginian. These officers reached Watertown, seven miles from Boston, on the morning of the 2nd of July, where they received congratulatory addresses from James Warren, resident of the Provincial Congress in session there. They arrived at Cambridge early in the afternoon, when Washington established his headquarters in the house provided for him, lately the residence of Professor Longfellow, the poet. At nine o'clock the next morning (July 3), he appeared, with his suite, under a large elm tree yet standing at the northerly end of Cambridge Common. The Continental forces were drawn up in line, when Washington, with uncovered head, stepped a few paces forward, drew his sword, and took formal command of the Army. In that important office he served without intermission almost eight years, when he resigned his commission into the custody of the Congress, from which body he received it.

On the 4th of July, Washington issued his first general order, in which he recommended

sobriety, harmony, order, and the constant exercise of patriotism and morality, and a humble reliance upon God. On the 9th, he held his first council of war; and ten days afterward Adjutant-General Gates reported present, fit for duty, 13,743 men, and an enrollment of 16,770, all from the colonies of Massachusetts, Connecticut, New Hampshire, and Rhode Island. Some riflemen from Maryland, Virginia, and Western Pennsylvania, led by Daniel Morgan, a man of sturdy frame and unflinching courage, who had seen service in the French and Indian War, joined the army soon afterward.

Washington immediately began the siege of Boston by so disposing his forces as to confine the British to the peninsula and the adjacent islands and shores. He arranged his army in three grand divisions, each division containing two brigades. The right wing was placed under General Artemas Ward, with brigadiers Thomas and Spencer. They were stationed at Roxbury. The left wing was commanded by General Lee, and consisted of the brigades of Sullivan and Greene. These occupied Winter and Prospect Hills. The centre was commanded by General Putnam. One of his brigades was commanded by Heath, and the other by a senior officer of less rank than a brigadier, for Pomeroy had declined the office conferred upon him by the Congress. The Americans cast up strong lines of intrenchments between the extremities of the army. The British were strongly intrenched on Bunker's Hill, about half a mile from the battle-ground on Breed's Hill. Their sentries occupied Charlestown Neck floating batteries were moored in Mystic River, near Bunker's Hill, and a twenty-gun ship was anchored at the ferry between Boston and Charlestown. On Copp's Hill, in the city, the British had a strong battery. The bulk of the army under General Howe (who had succeeded Gage in the chief command) lay upon Bunker's Hill, and some cavalry and a small corps of Tories remained in the City. Such was the relative position of the belligerent forces during the summer and early autumn of 1775.

Meanwhile the civil powers of the General Congress and of the province were strengthened by consolidation. In Massachusetts a House of Representatives was organized under the original charter, which vested executive powers in a council chosen by the people, in the absence of the governor and his lieutenant. That body, therefore, assumed such powers, as a single executive committee, vested with all the functions of Committees of Correspondence, Inspection, and Safety. Under such a government the people of Massachusetts lived, until they formed a State Constitution in 1780.

We have observed that the General Congress sent an address to the inhabitants of Canada. It was affectionate in its terms. It invited them to join the other colonies in efforts to obtain a redress of grievances. But the duplicity of the Congress of 1774 had made the Canadians lukewarm, as John Brown reported them, if not actually hostile. That Congress had also addressed them in affectionate terms; but in their address to the people of Great Britain, who delighted in shouting No Popery! they had, unfortunately, in alluding to the Quebec Act, said: "We think the Legislature is not authorized by the constitution to establish a religion fraught with sanguinary tenets, in any part of the globe; nor can we suppress our astonishment that a British Parliament should ever consent to establish in that Country [Canada] a religion that has deluged your island in blood and dispensed impiety, bigotry, persecution, murder, and rebellion through

every part of the world." This address, like the one to the Canadians, was translated into the French language, and scattered among the priests and the people by the press. It created much indignation for awhile, but the resentment soon cooled, for the national hatred of the English by the French population made the latter soon feel kindly toward the Bostonians," as the patriots were called.

Carleton proclaimed martial-law in Canada, and denounced the borderers who seized the lake posts as rebels and traitors. He sought alliances with the Indian tribes, and proposed to invade New York for the purpose of recovering those posts. When, in June (1775), the Continental Congress heard of these things, the conquest of Canada seemed to them and to the people as a simple act of self-defence, and it was resolved to undertake that task. It ought to have been attempted sooner. Allen urged it with vehemence soon after the posts were taken. Hoping his advice to invade Canada at once would be followed, he began to prepare for the important work. A party of his Green Mountain Boys captured Skenesborough, at the head of Lake Champlain (now Whitehall), with a son of Skene, the proprietor, and many of his people. They also took away from them a schooner and several bateaux. Colonel Arnold armed the schooner with guns from Ticonderoga, fully manned it, and with some bateaux sailed down the lake to attack the fort at St. Johns, on the Sorel, its outlet, followed by Allen, with one hundred and fifty men, in boats and bateaux. Arnold left the schooner at the foot of the lake, and with thirty- five men, who went in boats, he captured the little garrison at St. Johns, destroyed some vessels there, and sailed for Ticonderoga with his prisoners. He met Allen on the way. After a brief conference, the latter pressed forward to garrison the captured fort but on the approach of a superior force of Canadians from Montreal and Chambly he retreated. Then it was that Allen, by an earnest letter, entreated the Congress to invade Canada. The exploits of the Green Mountain Boys and of Arnold showed how easily the conquest might be achieved. But the Congress then regarded the letter of the bold leader as the utterances of the wild fancy of an ambitious adventurer drunk with sudden success. But events soon changed their minds. After the information of Carleton's movements had been received, and the battle of Bunker's Hill had startled the continent, the Congress and the people saw the folly of the delay. The operations of the patriots on Lake Champlain had aroused the British authorities in Canada to a sense of their danger the delay had enabled them to take measures for arresting that danger.

General Schuyler was ordered to repair to the lake fortresses, where Colonel Hinman was in command with a few Connecticut troops. He had been appointed to that station with the sanction of the Continental Congress. Schuyler was authorized, if he should find it practicable and not disagreeable to the Canadians, immediately to take possession of St. Johns and Montreal, and pursue such other measures in Canada as might have a tendency to promote the peace and security of the province." These mild and cautious words were properly interpreted as an explicit order to invade Canada. Agents were sent among the Indians in the Mohawk country at the same time, to secure their neutrality, but not to force military alliances with the savages. The Congress also appointed a Board of Commissioners of Indian Affairs, of which General Schuyler was appointed chairman. His family had always maintained a great influence over the chiefs of the Six Nations; and the general was popular among them. The value of his services in keeping these

nations neutral or passive during the struggle cannot be estimated.

Schuyler did not reach Ticonderoga until the 18th of July, having been detained at Albany and vicinity in consequence of alarming news from the Indian country. It was asserted that Guy Johnson, the Indian agent, who had espoused the ministerial cause, was endeavoring to make the Six Nations the allies of the British in the impending struggle and that Sir John Johnson, the son and heir of Sir William, was organizing a military force for the same purpose, among his retainers who were chiefly Scotch Highlanders and the Tories of Tryon county. These rumors were largely true, and demanded instant attention.

When Schuyler arrived at Ticonderoga, he found great confusion prevailing. Colonel Arnold, who claimed precedence to all others because of his earlier commission from the Provincial Congress of Massachusetts, refused to acknowledge the authority of Colonel Hinman and most of the Green Mountain Boys, disgusted by Arnold's offensive bearing toward Allen and other officers, had returned home. Complaint of his conduct was made to the body who commissioned him. It was a difficult case to deal with. Nobody doubted Arnold's bravery and skill, and his usefulness as a leader. But he was ambitious, unscrupulous, and so quarrelsome that few could endure him in his mood at that time. A committee was sent to investigate the matter. They were empowered to order his return to Massachusetts, or to submit to Hinman's authority. When their errand was revealed to Arnold, he was enraged. He stamped, swore, cursed all Congresses and kings, fate, committee-men in general and his present inquisitors in particular, and, with horrid oaths, he declared that he would be second to no man. Then he threw up his commission, disbanded his men, and rode to Cambridge to lay his grievances before Washington.

Schuyler's first object was to ascertain the state of the province he was about to invade. He employed Major Brown, an American resident on the Sorel, employed by Adams and Hancock for the same purpose, to obtain desired information. The major soon reported that there were only seven hundred regulars in Canada; that the militia would not serve under French officers lately appointed that the peasantry were generally friendly toward the Bostonians, and that it was a most auspicious time to invade the province. Meanwhile Schuyler had attempted to organize the crude army which had been slowly gathering at Ticonderoga, composed chiefly of Connecticut troops under Wooster. The general was, in his daily habits of life, a strict disciplinarian, and the insubordination which he encountered at the outset annoyed him exceedingly. The Connecticut troops were extremely democratic in their notions. Each man felt himself equal to his officers in command, and could not brook the restraint of necessary discipline. Schuyler chafed under this state of things, and the friction then visible prevailed during the whole campaign.

Schuyler had a divided duty as leader of the army and head of the Indian Commission. The duties of the latter then imperatively demanded his attendance, and he summoned Montgomery, his favorite brigadier, to the actual leadership of the expedition. This handsome Irish gentleman, then forty years of age, had achieved distinction in the British army, and had lately married a sister of Robert R. Livingston, who was afterward the eminent chancellor of the State of New York. His devoted young wife accompanied him as far as the country seat of General Schuyler, at

Saratoga, where he bade her adieu, kissed the tears from her cheeks, and with cheerfulness said at parting: "You will never have cause to blush for your Montgomery." Arriving at Ticonderoga on the 17th of August, he was placed in active command of the expedition, and Schuyler returned to Albany, where he soon afterward received a letter from General Washington, urging him to hasten the invasion of Canada.

Meanwhile Montgomery, with a little more than a thousand men, had gone to Isle La Motte to prevent British vessels a-building on the Sorel, passing into Lake Champlain. There he was joined by Schuyler on the 4th of September. They pushed on to Isle aux Noix, and with a considerable force appeared before the fort at St. Johns, the first military post within the Canadian border. Deceived concerning the strength of the garrison and the disposition of the Canadians, they fell back and waited for reinforcements. There Schuyler was prostrated with sickness, and at the middle of the month he was compelled to return to Ticonderoga. Fever, gout, and rheumatism tortured him for a long time, and he did not rejoin the army, but did better service in sending forward reinforcements and supplies.

Montgomery was now in full command of the army. He immediately invested St. Johns with about a thousand men. New York troops had already joined him. Lamb's company of artillery came late in September. Some troops from New Hampshire under Colonel Bedel, and Green Mountain Boys led by Colonel Seth Warner, also joined him. The garrison was commanded by Major Preston, and was well supplied with provisions and ammunition. This circumstance, the injudicious movements of Colonel Ethan Allen and Major Brown, who were recruiting south of the St. Lawrence, and the insubordination and mutinous spirit displayed by the Connecticut and New York troops, prolonged the siege. It lasted fifty-five days. On the evening of the 2nd of November, when Preston heard of the defeat of a considerable force under Carleton, on their way to relieve him, he surrendered the fort, garrison, and munitions of war to Montgomery. The spoils of arms, ammunition, provisions and clothing, were considerable. Five hundred regular soldiers, and one hundred Canadian volunteers, were made prisoners of war.

Some victories and disasters had occurred at other points during the siege. Colonel Allen, with about one hundred recruits, mostly Canadians, crossed the St. Lawrence to attack Montreal. He was misled by the advice of Major Brown, who agreed to cross at another place and join in the attack. General Robert Prescott was in command of the city. He sallied out with a considerable force of regulars, Canadians and Indians, and after a sharp skirmish made Allen and his men prisoners. For reasons never explained, Brown did not cross the river, and the attacking party were overwhelmed. When Prescott learned that Allen was the man who seized Ticonderoga in May, he was greatly enraged. He ordered his chief prisoner to be bound hand and foot with irons, and sent to England to be tried for treason. Prescott caused his shackles to be fastened to a bar of iron eight feet in length. With this, Allen was thrust into the hold of a war-vessel, where he was kept five weeks without a seat, or a bed to lie upon, when she sailed for England, and more humane treatment was given him. Allen was kept in close confinement in England, Halifax, and New York until the spring of 1778, when he was exchanged.

At the close of October (1775), detachments under Colonel Bedel and Majors Brown and Livingston, captured the strong fort (but feebly garrisoned) at Chambly, a few miles from St. Johns, with a large amount of provisions and munitions of war. When Carleton heard of this disaster, he left Montreal with a mixed force to reinforce Major Preston. He crossed the St. Lawrence in flat-boats and bateaux, and was about to land at Longueuil, when Green Mountain Boys and New Yorkers under Colonel Seth Warner, rising suddenly from a hiding-place, opened a terrible fire from their muskets and a storm of grape-shot from a four-pound cannon, which drove them across the river in great confusion. These two events caused Preston to surrender, as we have observed.

After the capture of St. Johns, Montgomery pushed on toward Montreal. Carleton, conscious of his weakness, prepared to fly, with the garrison, to Quebec. Montgomery sent a detachment to the mouth of the Sorel, where the flotilla bearing General Prescott and the garrison was intercepted and captured, with a considerable quantity of munitions. Carleton, passing by in the night, in a boat with muffled oars, escaped to Quebec. On the 13th of November, Montgomery entered Montreal in triumph. He treated the inhabitants so generously, that he gained their confidence and respect. There he found a large supply of woollen goods with which he clothed such of his men who agreed to remain beyond the term of their enlistment, and he prepared for further aggressive movements. Although the strongholds in Canada, excepting the capital, were then in his possession, he wrote to the Congress: Till Quebec is taken, Canada is unconquered."

Meanwhile the co-operating expedition mentioned by Washington in his letter to Schuyler, had done its marvelous work. Late in August, the commander-in-chief had perfected his plan. Arnold was then at Cambridge making loud complaints of ill-usage upon Lake Champlain. The proposed expedition, promising wild adventure and the exercise of rare courage and skill, seemed to be suited to his nature, and Washington, to silence his complaints and to secure his services, commissioned him a colonel in the Continental Army, and gave him the command of the troops to be used, comprising eleven hundred hardy men selected from the forces at Cambridge. These were composed of New England musketeers and riflemen from Virginia and Pennsylvania under Captain Daniel Morgan. At the middle of September they sailed from Newburyport, in transports, for their general rendezvous at Fort Western on the Kennebec River, opposite the present city of Augusta. They were then on the verge of an uninhabited wilderness, excepting by a few Indian hunters. There they were furnished with bateaux wherewith to navigate shallow streams and little lakes; and at Norridgewock Falls, where Father Rale had his Indian mission, already mentioned, their first labors began. Their bateaux were drawn by oxen, and their provisions were carried on their backs around the falls - a wearisome task often repeated afterward. But they pressed on with cheerfulness toward the headwaters of the Kennebec, often wading and pushing their bateaux against swift currents. At length they left that stream, and over craggy knolls, tangled ravines, deep morasses and gentle brook) they made their way to Dead River - a portage of fifteen miles broken by three ponds. Upon the placid bosom of that sluggish stream, on the great watershed between the St. Lawrence and the Atlantic, they moved quietly, in fine weather, and were suddenly confronted by a lofty mountain capped with snow. At the foot of this hill Arnold encamped. Major Bigelow ascended to its summit, hoping to see the spires of Quebec; and it has

been called Mount Bigelow to this day.

Sickness and desertion now began to reduce the number of effective men. It was late in October. Keen winds came from the north. They were thirty miles from Lake Megantic, the source of the Chaudiere, a tributary of the St. Lawrence, down which Arnold intended to voyage in the bateaux. When the expedition moved, a heavy rain had set in. Torrents came roaring from the hills and filled the Dead River to its brim. Its banks were soon overflowed and its channel was filled with drift-wood, among which several of the boats were overturned and much provision was lost. Food for only twelve days remained. A council of war determined to send the sick and wounded to Norridgewock, where Colonel Enos was yet with the rear division. He was ordered to come on with provisions for fifteen days. Instead of obeying, he returned to Cambridge with his whole division, where he was looked upon as a traitor or coward. Though acquitted by a court-martial, he was never restored to public favor.

Arnold's situation was now becoming critical. The rain changed to snow, and ice formed upon the still waters. The men were often compelled to wade in the freezing floods, waist deep, and push the bateaux before them. In that dreadful journey two women, wives of two soldiers, participated, wading with their husbands. At length Lake Megantic was reached, and they encamped on its borders; and the next day, Arnold, with fifty-five men, started to voyage down the Chaudiere to the nearest French settlement, there to procure provisions and send them back to the main army. It proved to be a most perilous undertaking. They had no guide. As soon as they entered the river, they found the current running swiftly over a rocky bed. They lashed their baggage and provisions to the bateaux, and committed themselves to the seething flood. They were soon among foaming rapids, when three of their vessels were dashed to pieces and their contents engulfed. No life perished. The men were saved by those in the other boats which were moored in shallow estuaries. This seeming calamity was a mercy in disguise, for, had they not been checked, the whole party, in a few minutes, would have been plunged over a fearful cataract, the sullen roar of which they could distinctly hear.

For seventy miles further, falls and rapids succeeded each other, when Sertigan was reached, and Indians were sent back to the main body with provisions, and to guide them to the settlements. This relief-party found the soldiers in a starving condition. Their boats and provisions had been destroyed, and they had slaughtered their last ox several days before. They had subsisted upon a scanty supply of roots, and tried to obtain mucilage by boiling their moose-skin moccasins, but in vain. A dog was killed and furnished soup for a few, and they were suffering the despair of hopelessly starving men when the Indians found them. A few days afterward, the whole army, united, were marching toward the St. Lawrence; and on the 9th of November they suddenly appeared on the heights of Point Levis, opposite Quebec, veiled in falling snow. To the eyes of the wondering people of that city, they seemed like a spectre army just fallen from the clouds. Morgan's riflemen, in their linen frocks, had been seen by the messenger, who carried the news of their arrival to Quebec. "They are vetu en toile" (clothed in linen cloth), said the messenger. The last word was mistaken for tole (iron plate), and this created a panic. The city was soon in a tumult. The drums beat to arms, and the garrison was

strengthened.

Arnold relied upon the friendship for the Americans of a large portion of the inhabitants of Quebec, and believed they would compel the garrison to surrender, if he should appear with a force before the city. He was anxious to cross over at once, but was detained by a storm of sleet until the 13th. That night he crossed the river with five hundred and fifty men in birch canoes. They landed at Wolfe's Cove, ascended the ravine, and at dawn stood in battle array on the Plains of Abraham, where Wolfe had stood sixteen years before. Believing that a shout from his little army would bring out a friendly response from the city, he marched his men toward the two gates opening upon the Plains, and ordered them to give three cheers. He expected to bring out the regulars to attack him, when he hoped, by the assistance of the citizens, to be able to rush in and take possession of the town. But the commanders were wise enough not to open the gates, and the citizens were restrained by fear of the garrison. After making a ridiculous display of arrogance and folly a few days, by issuing proclamations and demanding the surrender of the city, all of Mich were treated with contempt by the commanders of the garrison, Arnold was startled by the news that Carleton was coming down the St. Lawrence with a force of Canadians and Indians, and information from his friends in the city, that the garrison were on the point of sallying out to attack him with field-pieces. He had no cannon, and his numbers were few, though the remainder had come over from Point Levis, and joined him and he prudently fled up the river to Point aux Trembles (Aspen Trees Point), and there awaited instructions from Montgomery.

Impressed with the importance of taking Quebec to insure the conquest of Canada, Montgomery placed small garrisons in the forts at St. Johns and Chambly, and left Montreal in charge of General Wooster, preparatory to marching on the Canadian capital. He had heard that the British authorities there were much alarmed by the presence of Arnold. They expect to be besieged," he wrote to Schuyler, which, by the blessing of God, they shall be, if the severe season holds off and I can prevail on the troops to accompany me." Montgomery's greatest difficulty was involved in the last consideration. A large portion of his men were indisposed to go further, or remain longer than their enlistment papers compelled them to - the first of December. Day by day his army was melting away. The frequent appeals of General Schuyler and himself to Congress for reinforcements had not been responded to, and he took the responsibility of making an unauthorized engagement with troops who were willing to go. With the comparatively few men who agreed to follow him, he left Montreal on the 26th of September, and joined Arnold at Point aux Trembles, on the 3rd of December, and took command of the combined troops. With woollen clothing which he took with him, Montgomery made Arnold's thinly-clad troops comfortable.

Chapter LXIV

Quebec Assailed - Death of Montgomery - Arnold and Lamb Wounded - Americans Repulsed - Montgomery's Remains - Condition of the Republican Armies - Franklin's Plan for a Civil Government - General Post-Office Established - A General Hospital - The Army Before Boston - Committee of Congress - Insubordination - Events Near Boston - A Continental Navy - A Changing Army - Officer's Wives in Camp - Union Flag - British Troops in Boston - Artillery Procured - Dorchester Heights Fortified - Boston Closely Besieged.

THE little army of republicans under Montgomery, less than a thousand in number, with two hundred Canadian volunteers led by Colonel James Livingston, pressed on toward Quebec from Point aux Trembles, and arrived before the town on the evening of the 5th of December. The general made his quarters at Holland House, two or three miles from the city, and on the following morning he sent a flag with a message to Governor Carleton, demanding an instant surrender of the post. The flag was fired upon. Montgomery, indignant at such treatment - such violation of the rules of war among civilized nations - sent a threatening letter to Carleton, and another to the inhabitants. These were taken into the city by a woman, and a copy of the latter was shot over the walls, into the town, on an arrow from an Indian bow. Carleton refused to have any intercourse with the "rebel general," and the latter prepared to assail the walled town with his handful of men, ill-clad, ill-fed, and exposed to storms and intense cold on the open Plains of Abraham.

The ground was too hard frozen to be penetrated with pick or spade, and the snow covered it in huge drifts; so Montgomery filled gabions (a sort of wicker-work baskets) with snow, poured water over the mass, which instantly congealed, and soon raised a huge ice-mound. Upon this glittering embankment Lamb placed in battery six 12-pound cannon and two howitzers. In the Lower Town he placed four or five mortars, from which he sent bombshells into the city and set a few buildings on fire. Montgomery made further unsuccessful efforts to communicate with the governor and continued to throw shells into the city. At length some heavy round shot from the citadel shattered Lamb's crystal battery into fragments, and compelled him to withdraw. The cannon of the Americans made no impression on the heavy walls, and Montgomery was compelled to resort to other measures for taking the city. It was now determined to wait for expected reinforcements, but for a fortnight they waited in vain. The Congress were tardy in their actions and for want of hard money Schuyler was almost powerless to procure men or supplies. He used his own personal credit largely, but he could not send on men. A friend in Montreal had helped Montgomery to the extent of his ability, and, the general was left to his own resources. The terms of the enlistment of many of his men had almost expired, and the deadly small-pox had appeared among them. A web of fearful difficulty was thus gathering around the general but worse than all was a quarrel between Arnold and some of his officers, which caused the latter and their men to threaten to leave the service unless they were placed under another commander. Montgomery, by the exercise of wisdom and justice, healed the dissensions and at Christmas time a plan was arranged by a council of officers to assail the town at two points simultaneously; one division of the troops to be under the immediate command of the general, and another under

Arnold. The latter was to make a night attack upon the Lower Town, setting fire to houses in the suburb St. Roque so as to consume the British stockade in that quarter, while the main body should attempt to take Cape Diamond Bastion, a strong part of the city walls on the highest point of the rocky promontory. It was determined to make the assault on the first stormy night.

At length the serene, cold days and nights were ended, and on the evening of the 30th of December (1775) a snow-storm set in. Montgomery's force was now reduced by sickness and desertion to seven hundred and fifty men, but the brave soldier was determined to assail the town with this handful. He gave orders for his troops to be ready to move at two o'clock in the morning of the 31st. Colonel Livingston was directed to make a feigned attack on St. Louis Gate and set it on fire, while Major Brown should menace Cape Diamond Bastion. Arnold was directed to lead three hundred and fifty men, with Lamb's artillery and Morgan's riflemen, to assail and fire the works in St. Roque, while Montgomery should lead the remainder below Cape Diamond along the narrow space between the declivity and the St. Lawrence, carry the defenses at the foot of the rocks, and endeavor to press forward and join Arnold. Being thus in possession of the whole Lower Town, the combined forces were to destroy Prescott Gate, at the foot of Mountain street, and rush into the city. No doubt full success would have rewarded their efforts had not a Canadian deserter revealed the plot to Carleton, who caused his troops to sleep on their arms and to be ready for action at all points.

In order to recognize each other, the republican soldiers were ordered to fasten a piece of white paper to the front of their caps. On some of them they wrote the words of Henry, "Liberty or Death." The narrow path along which Montgomery led his men at the foot of the acclivity, was blocked with ice and snow, and a strong wind blew blinding sleet and cutting hail in the faces of the patriots. They pressed on, and passing a deserted barrier, they approached a block-house, at the foot of Cape Diamond, pierced for musketry and cannon. All was silent there. Believing the garrison not to be on the alert, Montgomery, burning with impatience to win success, shouted to his immediate followers - the companies of Captains Cheeseman and Mott - "Men of New York, you will not fear to follow where your general leads; push on, my brave boys, and Quebec is ours!" and rushed forward to surprise the garrison and take the battery. There were vigilant eyes and ears in the block-house. In the dim light of a winter's dawn, through the thick snow-veil, forty men watched the coming republicans; and when Montgomery shouted to his followers, and was within fifty yards of the works, they opened a deadly fire of grape- shot from their cannon. Montgomery, his aid McPherson, Captain Cheeseman and ten others were instantly killed. The remainder retreated to Wolfe's Cove, where the senior officer, Lieutenant-Colonel Campbell, rallied them, but did not renew the effort to reach Prescott Gate.

While these sad events were occurring on the St. Lawrence side of the town, Arnold was making his way near the St. Charles, along a narrow way filled with snow-drifts. The town was in an uproar. The bells were ringing; the drums were beating a general alarm and cannon were beginning to thunder. The storm was raging violently, and Arnold was compelled to march in single file. Lamb had to leave his cannon behind in the drifts, and join the fighters with small arms. At a narrow pass Arnold was wounded in the leg, and was carried to the General Hospital, when

the command devolved on Morgan. The troops pressed forward under their new leader, captured a battery, and fought fiercely for three hours to capture another, and succeeded. Then Lamb was severely wounded. Morgan was about to push on to attack Prescott Gate, when the sad news came that troops under Dearborn, stationed near Palace Gate, had been captured by a party who had sallied out of the city, and had then cut off the retreat of Arnold's division in front. At ten o'clock, after he had lost full one hundred men, Morgan was compelled to surrender with more than four hundred followers. A reserve force of Arnold's division had retreated, and were soon joined to those under Lieutenant-Colonel Campbell. So ended the siege of Quebec.

When the contest was over, and it was known in the city that General Montgomery was slain, Governor Carleton, who had been his companion in arms under Wolfe, sent out a detachment to search for his body. It was found, with those of Cheeseman and McPherson, shrouded in snow-drifts. They were carried into the city and buried within the walls. There Montgomery's remains rested forty years, when they were taken to New York and deposited beneath a beautiful mural monument erected by order of Congress on the exterior of the wall of St. Paul's Church that fronts on Broadway.

The Continental Congress, in the meantime, had been working industriously in perfecting a national organization and in supporting the armies in the field, at the same time taking pains not to give mortal offence to the British government until an answer to their petition should come from the king. They had tremendous difficulties before them, and heavy responsibilities to bear. The first reports from Washington and Schuyler, concerning the troops, were very discouraging, and they continued to be so for several months - the spirit of democracy everywhere producing insubordination and consequent weakness. The inefficiency of the executive powers of the Congress was keenly felt. These were delegated to a single committee of that body. The sagacious Franklin saw the futility of attempting to carry on the inevitable war with such a feeble instrument, and late in July he submitted the basis of a form of confederation, similar in some respects to the one he proposed in the Convention at Albany twenty-one years before, but generally more like our present national constitution. The plan was a virtual declaration of independence; the government it proposed was to be perpetual unless the British rulers should accede to the claims of the colonies. It was not then acted upon.

The colonial post office system had been broken up by the public did orders, and on the 26th of July (1775) the Congress made provision for a new one, and appointed Dr. Franklin postmaster-general. From that office he had been dismissed by the British government the year before, as we have observed. Very little else was done during the year toward organizing civil government, for military affairs occupied almost the whole attention of the Congress. They established a general hospital, and appointed the unworthy Dr. Benjamin Church as chief director. Soon after his appointment, he was detected in holding secret correspondence with General Gage. He was immediately expelled from every position of trust which he held, and by order of the Continental Congress was lodged in the Norwich (Connecticut) jail. His health failing, he was allowed to leave the country for the West Indies. The vessel in which he sailed was never heard of afterward. So perished the first traitor to the American cause. Dr. John Morgan took his place

at the head of the hospital.

The army before Boston received the special attention of the Congress. The term of enlistment of all the troops would expire with the year, and Washington foresaw the dissolution of his forces then. He asked the Congress to assist him in providing plans for preventing such a fatal disaster. They sent a committee composed of Dr. Franklin, Thomas Lynch, and Benjamin Harrison to the camp at Cambridge for the purpose, and at the headquarters of Washington they opened their conference with the commander-in-chief on the 18th of October. There they were joined by delegates from the several New England colonies, and in the course of a few days they matured a plan that was satisfactory to Washington, and was effectual.

For a long time the army was not only weak in numbers, but feeble in moral strength and material supplies. In August it was discovered that the supply of gunpowder was not sufficient for nine rounds to each man, and other munitions were lacking in the same proportion. For months the American army was compelled to play the part of jailer to the British troops in Boston. It was even difficult to sustain that part; and had the royal forces known the real impotence of their jailers, they might have burst their prison doors with impunity, and scattered the republican army to the winds. In the individuality - the self-assertion of each soldier - to which allusion has been made, was found moral weakness as regarded the strength of discipline. Each man had left his home to fight for freedom, and was disposed to first assert it in his own behalf. The consequence was general insubordination, which had to be humored until the common sense and experience of the soldier taught him the value and necessity of discipline. Washington managed this matter with great tact, and accomplished, by argument and persuasion, that which he could not have gained by force.

Comparative inaction marked the siege of Boston for several months. There was some cannonading in August when General Sullivan, in imitation of Prescott, cast up a redoubt in a single night upon an eminence within cannon-shot of Bunker's Hill. Three hundred shells were thrown upon this redoubt from Bunker's Hill and British shipping with very little effect. There were occasional skirmishes between republican detachments and royal foragers on the islands in Boston harbor and the shores of the main, but there was no serious engagement. Washington tried to bring on one by various challenges. He did not feel strong enough to attack his foe, but he was ready to meet any sortie or sallying-out the British troops might make. But Gage was too prudent to attempt another excursion into the country. He contented himself with threats; in the sending out of alarming stories about Russian and German troops coming to help the British, and in treating the few whigs who remained in Boston in a barbarous manner. Gage was called to England, in October, to answer for his inefficiency, when General Howe assumed the chief command of the British army in America. Howe strengthened his defenses, and increased the number of British cruisers sent out to harass the coast towns of New England, hoping thereby to cause Washington to weaken his besieging army by sending detachments for the relief of the distressed regions. Falmouth (now Portland, Maine,) was burned in October, and other towns were sorely smitten by the marauders. These acts failed to draw a regiment away from Cambridge, but caused a swarm of American privateers to appear upon the waters. Captain

Manly, in a vessel sent out by Washington to intercept supply-vessels bound for Boston, maintained a position off the harbor of the New England capital for some time, and made three important captures. One of his prizes contained heavy guns, mortars, and entrenching tools; the very things most needed by the Americans at that time.

Howe imitated Gage in treating the open whigs and suspected persons in Boston with harshness. His excuse was that they were active, though secret, enemies, keeping up a communication with the "rebels" either by personal intercourse, or by signals from church steeples and other high places. He forbade all persons leaving the city without permission, under pain of military execution and he ordered all of the inhabitants to associate themselves into military companies.

At about this time the Congress was putting forth its energies for the establishment of a Continental Navy. The separate colonies were doing the same thing. A Marine Committee was appointed, and in December (1775) the Congress ordered the construction of thirteen armed vessels. Meanwhile Washington, under instructions, had caused floating batteries to be built in the Charles River, from one of which shells were thrown into Boston late in October, producing much alarm and some injury.

Six months had passed away since the battle of Bunker's Hill, and yet the relative position of the belligerent troops had changed very little. The people murmured; Congress fretted, and Washington was impatient to begin a vigorous siege. But he was almost powerless. At the beginning of December his old army began to dissolve, and not more than five thousand new recruits were enrolled. There seemed to be a fatal flagging of spirits. The cold was increasing; many of the soldiers lacked comfortable clothing it was difficult to procure wood for fuel, and whole regiments were compelled to eat their provisions raw for the want of it to cook them. Fences and fruit trees around the camp were seized for use, and groups of shivering soldiers were often seen hovering around smoldering embers. The Connecticut troops demanded a bounty, and when it was refused, because Congress had not authorized it, they resolved to leave camp in a body on the 6th of December. Many did go and never came back. These untoward circumstances filled the mind of Washington with the keenest anxiety; when suddenly a salutary change was visible. Within the space of a fortnight new hopes and renewed patriotism seemed to fill the bosoms of the people, and at the close of the year the regiments were nearly all full, and ten thousand Minute-men, chiefly in Massachusetts, were ready to swell the ranks when called upon. The camp was well supplied with provisions; order was generally preserved; the commander-in-chief was more hopeful than at any time since his arrival, and general cheerfulness prevailed. The wives of several of the officers had arrived in camp. Mrs. Washington, with her son John Parke Custis and his young spouse, came on the 11th of December, and the Christmas holidays were spent at Cambridge quite agreeably.

The new Continental army was organized on the first of January, 1776, when it consisted of almost ten thousand men, of whom more than a thousand were absent on furlough which it had been necessary to grant as a condition of re-enlistment. The event was signalled by the raising of

a new flag composed of thirteen stripes, alternate red and white, emblematic of the union of the thirteen colonies (for Georgia had lately sent delegates to the Congress), and in the dexter corner, the British Union - the combined crosses of St. George and St. Andrew on a blue ground as indicative of the loyalty of the colonies to the British crown. As it fluttered in the keen winter wind on that clear morning, shouts from a thousand voices greeted it, and in token of their feelings many of the soldiers threw their hats high in air. This incident produced erroneous impressions upon the British officers in Boston. On that day printed copies of the king's speech on the opening of Parliament late in October were received by General Howe, and he sent a package of them to General Washington. The king, after declaring his intention to enforce obedience in the colonies, proposed the appointment of Commissioners to offer the olive branch of peace and pardon to all individual offenders in America, as well as whole communities or provinces that might sue for forgiveness. The hoisting of the Union flag - the flag with the British Union - was regarded with joy in Boston as a token of the deep impression the gracious speech had made upon the Americans, and as a signal of submission. The Union flag had been raised before the speech was received, and the latter was burned with contempt by a party of Massachusetts soldiers.

The British troops in Boston, at this time, numbered about eight thousand, exclusive of marines on the ships-of-war in the harbor. They were well supplied with provisions from Barbadoes and Great Britain, and having been promised ample reinforcements the coming season, they were prepared to sit quietly in Boston and wait for them. They had converted the Old South Meeting-house into a riding-school, and Faneuil Hall into a theatre, and were whiling away the winter quite pleasantly, while Washington was chafing with impatience to break up the nest." He had received a temporary reinforcement of five thousand militia, and he waited for the ice in the rivers to become strong enough to bear his troops to make an assault upon the town. But the winter was exceedingly mild and no opportunity of that kind offered until February, when a council of his officers deemed the undertaking too hazardous. The temporary militia had retired, and Washington was compelled to call upon the New England colonies to furnish thirteen regiments more.

Just at that time news came from the north of the death of Montgomery and the repulse at Quebec, with an urgent request from General Schuyler for the commander-in-chief to send three thousand soldiers immediately to reinforce the little army in Canada to retrieve its losses, and to maintain the republican cause in that province. The necessity for strength at Boston was as great as at Quebec, yet Washington, ever ready to act for the general good, asked Massachusetts, New Hampshire, and Connecticut to furnish a regiment each, enlisted for a year, and send them to Canada. To relieve these colonies of an increased burden, he allowed three regiments to be taken from his last requisition, reserving ten for the main army. They were raised and sent to Canada during the winter.

In small arms and ammunition the army at Cambridge was yet sadly deficient. Powder was very scarce, and it was difficult to get a supply. General Putnam was specially charged with the procuring of it. Colonel Moylan wrote from the camp in January: The bay is open - everything thaws here except Old Put. He is still as hard as ever, crying out for powder - powder - ye gods,

give us powder! Colonel Knox, who had been sent to the Champlain forts, had, with great enterprise and perseverance, brought, upon forty sledges drawn by oxen, more than fifty cannon, mortars, and howitzers. The strange procession of cattle and sledges, and rough teamsters carrying their guns slung over their knapsacks on their backs, had made their way over frozen lakes and rivers, wild morasses and rugged hills covered with almost impassable snows; and a supply of bomb-shells came from New York. Late in February powder began to arrive. The ten militia regiments came in to strengthen the lines. Heavy pieces of ordnance were placed in position before Boston, and Washington, who had been urged by the Congress to attack the city as soon as possible, before expected reinforcements should arrive, now prepared to do so. General Howe, meanwhile, felt perfectly secure. He wrote to Dartmouth that he had not the least apprehension of an attack from the rebels, and wished they would "attempt so rash a step, and quit their strong entrenchments," to which they might attribute their safety.

From this dream of security Howe was suddenly awakened, and his wish was gratified. His young officers had got up a farce entitled "Boston Blockaded," in which Washington was burlesqued as an uncouth figure with a large wig and wearing a rusty sword, accompanied with a country servant with a rusty gun. They were now called to perform in the serio-comic drama of Boston Bombarded, with appropriate costume and scenery, and Washington and Howe as the principal characters. The American commander determined to occupy and fortify Dorchester Heights which overlooked Boston, and which Howe had strangely neglected to secure. The design was kept a profound secret. To divert the attention of the British, a severe cannonade and bombardment was opened upon the town from Lechmere's Point, Roxbury, Cobble Hill, Ploughed Hill and Lamb's Dam, on Saturday night, the 2nd of March. This was repeated on Sunday and Monday nights, the latter the eve of the anniversary of the Boston Massacre. At seven o'clock that evening, General Thomas, with two thousand men provided with entrenching tools, proceeded to take possession of Dorchester Heights. A train of three hundred carts and wagons, laden with fascines and screwed hay, followed. They all moved in perfect silence and within an hour they were on the Heights, undiscovered by the British sentinels in the city, where every ear was filled with the incessant noise of cannon on the American batteries, and which was kept up all night - from seven o'clock till daylight. The working force were divided, one-half of them taking post on an eminence nearest Boston the other on a hill opposite the castle. The bundles of hay were placed on the Boston side of Dorchester Neck as a covering for the teams and troops passing over it, from a raking fire that might be opened from the town. The weather was moderately cold. The ground was frozen to the depth of eighteen inches. The full moon was shining in splendor; and through that long winter night - several hours longer than the summer night when the redoubt on Breed's Hill was erected - worked on under the direction of the veteran Gridley, the same engineer, and the eye of Washington, who perceived with joy that his movement was unsuspected by his enemy. At about three o'clock in the morning, a relief party appeared; and at dawn on the 5th of March, 1776, the astonished Britons saw two redoubts on Dorchester Heights skillfully planned, strong enough to protect their inmates from grape-shot and musketry, armed with cannon that seriously menaced all Boston, and manned with resolute patriots. On the summits of the steep hills were barrels filled with stones to be rolled down upon ascending assailants, and strong abatis formed of the trees of adjacent orchards, protected the foot of the Heights. Perhaps

there never was so much work done in so short a space of time," wrote General Heath. Howe was overwhelmed with astonishment, and exclaimed "I know not what I shall do ! The rebels have done more in one night than my whole army would have done in a month." A Loyalist of the time wrote:

"Like Titans of old the Rebels had piled Huge stone-heaps on Dorchester Hill, And with murderous plan like savages wild, So prepared our poor soldiers to kill, Who might he compelled to scale the rough Height To drive the bold Yankees away in affright."

Chapter LXV

Perils of the British in Boston - British and Tories Leave the City for Nova Scotia - Honors to Washington - Stirring Events in New York - Affairs in the Middle Provinces in 1775 - Exciting Scenes in Virginia - Battle at Great Bridge - Destruction of Norfolk - Events in North Carolina in 1775 - Battle at Moore's Creek Bridge - Doings in South Carolina and Georgia in 1775 - Condition of the Americans - Mercenary Troops Sought for by the British.

GENERAL HOWE fully comprehended the perils of his situation. American officers whom he had affected to despise had outgeneraled him. He overestimated the numbers of the republican army, and supposed that the work on Dorchester Heights had been done by twelve thousand men. To the minds of his cultivated officers it seemed like the realization of a tale of the Arabian Nights. But it was the work of less than three thousand New England farmers, meanly clad, poorly fed, and inadequately armed and disciplined. To dislodge them was the prime necessity of the British. If they retain possession of the Heights," said Admiral Shulldham, "I cannot keep a ship in the harbor." It was therefore determined to assault the Americans, and attempt to drive them from their redoubts. Washington was prepared for such an emergency. He had boats and floating batteries that would carry four thousand men into Boston.
